Dr. Hansbrough stated that he would like to give a second report on the federal HMO that was going into Lilbourn, Mo. He reported at the previous Council meeting that the Bootheel CHP Agency had approved this. He indicated that the structure of this organization has changed. A St. Louis group has taken over this project. After this restructuring, the Bootheel CHP Agency then asked to review it again, and was refused. They apparently have the feeling that the way they will get the patients seen in the HMO is by paying the UCR fees to see the people in the HMO, as Missouri physicians get paid very low fees from Medicaid and most of these patients are Medicaid patients. Dr. Hansbrough indicated that the Executive Secretary of the Bootheel CHP felt sure that this project got through CHP in a form which would today be rejected.—**Referred to Resolutions Committee.**

■ *District #1*—Dr. Martin reported that someone in his district was looking for an anesthesiologist and found one from Canada who was licensed in one of the Carolinas. She was board certified in anesthesiology. She could not get a license in Missouri without taking the examination. She immediately applied to Indiana and was granted a license by reciprocity. Dr. Martin voiced his concern about this.

Dr. Martin called the Council's attention to the Interprofessional Code which was sent out recently and indicated that his Society has accepted this Code. He stated that he felt that if the local medical societies accept this code, it also should be accepted by the local lawyers associations.—**Referred to Medical Education and Public Welfare Committee.**

■ *District #9*—Dr. Cooper indicated that his district plans to have a Councilor District meeting soon, but definite plans have not been made as yet.

District #8—Dr. McAlhany reported that since the ruling on the Curteman Case, the ophthalmologists in his area have been very concerned. He said that he understood the ophthalmologists are setting up an independent organization to consider problems involved.—**Referred to Miscellaneous Affairs Committee.**

■ Dr. McAlhany reminded the Council of the November meeting in Springfield when Dr. Carl Hoffman, President of AMA, will attend. He stated that they would like to have a cocktail party for Dr. Hoffman with the Council and Officers present. He stated that he felt this is a stat function and asked the Council to assist financially. Thi request was approved.—**Referred to Reports of Officer Committee.**

■ Dr. McAlhany said that Greene County has an M.D physician running for Coroner in November.

He reported that they have petitioned the General Assembly for a statewide Medical Examiner System. It wa suggested that this might be done first on a pilot basis Dr. McAlhany stated that if they do get the M.D. fo coroner, they undoubtedly will try to set this up as pilot project in Greene County.

Dr. McAlhany said that the judge recently ruled in favor of the "Singing Doctors of Greene County" agains the IRS.

District #3—Dr. Franklin said that he recently attended a meeting of the Council of St. Louis Medical Societ where several things were discussed. Two plans for physician assistants were discussed. One was from Dr. Hofstetter for the St. Louis State Hospital for psychiatri nurse assistants. This was approved by the St. Loui Medical Society Council. Dr. Franklin stated that the had suggested to them that local matters should be handled locally and not by the state. Another plan presente by Dean Wochner for physician nurse assistants wa quite extensive. A committee was appointed to stud this proposal.

Dr. Domke reported that a short time ago there wa some discussion regarding the development of an O nurse assistant and an Attorney General's opinion wa sought. An adverse opinion was received from him. Dr Domke indicated that he felt this might have some bearing on the plans that St. Louis Medical Society is reviewing. Dr. Miller said that he felt these things should b brought before the state organization so that there ca be some uniformity. Dr. Hetlage stated that the reaso for the development of a concept of what these peopl may or may not do is to stop the development of a patchwork type of physician assistant. He said he felt thi should be brought back to the Council for consideratio and input rather than on a local basis.

Dr. Franklin stated that it might be worthwhile if a copy of this proposal from Dean Wochner be sent to each member of the Council. Dr. Cope indicated that the Council would await the results of the St. Louis Medical Society committee action on this.—**Referred to Miscellaneous Affairs Committee.**

■ St. Louis County and St. Louis Medical Societies have appointed a committee regarding the building of one building for the use of both medical societies. Committees have been appointed for changes in the bylaws to accommodate this. Committees have been appointed to study the use of the building by both organizations. Dr. Franklin said that more than 125 County members have joined the St. Louis Society for Medical and Scientific Education.

An Insurance Liaison Committee of both the city and county headed by Dr. Kinsella, HIC and the metropolitan hospital association have launched a campaign on the conservation of the health care dollar. The plan is to launch new materials every three months to (1) alert the physicians, (2) the patients or consumers and (3) hospital employees to help with the conservation of the health care dollar.—**Referred to Reports of Officers Committee.**

■ Dr. Franklin indicated that he wanted to endorse what Dr. McAlhany said about the ophthalmologists. He

MSMA Members Receive 50-Year Pins

MSMA members who have completed 50 years in the practice of medicine were honored at the Presidents' Banquet. Receiving 50-year pins from President Walter T. Gunn were *(left to right)* Drs. L. P. Freimuth, St. Louis; Alfred J. Cone, Chesterfield; George V. Feist, Kansas City; Leo P. FitzGerald, St. Louis; Thomas B. Hall, Arrow Rock; Harry C. Lapp, Kansas City; Emmett F. Hoctor, Farmington; Sol Weber, St. Louis; and John W. Williams, Springfield.

stated that he was informed that they are forming a new organization because their present bylaws state that they cannot become involved in legislative matters. Apparently, they are forming this new organization for possible legislative action.—**Referred to Miscellaneous Affairs Committee.**

■ *District #7*—Dr. Chandler reported that Jackson County Medical Society approved in principle a treatment program for alcoholics.

He stated that some of his members are extremely upset with the Board of Healing Arts, particularly regarding certain policies. He stated that industry in the area is having a difficult time with absenteeism. There are frequent abuses. Investigation has shown that workers go to certain physicians and secure a sick leave slip certifying that they are sick. This is costing hundreds of thousands of dollars each year. Representatives of the Board of Healing Arts have had meetings with these people. They have investigated and found that such a thing does exist. However, they have taken no action, at least not to the satisfaction of the local physicians.

Dr. Chandler reported that recently there was a seminar on acupuncture in Kansas City. The fee for attendance was quite high. However, the seminar was well attended. Dr. Chandler indicated that he felt some decision should be forthcoming from the Board of Healing Arts stating whether acupuncture is or is not the practice of medicine.

Mr. Cooper indicated that all the information we had on acupuncture had been sent to their office prior to the August Board meeting, suggesting that they take the New York approach which declared acupuncture the practice of medicine.

Dr. Chandler stated that he felt many physicians are not knowledgeable about what the AMA does for them and Jackson County has been running a series of articles regarding activities of the AMA. He indicated that he felt this is something societies who have bulletins should look into, as this is a good form of communication.—**Referred to Medical Education and Public Welfare Committee.**

■ *District #4*—Dr. Hetlage reported that the majority of his Councilor District work at its recent meeting was done on input to the AMA. He indicated that he feels his delegates to MSMA are contributing significantly and his meeting with them prior to Council meetings works very well in his district.—**Referred to Reports of Officers Committee.**

■ Dr. Hetlage said that they discussed the matter of emergency hospital services, as recommended by the Sub Task Force on Emergency Health Care Services, and the problems inherent in categorization of hospitals and which class certain hospitals will come under. Possibly, the hospitals should be asked to categorize themselves. Dr. Hetlage reported that they did endorse this plan.—**Referred to Miscellaneous Affairs Committee.**

■ He stated that they discussed the Negotiation of Professional Fees and have some questions about it. He reported that they are in favor of this, but do not want to create another problem such as took place with the HCF.

He reported that family planning was discussed, but this would be reported in the Ad Hoc Committee presentation.

Dr. Hetlage stated that his district is pleased with the input they have had into Blue Shield in St. Louis. However, there is no input into Blue Cross whatsoever.—**Referred to Resolutions Committee.**

■ He thanked the AMA Delegates for introducing the two resolutions from his district at the AMA San Francisco meeting.

He asked if there is any possibility that his local delegates and alternates might receive copies of the weekly *AMA Newsletter* (green sheet).

Dr. Hetlage asked the Chairman to call an Executive Session to discuss several items of concern in his particular district.

District #6—Dr. Bradshaw said that he did not have a report at this time, but requested time later.—**Referred to Reports of Officers Committee.**

■ *District #5*—Dr. Cope reported that he had received a call from Dr. Schertz indicating that some ophthalmologists in the state are proposing legislation relating to physician assistants. Dr. Cope stated that he felt a stand must be taken regarding acupuncture and the Council must decide what to do in regard to the ophthalmologists' proposals.—**Referred to Miscellaneous Affairs Committee.**

■ Dr. Gunn again introduced the subject of things being considered at the local level prior to their being approved at the state level. It was pointed out that when federal grants are involved, they usually require both local and state approval.—**Referred to Medical Education and Public Welfare Committee.**

ACUPUNCTURE

■ The Chairman then indicated that he felt a stand should be taken on acupuncture and called for discussion.

Dr. Matthews stated that it is his understanding that in the state of New York, the State Board declared acupuncture the practice of medicine. He indicated that he felt the Council might propose that the Missouri Board of Healing Arts proceed along these same lines. Dr. Cope stated that he is of the opinion that the actual puncturing of a human body with a needle is the practice of medicine.

Following further discussion, on motion of Dr. Gunn, duly seconded, the matter of acupuncture was referred to the Commission on Continuing Education and Health Manpower for study and a report back to the Council.

Discussion then was held regarding Dr. Martin's concern over licensing procedures of the State Board. It was pointed out that we do have reciprocity with various states, but on an individual basis. Dr. Martin indicated that he would check into this matter a little further and get more of the details.

Discussion followed regarding the Board of Healing Arts' apparent lack of investigation and action against certain physicians licensed in Missouri. It was indicated that licensure and activities of the State Board is of sufficient importance that possibly a special meeting of the Council with the State Board might be worthwhile with an agenda planned ahead of time so that some mutually satisfactory answers might be worked out. It then was suggested that possibly our Executive Committee should meet with the State Board at least once annually.

After brief discussion, it was moved and seconded that the President of the State Board of Healing Arts or his Board representative be invited to future Council Meetings. Motion carried.—**Referred to Medical Education and Public Welfare Committee.**

PHYSICIAN ASSISTANTS

■ The Chairman then called for discussion regarding the ophthalmologists and physicians' assistants.

Dr. Chandler said that he was invited to a meeting which the ophthalmologists held. He stated that they feel they have many problems since the Curteman ruling. Many of their assistants do preliminary studies that free the M.D. for more diagnosis and treatment. They feel that some new legislation is needed and are drafting a bill with legal help. He said they asked him to bring this matter to the Council because they want to work closely with the MSMA. Dr. Chandler reported that the ophthalmologists thought they could tack their bill onto our physician assistants bill, which they indicated was coming up in January and being worked on now. Dr. Chandler stated that he told them he was not aware of any bill being worked on at the present time, but, in fact, he understood we were going to wait until we had more information from the AMA.

Dr. Hetlage stated that his contact with Dr. Schertz on this matter was one phone call. Dr. Hetlage said tha MSMA did pass a resolution favoring such legislation but we really need more information and it obviously i getting more complicated.

Dr. Cope suggested that possibly a letter should be sent to them indicating that at the present time there i no legislation regarding physicians assistants being considered and that they should keep us informed of thei activity.

Dr. Peterson indicated that it was his understanding that the AMA has recently come out and okayed some training programs for medical assistants.

Following further discussion, motion was made by Dr Gunn and seconded that the Chairman compose a suitable letter to be sent to Dr. Schertz and that formal action on this letter be taken on Sunday morning. Motion carried.—**Referred to Miscellaneous Affairs Committee.**

BUDGET COMMITTEE

■ Chairman Cope appointed the following Budget Committee for 1973: Drs. Gulick, Gunn, Stricker, Cope, Chandler, Martin.

COMMITTEE ON ARRANGEMENTS

The following physicians were named by the Chairman of the Council to the Committee on Arrangements for the 115th Annual Session: Drs. Franklin, Hetlage and Bach.—**Referred to Reports of Officers Committee.**

MSMA SPONSORSHIP OF TOURS

■ The Chairman then named the following members to study the various tour material for the fall of 1973 and suggest which one MSMA should sponsor: Drs. Martin, Chandler and Hetlage. This suggestion is to be brought to the Council Meeting on Sunday morning.—**Referred to Medical Education and Public Welfare Committee.**

PRESIDENT'S REMARKS

■ President Gunn reported that he had received correspondence from Dr. Mebust of the Kansas City Urological Society asking that they be the spokesman for the urologists in the western part of the state instead of the Federation of Missouri Urologists.

Dr. Cope stated that the Federation meets once each year at the site of the MSMA Annual Session. Its membership is statewide. The Kansas City Urological Society has members as far west as Colorado. Dr. Cope stated that at their last meeting in April in Kansas City, the Federation voted to go along with the Health Care Foundation. Dr. Cope indicated that he would write suggested letters to go to Dr. Mebust and the President of the Federation for Council approval on Sunday morning. Dr. Benoit indicated that the HCF had not received word from the urologists indicating they would participate on review panels.—**Referred to Miscellaneous Affairs Committee.**

■ Dr. Gunn reported that he had received a letter from Dr. McCallister of Kansas City regarding problems in computer interpretation of electrocardiograms. He feels that we should go on record as opposing it. He indicated that he would be happy to meet with anyone to discuss this. On motion of Dr. Gunn, duly seconded, it was recommended that this matter be sent to the MSMA Commission on Continuing Education for study and hearings. Motion carried. The motion was then amended to include that it also be sent to Jackson County Society for study.

Dr. Gunn received letters from HEW regarding our Resolutions #16 and #25 which we sent to them. In response to Resolution #16, "Support for Fee for Service Medical Care," they indicated that the Administration's recommended health care bills provide for continuing support of fee for service practice. In reply to Resolution #25, "Charges Imposed by Immediate Relatives," they indicated that they couldn't do anything about this. This would take legislative action.

The President stated that Dr. Miller and Dr. Paul Young have been named as official representatives of MSMA to attend the AMA Continuing Medical Education Conference on October 24-26 in Chicago. Dr. Gunn indicated that a letter had been received from Dr. Berry of Kansas City volunteering to serve as a MSMA representative inasmuch as he was going anyway. He was appointed as a third MSMA representative to attend this CME meeting. Dr. Gunn stated that Mr. McIntyre also would attend this meeting.

Dr. Gunn indicated that at our suggestion, Dr. G. Donald Shull of Jefferson City was named by Governor Hearnes as a member of the Missouri Board of Nursing Home Administrators. Dr. Shull replaces Dr. W. A. Bloom on the Board.

We have written to the AMA Board of Trustees asking them to send a member of the Board to the 115th Annual Session. However, we have not had a reply to this.

Dr. Gunn reported that Dr. Hollweg had received a letter from AMPAC commending him upon our support of AMPAC.

The President indicated that the Food and Drug Administration has stopped the shipping or selling of the Diapulse Machine in interstate commerce.—**Referred to Medical Education and Public Welfare Committee.**

■ Dr. Benoit, Chairman of the Health Care Foundation of Missouri, then gave the following report regarding the Foundation. He gave a statistical review of the membership. The Foundation has enrolled voluntarily 2,555 physicians in the state of Missouri—2,019 M.D.'s or 55.7% of the MSMA membership and 536 D.O.'s or 63.4% of their organization—59.5% of the two groups. Dr. Benoit stated that when the Foundation was first formed, they wanted to have at least 60% participation, but now feel that 80% is needed if they are going to get the type of support they want.

The HCF Board, at its June meeting, indicated that the HCF should make its services available to hospitals in whatever role they felt would be helpful. A letter was sent to the hospitals explaining this. It was sent to 98 hospitals with less than 100 beds and 96 hospitals with more than 100 beds. Of this number, replies were received from 49, of which 25 indicated they did not foresee a need for such service. Twelve hospitals with less than 100 beds expressed a keen interest and six hospitals with more than 100 beds expressed similar interest. Five hospitals with less than 100 beds indicated they might at some time be interested and one hospital with more than 100 beds.

Dr. Benoit stated further statistics, indicating that it is of considerable concern that the HCF has reviewed only 229 cases.

The law suit, as it relates to the Health Care Foundation, is at the moment awaiting a date for trial. Motions as filed by the HCF and MSMA were denied.

Dr. Benoit indicated that the HCF is still struggling with the Internal Review Department trying to have its categorization changed to a more favorable one.

He indicated that their Board is concerned about the manner in which panel review members and the members of the Central Coordinating Committee are to be selected. The HCF Bylaws Committee is charged with coming up with revised bylaws which will spell out how these members are to be selected. Dr. Benoit requested MSMA input into this effort. He stated that, originally, the M.D. panel review committee members were selected by the Councilor in their own district suggesting names, and Board members have been selected by the administrative members. Dr. Benoit indicated that this too has been challenged. He said that he felt there was some merit in the objections that the participating members really have no voice in the voting of the organizational structure as it currently exists. Dr. Benoit indicated that he feels the State Association should suggest the mechanism whereby such committee members, etc. are duly elected and/or appointed. He said that there should be some elections held at the end of this year. He said he would welcome any pertinent thoughts that the Council might have as to how to change the bylaws to make the voting more democratic. He stated that at the inception of the Health Care Foundation, many appointments were made and he felt that to continue this approach would be unwise.

Dr. Cope indicated that he felt three members of the Council should be selected to see what they could suggest and report in December.

After brief discussion, a motion was made and seconded that an advisory group from MSMA be appointed to assist the Bylaws Committee of the Health Care Foundation to suggest a new set of Bylaws that will make more democratic the election of panel review members and Central Coordinating Committee of the HCF and that the expenses of this advisory group be met by MSMA. Motion carried with one dissenting vote.

The question was raised regarding input from the Missouri Association of Osteopathic Physicians and Surgeons. Dr. Benoit stated that they are happy with the way selections are made now.

Dr. Benoit indicated that the financial needs for the continuing operations of the HCF are paramount at the present time. We are courting complete disenchantment with lack of staff and little financial help. Dr. Benoit stated that this summarized his report.

Dr. Hetlage questioned Dr. Benoit about what type of control the federal government might have if a grant were received. Dr. Benoit stated that, basically, all federal programs are the same. The only strings attached are that you have to demonstrate that the program is worthwhile and that you provide summary reports and evaluations at certain specified intervals. He stated that they may insist on consumer input. It was indicated that possibly the Foundation might lose a good percentage of its members if a federal grant were received.

Dr. Hansbrough asked whether all specialty groups had sent in guidelines for their specialties. It was stated that all had done so with the exception of family practice and urology.

Dr. Bradshaw asked if there were any other avenues of funding available. Dr. Miller said that they have explored every conceivable avenue of fiscal support. Basically, we felt that this Foundation, and this was supported by the existing Board, should be the responsibility of medicine. However, we felt it unwise to ask for an assessment to finance the Foundation. Although originally it was felt that physicians participating should possibly be paid for their time, we found rather hastily that this was not fiscally sound.

Dr. Miller went on to indicate that he felt there are only two alternatives—either go to the constituents and say we need more of your time and money or go to the federal government. He stated that all present give many dollars to the federal government each year and asked if they want any money back for something worthwhile. Everyone has said, "Yes. This is worthwhile. It needs to be done." If medicine doesn't do it, it isn't going to be done right. Let's don't walk away from this meeting today bankrupting this effort.

Dr. Benoit stated that he felt any attempt to get physician dollars into this is virtually impossible. He said that he does not feel that you can get physicians of MSMA to support this with an assessment. If we are successful through RMP, we are still 12 months away from getting any money. Dr. Benoit reported that he would like to have seen them operate under private funds. However, this did not pan out.

Dr. Bradshaw asked if the large Foundations had been approached for funds for the HCF. Dr. Benoit stated that under the present IRS classification of the HCF, these foundations would have to account for any funds they might give us. They do not want any part of that accountability. As indicated earlier, we are trying to have this rating changed.

Dr. Hetlage indicated that he felt the Council should take a vote on the HCF situation and made the following motion: "Move that we, as a Council, approve of the Health Care Foundation's efforts to seek additional financial help through government support." Motion was seconded. More discussion followed regarding the possibility of the Health Care Foundation seeking federal funds.

Dr. Franklin indicated that at the last meeting of the Council of the St. Louis Medical Society, it again was voted not to approve federal grants for the HCF. This was in accordance with the vote which had been taken a year or so ago and they still feel the same way.

Dr. Martin stated that it is his tax money that is up in Washington and he would like to get some of it back. He indicated that he felt that he would have to discuss this situation again with his constituents to find out where they stood.

Dr. McAlhany said that he felt his district would not buy seeking federal funds and moved that the matter of federal funds for the HCF be tabled until the December meeting to give the Councilors a chance to take it back to their membership. Motion was seconded and failed by a vote of five in favor of tabling and six against.

Dr. Bradshaw indicated that he also felt that the Councilors must make every effort to go back home and sell this.

Dr. Matthews stated that he felt it was not a matter of whether or not we are going to have federal funds, but whether it will be now or later. The important thing is, should we approve this now?

Dr. Mayer said that he has had a lot of experience dealing with the federal government and stated that the federal government does set down certain rules by which you are to abide if you get certain federal funds. If you feel you can abide by these rules, you accept the money. If you cannot go along with what they want, you don't accept the money.

Dr. Miller suggested that, possibly, the Council could approve federal funding of the HCF, providing that the premise of that funding be submitted to the Council for review. Dr. Benoit indicated that they are perfectly willing to report back to the Council, but it should become apparent that they cannot turn back to the two-parent organizations for everything.

Discussion ceased on the HCF and Chairman Cope called for the question on the motion on the floor: "Move that we, as a Council, approve of the Health Care Foundation's efforts to seek additional financial help through government support." Motion was seconded and carried by a vote of nine to three.

Dr. Bradshaw moved that the Health Care Foundation continues to seek other means of support as well. Motion was seconded and carried.—**Referred to Resolutions Committee.**

■ Dr. Benoit stated that he would like to make two other, unrelated comments. He stated that the *Jackson County Medical Society Bulletin* reprinted verbatim the presentation Dr. Howard gave at the AMA House, "What Is the AMA Doing?" He indicated that he felt this was one of the best things he had read and hoped that the Editorial Board of the MSMA Journal would be willing to print it in Missouri Medicine.

Dr. Benoit referred to the resolution introduced in the last MSMA House regarding Council Chairmanship. This resolution indicates that a change be made so that the Chairman of the Council could represent the entire state membership rather than his district and have another councilor from his district. He also indicated that according to the Planning Committee's report, the Immediate Past-President would be eliminated from the Council. Dr. Benoit stated that he felt that even though the Chairman of the Council would serve as a ranking officer of the Association, his main interest would still be with his own district. He said he felt a big mistake would be made if this was passed.—**Referred to Reports of Officers.**

DIRECTOR OF THE DIVISION OF HEALTH

■ Dr. Domke indicated that the MSMA Council has addressed itself to the problem of an effective program for the control of Venereal Disease. The State PTA, Department of Education, Division of Health, MAOPS and the MSMA are cooperating to come up with an effective educational program. Workshops are being planned for leaders of PTA organizations and they will need active support and participation of physicians in every area in this state. The Missouri Board of Health has endorsed this program.

Dr. Domke then indicated that the MSMA, at its Kansas City meeting, expressed itself by resolution as being interested in the matter of having medical expertise contributed to environmental health matters. The Board of Health also has expressed itself in the same way. He stated that a joint Senate House committee is reviewing what should be done by legislation to put into effect the recently passed constitutional amendments and welcomes any suggestions as to what should be done in regard to environmental concerns.—**Referred to Miscellaneous Affairs Committee.**

■ Presently, Comprehensive Health Planning is in the Department of Community Affairs which is directly under the Governor's Office. This is true in about half of the states. In the other states, CHP is associated with the Health Department. He indicated that he was not saying that it should be transferred to the State Health Department. It is true, however, that the administrative unit in the Governor's Office to which CHP was assigned appears to have been disbanded by the constitutional amendment.

The Little Hoover Commission has recommended that censing boards be placed under what was originally to e the Department of Agriculture and Community Afairs, but now is to be called the Department of Comunity Affairs, Regulation and Licensing. It seems to imly that there would be some common staff that would erve these different boards. The Board of Health invited e attention of the various health manpower licensing oards to this recommendation and are calling these ings to your attention so that recommendations can be ade to this joint Senate-House Committee if you desire.

As one important component to emergency medical ervices, the Board of Health has given high priority to gislation for ambulance regulation. Dr. Domke stated at we have seen the development of improved ambunce service in recent years, although some of the outate areas are in trouble. Hopefully, more support will e received for the bill during the next legislative session.

The Division of Health is undertaking a program audit r funds distributed by the Health Department for the pport of local health units. Some $2 million is distribted each year to the local health units. An auditing proram is being undertaken to determine and evaluate hat this money is doing. What this amounts to is an exansion and improvement of our audit procedures.

Dr. Domke said that he stated at the last Council leeting that he hoped to have information regarding hysician and health manpower in Missouri at this time. e passed around a copy of the printout containing this formation, numbers, where they are located, etc. He dicated that he would not review the entire table. They o hope to publish this and, possibly, in the MSMA urnal.—**Referred to Resolutions Committee.**

REPORT OF COMMISSION ON CONTINUING EDUCATION AND HEALTH MANPOWER

Dr. Ladyman, Chairman of the Commission, gave the llowing report on various activities of the Commission n Continuing Education and Health Manpower and sevral of its ad hoc committees.

He presented the Council with a resolution on nursing uties, indicating that it had been accepted by the Nursg Association, the Ad Hoc Committee on Health Manower and the Hospital Association and that he was eking Council approval.

Dr. Hansbrough called attention to the second page f the resolution. At the top of the page, it indicates Registered" professional nurses. He stated that since is does include licensed practical nurses, he felt the ord "registered" should be deleted. Dr. Ladyman indiated that there was no objection to this.

Dr. Ladyman then gave a brief progress report on the ilure rate of foreign physicians taking the state boards. everal AMA tables were distributed to the Council rearding how Missouri ranks with other states in this reard. These figures were for the year 1971 and showed failure rate in Missouri of 18.8%. For foreign gradutes, this failure rate was 20.9%. He stated that in comarison to other states who examined approximately the me number, we must be a little easier than the rest. orty-two states show no reciprocity for foreign gradues. Apparently, most of this is on an individual basis.

Dr. Mayer stated that it was his understanding that in e case of foreign graduates, they will accept them for eciprocity if they are boarded or board qualified or have raduated from an AMA approved program.

Dr. Ladyman spoke of the legal aspects of people dog emergency care in hospitals. The only information available right now are the 1966 guidelines set by the AMA. As of Jan. 1, 1973, they will publish new guidelines as to the legal implications of these people performing this task. He indicated that he would like to delay this until that time.

He stated that the turnout for the Continuing Medical Education workshop held in June at Columbia was not the best, but it was a fine educational program. They had several speakers who have been in the business for a long time. He stated that he felt the Committee really learned from it. This is in Phase I of the Program trying to identify needs and methods of administration. They are hoping to use the Health Care Foundation, possibly through its peer review mechanism input, to try to identify the needs in the different areas of the state. This was a worthwhile meeting.

Mr. Fox then reported for the Ad Hoc Committee on the 115th Annual Session. He stated that 23 separate sessions are planned. Both the Heart Association and the Cancer Society have agreed to sponsor sessions again this year. There will be two general sessions and the rest of the sessions will be sponsored by the various specialty groups in the state.

On motion of Dr. Matthews, duly seconded, the Council voted to commend Dr. Kinsella and the members of his committee for the splendid program they presented last year and to give full support for the forthcoming session. Motion carried.

Dr. Miller asked why OB-GYN was not sponsoring a session during the meeting. Mr. Fox indicated that letters were sent to all specialties and apparently no reply was received from them.

Mr. Fox reported on a meeting sponsored by the Missouri Extension Division on Rural Health which he attended. We were invited as a guest. Practically every organization was represented—Industrial Commission, Small Business Administration, etc. Almost the entire meeting was taken up with discussion of the problems of rural health and the federal bills now pending.

On motion, duly seconded, the report of the Commis-

President Walter T. Gunn *(right)* presents a special plaque of appreciation to Dr. Joseph V. Finnegan of St. Louis, who has served as Editor of MISSOURI MEDICINE since 1961.

sion on Continuing Education and Health Manpower was accepted. Motion carried.—**Referred to Medical Education and Public Welfare Committee.**

REPORT OF AMA DELEGATES

■ Dr. Neilson reported on the AMA meeting held in San Francisco in June. At the meeting, the concept of a physicians' union was vigorously attacked, representation for medical students was approved and the results of the first AMA membership poll were presented. The House of Delegates acted on 59 reports and 130 resolutions.

In his inaugural address, Dr. Hoffman, AMA President, made a plea for unity, but attacked the cry for unionism in the medical profession. It is estimated that 3,500 physicians now belong to unions or guilds. *Medical Economics* polled physicians and found that 60% of them believed that the profession should organize.

On a related issue, Dr. Hoffman said that peer review was initiated by the profession and it would be tragic and a dereliction of duty if we were to surrender that initiative to others. He indicated that *"Peer review is an idea whose time has come."*

The House received the results of the first membership opinion poll. Of the 94,000 respondents, 73% felt that the AMA should continue to try to keep the basic principles of private practice in any federal health program and 55% preferred the AMA's Medicredit plan of national health insurance to any other.

AMA programs that the members felt were not receiving enough emphasis were communications to the public, practice-management problems and socio-economic issues.—**Refererd to Resolutions Committee.**

■ The House approved a policy opposing employment of physicians' assistants in hospitals.

Guidelines were adopted for compensating physicians for the services of physicians' assistants. A Missouri resolution encouraging legislation at the state level which would place control of the physicians' assistant and physicians utilizing such services under state boards of physician licensing was referred to the Commission on Health Manpower for implementation.

The House established a Liaison Committee on Graduate Medical Education and a Coordinating Council on Medical Education.

The House adopted the following statement on marihuana: "This AMA House of Delegates does not condone the production, sale or use of marihuana. It does, however, recommend that the personal possesion of insignificant amounts be considered at most a misdemeanor, with commensurate penalties applied."—**Referred to Miscellaneous Affairs Committee.**

■ The Delegates adopted a strong resolution condemning attempts to fix physicians' fees by third-party payors in response to actions by Aetna Life and Casualty Insurance Company.—**Referred to Resolutions Committee.**

■ Bylaws changes gave medical students membership in the AMA and representation in the House of Delegates.

The House approved acceptance of a new contract with the Fireman's Fund Insurance Company to continue the AMA Group Disability Insurance Program.—**Referred to Constitution and Bylaws Committee.**

■ The two resolutions introduced by the Missouri delegation at the direction of the MSMA House of Delegates were adopted in amended form. One resolution regarde physicians' assistants and the second concerned the Pr priety of Professional Public Communications.

A new national project leading to the certification physicians' assistants is being undertaken by the AM and the National Board of Medical Examiners. The in portance of developing an examination for such a ne and evolving occupation as the physicians' assistant wa emphasized. The joint proposal recommends creation b the AMA of a national advisory body on certification o physicians' assistants, to counsel the AMA and the N tional Board regarding general policy decisions about th certification program.—**Referred to Miscellaneous Affai Committee.**

■ A tribute resolution was introduced into the House b the Missouri Delegation. Copies of the resolution will b sent to Dr. Wendell Scott's family.

Dr. Washburn sent a fine report to the Council, Offi cers, AMA Delegates and Alternates regarding a sum mary of the discussions before the AMA Council on Lon Range Planning and Development at the AMA sessio in June regarding proposed changes in the AMA organ zational structure and activities.

Dr. Neilson indicated that much hard work and effo paid off as Dr. Vernon Wilson was reelected to the Cou cil on Medical Education and Dr. Hector W. Benoit wa elected to the Council on Medical Service for a one-yea term. Dr. Neilson reported that both he and Dr. Beno chaired reference committees.

Missouri Congressman Durward Hall was properly re ognized for his service to government, his constituen and the entire medical profession.

Dr. Neilson thanked the officers and staff for their e forts at the AMA meeting and commended the Delegat and Alternates for a job well done. He stated that th delegation has been very effective this year and aske that the Councilors reassess AMA and bring positiv constructive thinking to the delegation so that Missou may continue to be among the leaders of the 50 constit ent delegations.—**Referred to Reports of Officers Com mittee.**

■ Dr. Hansbrough brought up the subject of the Ke nedy Bill (S-3327) and indicated that the press carrie a story indicating that the AMA had declined invitatio to testify on the bill before the Senate Health Subcon mittee. He said that he was aware that possibly we ha testified earlier, but felt that this was Mr. Kennedy's wa of using the AMA. Dr. Hansbrough indicated that an time a legislator requests the AMA to testify, we shoul be there to do it. He stated that he felt a letter should b written to the AMA indicating our concern of this ma ter.

Mr. Smith indicated that he was quite sure the AM did testify before the committee in its first round.

Dr. Matthews said that possibly there were some e tenuating circumstances for their not appearing. Ther are reasons at times for not testifying.

On motion, duly seconded, the AMA Delegates' repo was accepted with commendation. Motion carried.

REPORT OF AMA

Mr. Mortenson indicated that much time was spent o the Kennedy HMO Bill, Senator Kennedy wanted quic Senate action. AMA and state societies have been seekin to delay the bill and this has made Senator Kennedy u

“Antiacid” action for ulcer patients…

one of the many things you need in an anticholinergic.

Pro-Banthīne is provided in several different dosage forms and combinations which will meet virtually any clinical need. It is just as versatile in filling patient needs, among which are:

"Antiacid" action—Pro-Banthīne® (propantheline bromide) reduces gastric secretory volume and resting total and free acid.

"Sustained" action—Pro-Banthīne P.A.® (propantheline bromide) contains 30 mg. of the drug in the form of sustained-release or timed-release beads; on ingestion about half of the drug is released within an hour and the remainder continuously as earlier increments are metabolized.

High-level anticholinergic activity is maintained all day and all night in most patients with only two tablets every eight hours.

"Analgesic" action—Pro-Banthīne helps to control the acid-spasm-pain complex.

A "diagnostic tool"—Pro-Banthīne may be used parenterally to immobilize the duodenum for more revealing roentgenographic appraisal through hypotonic duodenography.

Pro-Banthīne is considered adjunctive in total peptic ulcer therapy that may include diet, conventional antacids, bed rest, and other supportive measures.

Vigorous anticholinergic action — Pro-Banthīne® Vials, 30 mg., are for intramuscular or intravenous use when prompt and vigorous anticholinergic action is required.

Mild anticholinergic action—Pro-Banthīne® Half Strength, 7.5-mg. tablets, for more exact adjustment of maintenance dosage in mild to moderate gastrointestinal disorders.

Indications: Pro-Banthīne is effective as adjunctive therapy in the treatment of peptic ulcer. Dosage must be adjusted to the individual.

Contraindications: Glaucoma, obstructive disease of the gastrointestinal tract, obstructive uropathy, intestinal atony, toxic megacolon, hiatal hernia associated with reflux esophagitis, or unstable cardiovascular adjustment in acute hemorrhage.

Warnings: Patients with severe cardiac disease should be given this medication with caution.

Fever and possibly heat stroke may occur due to anhidrosis.

In theory a curare-like action may occur, with loss of voluntary muscle control. For such patients prompt and continuing artificial respiration should be applied until the drug effect has been exhausted.

Diarrhea in an ileostomy patient may indicate obstruction, and this possibility should be considered before administering Pro-Banthīne.

Precautions: Since varying degrees of urinary hesitancy may be evidenced by elderly males with prostatic hypertrophy, such patients should be advised to micturate at the time of taking the medication.

Overdosage should be avoided in patients severely ill with ulcerative colitis.

Adverse Reactions: Varying degrees of drying of salivary secretions may occur as well as mydriasis and blurred vision. In addition the following adverse reactions have been reported: nervousness, drowsiness, dizziness, insomnia, headache, loss of the sense of taste, nausea, vomiting, constipation, impotence and allergic dermatitis.

Dosage and Administration: The recommended daily dosage for adult oral therapy is one 15-mg. tablet with meals and two at bedtime. Subsequent adjustment to the patient's requirements and tolerance must be made.

Pro-Banthīne P.A.—Each tablet of Pro-Banthīne P.A. (propantheline bromide) contains 30 mg. of the drug in the form of sustained-release or timed-release beads; on ingestion about half of the drug is released within an hour and the remainder continuously as earlier increments are metabolized. Thus the result is even, high-level anticholinergic activity maintained all day and all night in most patients with only two tablets daily. Some patients may require one tablet every eight hours.

The contraindications and precautions applicable to Pro-Banthīne 15 mg. should be observed.

How Supplied: Pro-Banthīne is supplied as tablets of 15 and 7.5 mg., as prolonged-acting tablets of 30 mg. and, for parenteral use, as serum-type vials of 30 mg.

Pro-Banthīne®

brand of
propantheline bromide

a good option in peptic ulcer

A DOUBLE-DUTY DIURETIC

Trademark

DYAZIDE®

Each capsule contains 50 mg. of Dyrenium® (brand of triamterene)
and 25 mg. of hydrochlorothiazide.

GETS THE WATER OUT IN EDEMA

BRINGS DOWN BLOOD PRESSURE IN HYPERTENSION*

SPARES POTASSIUM IN BOTH

Before prescribing, see complete prescribing information in SK&F literature or *PDR*.

*Indications: Edema associated with congestive heart failure, cirrhosis of the liver, the nephrotic syndrome; steroid-induced and idiopathic edema; edema resistant to other diuretic therapy. Also, mild to moderate hypertension.

Contraindications: Pre-existing elevated serum potassium. Hypersensitivity to either component. Continued use in progressive renal or hepatic dysfunction or developing hyperkalemia.

Warnings: **Do not use dietary potassium supplements or potassium salts unless hypokalemia develops or dietary potassium intake is markedly impaired.** Enteric-coated potassium salts may cause small bowel stenosis with or without ulceration. Hyperkalemia (> 5.4 mEq/L) has been reported in 4% of patients under 60 years, in 12% of patients over 60 years, and in less than 8% of patients overall. Rarely, cases have been associated with cardiac irregularities. Accordingly, **check serum potassium during therapy, particularly in patients with suspected or confirmed renal insufficiency (e.g., elderly or diabetics). If hyperkalemia develops, substitute a thiazide alone. If spironolactone is used concomitantly with 'Dyazide', check serum potassium frequently**—both can cause potassium retention and sometimes hyperkalemia. Two deaths have been reported in patients on such combined therapy (in one, recommended dosage was exceeded; in the other, serum electrolytes were not properly monitored). Observe patients on 'Dyazide' regularly for possible blood dyscrasias, liver damage or other idiosyncratic reactions. Blood dyscrasias have been reported in patients receiving Dyrenium (triamterene, SK&F). Rarely, leukopenia, thrombocytopenia, agranulocytosis, and aplastic anemia have been reported with the thiazides. Watch for signs of impending coma in acutely ill cirrhotics. Thiazides are reported to cross the placental barrier and appear in breast milk. This may result in fetal or neonatal hyperbilirubinemia, thrombocytopenia, altered carbohydrate metabolism and possibly other adverse reactions that have occurred in the adult. When used during pregnancy or in women who might bear children, weigh potential benefits against possible hazards to fetus.

Precautions: Do periodic serum electrolyte and BUN determinations. Do periodic hematologic studies in cirrhotics with splenomegaly. Antihypertensive effects may be enhanced in postsympathectomy patients. The following may occur: hyperuricemia and gout, reversible nitrogen retention, decreasing alkali reserve with possible metabolic acidosis, hyperglycemia and glycosuria (diabetic insulin requirements may be altered), digitalis intoxication (in hypokalemia). Use cautiously in surgical patients. Concomitant use with antihypertensive agents may result in an additive hypotensive effect.

Adverse Reactions: Muscle cramps, weakness, dizziness, headache, dry mouth; anaphylaxis; rash, urticaria, photosensitivity, purpura, other dermatological conditions; nausea and vomiting (may indicate electrolyte imbalance), diarrhea, constipation, other gastrointestinal disturbances. Rarely, necrotizing vasculitis, paresthesias, icterus, pancreatitis, and xanthopsia have occurred with thiazides alone.

Supplied: Bottles of 100 capsules.

SK&F CO.
Carolina, P.R. 00630

ppy. Contrary to the Senator's statement, the AMA's
ews were presented to the subcommittee last fall. It
bmitted a written statement reiterating its position
hen scheduling difficulties ruled out a personal appear-
ce.

Mr. Mortenson stated that they have had a good re-
onse to the AMA excess major medical insurance pro-
am. This program can be coordinated with any pro-
am which the member now has and the cost is very
w.

He also stated that AMA negotiations with Aetna have
en successful. We reached no definite deal, but we
ve reached an agreement.

Mr. Mortenson reported that his three priorities for the
MA are (1) politics, (2) keeping state societies in-
rmed and ourselves informed on legislation and (3)
MA membership. He stated that the AMA has been
ncerned about complaints regarding the lack of re-
onse, etc. and indicated that one individual is now in
arge of taking care of these complaints. He is David
eihaupt. He further stated that they would be happy
furnish speakers occasionally for county society meet-
gs.

LETTERS TO AMA

Dr. Hansbrough read a proposed letter to the AMA re-
rding the AMA's failure to appear at a Senator Ken-
dy Subcommittee meeting as had been requested by
e subcommittee. It was agreed that the letter be sent
the A.M.A.—**Referred to Resolutions Committee.**

OPHTHALMOLOGISTS

A proposed letter to Dr. Schertz was read. This letter
ncerned the ophthalmologists proposing legislation for
ysicians' assistants. A motion was made that the pro-
sed letter be sent to Dr. Schertz. Motion was seconded
d carried.

UROLOGISTS

A proposed letter that was to be sent to Dr. Mebust,
esident of the Kansas City Urological Society, was
ad. This letter concerned the Kansas City Urological
ciety's request that they be designated to represent the
ologists of Western Missouri at the state level.

Motion was made that this letter be sent to Dr.
ebust. Motion was seconded and carried.

Another letter was read that was to be sent to the
esident of the Missouri Federation of Urologists in-
rming him of the decision reached regarding the re-
est of the Kansas City Urological Society.

Dr. Stricker moved that this letter be sent to the Presi-
nt of the Missouri Federation of Urologists. Motion
s seconded and carried.—**Referred to Miscellaneous
fairs Committee.**

ACUPUNCTURE

Dr. Chandler moved that the following resolution re-
rding acupuncture be adopted and sent to the State
ard of Registration for the Healing Arts.

"WHEREAS, The practice of the ancient Chinese art of acupunc-
re and the Japanese art of shiatsu are attracting renewed atten-
n in both medical and nonmedical circles, and

WHEREAS, Various scientific agencies and institutions are cur-
ntly studying and investigating all aspects of acupuncture and
iatsu, including its possible utilization in the prevention and/or
atment of human disease, illness or other physical or mental
normalities, and

WHEREAS, The prevention and treatment of human disease,
ness or other physical or mental abnormalities clearly con-
tute the practice of medicine, therefore, be it

Resolved, That the Missouri State Medical Association urge the Missouri State Board of Registration for the Healing Arts to utilize such legal and statutory powers as may be available to declare that the principles apparently involved in the practice of acupuncture and shiatsu are medical principles and that acupuncture and shiatsu, if found to be scientifically valid and medically beneficial, would fall under the definition of the practice of medicine."

Motion was seconded and carried. It also was suggested that a news release be sent out regarding this matter. **—Referred to Medical Education and Public Welfare Committee.**

REPORT OF THE WOMAN'S AUXILIARY

■ Mrs. Jones introduced Mrs. Charles Willman, St. Joseph, President-Elect of the Woman's Auxiliary. Mrs. Jones indicated that Missouri will be host from October 18-20 to the North Central Regional Workshop.

Mrs. Jones stated that the Fall Conference of the Woman's Auxiliary would be held on October 24-25 at the Ramada Inn in Columbia. The program on the afternoon of the 24th will consist of a panel discussion on legislation and politics. That evening, the Auxiliary will join with the Fifth Councilor District meeting in having a benefit dinner for the Missouri State Medical Foundation. Speakers for the dinner will be Dr. Walter Gunn and Mr. Roy Pfautch, President of Civic Service, Inc., who will speak on "Practical Politics." The second day of the Conference will be a health education day. Mrs. Jones stated that she would like to thank Drs. William Bradshaw, Paul Young and Gerald Miller for their time and assistance in planning the Health Education Day. She also stated that 70 state organizations had been invited to join them.

Mrs. Jones stated that she hoped that a small room in the MSMA's new building could be set aside for the Auxiliary to store their archives.

Mrs. Jones stated that in keeping with the AMA's request that the women get involved in politics, the Auxiliary state legislation chairman had arranged for Mr. Royal O. Cooper to speak before the Jackson and Jasper County Auxiliaries and she hoped that he also could visit others.

Mrs. Jones indicated that Missouri was low in the list for AMA-ERF contributions. She indicated that there was a remedy for this. She stated that if possible, the Auxiliary would like to be given credit for all contributions in the state. Mr. McIntyre stated that he had checked into this matter with the AMA and that he was in full accord with this. He also indicated that everyone who gave a contribution would receive credit for it and that the Woman's Auxiliary would get credit for the total amount of AMA-ERF contributed throughout the state Mr. McIntyre stated that this would require official action by the Council.

Dr. Gunn moved that this policy for accounting for AMA-ERF funds be adopted. Motion was seconded and carried.

Mrs. Jones stated that she hoped that everyone is reading the Auxiliary page in MISSOURI MEDICINE. She also indicated that she and Mrs. Willman appreciated being invited to the meeting.—**Referred to Reports of Officers Committee.**

■ Dr. Miller reported that the Ad Hoc Family Planning Committee would present a short report at this time and present a more complete report at a later date. The Committee's report consists of the following four recommendations:

1. We recommend that due to the divergence in nature of the clinics, local medical societies and/or local physicians be urged to take a more active role in the establishment and operation of family planning clinics.
2. We recommend frequent appraisal of each clinic's programs as to its continued effectiveness and in its respect for medical ethics.
3. We recommend frequent appraisal of the clinic's programs in such areas as number of patients reached and costs-per-patient.
4. And, we recommend frequent appraisal of the clinics as to the extent they are invading the private practice of medicine.—**Referred to Miscellaneous Affairs Committee.**

■ Dr. Miller recommended that Drs. Gulick, Chandler and Cope act as Council representatives advisory to the Health Care Foundation's Constitution and Bylaws Committee. This action had been requested on the previous day.—**Referred to Resolutions Committee.**

■ Dr. Miller next reported on his experience as a member of the Missouri University President's Advisory Council for Health Related Professions. He indicated that he had been appointed to this committee two or three months before the completion of his term as President. The first meeting of this committee was held in June and was well attended by representatives from the various health professions. Dr. Miller indicated that he had asked that Dr. Gunn, as President of MSMA, be invited to attend these meetings, but that President Ratchford had asked that he attend the meeting in June. Dr. Miller indicated that a delightful program had been presented and that the first meeting had been extremely well received by all those present. Dr. Miller stated that certainly MSMA needs to be represented and thought that Dr. Gunn needs the exposure and full privilege to attend. President Ratchford felt that some continuity was needed so far as effectiveness is concerned.

Dr. Gunn then requested that Dr. Miller continue in this capacity as a member of this Advisory Council.

Dr. Hansbrough moved that this report be accepted. Motion was seconded and carried.—**Referred to Reports of Officers Committee.**

MISSOURI HEART ASSOCIATION

■ Dr. Hugh Stephenson, Chairman of the Cardiopulmonary Resuscitation Committee of the Missouri Heart Association, indicated that the Missouri Heart Association is submitting a grant application proposal to the Missouri Regional Medical Program to develop an intensive statewide training program in cardiopulmonary resuscitation. This program is not only designed for hospital personnel, but for all other emergency oriented people.

Dr. Stephenson said that the Heart Association has had a cardiopulmonary committee for some years. Several years ago, the committee sent out a survey to hospitals asking what is being done as far as record keeping is concerned on resuscitation attempts. He indicated that 70 hospitals did not as yet have any effective record keeping system on resuscitation attempts. Dr. Stephenson stated that he felt it was the obligation of his committee and medicine at large to see that appropriate applications of cardiopulmonary resuscitation were made. He stated that, perhaps, through the grant we can make a contribution. He indicated that we need to know just what is being accomplished and he doesn't believe anyone can say that the programs have achieved a specil degree of success.

Dr. Stephenson stated that this committee would lil to have the encouragement and the backing of MSMA.

Dr. Hetlage moved that we endorse and support th project. Motion was seconded by Dr. Miller and was ca ried.

CENTRAL METHODIST COLLEGE MANPOWER PROJECT

Dr. John Smart of Central Methodist College, Fayett presented a community-based educational manpow project in rural Mid-Missouri that the college wants implement.

Dr. Smart stated that he had researched the manpow problem in rural Missouri and that one main area of co cern is the shortage and maldistribution of allied healt manpower. He indicated that funding would con through HEW and Missouri Regional Medical Program.

Dr. Smart stated that this project is conceived as quasi-experiment in the more effective organization an cooperation of community-based institutions of high education and of professional health service. The proje will demonstrate ways of coordinating and cooperatir procedures, facilities, faculties and professional personn among these institutions which share concerns and r sponsibilities for the more effective recruitment and pre aration of allied health professionals to meet local nee and for facilitating professional and sub-professional a pirations at the local level. The community-based con prehensive educational programs of the project will me more effectively the demonstrated health manpow needs of the ten and one-half county Mid-Missouri rur area that will participate in the project. All the educ tional institutions in this project plan to develop and e tablish programs which will (1) expand health caree education opportunities for people of the area; (2) arti ulate and formulate effective linkages with all establishe training programs in the area (both sub-professional an professional levels); (3) significantly increase the nur ber of appropriately educated allied health professional and (4) provide for maximum vertical mobility betwee professions and sub-professions. Dr. Smart indicated th they had received endorsements from various health re lated organizations.

After hearing Dr. Smart's report, it was moved that th Council approve in principle the ideas which he presen ed. The detailed program will be submitted to our Con mission on Continuing Education and Health Manpow for study and subsequent report. Motion was seconde and carried.

REPORTS OF DEANS OF THE MEDICAL SCHOOLS

Dr. M. Kenton King of Washington University Med cal School reported that enrollment in Washington Uni versity had increased considerably. He indicated th within three years, there will be about 480 students i the school of medicine.

Dean Mayer of Missouri University reported that 11 new medical students had entered school in Septembe and 104 of these were Missouri residents.

Dr. Mayer stated that he had just learned that D George Ulett had resigned as Director of the Division o Mental Diseases and stated he would like to present th following suggestion that could be adopted as a resolu tion by the Council and be sent to Dr. Ulett:

> The MSMA Council, having recently been informed of th

ignation of Dr. George Ulett as Director of the Division of ntal Diseases of the State of Missouri, wishes to express to . Ulett the sincere appreciation of the Missouri State Medical ociation for his efforts over the last decade in improving the ntal health programs of the State of Missouri.

Dr. Miller moved that the above be adopted and sent Dr. Ulett. Motion was seconded and carried.

Dr. Mayer stated that in keeping with his approach d that of Dr. Wilson of keeping the Council informed any issues in which they are involved, he would like present an issue and seek the approval or opinion of e Council before implementing it. This issue relates to viding joint training for individuals in child psychiatry d working with the Kirksville College of Osteopathy. is program would be run conjointly in the facilities of medical school and the Warren Hearnes Child Devel- ment Center in Fulton. Dr. Mayer pointed out that the IA and others have approved of osteopaths coming in- AMA approved programs. No objections were raised.

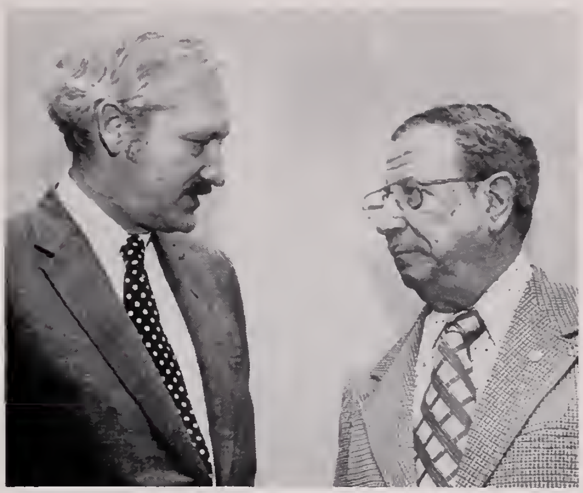
Dean Mayer indicated that he had recommended to ancellor Schooling that the policy of requiring referral patients to the University Hospital by practicing phy- ians should be expanded to state as follows:

"Any person requesting medical care, special study or gnosis may be admitted to the University Hospital. dmission may occur by direct request of a patient, by erral of a licensed physician or through such other eans as deemed appropriate under such rules and regu- ions as may be adopted."

Dean Mayer further pointed out that no change in this licy had as yet been made in that he wanted to make re that the Council of the Missouri State Medical As- iation had no objections to the change before it was plemented. No objections were raised by the Council.

Dean Noback stated that there were three things that wished to speak to:

1. He indicated that the Kansas City Medical School had 72 new students in year one and 12 new students in year three.
2. Dr. Noback indicated that General Hospital in Kansas City would be replaced by a new facility.
3. He next spoke to the school's application for an area health education center in western Missouri under the program supported by NIH through the Bureau of Health Manpower Education. Dr. Noback stated that in the latter part of June, the deans of all M.D. and D.O. schools in the country received a letter from the Bureau of Health Manpower Education stating that funds would be available to develop health education centers. He indicated that these centers would be based in medical schools and a consortium of institutions in some geographic portion of a state. He stated that he had discussed this with area hospital and health institutions and a letter of intent was filed that they were interested in developing such a center. Their letter was viewed as one of those that was meritorious. He indicated that he had been in contact with people in Springfield, St. Joseph and Columbia and that there is a substantial interest on the part of physicians, hospitals, nursing schools and educational institutions in cooperating in developing such a center.



Dr. R. Allen Chandler *(left)*, Seventh District Councilor, and Dr. Max S. Franklin, Third District Councilor, were elected Chairman and Vice-Chairman of the MSMA Council at the meeting on April 1.

Dr. Noback stated that the intent of their proposal is bring those in the western part of Missouri into closer mmunication and, over the years, they can plan realis- ally to improve our ability to support continuing edu- tion programs for all in the health manpower field. Dr. bback stated that the response to the application is not yet known, but that it should be known by the end of this month. Dr. Noback indicated that a substantial number of dollars would be involved and the federal program calls for level funding for each of five years.

Dr. George Thoma of St. Louis University stated that their school had 153 new students this fall. He indicated that one-third of the members of the class are Missouri residents. He said that there are several disadvantaged students. He indicated that a bridging course had been held last summer to help prepare some of these disadvantaged students for medical school. The program covered matters of study habits and refresher courses.

Dr. Thoma indicated that with their expanding enrollment and limited clinical facilities in their own hospital, they were having to rapidly expand their affiliation program with private and tax supported hospitals.—**Referred to Medical Education and Public Welfare Committee.**

REPORT OF COMMISSION ON MEDICAL ECONOMICS

■ Dr. Peterson, Chairman, stated that Mr. Proctor Carter and Mr. Ed Singleton of the Division of Welfare had attended the Commission meeting held on June 29. Mr. Carter had reported that nursing homes had recently been audited by federal auditors. The auditors observed 118 patients in ten nursing homes and, in their opinion, 67% of these patients may not have needed to be in the nursing homes. Mr. Carter had requested reexaminations of the patients. Mr. Carter also reported that he hoped to return physicians' reimbursement for Medicaid services rendered to the June, 1970 schedule.

Dr. Peterson reported that a physician reimbursement problem under Medicare had been referred to his Commission. The problem occurred when a patient of a physicians' group complained to the SSA that the group had refused to furnish an itemized bill for approximately $45.00 that would enable him to receive reimbursement. Subsequently, the group did furnish an itemized bill that was adequate for the patient to receive payment.

The HEW intermediary manual provides that "a patient's statement or a Social Security Office report may indicate that an attempt was made to obtain an itemized bill from the physician, but the physician refused to furnish the bill until it is paid. The carrier should then contact the physician or, if necessary, the local medical society in an effort to resolve the problem. If appropriate, the carrier may suggest the beneficiary file a grievance with the Society."

Voluminous background material was presented to the Commission concerning the methods of reimbursements under Medicare and available options. It appears that the real question involved is, "Is it the right of the physician or is it the right of the patient to determine the method of reimbursement for services rendered under Medicare?"

After discussion, on motion, the Commission recommends that the selection of alternative methods of collecting charges from the Medicare patient is the responsibility of the treating physician and that the patient should not have the option of demanding direct payment to himself for a physician's services. Dr. Peterson indicated that the Commission felt the whole problem of third party payments needed to be studied and an ad hoc committee, chaired by Dr. Heeb, was formed to study this problem and report its recommendations at the next Commission meeting.

Dr. Peterson next reported on the setting up of an organization for negotiation of professional fees. He stated the committee had researched this and had decided to set this up as a department of economic affairs within the framework of MSMA. He indicated that they had received advice not to set up the organization in this manner. He said that the committee had made a change of direction and would now set up the organization outside of the official structure of MSMA with its own Constitution and Bylaws and operating rules.

Dr. Peterson stated that the Illinois State Medical Society had recently published a pamphlet entitled "Medicare Misconceptions" and offered it for sale to its members so that they could give them to their patients. It has been a tremendous success and the Illinois Society has granted permission for all state medical associations to reprint this pamphlet. Dr. Peterson indicated that the Commission felt that this pamphlet should be reprinted and offered for sale to MSMA members.

Dr. Cope stated that the negotiation for fees organization would be similar in construction to MMPAC and that in approving the report, we would be confronted in the future with such an organization.

Dr. Hetlage moved approval of the entire report. Motion was seconded by Dr. Martin and carried.—**Referred to Resolutions Committee.**

REPORT OF COMMISSION ON PUBLIC AFFAIRS

■ Dr. Bowles, Chairman of the Commission, reported that he had a good Commission again this year, and that several items had been considered at a recent commission meeting.

Dr. Bowles reported that one of the issues of prime importance discussed was that of emergency medical services. He reported that on August 28-29, the Governor's Advisory Council on CHP held a meeting on emergency medical services. The meeting was held to discuss the need for providing adequate emergency care in Missouri. As a result of the meeting, a good provisional report had been written. Dr. Bowles asked permission that Dr. Allen Klippel be asked to appear at the December Council meeting to go over this report. Dr. Bowles mentioned that Senate Bill #508, which provides for the standardization and high quality of emergency care vehicles and
attendants, would be in the General Assembly next
sion and he would appreciate support for this bill.

Dr. Bowles indicated that there had been considera
discussion on VD education. He stated that he had
tended a meeting on July 19, with Dr. Bob Taylor of
Department of Education; Mrs. Leroy Schulenberg, P
ident of the State PTA; Mr. Ray Bly of the State
partment of Health; and Mr. Swarens. As a result of
meeting, it was decided to embark upon a renewed ef
toward stimulating VD education. A series of appr
mately 18 workshops are being planned over the st
under the sponsorship and cooperation of the Dep
ment of Education and the Department of Health for
officers and leaders of state PTA organizations w
MSMA providing physicians to handle discussion
medical and technical matters. An ad hoc committee c
sisting of Drs. Orgel, Hungate and Neilson was appoi
ed to study the possibility of physicians speaking at th
conferences. As a result of these conferences, it is ant
pated that the information received by the PTA lead
would be brought back to local school authorities
that these groups would cooperate in instituting a uni
type of VD education in schools.

The next item the commission discussed was the P
lic Affairs Conference. Dr. Bowles stated that despite
excellent programs, there had been a drop in attendan
The commission considered the possibility of dropp
the conference. After discussion, it was decided to c
tinue this project. The commission also indicated to
Councilors that possibly in some way, they could u
their county society officers to attend this conferen
There also was a suggestion at the commission meet
of combining the Woman's Auxiliary meeting with
Conference.

Dr. Bowles reported on the Mini-Estes Confere
that will be held on March 1-2, 1973. A similar conf
ence was held last year and was quite successful.
Bowles said that he attended a planning meeting for t
conference on July 22. He indicated that he would l
financial support for this conference, if needed. He sta
that the theme for this year's conference would be "P
lic and Professional Accountability for Health Care S
vices."

Dr. Bowles reported that Resolution #33 had been
ferred to the Commission. This resolution was concer
with the creation of a Pediatric Coordination Council
Missouri. The Council would be composed of represen
tives from various organizations, including the MS
The Commission recommends support for this Cou
and also recommends that Dr. Donald Blim of Kan
City be appointed to represent the MSMA.

Dr. Bowles requested suggestions for members of
ad hoc committees. He stated that he had received s
gestions from Jackson County.

Dr. Bowles stated that even though MSMA is not m
ing headlines in its efforts against drug abuse, our h
is being felt in the overall educational effort. He also
dicated that despite the public clamor for action on d
abuse, alcoholism remains far and away the greater pr
lem.

Dr. Bowles reported that the CHIP program was p
gressing and asked that Dr. Rikli be invited to the D
cember meeting to give a progress report.

Dr. Bowles reported on a request for approval of
medical program from the Missouri Municipal Leag
After consideration, the commission decided that MS
should serve in an advisory capacity and the MSMA st
should keep the Municipal League informed on hea
matters of mutual concern.

Dr. Bowles next spoke about mobile X-ray units. He licated that the HEW, FDA, ACCP and the ACR had ued a joint statement recommending the banning of bile X-ray units. The commission felt that they did not ve enough information on this matter and would report this at the December meeting.

Dr. Hetlage moved that the report be accepted with mmendation. Motion was seconded and carried.

Motion was made to appoint Dr. Blim to the Pediatric ordination Council and to give financial support to the 73 Mini-Estes Conference. Motion was seconded and ried.

COMMUNICATIONS CLINIC

Dr. Stricker reported on the Communications Clinic ld on August 28-29 in Chicago. Some of the clinic as, which could be considered by the MSMA, includ- a legislator's interview program, a News Media Code d a special venereal disease education program.

The legislator's interview program would be done by news reporter with individual lawmakers on health- ated bills which are under consideration. Television es of the interview would be sent to stations in that maker's district. The cost would be about $175 a ek during the legislative session. The News Media de, developed jointly by physicians and media repre- tatives, establishes certain guidelines in reporting alth-related news. A special VD education program ried out by New York Medical Society offers an eco- mical, but informative, pamphlet which students and chers will read.

Dr. Matthews asked if it would be possible to make a packet of these pamphlets passed out at the Com- nications Clinic and send them to the Presidents and cretaries of County Medical Societies. He indicated t this would be a good way to disperse some of these as and a covering letter be sent with this packet. Dr. tthews moved that a packet of these pamphlets be t to the Presidents and Secretaries of each county so- ty. Motion was seconded. During discussion, the mat- of cost was brought up. Mr. Swarens pointed out that se pamphlets could be obtained from the AMA and t the only cost involved would be mailing costs. It was n suggested that these be sent only to the secretaries each society.

The motion was amended to read as follows:

> Move that a packet of these pamphlets be sent to the Secretaries each county society.

The motion was seconded and carried.

Mr. Swarens was requested to study the News Media de and report back on it at the December meeting. **Referred to Miscellaneous Affairs Committee.**

COMMITTEE ON PLANNING

Dr. Hetlage stated that Resolution #27, regarding uncil Chairmanship, had come from his District and l been considered by the Planning Committee. It was t that as it now stands, it could not possibly be imple- nted. Dr. Hetlage requested that this resolution be re- red back to the Planning Committee for further con- eration.

Dr. Gunn moved that this item be referred back to the nning Committee for reconsideration and report be- e the Annual Meeting. Motion was seconded and car- l.

The recommendation that the Constitution be changed that the Immediate Past-President of the Association longer be a member of the Council also was referred k to the Planning Committee for further consideration.—**Referred to Reports of Officers Committee.**

■ The next item considered by the Planning Committee was the possibility of obtaining medical students, after their first year of medical school, working as assistants in physicians' offices during the summer. Dr. Franklin stated that this was an excellent program and gives the students a chance to find out what medicine is about.

It was moved to send this recommendation to the Commission on Continuing Education and Health Manpower. Motion was seconded and carried.—**Referred to Medical Education and Public Welfare Committee.**

■ The last item considered by the Committee was the possibility of relinquishing our tax exempt status under IRS regulations for nonprofit corporations. Dr. Cope stated that we ought to have our attorneys and accountants views on this matter.

Dr. Hansbrough moved that this matter be referred to the Long Range Planning Committee for further detailed study. Motion was seconded and carried.—**Referred to Reports of Officers Committee.**

MSMA SPONSORSHIP OF TOURS

■ Mr. Cooper reported that 134 physicians and their wives had signed up for the Caribbean Cruise and that the program had been approved for credit hours by the AAFP.

A committee composed of Drs. Martin, Hetlage and Chandler had been appointed to look at some suggested material for future tours. The committee recommended taking the Rhine Tour.

Dr. Hetlage moved acceptance of the Rhine Tour. Motion was seconded and carried.—**Referred to Medical Education and Public Welfare Committee.**

COMMITTEE ON MEMBERSHIP COMMUNICATIONS

■ Dr. Franklin, Chairman of the Committee, stated that effective membership communications is a problem in all organizations. He indicated that the committee reviewed the methods of communications now used by the MSMA and studied varied types of inner communications employed by other associations. One interesting idea would be the publication of an annual "Blue Book." This would be published in conjunction with our annual roster issue and could contain items of general interest and importance to physicians. The committee recommends considering adding it to the MSMA communications program.

The committee also felt that readership of the Journal might be better if more socio-economic material was added and, also, many *Letters to the Editor* require meaningful answers.

The committee discussed various ways of distributing the *Newsletter* which is the yellow sheet insert in the Journal. It was felt that the *Newsletter* tends to increase readership of the Journal and the committee recommends the expansion of the *Newsletter* to perhaps four pages when available material warrants.

The committee felt that hospital bulletin boards could be of aid in communications if the material is fresh, important and limited to one page. An area of communications the committee deemed vital is the personal contacts of MSMA officers and staff with local medical societies. This offers a chance for local physicians to become better informed on how the MSMA works and what it provides for its members.

The committee also recommends that the new-member pamphlet be revised and updated and mailed to each new member and that staff should investigate other materials that might be of assistance to new members.

The committee recommends the News Media Awards be continued. Finally, the committee recommends that the Editor of the Journal be added to the Membership Communications Committee.

Motion was made, seconded and carried that Dr. Franklin's report be approved and, in so doing, we approve these matters and distribute these to the various committees and commissions for study.—**Referred to Reports of Officers Committee.**

REPORT OF LEGAL COUNSEL

■ Mr. Noble reported that a summary of the Curteman Case had been forwarded to Mr. McIntyre and that copies had been given to the officers and councilors.

Mr. Noble indicated that the Health Care Foundation suit was pending a setting of date for trial in the Circuit Court of St. Louis County. He indicated that recently interrogatories had been filed by the plaintiffs and that we had furnished them with complete answers setting forth the legal steps in the formation of the Foundation. Mr. Noble indicated that he had asked the attorney for the plaintiffs for at least 60 days notice of the date set for trial in order to line up witnesses and so that there would be no conflicts. He also indicated that he planned to meet with the lawyer for the Foundation in the near future for further cooperative endeavors.

JCAH WORKSHOP

Mr. Fox stated that at the last Council Meeting, it was voted to hold the Mini-Estes Conference on March 1-2, 1973 and the JCAH Workshop would convene when the Mini-Estes Conference adjourns. Mr. Fox stated that since that time, the Joint Commission faculty in Chicago has informed us that this workshop should be on its own merits and not rely on the attendance at some other program. The dates for the workshop have been changed to May 11, 12 and 13 at the Lodge of the Four Seasons. This will be jointly sponsored by the Hospital Association. Mr. Fox asked if the Council would like to reconsider sponsorship for this.

The question of financing was brought up and Mr. Fox stated the Joint Commission had to have 150 advance registrations accompanied by checks for registration fees before they would even have the workshop. Mr. Fox stated that he didn't anticipate any financial deficit on the basis he just described.

Dr. Franklin moved that we co-sponsor with the Missouri Hospital Association the hospital workshop of the Joint Commission on Hospital Accreditation. Motion was seconded and carried.—**Referred to Miscellaneous Affairs Committee.**

REPORT OF THE TREASURER

■ Dr. Gulick, MSMA Terasurer, gave a brief report on the financial standing of the Association, copies of which were distributed to the Council and Officers. He stated that the Association is in good financial condition at the Present time. On motion, duly seconded, the report of the Treasurer was approved.

REPORT OF THE BUILDING COMMITTEE

Dr. Matthews, Chairman of the Committee, reported that we had paid $5,000 down on the new building. He stated that the building would be vacated around October 1. Dr. Matthews indicated that with our present financial condition, we would be able to purchase the building outright and use the building as collateral in securing funds for remodeling.

Dr. Matthews stated that the architectural firm
Pallardy and Evans of Jefferson City has been reta
on an hourly basis rather than the standard contrac
a percentage of the construction costs.

The committee also approved the selection of
Schell Construction Company of Jefferson City as
contractor. Both the architect and the contractor l
worked on the adjoining buildings and the comm
felt that this would result in a savings because deta
plans and specifications of the other buildings will
helpful in our plans.

Dr. Franklin moved that the report of the comm
be approved. Motion was seconded and carried.—
ferred to Reports of Officers Committee.

■ Dr. Bradshaw asked for reflective thinking on a
sible solution to some of our medical problems. He i
cated that he would like to have thoughts on the ide
having each physician spend some time as a prin
physician during his training after graduation and be
he continues on in the specialty training he wishe
pursue. This would be an additional period of trai
in his career before he continues in his residency work

Motion was made and seconded to table this ma
until the next meeting. Motion carried.

Dr. Martin stated that the committee reports had
quite long during this meeting and that a time l
should be put on these reports.

Dr. Martin moved that all reports given to the Cou
should be limited to 15 minutes, excluding discuss
Motion was seconded and carried.—**Referred to Med**
Education and Public Welfare Committee.

■ Mr. Swarens indicated that responses had been
ceived in regard to Resolution #35, which called for
mailing of a card asking physicians to restrict their
of amphetamines. Mr. Swarens stated that to date 1,
physicians, which is 40% of the membership, had sig
the cards. He also stated that the resolution also ca
for this information to be released to the news me
Mr. Swarens asked whether or not this informa
should be released now.

Motion was made and seconded to release this in
mation when it reaches 50%. Motion carried.—**Refer**
to Miscellaneous Affairs Committee.

■ The Chairman stated that he, on behalf of all th
present, would like to thank Dr. and Mrs. Stricker for
fine entertainment on Friday and Saturday.

Mr. McIntyre stated that the Budget Committee m
ing would be held on Friday, December 8, and
Council Meeting on Saturday, December 9 and Sunc
December 10. He indicated dates were being held
Ramada Inn, Jefferson City. He said the rates had b
raised at the Lodge of the Four Seasons, where last ye
December meeting had been held. Dr. Chandler mo
that the December Council Meeting be held at the
mada Inn in Jefferson City. Motion was seconded
carried.—**Referred to Reports of Officers Committee.**

Meeting of Dec. 9-10, 1972

■ James C. Cope, M.D., Columbia, Chairman, called
meeting to order. Those present were Drs. Cope; Wa
T. Gunn, St. Louis; E. A. Stricker, St. James; John
Matthews, Jefferson City; Charles R. Gulick, St. Lo
Gerald L. Miller, Kansas City; John N. Martin,
Joseph; Lysle M. Bach, Hannibal; Max S. Franklin,

ouis; Louis P. Hetlage, Troy; William D. Bradshaw,
linton; R. Allen Chandler, Kansas City; Howard J.
cAlhany, Springfield; Claude W. Cooper, Thayer; Eu-
ene T. Hansbrough, Poplar Bluff; Hector W. Benoit,
., Kansas City; Stanley S. Peterson, Springfield; J. Lor-
Washburn, Versailles; Samuel B. Guze, St. Louis;
eorge A. Thoma, St. Louis; William D. Mayer and
illiam C. Allen, Columbia; Allen Klippel, St. Louis;
ul R. Young, Columbia; Melvin Kasten, Cape Girar-
au; Arthur Rikli, John Maher, Helen Yeager, Colum-
a; Mrs. Keith D. Jones, Warrensburg; Mrs. Jackie
atson, St. Louis; Messrs. Lee Mortenson, Chicago, Ill.;
hn Noble, Kennett; Allen D. Smith, Kansas City;
ollister S. Smith, St. Louis; Gary L. Schnedler and
ax Lilley, Springfield; Mark Halvorson, Jefferson City;
y McIntyre, Tom P. Fox, Royal O. Cooper and C. C.
varens, Staff.

Chairman Cope called the meeting to order and re-
ested approval of the minutes of the Sept. 16-17,
72 Council meeting. Dr. Hetlage indicated that due
several objections, he had withdrawn the statement
garding organized medicine which appeared in the
uncilors' copy of the minutes and would discuss this
rther during his Councilor District report. On motion,
ly seconded, the Council minutes as published in the
urnal were accepted.

REPORT OF THE EXECUTIVE SECRETARY

Mr. McIntyre reported that Dr. Bach had represented
e Missouri State Medical Association at the services
Dr. W. F. Francka, Hannibal, a Past-President of
SMA, who passed away recently. The Association sent
wers.

A note of thanks has been received from Mrs. Shat-
n, widow of Dr. Martyn Shattyn, thanking the As-
ciation for the "In Memoriam Perpetuum." This trib-
e, signed by the MSMA President and the Executive
cretary, is sent to the families of deceased members.

Mr. McIntyre read a short note from Dr. George
ett expressing his appreciation for the letter the As-
ciation sent when he resigned as Director of the
vision of Mental Diseases. Dr. Harold Robb has been
pointed as the new Director.—**Referred to Reports of**
ficers Committee.

A letter was written to the AMA to find out why the
IA did not appear before the Kennedy Subcommittee
Health regarding HMO legislation on June 22, 1972.
e reply pointed out that the AMA had reported to
committee on various other occasions.—**Referred to**
solutions Committee.

The Councilor from District #6, Dr. Bradshaw, has
en elected Vice-President of the State Board of
alth.

A letter to John R. Smart, Ph.D., Central Methodist
llege, from Dr. Charles A. Worley, Chairman, MSMA
Hoc Committee on Health Manpower, regarding a
ommunity-Based Educational Manpower Project in
ral Mid-Missouri" was read. This letter indicated that
Committee had given unanimous approval in prin-
le to the proposed project and further stated that the
ion of the committee was subject to official confirma-
n of the Council.

Motion was made to accept this Committee report.
tion was seconded and carried with one dissenting
te.

Mr. McIntyre stated that a news release was written
garding the stand the Council had taken on acupuncture at its September meeting. Prior to release, the Board of Healing Arts had taken action on this matter. Unfortunately, this was not known to the Association. Many times, press releases are misinterpreted, and the MSMA office has received many inquiries seeking physicians who will perform acupuncture.—**Referred to Medical Education and Public Welfare Committee.**

■ In September the Missouri Ear, Nose and Throat Association, Inc., a statewide organization, was formed. The Association has asked the MSMA to recognize this organization on the Interspecialty Commission for otolaryngology. On motion of Dr. McAlhany, duly seconded, it was agreed that the Council accept the request of this group and that the organization becomes a member of the Interspecialty Commission.—**Referred to Miscellaneous Affairs Committee.**

■ Dr. Allen gave a short report on the meeting of the National Joint Practice Commission which he attended on November 9-10 in Atasca, Ill. at Dr. Worley's request.

Dr. Allen said he was pleased to represent the MSMA at the meeting. He stated that the impetus for establishment of the National Joint Practice Commission came from the National Commission for the Study of Nursing and Nursing Education for the purpose of promoting involvement of physicians and nurses in a cooperative effort to develop further the role of medicine and nursing to effect better health care. Both the president of the American Nurses Association and the president of the American Medical Association addressed the group. AMA President Hoffman pointed out that while the AMA supported the National Joint Practice Commission, he felt that the states were the laboratories for exploring and testing the expanded roles for nurses, as well as new mechanisms and roles of physicians and nurses working together in the private practice setting. A list of objectives were distributed to the participants. To date, 26 states have established Joint Practice Committees and others have Liaison Committees or some other form of formal liaison between physician and nurse organizations. Only two states have no structure for formal relationship between the two organizations. There were small group sessions for the major portion of the Conference with an opportunity for all attendees to participate.

Dr. Allen called attention to a booklet entitled, "The Physician's Assistant—Today and Tomorrow." He felt that it is well worth reading. The price of the book is $3.95 and can be obtained from the County Mailing Service, Inc., Sawmill Road, Westhaven, Conn. 06516. On motion, duly seconded, the report given by Dr. Allen was accepted.—**Referred to Medical Education and Public Welfare Committee.**

■ Mr. McIntyre stated that a letter had been received from the AMA regarding its National Leadership Conference to be held on Feb. 16-18, 1973. Discussion followed regarding which MSMA officers should attend this conference. On motion, duly seconded, it was agreed by the Council that the President-Elect, Chairman of the Council, Vice-Chairman of the Council and Executive Secretary should attend this National Leadership Conference.—**Referred to Reports of Officers Committee.**

REPORT OF LEGAL COUNSEL

■ Mr. Noble reported that the Health Care Foundation of Missouri case is set for trial on January 15, 1973. He indicated that he and Mr. Carson, Legal Counsel for the Health Care Foundation, are working on the details for the trial and will be in touch with those members of the Council whose presence they consider necessary at the trial.—**Referred to Resolutions Committee.**

■ Chairman Cope introduced and welcomed Dr. Melvin Kasten, Cape Girardeau, President of the State Board of Registration for the Healing Arts.

The Chairman added an item to the agenda regarding a Building Committee Report for Sunday.

REPORT OF THE TREASURER

Dr. Gulick presented the Treasurer's Report. He reviewed the figures shown in the Treasurer's Account, minus the accounts payable, which left a balance on hand of $40,214.89 as of Dec. 1, 1972. This does not include the investment account (at cost) of $125,733.91.

On motion of Dr. Gunn, duly seconded, the Treasurer's Report was approved.

REPORT OF THE BUDGET COMMITTEE

The Budget Committee met on Friday afternoon, December 8, prior to the Council meeting on Saturday. The Committee reviewed the material presented which showed Exhibit A—Actual Income through October 31, 1972; Expected Total Income for 1972; Income Budget for 1972 and Estimated Receipts for 1973. Exhibit B—Actual Expenditures through October 31; Estimated Expenditures for 1972; Budget for 1972 and Proposed Budget for 1973. Exhibit C—Actual Meeting and Committee Expenses through Oct. 31, 1972; Estimated Expenses for all of 1972 and Proposed Budget for 1973. A breakdown of anticipated income and expenses for the year 1972 was also included.

Dr. Gulick indicated that he felt the proposed budget for 1973 is practical and within anticipated income. He further stated that the Budget Committee recommends that for 1973, the interest from the Investment Fund be placed into the operating fund rather than being reinvested.

Dr. Gulick indicated that the building for the Missouri State Medical Association headquarters office has been paid for. However, this money did not come out of current income. The Budget Committee commended the AMA Delegates for the great job they have done and wanted them to know that their efforts are appreciated.

Dr. Gulick stated that at the April, 1972 Council Meeting, the Council recommended that the MSMA give $100 to each of the four SAMA (Student American Medical Association) organizations in the state in addition to the $100 donation to the National SAMA. This has been budgeted and will be done this next year. The following proposed budget was approved for 1973:

Salaries	$125,520.00
Furniture & Fixtures	500.00
Office Rent & Lights (Four months present office)	2,560.00
General Expense	3,900.00
Office Supplies	4,800.00
MSMF Assessment	39,340.00
Journal Expense	48,500.00
Postage	4,700.00
Equipment Rentals & Repairs	2,300.00
Telephone & Telegraph	8,000.00
Pension Expense	21,000.00
Legal & Professional	9,500.00
Payroll Taxes	5,502.
Commission-Committee Meetings	38,100.
Annual Session	18,500.
Car Lease and Expense	2,300.
Taxes—IRS	500.
Travel Expenses	5,500.
New Building Expense (Operating)	12,735.
Total	$353,757.

On motion of Dr. McAlhany, duly seconded, the ı port of the Budget Committee was accepted.—**Referr to Reports of Officers Committee.**

REPORT OF THE PRESIDENT

■ The Council's attention was called to the December issue of the *AMA Newsletter* which states that a pı gram entitled "What Price Health?" will be aired NBC-TV on December 19 at 9:00 CST.

Governor-Elect Bond has been invited to be the ba quet speaker at our 115th Annual Session of MSM Mr. Bond is not accepting engagements this far in a vance and should receive a repeat invitation 60 days advance of the speaking engagement. Dr. Sammons, member of the AMA Board of Trustees, will be on tl program of the Annual Session.

A recent opportunity to sit in on the giving examinations by the Board of Registration for the Hea ing Arts was offered to Dr. Gunn. He felt that tl examinations were well conducted.

The Texas Academy of Family Physicians has a pr gram called "Doctor for a Day." This program, in e sence, calls for a physician to be in the Capitol durii the time when the General Assembly is in session. D Koon, President of the Missouri Academy of Fami Physicians, will try to start such a program for Missou

The MSMA has received a letter from a special cor mittee of the University of Missouri-Columbia reques ing the names of any physician or physicians recor mended to fill the newly-created position of Provc for Health Affairs. Dr. Allen explained that the Boaı of Curators had approved creation of this new positic and the Chancellor had appointed a committee that in the process of describing the role of the provost ar the type of individual needed to fill this position. The charge is to present to the Chancellor and, subsequentl to the Board of Curators at least four candidates fro whom one will be selected. Dr. Cope then appointe Dr. Bradshaw, Chairman; Drs. Chandler and Gulick a committee to suggest a physician for the position Provost. The Committee was asked to report on Sund morning.—**Referred to Medical Education and Publ Welfare Committee.**

■ The AMA has requested appointments to the con mittee working with the Federal Food and Dru Administration which is investigating drugs sold acros the-counter. Suggestions for these appointments we Drs. James O. Lottes, St. Louis; Richard P. Bowle Liberty; and Albert D. Cross, Trenton.

Dr. Gunn reported that he had received a lett commending Mr. Tom Fox and thanking him for settir up the MECO program for next year.

COUNCILOR DISTRICT REPORTS

District #4—Dr. Hetlage reported that he had hel his usual Councilor District Conference. However, it wa not attended by a majority or quorum of the delegate there were no specific recommendations, but sug- ested reconsideration of some of those made previously.

Dr. Hetlage said that the Lincoln County Hospital taff, which represents part of the members of one of r. Hetlage's societies, had recommendations to make. ne regarded automobile accidents. It is felt that the ork being done by Dr. Klippel and his group per- aps does not include specifically those factors which pply to rural accidents. "We have recommendations to ake that I feel are pertinent. Factors involved in the rder of their frequency are highway engineering with pecific regard to highway maintenance, highway mark- ngs, consistency of markings and consistency of light- ng. Second, age of the drivers and their physical condi- on. We would suggest that the recommendation be ade to the proper Commission to require compulsory xamination, both physical and for competency, for those ndividuals over the age of 65. The third factor in im- ortance is relative to drinking. We feel that permission draw blood should be given and this should be in- luded as a part of the signature on the drivers license." e further stated that they feel more time should be pent by the Highway Patrol in spot checking drunk rivers and less time on speeders. He further said that great factor in his area is drivers who are fatigued nd he indicated that they, too, might be spot checked y patrolmen. Dr. Hetlage asked that he be allowed take these recommendations to the appropriate com- ission. No objections were raised.

The Council's attention was called to the entire situa- on relative to nursing home care. He stated that more tention should be given to appraisal and that he ould talk with Dr. Bradshaw about this.

Dr. Hetlage reported that a significant meeting was eld between the St. Charles County physicians and e local druggists. Matters of labeling and refill in- ructions were discussed. The druggists were not ware of the fact that the state has taken a stand on beling of prescriptions. He pointed out that there is a rious problem on Sunday and holiday coverage in harmacies. Dr. Hetlage said that he wanted to bring is to the Council's attention and recommended that is same meeting be conducted in other areas. Of 50 harmacists invited to the meeting, 35 were in attend- nce.—**Referred to Miscellaneous Affairs Committee.**

Dr. Hetlage then brought up the subject of the state- ent which he voluntarily withdrew at the previous ouncil meeting regarding organized medicine and pos- ble restructuring and changes. He said that it was a atement which was prepared carefully following the commendation of the Councilor District Conference hich consisted of a quorum of the delegates and of- cers of the Fourth District. He stated that he withdrew and had each medical society approve it word for ord. The remarks in that statement were not neces- rily his, but the Councilor District's and they have ap- roved it and asked that he present it and read it again to the minutes of this meeting. He indicated that there no particular reference to any particular individual. r. Hetlage then read the following statement;

"It is not the District Councilor nor the Fourth Dis- ict delegates, but a widespread opinion, that the struc- re of organized medicine needs changes which would t the profession into line with the social and eco- mic, as well as governmental, pressures of the day. hysicians, particularly young physicians, at the grass ots level are speaking out on communications, par- cipation, relevance and involvement within their profession. Many of these men feel that the structure of organized medicine fails to meet their needs for representation and involvement and either have become apathetic or have pressed their desire for change. There are those who feel that the hierarchy of medicine has ignored these cries and has resisted change until the degree of participation showed an alarming tendency to drop and that only now has the atmosphere become one receptive to change, change which should have been an ongoing process of an organization sensitive to the desires of those members who constitute the foundation of its being.

"As long as men are content to function within a set structure, there will be other men willing to place themselves in a position of jeopardy, to rouse those men into some kind of activity, be it positive or negative.

"Considerable thought has gone into recommendations to the delegates to the AMA from this district. No one has an answer. No one is willing to say that total revolution is an answer, but we do say that a careful examination of the structure is in order and that careful and relevant changes can and should be made.

"We feel that the AMA is not an entity unto itself. No. The AMA is state societies, composed of delegates, councilors, societies and grass roots members. We feel that change in the AMA should rightly begin at the county society level and extend through the state structure to ultimately be reflected on the posture and operation of the AMA.

"Of primary consideration, then, is the county medical society. Is it a relevant and effective political and educational unit? Would not the hospital staff, with its compulsory attendance and day to day liaison, be a more effective political unit?

"Care should be given to the position of delegate to the state convention. Is this job a meaningful one with opportunity for significant pertinent input, one to be sought after, or is it now a position to be filled by those who have nothing better to do than rubber stamp mostly meaningless resolutions? Is the quality of the delegate lower now than it would be if the job were a continuing one throughout the year, one to be sought after because of its responsibility and sensitivity?

"Are councilors seeking the job because they wish to have significant input and because they want to be representative of their districts? Should the job of councilor be a permanent position supported ad infinitum by the district who wants a president, or should his term be limited, so that fresh, new ideas would be forthcoming from younger men?

"Should the president always come from the Council or should the delegates have some voice in the selection from an open panel?

"Should the AMA Delegates be selected without limitation of tenure by a nominating committee with set instructions and elected without question by voice vote of a powerless house of delegates or should the AMA delegates be elected from an open slate proposed by an unrestricted nominating committee of responsible delegates?

"In other words, gentlemen, how is the grass roots member going to be properly represented to the AMA if he is not represented by a strong delegate organization, who actively seeks and pursues the job, who participates in district activities on an ongoing basis, and who have an active say in who will represent him as an officer of the state society and as a delegate to the AMA?

"The effect of a change to relevance on the part of the state conventions should have a noticeable effect upon the makeup of the AMA.

"Above that, we feel that younger but responsible men, both on a state and AMA level, should be used on commissions, committees and as alternate or sub-alternate representatives, recognizing the limitation of numbers within the delegate structure.

"We submit that the lines of communication from the top down should be further reinforced, that ongoing work at the AMA level be frequently reported by some appropriate means and that councilor district delegate meetings be kept informed as to those decisions which may be of relevance to the concerned physicians. In other words, the house of delegates has a reverse function, a reverse flow through the AMA delegates to the councilor district organization back to the local society.

"We submit that constructive thinking along these lines could lead to changes which would satisfy the thirst for representation among the members at the bottom."

Dr. Cope indicated that the above statement was sent to our AMA Delegates and Alternates prior to the Cincinnati meeting.

Lengthy discussion followed regarding the statement from the Fourth Councilor District. Communications is still the obvious problem and there was a suggestion made that the Councilors might ask for five minutes at hospital staff meetings to disseminate information. It was pointed out that where the information does not get back through publications, the Councilors should see that it does get to their areas. Should the Councilors have a budget for these purposes? It was indicated that one county invited hospital representation on its county society council. However, this effort failed as these hospital representatives did not attend the Council meetings.

Dr. Hetlage stated that he feels we need to stimulate the young physicians' desire to become involved in organized medicine. Many of them think the hierarchy of medicine doesn't really care about the relatively new physician. He stated that the key man program is certainly a valid one in hospitals. Many physicians feel that they are not represented in organized medicine. We need to make the job of state delegate an important one and not for just a couple of days a year.

Dr. Cope stated that he appreciated this report from the Fourth District, if only for its stimulating quality.

It was stated that not all physicians, young or old, want to become involved in organized medicine; many are just not interested and they have other interests.

It was brought out that many times young physicians who are just getting started in practice do not have the time to become involved in extra curricular activities. It takes several years to become interested. We need innovations, but perhaps the present system is not all bad.

Mr. Mortenson said that one AMA staff has four speaking engagements at various Missouri component society meetings within the next month. This is one means of communication. He indicated that Illinois has implemented the key man system. They also have instituted a bulletin on the most recent state and AMA innovations to be placed in every hospital every two to three weeks. Mr. Mortenson indicated that everyone wants to be heard and wants to know that someone is listening to them specifically. He further stated that he could bring to the Council material on other state communications systems. It was pointed out that, indeed if all of these communications are to be expedited, it going to cost money.

Dr. Gunn stated that if we implement this key ma concept in the 200 hospitals, he would suggest that th green sheet be reproduced. It is the greatest mean the AMA has to reach its people with facts, figure and timely items.

Dr. Hetlage stated that the report is more stimulatin than constructive. He said that in the last session, h District submitted a resolution regarding the medic profession speaking out on public issues and also submitted the one regarding Council Chairmanship. H said that in the report itself there are several thing that are constructive: first make the delegate's job more important one—one to be sought after; secondly limit the terms of Councilors. He stated that the fou main words in the entire report are "communication participation, relevance and involvement."

Dr. Cope suggested that Dr. Hetlage might brea this report down into separate resolutions which coul be referred to the proper commission or committee f study and recommendations.

District #10—Dr. Hansbrough indicated that we ma have gotten away from the original purpose of the bo and check mark on the front of the Journal to ca members' attention to a very important item. On motio of Dr. Hansbrough, duly seconded, the Council requests the Publication Committee to review the purpos of the check mark on the front of the Journal.—**Referre to Reports of Officers Committee.**

■ Dr. Hansbrough reported that on November 19, h Council District meeting was held in Farmington with very interesting program. Our MSMA President and th President of the Woman's Auxiliary were present. A the request of the physicians in the District, we trie to bring up socio-economic problems; physicians foundations, that is, special care foundations; HMOs; CHP and a most stimulating and provocative talk by a youn psychologist who stated that mental illness is too important to have a physician deal with it. Apparently, thi is the way some clinical psychologists feel. His genera concept on how to treat people was very interesting.

Dr. Hansbrough stated that he enjoyed being i Springfield during Dr. Hoffman's visit there.

He said that one thing they found out in his immediate area is how the new controlled drug act i affecting the community. He stated they are having difficult time with falsified prescriptions.

At this point, Dr. Cope indicated that the wive were invited to an informal talk on transactional analysi in the Chairman's suite on Sunday morning at 9:30 AM

District #9—Dr. Cooper reported that they hav postponed their Councilor District meeting until afte the first of the year. He said he had had the pleasur of going on the Caribbean Cruise sponsored by th MSMA and asked to go on record as saying that th MSMA Staff did an outstanding job and the program was well organized. He recommended that the MSM continue to sponsor such tours.

District #7—Dr. Chandler reported that Jackso County will hold its President's Dinner on Friday, January 19 and invited all those present to attend.

Dr. Chandler stated that in reference to the program to be aired by NBC on "What Price Health?," th Executive Secretary of Jackson County has been in contact with the station that carries the NBC network t determine whether or not the officers of the Society ca all a preview of this program. If this is possible, further quiry will be made as to whether we can give a back-p program to answer this. He suggested that other cieties might attempt this and indicated that physiians cannot always sit back and be attacked.—**Referred Medical Education and Public Welfare Committee.**

■ Dr. Chandler said that there is an increasing interest autonomous blood transfusions in Kansas City. A ommittee on Blood has been expanded and Dr. Chanler indicated that he would like to report back to the ouncil on this subject so that perhaps, it can be placed one of the committees on the state level.

Dr. Chandler stated that they are having difficulties ith the Mid-American CHP Agency, particularly as hysician representation on the board is concerned. leretofore, they have had input from the Jackson ounty Medical Society. This has been changed, but ey do not know how or why. There is no M.D. input om the County Society at the present time. The phy-ician now on the board comes back and tries to give logical explanation of their activities, but he is over-helmed by so much paperwork. It is difficult to know xactly what is going on.

He said that the Western Missouri Health Education enter, which was reported by Dr. Noback at the last ouncil Meeting as receiving funding, is gaining mo-entum. This will be an increasingly important area in e future.

He had spoken previously about the HMO which is be in Kansas City. The man who contacted Jackson County Medical Society regarding the HMO is now in full residence. He has contacted the unions, large industries, etc. and is getting some interested audiences, so we feel that there will be, in fact, an HMO of some type in Kansas City in the near future.—**Referred to Resolutions Committee.**

■ *District #8*—Dr. McAlhany reported that Dr. Hoffman, President of AMA, was given an honorary degree from Drury College during his visit in Springfield in November. Dr. McAlhany thanked the officers and councilors who were able to spend time with Dr. Hoffman. He stated that he was very impressed with him.

Greene County did elect a physician as coroner as was anticipated and plans are underway to establish a medical examiner system in Greene County. Clay County has agreed with this concept and a bill will be introduced in the Missouri Legislature. Senators Paul Bradshaw and William Waters are co-sponsoring this bill.

Dr. McAlhany said that there has been advertising by chiropractors in the local newspaper. He was advised first to go through the State Chiropractic Board to see if this group would take action to stop this advertising and then, if necessary, to approach the local Prosecuting Attorney. It was suggested that as the Eighth District Councilor, Dr. McAlhany write a letter to the Chiropractic Board filing a complaint and send a copy of the letter with a copy of the article to the MSMA office and to the local Prosecuting Attorney. A Councilor, a physician or an individual could file a com-

MUNNS
MEDICAL
SUPPLY

at

1432 Hanley Industrial Drive
St. Louis, Mo.

Topeka — Kansas City — Wichita

plaint with the Chiropractic Board. Dr. McAlhany will pursue this matter and will report further to the Council.

Dr. McAlhany called on Mr. Schnedler who commented on the Doctor-for-a-Day Program. This project is being undertaken by the Missouri Academy of Family Physicians. The Academy would provide a physician each day the Legislature is in session. It is hoped this will aid in communications between the medical profession and the Legislature.—**Referred to Miscellaneous Affairs Committee.**

■ He also stated that they had won the case with IRS regarding the Greene County Medical Society Foundation. However, the judgment was appealed. It is still in litigation and the Foundation's attorneys have now filed the report and their answer to the appeal. Hopefully, some decision will be made in the near future.

The Greene County Medical Society Business Bureau has now been incorporated and the Board of Directors has been appointed. The Bureau hopes to be in business by Jan. 1, 1973.

After about six months of research, Greene County Medical Society has produced a reference handbook for physicians. A copy was sent to all physicians in Greene County.

District #3—Dr. Franklin stated that he also attended the meeting in Greene County during Dr. Hoffman's visit. He said that functions were well attended, the food was delicious and "Greene County is really on the ball."

At the invitation of Dr. Hetlage, he attended the meeting of the Fourth District. There were other meetings that night, so it was not as well attended as it might have been. At that meeting, he made a suggestion to Dr. Hetlage and the group similar to Dr. Cope's suggestion, that their suggestions be put into the form of resolutions and presented to the House of Delegates.

The installation of Dr. Donald Judd as President of the St. Louis Medical Society will be held on Saturday, January 13 and all are invited. Dr. Richard Bradley is President-Elect, Dr. Joseph Vacca is Vice-President and Dr. Carol Williams is Secretary.

Dr. Franklin indicated that the yellow pages of the phone book in St. Louis are beginning to list doctors under specialties. He asked for comments about this.

Mr. Allen Smith reported that Jackson County started this specialty listing under the AMA trademark years ago. About 12 years ago, the plan was expanded to include three other medical societies in the Kansas City area—Wyandotte, Johnson and Clay Counties.

Dr. Franklin indicated he did not feel this helped the patients, who have always been able to call the St. Louis Medical Society and this has worked very well.

District #2—Dr. Bach—No report.—**Referred to Reports of Officers Committee.**

■ *District #1*—Dr. Martin reported that Sister's Hospital in St. Joseph had recently announced that it will close. He indicated that this would mean a loss of 200 beds. Dr. Martin also indicated that Sister's Hospital recently had taken over the ambulance service for St. Joseph. He stated that another hospital in St. Joseph had recently hired a physician for its emergency room.

Dr. Martin indicated that it has been difficult to get new doctors in his area. He stated that he was questioned by some city councilmen as to why they don't get new doctors.

Dr. Martin said that they had coroners in his ar who are M.D.'s and that he is willing to help tho in other areas if they wish to get M.D. Coroners.

District #6—Dr. Bradshaw indicated that in the al sence of Dr. Domke, he would report on the Division Health. One recent concern was whether or not smal pox vaccination should be continued. The U. S. Publ Health Service has gone on record as favoring the di continuance of required vaccination. The Division Health had appointed a committee to study this ar that committee reported that smallpox vaccination nee not be continued. Dr. Bradshaw stated that the Boar of Health thinks that it should be continued, but h indicated that the Board would abide by the commi tee's statement. He also indicated that we were goin to be faced with the A-2 English strain of influenza.

Dr. Bradshaw referred to a point mentioned by D Hetlage regarding labeling of prescriptions. In his are the prescription blanks were printed so that a physicia could indicate whether a prescription should be labele

Dr. Bradshaw had the privilege of attending the Fa Conference of the MSMA Woman's Auxiliary in Columbia. The two topics presented were legislative an health education. The program was well done and h felt that Mrs. Jones is to be congratulated.—**Referred t Miscellaneous Affairs Committee.**

■ Dr. Bradshaw requested that an ad hoc committee not only Council members but, also, of those attendin the Council meetings be appointed to study the feasibi ity of inserting a year of continuing training, either afte internship or in lieu of internship, in primary patien care in the state of Missouri. This is being studied i several other states.

Dr. Gunn asked whether or not this would includ emergency room service. Dr. Bradshaw indicated tha he wasn't sure at this point about emergency roo service and would rather not go into detail at this tim

It was moved that an ad hoc committee of the Cour cil plus those normally attending the Council meeting be appointed to study the feasibility of inserting a yea of continuing training in primary patient care in th state of Missouri. The motion was seconded and carrie Dr. Cope stated that the committee would be appointe on Sunday morning.—**Referred to Medical Educatio and Public Welfare Committee.**

■ Dr. Bradshaw reported that the PTA, in conjunctio with the Missouri Department of Education, is plannin workshops over the state. The basic premise of thes workshops is the study of communicable diseases wit emphasis on venereal disease, but the program is no geared entirely to VD control, but also to the development of curriculum from kindergarten through hig school and college for health education and commun cable diseases.

District #5—Dr. Cope stated that his Councilor District meeting was held in conjunction with the Fall Conference of the Woman's Auxiliary in Columbia and tha it had been very successful.—**Referred to Miscellaneou Affairs Committee.**

REPORTS OF AMA DELEGATES

■ Dr. Washburn stated that in the absence of Dr. Neilson, he would give the AMA Delegates' report. Th 1972 Clinical session of the AMA was held in Cincinnati on Nov. 26-29, 1972. Approximately 50 report and 70 resolutions were considered. A hearing of th ouncil on Long Range Planning and Development was eld on November 27 and the Council on Medical ervice held a conference on Saturday afternoon, Noember 25, on the subject of PSRO's (Professional Stanards Review Organizations). This problem dominated he meeting. President Nixon, by signing HR 1, made weeping changes in Social Security, Medicare and edicaid. The price tag is $6 billion and tax increases re to be imposed. The bill (1) extends Medicare to ome people under 65 and brings the disabled into the rogram; (2) it federalizes aid to the aged, blind and isabled with a guaranteed income program; (3) it inreases several Social Security benefits, such as raising idows benefits, and it lifts the amount retirees can arn and retain benefits. Nearly 100 changes are made in edicare, Medicaid and Maternal and Child Health reas of the law and authorizes payment under Medicare o prepaid group practices termed HMO's.

However, the most significant change in the law for racticing physicians in our nation is the creation of a ationwide system of Professional Standards Review Oranizations to police the cost and quality of health are for Medicare and Medicaid. However, extending his principle to the entire population a section at a ime is entirely possible. The principle of government ontrol of the practice of medicine through imposition f government-developed standards of diagnosis and reatment has already been established by the enactment f this legislation to create a network of PSRO oranizations. It seems that justification for coercing .D.'s into conforming to federal standards in their ractices is that the government has "the right" to conrol anything it subsidizes.

The AMA Board of Trustees apparently is trying to ell HEW officials on the idea of letting physicians lead he way in the development of guidelines and criteria to e used in PSRO activities.—Referred to Resolutions ommittee.

■ Dr. Washburn reported that the AMA Council and ommittee structure has been drastically altered to save 840,000. Report A, presented by the Board of Trustes, is a sweeping change. It is labeled, "Fiscal Retraint and Priorities." It abolishes four councils and six ommittees, combines two other councils, reduces memership on the remaining councils and committees, cuts own on frequency of their meetings and trims 15 emloyees from the headquarters staff.

An AMA Conference on 1973 Membership Program as held on November 27. Membership in the AMA as f October, 1972, stands at 155,074—about 1,000 less han the 1971 total. It is expected that membership will robably equal the 1971 figure by the end of this year. embership is still far below the 165,000 figure of 1970. wenty-one states have equalled or bettered their 1971 embership totals. Missouri has reached 98% of its 1971 otal. The AMA is issuing "guidelines for a 1973 Memership Drive," which, hopefully, will help component ocieties bolster local and state society and AMA memership.

The AMA delegates discussed various resolutions and eports presented at the 1972 Clinical Session, which nclude the following: A resolution encouraging unified embership; Resolution #33 which calls for liaison etween state medical associations and federal repreentatives and agencies; Resolution #1 which calls for hysician representation on governing boards of hospitals; esolution #23 which calls for the development of improved communications between medical staffs and state and local medical societies; Report F of the Board of Trustees regarding the responsibility for actions of the physician's assistant; Report H of the Board of Trustees regarding recommended definition of the role of a primary care physician; Report B of the Council on Medical Service regarding public involvement in health services review; Resolution #24—Review Committees for Medical Practices; Report J of the Council on Medical Service regarding the claims practices of Aetna Life and Casualty Company.—Referred to Reports of Officers Committee.

■ Dr. Benoit stated that he had been asked to discuss the PSRO legislation recently adopted by Congress. Dr. Benoit indicated that a Conference was held during the AMA Clinical Session to discuss PSRO. He indicated that the AMA is going to appoint an advisory committee on PSRO to act as the medical profession's advocate to insure the proper implementation of this program in order to assure the best interests of the public and the profession. This committee will include members from the Board of Trustees, the Council on Medical Service and representatives from other appropriate organizations. The Committee was given several responsibilities which include some of the following:

(1) Provide input from the medical profession into the development of the rules and regulations which will govern the Professional Standards Review Organizations program; (2) Assist state medical associations, or state medical associations in concert with county medical societies, in developing PSRO's and to recommend structures and operating mechanisms; (3) Recognize appropriate geographical boundaries for PSRO's; (4) Distribute information about Public Law 92-603. Dr. Benoit stated that this information needs to be circularized to every member of our Association. He indicated that doctors need to know what is in the law. This Committee and other AMA councils and committees will monitor the effect of PSRO activity on the quality of medical care and report their findings to each future meeting of the House of Delegates.

Dr. Benoit stated that we in Missouri have recognized that we were going down the road toward legislation of this type and that is why we started the Health Care Foundation. He indicated that the HCF is structured along lines that, hopefully, would make it the PSRO for Missouri and, thereby, maintain as much control as possible over our own destiny and over the destiny of the care of patients. Dr. Benoit indicated that the law states there will be no liability to persons serving in a peer review capacity for actions they take unless there is proven malice.

Dr. Benoit then asked if there were any questions. Dr. Bradshaw asked if there would be lay input into the PSRO. Dr. Benoit indicated that as far as judgment of the competency of professional care is concerned, there is no one who can do this appropriately except physicians; but when you are talking about review of health care services, there is other expertise that can be brought to bear on this problem. He indicated that some of these people will be hospital administrators, legislators, legal and business people. Dr. Benoit indicated that the funding of this program has been written into the law. He stated that this legislation should be summarized and published in the Journal.

It was moved that staff publish a summarization of PSRO legislation in a future issue of MISSOURI MEDICINE. The motion was seconded and carried.

Dr. Washburn thanked the Alternate Delegates, Dr. and Mrs. Gunn, Dr. and Mrs. Stricker, Dr. and Mrs. Cope and staff for their assistance at the AMA meeting.

HEALTH CARE FOUNDATION REPORT

Dr. Benoit stated that a Board meeting had been held the evening before the Council Meeting. He indicated that the Foundation is proceeding with efforts to obtain financial support from RMP. Dr. Benoit reported that the Foundation had solicited the participating members for support and that they had a reasonably good response. To date, they have received $12,110 from the participating members. He indicated that the Missouri Radiological Society had been extremely active and interested in the Foundation. The Society had held a meeting in Kansas City regarding its role as it relates to peer review and had sent a check to the Foundation.

Dr. Benoit reported that he had recently met with the medical directors of several large companies in Kansas City and the Foundation has agreed to assist them with their problems. One of the companies made a financial contribution to the Foundation recently and Dr. Benoit stated that he feels that the Foundation will obtain similar contributions from the other companies.

Dr. Benoit stated that he would like to commend Mark Halvorson for the fine job he is doing.

Dr. Benoit indicated that the Council had appointed a committee to act as consultants to the Bylaws Committee of the Foundation. However, since the passage of the PSRO legislation, the committee had regrouped. He stated that the Board had spent time discussing how to approach bylaw changes in order to accommodate the Foundation to HR 1. He indicated that one of the main changes would be the manner in which men are elected or appointed to committees. He stated that it was important that these changes be made as soon as possible so that the Foundation might be considered by HEW as the PSRO for Missouri.

Dr. Benoit stated that they had 60% participation from the members of the Association, but would like to have 80%. He indicated that further solicitations will be made.

AD HOC COMMITTEE ON THIRD PARTY PAYMENTS

Dr. Peterson reported that the Committee had met with representatives of carriers and had discussed mutual problems with them. Dr. Peterson mentioned a letter that Aetna is sending to patients and said that at the January meeting of the Commission on Medical Economics, Aetna officials will be present to discuss this and other claims policies.

The Committee presented the following recommendations for consideration by the Council:

1. That standard HIC forms be used to file insurance claims and that this form will have provision for designating any disability and if the carrier requires special forms to be filed, the physician should charge the carrier $5.00 for the preparation of each required form and further that all carriers be so advised.
2. That representatives of carriers present request the Health Insurance Council, in cooperation with the AMA Council on Medical Service, to design simplified, one-sided forms that will enable physicians to retain a copy for their files. This form should also provide a blank for the stamp of the physician's name and ID number.
3. That all carriers adopt the AMA-CPT Third Edition Code.

Dr. Miller moved that this report be accepted and that the recommended actions in the report be taken Motion was seconded and carried.

AD HOC COMMITTEE ON NEGOTIATION OF PROFESSIONAL FEES

Dr. Peterson distributed copies of proposed bylaw for a negotiation of professional fees organization tha the committee is presently trying to organize.

Motion was made and seconded that action on these proposed bylaws be tabled. Motion carried.

Dr. Peterson introduced Mr. Max Lilley, an attorney from Springfield, who had drawn up the proposed bylaws.—**Referred to Resolutions Committee.**

REPORT OF THE COMMITTEE ON EMERGENCY MEDICAL CARE

■ Dr. Klippel stated that a Task Force on emergency Medical Care under CHP had been appointed by Governor Hearnes. The Task Force spent a great deal of time going over this problem and has developed an emergency care services plan for Missouri. He indicated that the Governor's Advisory Council on CHP had approved this program. He stated that every hospital and physician has a role to play in emergency medical care. He indicated that the Governor's Advisory Council on CHP will try to generate support for legislation to implement this program.

Dr. Klippel then spoke briefly about the high cost of using helicopters as ambulances. He asked the Council to pass a resolution endorsing the idea of the development of a program for emergency care in the state.

Dr. McAlhany indicated that he would like to have material to read and study before taking any action on this. Dr. Klippel stated that he was not asking for the endorsement of a specific program, but only of the idea of establishing such a program. It was brought out that a bill had been introduced in the legislature last session regarding ambulances and ambulance personnel, but was not passed. Dr. McAlhany asked what would happen to the small community who could not meet the requirements of this program. Dr. Klippel stated that the idea is to have something down on paper and have money available to implement the program so that the small community that desires these services can avail itself of them.

Dr. Hetlage moved that the Council of the MSMA approve in principle the efforts of the Committee on Emergency Medical Service and encourage further development of a coordinated program for these services in Missouri and, also, provide for the regionalization of ambulances. Motion was seconded and carried.—**Referred to Miscellaneous Affairs Committee.**

REPORT OF THE WOMAN'S AUXILIARY

■ Mrs. Jones thanked the Council and the committee of the Council that helped the Auxiliary with its Fall Conference. She reported that there were 30 state representatives present and the total attendance was between 150 and 200. She stated that the Missouri Auxiliary is the first to have a Health Education Day and that this Auxiliary Health Education Day will be used as a pilot program for the other 49 state auxiliaries.

Mrs. Jones stated that Dr. Richard Bowles had asked the Auxiliary to support the Public Affairs Conference.

he indicated that the Auxiliary will support it by at-ending the Conference and, also, that it would hold a iid-winter Board meeting preceding the Conference. he reported that the Woman's Auxiliary has 91 IMPAC members and that she hoped to have 100 by ie end of the year.

Mrs. Jones reported that this year, the Auxiliary has iised $1,000 for the Missouri State Medical Founda-on. She said that the county auxiliary with the largest er capita contribution to the Foundation will receive plaque with that county auxiliary's name inscribed pon it.

Mrs. Jones stated that it was her pleasure to attend ie Councilor District meetings and she is interested in ttending those in which county auxiliaries have not een organized.

Mrs. Jones requested permission for herself or a repre-entative appointed by her to attend the MSMA Com-iission and Committee meetings. She indicated that this a common practice in surrounding states.

The above request was discussed, and it was the eneral feeling that this matter should be discussed fur-ier by the Auxiliary.—**Referred to Reports of Officers ommittee.**

REPORT OF THE AD HOC COMMITTEE ON CONTINUING MEDICAL EDUCATION

Dr. Paul Young reported that the AMA Third Na-onal Conference of State Medical Association Repre-entatives on Continuing Medical Education was held in)ctober. The main subjects covered during this Con-erence were (1) Accreditation CME, (2) Curriculum or continuing medical education, (3) Peer Review and 4) Choice between voluntary or compulsory CME. He ndicated that the AMA wants to delegate to state hapters the responsibility for CME accreditation. Dr. oung reported that curriculum for CME was discussed great deal. He indicated that he would like to have ome input from the new UMKC School of Medicine in egard to curriculum.

Dr. Young reported that in regard to peer review, Iissouri has moved on the road farther than most ther states. Our plan in Phase 2 considers it an im-ortant approach to have our continuing education pro-ram linked to peer review.

Dr. Young stated that various things had been tried n some states in regard to the choice between volun-ary or compulsory continuing medical education.

Dr. Young reported that a workshop for members of is ad hoc committee, as well as representatives from he Councilor Districts, is being planned for February -3 and will be held in conjunction with the Public ffairs Conference. He asked for Council approval to roceed with this. The subject of a budget for this vorkshop was mentioned and Dr. Young said that a naximum budget of $500 or less should be sufficient.

Discussion followed on some of the points mentioned y Dr. Young. He suggested to the Council that a long ook be taken at ways in which to develop an effective ontinuing medical education program and that he be iven permission to proceed to develop a long range udget for a continuing education program. He indicated hat in California, each member was assessed $10 a ear for this program. He stated that changes in the udget of the State Medical Association might need o be made.

Motion was made to instruct Dr. Young to proceed with a workshop in conjunction with the Public Affairs Conference. Motion was seconded and carried.

Motion was made and seconded that Dr. Young be given permission to develop for consideration a long range budget for a continuing education program. Motion carried.

Dr. Young reported that the Committee had discussed acupuncture. He indicated that the committee discussed the MSMA news release and the similar policy statement of the State Board of Registration for the Healing Arts to the effect that acupuncture is the practice of medicine. It was noted that the AMA and the Federal Government are conducting research on acupuncture.

Dr. Young read the following statement regarding acupuncture developed by the Committee:

"The application of acupuncture as a modality to relieve human suffering is clearly an issue which physicians in the state of Missouri, the nation and the world must recognize. It would appear that where it is now being used, it is used on a purely empirical basis. However, if we ascribe to the principles of allopathy, then we must consider its possible benefits to our patients.

"As with any empirical modality of treatment, great caution must be exercised in its use. Therefore, we recommend that acupuncture be considered as an experimental technique. Those physicians who wish to conduct experiments involving acupuncture should be guided by the same ethical and scientific principles which are applied to all experimentation in medicine. It is recommended that experimentation be carried out under the direct supervision of professionals who are well-trained in the basic sciences upon which the modern practice of medicine is based. It is recommended that physicians approach the issue of acupuncture with the same sense of critical inquiry which has characterized the medical profession since Hippocrates."

The motion was made and seconded to accept the statement on acupuncture. During discussion, the following amendment to the statement was presented:

> ". . . that anyone doing acupuncture confer with the AMA Section on Anesthesia for their experimental protocol and to follow this protocol and report their results."

Motion was made by Dr. Hetlage and seconded to table action on this statement and proposed amendment. Motion carried.

The next portion of Dr. Young's report was concerned with the employment of medical students in physicians' offices for the summer months. The Committee presented the following two points in regard to this subject: (1) Suggest to the MSMA Council that Dr. Young be authorized to represent MSMA in negotiations with the other three sponsors of the SAMA Summer MECO Program and (2) the same four sponsors would then assume the responsibility for possible implementation of the program in the summer of 1974. Dr. Young also indicated that guidelines to implement this program would be set up.

Motion was made and seconded to give Dr. Young the authority to represent MSMA in the implementation of this program. Motion carried.

Dr. Young next reported on EKG computer interpretation. He stated that the members of the committee felt that they did not have the appropriate expertise to deal with this problem and, therefore, recommended that a study group be formed including a cardiologist, a general physician and two or more internists and, also, include Dr. Ben McAllister and Dr. Russell Sandberg. Dr. Cope stated that it was his opinion that if Dr. Young wished to appoint a subcommittee to study this problem he would be perfectly in order.

The last item in Dr. Young's report was a letter from Dr. Maxwell Berry requesting CME core curriculum. Dr. Young pointed out that this letter had been directed to the Council for action.

Motion was made and seconded to refer this letter to the Ad Hoc Committee on Continuing Medical Education. Motion carried.

Dr. Franklin moved that Dr. Young's report be accepted. Motion was seconded and carried.—**Referred to Medical Education and Public Welfare Committee.**

REPORT OF INSURANCE ADVISORY STUDY COMMITTEE

■ Mr. Fox reported that the Council had directed the formation of this committee and that a meeting had been held recently. He stated that representatives from insurance companies were invited to the meeting. After discussion, they recommended that the three MSMA existing programs (disability, major medical and accidental death and dismemberment) be continued as they are now written. Mr. Fox indicated that the committee had studied some new programs (term life, overhead, excess major medical). The committee recommended that these programs be studied further. It was pointed out that the AMA and the large metropolitan medical societies have their own insurance programs.

Dr. Hansbrough moved acceptance of this report. Motion was seconded and carried.

Dr. McAlhany suggested that, possibly, this committee could investigate some type of deductible insurance program. Dr. Bradshaw pointed out that the law regarding Workmen's Compensation had recently been changed so that anyone who has one or more employees will come under this program. He stated that this is a real hardship on those who employ professional people. It was suggested that this committee investigate insurance coverage under various insurance companies.

Motion was made to look into other health coverage plans other than the Blues and consider statewide coverage for MSMA membership. Motion was seconded and carried.

Dr. Cope referred this resolution to the Advisory Study Committee for report.

Dr. Bradshaw suggested that the staff find out what they can about the new Workmen's Compensation Law and report back to the Council. Dr. Cope directed that staff check into this and report back to the Council.

Dr. Thoma stated that St. Louis University comes under this program. Dr. Thoma indicated that St. Louis University is self-insured. He was directed to bring report on this to the next meeting.

REPORT OF COMMISSION ON MEDICAL-LEGAL AFFAIRS

Mr. Cooper reported that a summary of an excellent film, "Courtroom Confrontation," was shown at a recent meeting. The film is based on the landmark "Darling Case."

There was discussion at a recent meeting of this committee regarding video tape depositions. The Bar Association is going to attempt to have court rules changed to allow video tape depositions in court. It was pointed out that it depended upon the judge as to whether or not these types of depositions would be admitted as evidence.

The Committee suggested that the use of pre-trial screening panels for professional liability suits should be restudied. The Medical Association had studied this in 1970. At that time, it recommended that pre-trial screening panels not be used. A member of each organization represented at the joint medical-legal meetings will be appointed to serve on an ad hoc committee to study pre-trial screening panels.

Mr. Cooper stated that at the committee meeting it was brought out that the Buchanan County Bar Association had declined to accept the "Interprofessional Code." Since that time, however, they have changed their stand and accepted the Code.

Mr. Cooper reported that the medical examiner system was discussed and the committee agreed to continue the joint meetings.

Motion was made and seconded to accept this report. Motion carried.—**Referred to Constitution and Bylaws Committee.**

REPORT ON CARIBBEAN TOUR SPONSORED BY MSMA

■ Mr. Cooper reported that the cruise had been excellent and that the scientific program was very good. He read several letters commending the Association for the cruise and the scientific program.

Dr. Hansbrough moved that this report be accepted with commendation.

Motion was seconded and carried.

PROVOST FOR HEALTH AFFAIRS

Dr. Bradshaw reported that the committee (Drs. Bradshaw, Chandler and Gulick) appointed by Dr. Cope to suggest a recommendation for the position of Provost for Health Affairs would like to make the following motion:

"It is the unanimous opinion of the Committee that in recognition of the service Dr. William D. Mayer has given to the State Medical Association while acting as Dean of the University of Missouri School of Medicine-Columbia, that the Council endorse Dr. Mayer as a candidate for the office of Provost for Health Affairs of the University of Missouri." Motion was duly seconded and carried.—**Referred to Medical Education and Public Welfare Committee.**

PUBLIC AFFAIRS CONFERENCE

■ Mr. Swarens reported that the Public Affairs Conference will be held on Feb. 3-4, 1973 at the Ramada Inn in Jefferson City. The Woman's Auxiliary will hold its Board Meeting in conjunction with this Conference. All invited speakers have agreed to appear. Among the speakers will be Sen. Lem T. Jones, Jr., Rep. Richard J. Rabbitt and two AMA officials—one from Washington and one from Chicago. The Commission on Public Affairs would like to ask each Councilor to contact his county society officers and urge them to attend the Public Affairs Conference. Motion was made, seconded and carried to file this report as information.

COMMISSION ON PUBLIC AFFAIRS

Mr. Swarens reported that upon request from the Council, the Commission on Public Affairs investigated the use of mobile X-ray units for chest screening in Missouri. He stated that at the time of the Council request, the Tuberculosis and Respiratory Disease Society of St. Louis and Eastern Missouri was operating under guidelines which permitted mass X-ray screening. However, the Society has recently revised its guidelines to conform with policy statements of HEW, The Ameri-an College of Radiology and the USPHS, which urge aution concerning the use of photofluorographic X-ray nits for chest screening programs. The Society has disontinued mass screening, but will continue to offer its ervices to problem situations.

The Commission on Public Affairs endorses the new uidelines for mobile X-ray units as issued by the uberculosis and Respiratory Diseases Society of St. ouis and Eastern Missouri. Motion was made, seconded nd carried to accept the interim report of the Comission on Public Affairs and endorse the guidelines egarding Mobile X-Ray Units as set forth by the uberculosis and Respiratory Disease Society of St. ouis and Eastern Missouri.**—Referred to Miscellaneous ffairs Committee.**

BOARD OF REGISTRATION FOR THE HEALING ARTS

The Chairman called on Dr. Melvin Kasten, President f the Missouri State Board of Registration for the ealing Arts, to give any comments which he might ave. Dr. Kasten called attention to the September ouncil minutes and spoke on several issues contained herein. He stated that in regard to Dr. Martin's conern about the anesthesiologist from Canada who was censed in one of the Carolinas, the reason she could ot obtain a Missouri license was that her license in arolina was by reciprocity and not by examination, nd Missouri does not have reciprocity with Canada.

Dr. Kasten then spoke on the subject of absenteeism lips being signed by some physicians for people workng in industry when, in fact, the individuals were not l. This is expensive to industry. He stated that many eople appear in court and testify against these physiians. These physicians have been warned, but there sn't much the State Board can do.

Dr. Kasten stated that just recently the FLEX examnation was given to 195 individuals, of which about 40 were foreign doctors and about 45 were taking the xamination for the second time. In June, the FLEX xamination was given to 86 foreign graduates with 17 assing. Dr. Kasten indicated that the grading system f FLEX requires 75% on Part I and no grade lower han 60 and 75% on Part II and no grade lower than 0. He stated that the FLEX examination is costing he state money. The law now states that we can charge 25 for those taking Part I and $25 for Part II which s a total of $50. It costs the State Board $65 to give he examination. We hope that we can get this changed n the law.

Following Dr. Kasten's report, Dr. Hetlage brought p two matters of concern. One is the unsupervised use f transactional analysis in groups in which there is no sychiatric supervision. Some are cropping up and do eem to come under the realm of psychiatry.

The other item of concern is that at least in the t. Louis area, many discount houses and department tores have a nurse piercing ears. He indicated that this nay or may not come under the jurisdiction of the tate Board.

Dr. Kasten indicated that they have checked into the natter of piercing ears, but do not have the manpower r the money to check all of them. He indicated that e thought the Board had written to these stores, but as not certain.

Dr. Kasten stated that someone has brought up the uestion of whether or not the Board can license the raduates of the University of Missouri in Kansas City nder the present law. The law needs to be updated.

Dr. Mayer stated that we have very carefully avoided trying to change the State Registration Law for so long that we are now functioning with one that is definitely outdated. He indicated that all he was suggesting is that when the State Board does open this up for possible changes, that very strong input from the MSMA Council be made as well as strong input from the Medical Schools of this State.

REPORTS OF THE DEANS

In the absence of Dr. Guze of Washington University School of Medicine, who attended the meeting earlier, Dr. Gulick gave a brief report regarding their building and expansion program. Dr. Gulick indicated that they moved into the new Eastern Division about a month ago and are very happy with it. It holds 500 patients. These are replacement beds and not new beds. McMillan Hospital and the old Maternity Hospital are closing. They have approval to build a parking garage underneath a part of Forest Park which will hold 1,300 cars. Children's Hospital has a new addition. They are going to completely renovate Maternity and McMillan Hospitals.

Dr. Gulick reported the part-time faculty has been requesting representation on the Executive Faculty and they have elected one man to serve on the Executive Faculty, that one man being Dr. Gulick.

Dr. Mayer reported that his tardiness on the previous day was due to the fact that the Chancellor called a meeting of all deans of the Columbia campus, elected faculty council and council of the graduate faculty of the Columbia campus because the President was about to release the third draft on the role and scope of the University. He read to the Council the statements contained therein regarding the health professions, stating that in the area of the allied health professions at the University of Missouri at Columbia and Kansas City, they shall continue to expand as funds and facilities permit. Hopefully, this will enable us to move forward. The document further indicated that the University of Missouri at St. Louis needs to look at what it is doing in nursing and health professions. He stated that the two local Columbia papers recently carried much of this on their front pages.

Dr. Mayer stated that at the September meeting of the MSMA Council, he informed the Council that he had recommended a policy change regarding admissions to the University Hospital. No objections were raised by the Council at that time. Dr. Mayer stated he pursued this with the Chancellor, President and Board of Curators and the following policy statement was adopted in October: "Any person requesting medical care, special study or diagnosis may be admitted to the University Hospital. Admission may occur by direct request of a patient, by referral of a licensed psysician or through such other means as deemed appropriate under such rules and regulations as may be adopted."

Dr. Mayer indicated that at the present time, Dr. Noback was being visited regarding accreditation by the Liaison Committee of the Council on Medical Education of AMA and the Association of American Medical Colleges. Because Kansas City is a new school, it has a visitation almost annually. The University of Missouri has this visitation about once every seven years and such visitation had just been completed. It was reported in an informal way to the President, Chancellor and Dr. Mayer that they thought we had a good institution, very possibly on the way to being a great one, and commended us for the "remarkable" progress which has occurred during the last seven years. They indicated very directly that we should be proud of the School of Medicine in Columbia.

Dr. Mayer then commented on the reorganization. In October, the Chancellor received approval to reorganize his office. The Chancellor and Vice-Chancellor constitute the office of the Chancellor. On January 1, 1973 Dr. Walter Daniel, former President of Lincoln University, will assume the responsibility of Vice-Chancellor. Under the Chancellor's office, they have created three provost positions—Provost for Administration, Provost for Academic Affairs and Provost for Health Affairs. The Chancellor sees these five individuals as having the total responsibility for the administration of the Columbia campus and its 22,000-member student body. Dr. Mayer stated that he felt it very significant that they did include health affairs in those five. Under the Provost for Health Affairs will be the Director of the University Hospital, the Dean of the School of Medicine and the Dean of the School of Nursing. Consideration is being given to the establishment of a Dean of the School of Allied Health. If such becomes a reality, this, too, would be under the Provost for Health Affairs.

Dr. Thoma indicated that St. Louis University is engaged in a building program. Its main activity has been in nailing down its affiliation with DePaul Hospital. Affiliation will be a complete one. A medical director has been appointed. They are undergoing a $6 million building program. Affiliation of OB-GYN services has already begun. If all goes well, they anticipate not having an obstetrical service immediately in the University Hospital. It is anticipated in the next decade that Firmin Desloge will be phased out as a secondary care hospital. They are not adding beds, but simply upgrading the ancillary services and putting in better specialized services, such as radiation services, etc. An all-weather bridge is being built to Bethesda Hospital. They intend to use Desloge for tertiary care only. DePaul will have a 500-bed hospital in their final building program. The Kingshighway site will be converted to a community health center. It is hoped that this will be both a University service and a private practice community center.—**Referred to Medical Education and Public Welfare Committee.**

HCFM PROPOSAL TO MRMP

■ Chairman Cope called on Mr. Mark Halvorson, Executive Vice-President of the Health Care Foundation of Missouri, to present its proposal to the Missouri Regional Medical Program. Mr. Halvorson pointed out that the HCFM has been negotiating with MRMP regarding the funding activities of the Foundation. These activities have related to a data development project that was preliminary to a proposal for a grant from MRMP which will extend over a three-year period beginning in September, 1973. Council endorsement of this three-year project is being sought.

The nature of the project is to develop appropriate criteria and guidelines for evaluating the quality, accessibility and costs of medical care and defining areas of educational needs within the health care delivery system in Missouri. The title of the project is "Quality Criteria for Medical Care Evaluation." Mr. Halvorson then explained the goals, objectives and methodology of the project, indicating that this project is to continue the development of a Medical Care Evaluation Model. Mr. Halvorson stated that during the past three to six months, the HCFM has been working on a preliminary or experimental project in cooperation with MRMP This experimental project was designed to determine i HCFM could develop a data base that would assist i the development of a medical evaluation model. Thi data base is now in the process of being developed.

Mr. Halvorson reported that the project has bee endorsed by MAOPS, Mid-Missouri Areawide Comprehensive Health Planning Agency, State of Missouri Department of Community Affairs, Missouri Hospital Association and numerous other interested medical organizations that have agreed to cooperate on the project i their assistance and cooperation is sought. He stated that Council approval of this project will be sincerely appreciated and endorsement of this project by the Council will be an important factor.

Dr. Bradshaw asked for an approximation of th number of cases that the Foundation has reviewed t date. It was reported that as of August 31, 223 case had been reviewed and there are currently about 6 cases in process. Of those, some 83% were cases submitted by health insurance carriers and a small percentage by physicians. He stated that this only give them a start on a data base.

Mr. Halvorson reported that a survey questionnaire was sent to the participating members of HCFM on an experimental basis. He stated that in the future, they can foresee the development of specific surveys, perhaps by specialties, asking more specific questions relative to selected days and patient management of those days. We need and request full physician interest in these surveys so that the focus can be on what educational programs might logically be developed.

Dr. Hansbrough indicated that one physician submitted 51 cases and all were ruled in favor of the physician. He stated that he felt that in terms of volume of cases, each was reviewed separately and should be recorded as 51 individual cases, thus raising the numbe of cases which the Foundation found in favor of the physician. Mr. Halvorson indicated that in terms of volume, each one was reviewed separately, but in term of their record keeping, they include him as one massive case. Dr. Hansbrough indicated that he felt these should be recorded as 51 separate cases. Mr. Halvorson stated that of the total cases about 50% are in favor o the physician and about 50% in favor of the carrier.

Discussion followed as to whether or not this projec had been approved by the CHP (a) and (b) agencies Dr. Rikli indicated that he felt they had a favorable report back from the A agency.

Dr. Miller stated that the total number of cases reviewed is quite different from the relatively few physicians involved. He said this also brings to note the big concern of the HCFM in its activities so far, namely insufficient experience in reviewing cases. He said this is due to a host of reasons.

Dr. Miller called attention again to the fact tha PSRO legislation has been passed as of October 27 as part of HR 1. The HCFM has had some foresight in developing a structural organization that will possibly accommodate this and will put us in the forefront in health care activities to accommodate this legislation.

Dr. Miller moved that the Council endorse the project report as submitted by Mr. Halvorson. Motion was seconded and carried.—**Referred to Resolutions Committee.**

KIDNEY DISEASE PLAN

■ Dr. Cope called on Dr. John F. Maher, Professor of Medicine (Nephrology), University of Missouri-Colum-ia. Dr. Maher indicated that a group of physician-aders in the field of nephrology have developed a omprehensive Multi-Regional Kidney Disease Plan for ansas, Missouri and Southern Illinois, which is now eing submitted by the Kansas, Bi-State and Missouri egional Medical Programs in the form of a project roposal for funding by the Regional Medical Programs ervice of HEW. Dr. Maher stated that kidney disease the fourth leading killer, but the National Kidney oundation is 19th in contributions. Many times, kidney isease does not come to the attention of physicians at time when it could be properly treated. He stated iat when most of those present graduated, there were nly two nephrologists in the country. There must be iore postgraduate education for the practicing nehrologists.

Dr. Maher stated that they find that patients who ve in the St. Louis area may go to Kansas City or olumbia and patients in Kansas City sometimes go to t. Louis. It is felt this is inefficient, especially when person needs dialysis three times a week. He also indiated that at times the staff is overworked to a point here there is concern regarding fatigue and at other mes, the work load is too low. He stated that a registry nd inventory of dialysis facilities and patients in need f therapy will help straighten these things out. He id that in order to transplant, they need to identify iose individuals who are compatible and need to find onors where they can.

Dr. Maher stated that they also have a problem of ne laboratory identifying the characteristics of an indiidual. They send the kidney and find that when it ets to the other laboratory, it doesn't work. We want have all laboratories use a common system for all e potential recipients and have the Kansas City laborary function as the reference laboratory so that kidneys in be taken from anywhere in this region.

Dr. Maher said that in order for this program to work, ey cannot have the transplant surgeon go after the onor. This would mean considerable travel and loss of me. They would like to identify and train organ prourement surgeons in many areas throughout the region.

On motion of Dr. Hetlage, duly seconded, the Counil endorsed the project as spelled out by Dr. Maher.

PROJECT REGARDING CLINICAL NURSE ASSOCIATE

Helen Yeager, M.D., Assistant Professor, Department f Pediatrics at the University of Missouri, Columbia, resented to the Council a proposal submitted to the lissouri Regional Medical Program for development f a program to define the role of a clinical nurse ssociate for neurologically handicapped children. This roject is being submitted by the Department of Peditrics and the Department of Nursing. Dr. Yeager indiated that their interest is to try to determine for what le the nurse can be trained to perform to care for iese children. She emphasized that this is not a traing proposal, but a planning proposal. She indicated iat they are asking for funding for two degree nurses develop clinical experiences and to evaluate the alue of academic courses in preparing the nurse for e role of specialist in the care of neurologically handiapped children. The purpose of this project is to define ays in which a nurse with expanded responsibilities s a Nurse Associate can enrich health programs for eurologically handicapped children. Also, resources pen to the nurse for her training in these areas will e explored.

On motion, duly seconded, the Council agreed to endorse this project proposal.—**Referred to Medical Education and Public Welfare Committee.**

PROGRESS REPORT ON CONSUMER HEALTH INFORMATION PROGRAM

■ Dr. Rikli, Director of the CHIP Program, indicated that this program had been in the making for approximately three years and that when the proposal was funded, a letter was sent to MSMA bringing this proposal to our attention and that it is getting underway. He stated that copies of this program are available.

Dr. Rikli stated that three areas now have consumer health information centers. These areas are Salem, Warrensburg and the metropolitan area of Kansas City. The center in Salem includes the three-county area of Iron, Reynolds and Dent counties. The specialist in the Salem area is Mr. Jim Bryan. Mr. Bryan is a graduate of a health education course at the University of Missouri. The health information specialist spends about six weeks in preparation and then is sent into the area to get acquainted with the producers of health care services and with consumer groups.

The health information specialist in Warrensburg had been talking to various groups about the program. She was asked about poison control by one of these groups. She contacted the directors of the program and they supplied the necessary information to present to this group on how to control this problem.

Dr. Rikli indicated that the problems in Salem and Warrensburg are quite different than those in Kansas City. He stated that a nurse was selected to be the CHIP representative in Kansas City. He indicated that the main problem in Kansas City is helping people identify where they can get help with their health care problems. He stated that sensitive issues are being placed upon these people in these communities. He indicated that in one of the areas, there had been questions about the propriety of a physician operating a pharmacy and dispensing drugs from his office. He indicated that he felt that we need to recognize that these representatives are going to be faced with sensitive issues and hopefully, these can be brought to the attention of the appropriate organization for their consideration. He stated that the role of these CHIP representatives was not to give solutions to problems, but to obtain information for the parties involved and to help resolve their controversies.

During discussion, a question was asked as to whether or not Dr. Rikli felt that this program in any way conflicts with local and state health departments. Dr. Rikli stated that he felt that these programs complement each other and doesn't believe that they are competitive. Dr. Rikli indicated that the CHP "A" agency had expressed support for the program.

Motion was made and seconded that Dr. Rikli's report be filed. Motion carried.

Dr. Cope appointed the following to a committee to study the feasibility of inserting a year of continuing training in primary patient care in the state of Missouri: Dr. Bradshaw, Chairman; Drs. Noback, Gunn and Hansbrough.—**Referred to Miscellaneous Affairs Committee.**

REPORT OF THE BUILDING COMMITTEE

■ Dr. Matthews reported that a survey had been done and we now have clear title to the property. Title insurance has been purchased. The property has been purchased and we have taken possession of it. He stated that the architect had completed the drawings and we are ready to go ahead with the remodeling. He indicated that the building committee would like authorization to proceed with borrowing money to do the remodeling.

Dr. Matthews stated that costs of remodeling and furnishings will be somewhere in the neighborhood of $110,000.

Dr. Cope, as a member of the building committee, made a motion regarding the committee's request for authorization to borrow money for remodeling. Dr. Chandler, Vice-Chairman, took over chairmanship of the Council Meeting.

Dr. Cope moved that the Building Committee be empowered to negotiate, in its best judgment, a loan in the amount of $100,000-$110,000 for the purpose of remodeling and furnishing the property located at 113 Madison Street, Jefferson City, for use as the office of the MSMA and that the officers of the Association be authorized to sign the necessary instruments and papers to obtain the loan. Motion was seconded and carried.—**Referred to Reports of Officers Committee.**

REPORT OF THE COMMITTEE ON LEGISLATIVE AFFAIRS

■ Dr. Matthews stated that the committee had discussed numerous items and, generally, the items discussed were bills that have been pre-filed, most of which had been acted upon previously by the Council or the House. The immunity from liability for peer review physicians bill is in the works. A medical examiner system bill was introduced and calls for a pilot medical examiner system on an area-wide basis rather than on a statewide basis. The cost of a statewide system had prevented acceptance in previous sessions.

Another bill would allow embalmers to enucleate corneas. This would allow properly trained embalmers to enucleate corneas for transplants.

A proposed bill from the ophthalmologists providing for delegation of authority was discussed. This bill came about as a result of the Curteman decision. This bill would allow technicians to perform certain functions that had been delegated to them by a physician. The Committee and Council will support the delegation of authority bill.

Dr. Matthews stated that the committee had discussed the possibility of getting a sick doctor statute passed in next two or three years. The Committee would like Council approval to proceed with the planning of a sick doctor statute.

Motion was made and seconded that the legislative committee start developing sick doctor legislation. Motion carried.—**Referred to Miscellaneous Affairs Committee.**

AMA REPORT

■ Mr. Mortenson reported that an AMA membership project will be underway shortly in St. Louis City and St. Louis County. He stated that Missouri's AMA membership had dropped from last year. He urged everyone who can to attend a "National Leadership Conference" being conducted by the AMA in February.

Mr. Mortenson reported that Mr. David Weihaupt of the AMA will be coming to Missouri two or three times in the next few months to speak to groups about the AMA.

Mr. Mortenson indicated that Dr. Hoffman appreciated the hospitality extended to him during a recent visit to Springfield. Mr. Mortenson stated that all comments he had heard about the trip had been very favorable.

He stated that the legislative efforts of the AMA ar going to be shifted more toward state legislation.

REPORT OF THE PLANNING COMMITTEE

In the absence of Dr. Kerr, Chairman, Dr. Cope, member of the Planning Committee, gave the committee's report. Dr. Chandler, Vice-Chairman of the Council, took over the chairmanship of the Council Meeting.

The Committee feels that it needs direction regardin what its duties are. The Committee does not know if i is an action committee or just a committee to mak suggestions.

The first item discussed by the committee was Resolution #27, "Council Chairmanship." This resolution ha been re-referred by the Council to the Committee a the September Council meeting for reconsideration an a report before the Annual Meeting. The Committe tabled this resolution.

The next item discussed by the Committee was th possibility of a merger between St. Louis City and S Louis County societies. The Committee felt that th Council should be aware of this possibility and, perhaps develop ideas as to how this can be handled.

The third item discussed by the Committee was tha the Committee is of the opinion that strict adherence t tradition constitutes a continuing deterrent to the sustained involvement of competent and interested members of the Association. The Committee recommends t the Council that an appropriate study be made of thi problem.

Dr. Cope reported that the Committee recognizes th continuing problem of communications and suggests tha the Communications Committee: (1) Advocate the us of short, personal letters from Councilors to member of their Districts; (2) Maintain closer liaison with hospital staffs. He indicated that, possibly, a key ma could be appointed on each hospital staff to receiv and disseminate communications from the Association.

The Committee discussed the status of the Immediat Past-President. It was pointed out that the Immediat Past-President is neither an officer nor a councilor an requests that legal counsel furnish clarification of th Council status of the Immediate Past-President.

The Committee suggests that the Health Care Foundation study the possibility of developing a certifie hospital admission program.

The last item discussed by the committee was income-producing programs for the Association. Dr. Cop stated that the Association will have to have mor money in future years and that there is a limit as to hov much dues can be raised to finance the Association. Th Committee recommended that the Council study th feasibility of retaining competent management consultants to recommend possible income-producing program for the Association.

Dr. Hetlage stated that he would like to refer t Item #2 in the Committee report. He indicated that i Dr. Franklin agreed, he and Dr. Franklin would submi a statement at the next Council meeting as to what i going on in regard to the merger of St. Louis City an St. Louis County. Dr. Franklin agreed to do this, bu stated that he was not sure that they would get anywhere with this.

Dr. Hetlage indicated that relative to Item #3 regarding strict adherence to tradition that delegates from his District would be happy to testify before this committee with their ideas regarding this subject. He stated that this is the logical place to do it and that a representative group would come to explain their ideas.

Dr. Hetlage also made reference to Item #4 regard- ig communications. He indicated that during his Coun- lor District report, it was suggested that the AMA reen sheet be sent to a key man on each hospital aff to be placed on the hospital bulletin board in or- er to aid in communications with hospital staff mem- ers.

Following considerable discussion regarding this mat- r, the following amended motion was presented:

> Move that "the AMA green sheet be sent to a designated member of each hospital staff for posting on the bulletin board—that man being a designate of the Councilor in each District and that such mailing begin on Jan. 1, 1973 until April 1, 1973 and then be reevaluated at the annual meeting before further continuance." Motion was seconded and carried.

Mr. McIntyre requested that each Councilor send the ames of his designees in each hospital to the state ffice before January 1. Motion was made and seconded accept this report. Motion carried.

Dr. Cope stated that he liked the microphone system sed at this meeting and suggested that Staff look into ie possibility of getting such a system for the MSMA.

FINANCE COMMITTEE

Dr. Gulick indicated that the Council had given per- ission to borrow money for the remodeling and fur- ishing of the new building. He stated that, perhaps, ie Council would like to consider the possibility of lling up to $50,000 from our investment account for emodeling and borrow the rest of the amount needed. his would be quite a saving as far as interest on a an is concerned.

Motion was made and seconded that the Finance ommittee be authorized to sell a portion of our reserve ecurities up to $50,000 for the purpose of financing the emodeling of the new building. Motion carried.—**Re- rred to Reports of Officers Committee.**

LEGISLATIVE AFFAIRS COMMITTEE

Dr. Matthews stated that the Council needed to take ction regarding the removal of smallpox vaccination om the mandatory list of immunizations in Missouri. he Board of Health Committee recommended that this e removed from the mandatory list. The Board of lealth does not agree with the Committee, but will not ppose the bill. Dr. Matthews stated that he felt that ie MSMA should take the position that it does not ppose the bill, but does feel that the physicians should o ahead and immunize their patients as they see fit. He idicated that the Academy of Pediatrics has endorsed ich a bill.

During discussion, it was pointed out that during the ist few years, there have been more deaths and com- lications resulting from vaccination than from the dis- ase itself. Mr. Fox stated that a recent telephone poll f pediatricians indicated that they are divided about 0-50 on whether or not to continue mandatory vac- ination.

Motion was made and seconded that MSMA support non-mandatory smallpox vaccination position with in- ividual physicians continuing to immunize their pa- ents as they see fit. Motion carried.—**Referred to Mis- ellaneous Affairs Committee.**

NEXT COUNCIL MEETING

The next meeting of the Council will be held on Fri- ay, February 2 and Saturday, February 3. The Public Affairs Conference will begin Saturday afternoon and continue until noon Sunday, February 4. The meetings of both the Council and the Public Affairs Conference will be held at the Ramada Inn in Jefferson City.

A joint meeting of the Building Committee and the Finance Committee was called immediately following the adjournment of the Council Meeting.—**Referred to Reports of Officers Committee.**

Meeting of Feb. 2-3, 1973

■ James C. Cope, M.D., Columbia, Chairman, called the meeting to order. Those present were Drs. Cope; Walter T. Gunn, St. Louis; E. A. Stricker, St. James; John I. Matthews, Jefferson City; Charles R. Gulick, St. Louis; Gerald L. Miller, Kansas City; E. D. Imes, Maryville; R. A. Slickman, Kansas City; Lysle M. Bach, Hannibal; Max S. Franklin, St. Louis; Louis P. Hetlage, Troy; William D. Bradshaw, Clinton; R. Allen Chandler, Kansas City; Howard J. McAlhany, Springfield; Claude W. Cooper; Thayer; Eugene T. Hansbrough, Poplar Bluff; Stanley S. Peterson, Springfield; J. Loren Washburn, Versailles; Samuel B. Guze, St. Louis; George A. Thoma, St. Louis; William D. Mayer and William C. Allen, Columbia; R. K. Noback, Kansas City; Herbert R. Domke, Jefferson City; Mrs. Keith D. Jones, Warrensburg; Mrs. Jackie Watson, St. Louis; Messrs. Lee Mortenson, Chicago, Ill.; John Noble, Kennett; Allen D. Smith, Kansas City; Roger Weis, Kansas City; William Lindsley, St. Louis; Gary L. Schnedler, Springfield; Ray McIntryre, Tom P. Fox, Royal O. Cooper and C. C. Swarens, Staff.

COMMITTEE ON ARRANGEMENTS

The Chairman called the meeting to order and indicated that at the September, 1972 Council Meeting he had named the Committee on Arrangements—Drs. Franklin, Hetlage and Bach. However, no Chairman was named at that time. He stated that Dr. Franklin will be the Committee Chairman.

APPROVAL OF PREVIOUS MINUTES

Dr. Cope requested approval of the minutes of the Dec. 9-10, 1972 Council Meeting. On motion, duly seconded, the Council Minutes were approved as published.

TREASURER'S REPORT

Dr. Gulick reported that the audited account of the activities of the Association for the calendar year 1972 shows an excess of income over expenses. This is due largely to the increase in MSMA membership during the past year and more Journal advertising. In addition, some expenses were lower. The 1972 audit of the Association's accounts will be published in the March, 1973 issue of Missouri Medicine and will be included in the Delegates' Handbook for the 1973 Annual Session. On motion, duly seconded, the report of the Treasurer was approved.

EXECUTIVE SECRETARY'S REPORT

Mr. McIntyre said that the Editor of Missouri Medicine is appointed annually and usually at this meeting. On motion of Dr. Gunn, duly seconded, it was agreed that Dr. Finnegan be reappointed as Editor of Missouri Medicine. Dr. Fennigan will be requested to submit for Council consideration and approval members for the Editorial Board and Publications Committee.—**Referred to Reports of Officers Committee.**

■ It was pointed out that a news release was prepared and sent out with the approval of the MSMA President regarding the retaining of physicians under the 2.5% mandatory guidelines during Phase 3 of the Economic Stabilization Program, while freeing most of the rest of the economy from any mandatory guidelines. A copy of this also was sent to all Missouri Congressmen and Senators.

Dr. Cope indicated that Mr. Swarens was interviewed by Channel 8, KOMU-TV regarding the above and did a very nice job. He stated that it is gratifying to know that we can respond to this type of thing immediately.—**Referred to Miscellaneous Affairs Committee.**

■ Mr. Cooper said that the brochures regarding the MSMA-sponsored tour to Scandinavia in July, 1973 had been sent out and reported that as of Thursday, 25 responses have been received.—**Referred to Medical Education and Public Welfare Committee.**

■ For the past three years, the Association has honored the Missouri Congressional Delegation by having a luncheon in Washington in connection with the AMPAC Workshop. Mr. Cooper requested permission to hold this luncheon again this year, along with funding for same on March 9. On motion of Dr. Hetlage, duly seconded, it was agreed that this luncheon again be sponsored this year.

Mr. Fox reported on the development of a Quality Assurance Program (QAP) by the American Hospital Association. In drafting this, the American Hospital Association consulted with the AMA, the JCAH and also used the Michigan PAS Program. They are asking for MSMA endorsement of this program. The Missouri Hospital Association is holding an institute on February 19 in Jefferson City to go over this program. Also, the agenda of the Joint Commission on Hospital Accreditation will include this Quality Assurance Program at their meeting on May 11-13 at the Lake of the Ozarks.

Dr. Hetlage stated that this QAP was discussed at length during his Councilor meeting, but felt that they could not make a fair appraisal of this program without being fully and properly informed. They also felt that several of their physicians would attend the meeting in February. It was indicated that Dr. Ladyman will attend the meeting on February 19.

Mr. Fox reported that the Mini-Estes meeting this year will be held in Columbia on March 1 and 2. Registrations are coming in.

Mr. McIntyre stated that a PAS-MAP (Professional Activities Study-Medical Audit Program) Workshop will be held in St. Louis on February 22 at the Hilton Inn. The MSMA is cosponsoring this workshop again with no expense. It provides hospital staff members with an opportunity to learn techniques of using PAS System reports to carry out medical care evaluation studies. Dr. Vacca of St. Louis will attend and will represent Dr. Gunn in giving an opening welcome.—**Referred to Miscellaneous Affairs Committee.**

■ Mr. McIntyre indicated that Dr. Benoit, AMA Delegate and Chairman of the HCFM (Health Care Foundation of Missouri), could not be present at this meeting, but had written a letter to Chairman Cope with the following information:

> "I have been appointed to the AMA Advisory Committee on PSRO legislation as a representative of the Council on Medical Service, and our first meeting was held in Chicago on Jan. 12, 1973. This has been reasonably accurately reported in the AMA Newsletter, which I am sure most of the Councilors have read.
>
> "In addition to those people actually representin the AMA—such as the three members of the Counc on Medical Service, two members of the Council o Medical Legislation, three members from the Inter specialty Council, etc.—there were people there representing other organizations, although some of the were physicians. Dr. Schubert represented the Sacramento Health Care Foundation with their well know CHAP program espousing the benefits and exemplar goals of the American Association of Foundations fo Medical Care, about which I can assure you I hav many reservations and so does the AMA. The American Hospital Association and American Association Nursing Homes were well represented. The Illinoi Foundation for Medical Care and its HAS progra was extremely well represented by Dr. O'Donnell. Th National Association of Blue Shield Plans and Blu Cross Association were represented. Of considerabl concern to me was the fact that the American Osteopathic Association declined to have a representati serve on this Committee. The National Medical Association also was represented.
>
> "The Chairman of the PSRO Advisory Committe is Dr. Robert Hunter from the Board of Trustees. H came with fairly clear-cut instructions from the Boar as to the modus operandi of this Committee.
>
> "Various goals of the Committee's activity were outlined, and they will be dealt with by individual Tas Forces from the overall Committee. One Task Forc deals with the development of rules and regulation to implement HR-1; there will be a Task Force to loo into standards of care; another Task Force will loo into the geographical distribution of PSROs; and another will look at the structure of PSROs and ho they would best hope to function. Also identified a the meeting as a specific Task Force (but not listed i the final minutes, which bothers me) was one tha should devote itself almost exclusively to the distribution of information to physicians and the education o physicians as to the impact of this new legislation. I has been my observation, at least locally, that perhap 90% of the physicians are not aware of the impact HR- and the Bennett Amendment will have on the averag practitioner, and it has been viewed as relatively minor as compared with the passage of Medicare an Medicaid. In my personal opinion, the impact of thi new legislation on our patients and the way we car for them will be far reaching and of great importanc to both patient and physician.
>
> "I will, I am sure, be appointed to a Task Force, bu to which one I do not know at this point. There shoul be another meeting of the entire Committee in March and I would hope to be able to give a more detaile report of Task Force activity and overall Committe action at the Council Meeting just prior to the annua convention of MSMA.
>
> "Also at this time, I would like to give you some interval news regarding the Health Care Foundation o Missouri. We have contacted the Department of HE in an attempt to get as much information from them as we can to guide us regarding our future consideration as the PSRO agency for the state of Missouri. think it is fairly safe to say that probably there will b more than one PSRO established in Missouri, and according to the legislation, if, indeed, there is more than one in the state, then there will be a State Advisor Council to oversee the activities of the intra-stat

PSROs and be the reporting agency to the National Advisory Council provided for in the legislation. Having anticipated legislation of this type some three years ago, the Council would not be interested in knowing that the Health Care Foundation is undergoing a major restructuring of the Bylaws, which I think will provide a great deal more autonomy for each of the five currently existing Regional Review Panels and, hopefully, with proper funding, these individual regions can become separate PSROs in the future under the overall umbrella of the state organization."

Dr. Benoit further stated in his letter that regarding ie lawsuit brought by ten physicians in the St. Louis ea against the Council, individual members and officers the Association and the HCFM survived its first test ith a favorable decision by the judge for the dendants.

The question arose as to what other PSRO agencies e expected in the state. It was pointed out that there as a possibility that the present regions set up under ie HCFM might be expanded to a regional PSRO with itonomy to the HCFM and be separated only georaphically.—**Referred to Resolutions Committee.**

COUNCILOR DISTRICT REPORTS

District #9—Dr. Cooper indicated that everything ems to be going well in his District. They are holding Councilor District Meeting on Wednesday, February 8 at the Holiday Inn in West Plains. He invited those resent to attend.—**Referred to Reports of Officers Comittee.**

District #10—Dr. Hansbrough said that they have 00 physicians in the Tenth Councilor District which is egion E of the HCFM and have been discussing buildig their own autonomous organization under the HCF carry out the Bennett Amendment. They are studying foundation-type practice which seems to be working ell in other states. Regional review is very important as roblems are different in different regions.

Dr. Hansbrough reported further on the HMO being stablished in Lilbourn, Mo., which is to begin operation July. The Bootheel Housing Authority has the contract r this. They hope to obtain 200 families that will have repaid outpatient care. This is on an experimental bas. What they want to do is to see if somebody will unerwrite outpatient office care for a flat fee for a family. hey anticipate that this organization will pay a physian about $250 a year to take care of outpatient care r a family of four. They will charge the patient $1.00 r every office call and 20% of all lab fees. The physician ill be responsible for consultation fees. This is being one on a limited basis to see how they come out on a repaid outpatient care program.—**Referred to Resoluons Committee.**

District 8#—Dr. McAlhany stated that letters were ritten to the secretary and president of the State Board Chiropractic Examiners regarding chiropractic adversing in a local paper. A reply was received from their resident stating that this infraction would be brought the attention of their Board. Since that time, there has een no further chiropractic advertising in this local ewspaper.

Dr. McAlhany said that Senate Bill 122 (Medical Exminer Bill) was perfected in the Senate. As the bill is resently written, it concerns only Greene and Clay ounties, but other counties may participate if they so esire. He urged the key men to ask their representatives to support the bill. It was pointed out that not only a county, but a group of counties may go together.

Greene County held its annual orientation meeting for new members last month and Mr. Swarens was there. On January 26, Dr. M. D. Bonebrake was installed as President of the Greene County Medical Society.

Mr. Schnedler reported that for the second year, Greene County Medical Society put out a calendar in catalog form indicating hospital staff meeting dates, Greene County meetings and MSMA and AMA meetings. It has been very well received.

The suit Greene County has with IRS regarding the "Singing Doctors" is still pending.—**Referred to Miscellaneous Affairs Committee.**

■ *District #7*—Dr. Chandler reported that the Jackson County Medical Society President's Dinner was held on January 19, and Dr. C. Y. Thomas was installed as the new President. Dr. Chandler said that Dr. Thomas' speech was a tremendous one and recommended that it be sent to the MSMA Journal for publication.

Dr. Chandler said that he hoped to report further on the Mid-American Comprehensive Health Agency at the next meeting.

District #6—Dr. Bradshaw reported that things are fine in his district and reported no problems.

District #3—Dr. Franklin said that on January 13, Dr. Donald Judd was installed as President of St. Louis Medical Society and Dr. Richard Bradley as President-Elect.

On March 20, a discussion will be held during the St. Louis County and St. Louis Medical Society meeting in regard to a joint building. Tentatively, land has been selected—a 10-15 acre tract in west St. Louis County.

Dr. Franklin stated that he attended the Court hearing regarding HCF and was impressed with MSMA legal counsel.

At this point, Dr. Chandler indicated that he failed to mention one important item in his report. Jackson County has a merit award system and this is given infrequently to an outstanding physician who has contributed much to medicine. At the January 19 banquet, Dr. Miller and Dr. Benoit received such an award.

Dr. Franklin continued his report, indicating that the matter of the usual dance at the Annual Session banquet was brought up before the Council of his Society and also was discussed with Dr. Hetlage. He stated that it was their feeling that this is not essential and, perhaps, it would be better to open the hospitality rooms.

Mr. McIntyre indicated that Governor Bond has been invited to be the banquet speaker for Saturday night. We have not received a definite reply as yet.

Dr. Chandler stated that he felt to abolish the dance once and for all would be a mistake. It was pointed out that if there is no dance, it would be only on a trial basis to see how it worked out. The Chairman indicated that he felt this was a matter for the Committee on Arrangements.

Dr. Cope said that we are having fewer and fewer exhibits and felt that we may have to think about providing an area where people can gather and visit. He said that Mrs. Jones would say more about this.—**Referred to Reports of Officers Committee.**

■ *District #4*—Dr. Hetlage reported that he had had a good meeting with his county officers and delegates on Wednesday. A great many things were considered, but he said he would discuss some of them as the issues came up in the meeting.

He said that a discussion was held with Mr. Hughes regarding the new Open Panel Program that Blue Shield will propose and indicated that Mr. Hughes would be at the Council meeting to present that program for endorsement. The Fourth Councilor District passed a resolution which indicated that this Open Panel Program had been designed and prepared with a great deal of physician input. Dr. Hetlage assured the Council that they have had many meetings with Blue Shield in the past two years in regard to this. He said that the Fourth Councilor District agreed with it and unanimously endorsed it by a resolution.—**Referred to Resolutions Committee.**

■ The Fourth Councilor District passed a second resolution which reads:

> "The Missouri State Medical Association, Fourth Councilor District at a meeting duly called and held on Jan. 31, 1973, adopted the following resolution:
>
> *Resolved*, that the enactment of any of the bills now pending in the General Assembly of the state of Missouri for the regulation of health service corporations will not be in the best interest of the people of the state, including the more than 900,000 members of Missouri Medical Service and their families; and be it
>
> *Further Resolved*, that a copy of this Resolution be transmitted to the proper officers of the Missouri State Medical Association with the request that the Association take favorable action and aid in the opposition to the enactment of these bills."

Chairman Cope said that there would be a meeting of the Legislative Committee on Friday evening and, perhaps. Dr. Hetlage would like to bring this to their meeting.

Much time was spent discussing QAP. It was felt that there is a need to be more properly informed relative to this.—**Referred to Miscellaneous Affairs Committee.**

■ Dr. Hetlage said that another problem which arose was relative to Part A Medicare carriers. Doctors feel they are being imposed upon by the hospital administration and the Board of Directors to conform with rules and regulations that they say are forthcoming. In a talk to the administrators in Macon, it was indicated that carriers would review the Utilization Committee findings. If they felt there was prolonged hospital stay, they could reject all or part of the stay and according to the House Rule #1, the hospital would have no recourse against the family for paying the bill. Dr. Hetlage reported that he would have more information on this later.—**Referred to Resolutions Committee.**

■ Other matters discussed by the Fourth Councilor District were suggested changes in Narcotic Laws, which it was decided would be handled best by resolution to the Assembly, and suggested similar direction from county societies. Dr. Allen Klippel was named President of St. Louis County Medical Society and Dr. John Soucy was elected as President of St. Charles-Lincoln County Medical Society.

Dr. Hetlage indicated that his District felt that the Council should discuss the matter of a stand on abortion relative to the Supreme Court decision of January 21.

Chairman Cope stated that the MSMA House of Delegates had taken a stand on this to the effect that an abortion should only be performed by a licensed physician in a licensed hospital.

It was pointed out that this particular stand should be reiterated and that there should be protection for the physician who chooses not to do abortions.

Dr. Miller stated that they had asked a legislator to discuss this. It was his opinion that the Supreme Court decision will have no impact on existing state statutes until such statutes are challenged in view of this decision. Fundamentally, we are still in a status quo and do not think this changes our position.

Mr. Noble reported that it was his understanding th the Attorney General is working on this question no and that there should be an opinion from his office rel tively soon.

Dr. Domke indicated that it might be well to try to g a statute quickly which indicates that abortions be pe formed only in licensed hospitals. Discussion arose as whether or not it would be feasible economically to r quire that all abortions be done in licensed hospital since many things are required upon admission. It w pointed out that the physician could indicate that som procedures not be done, so that the cost would not b prohibitive. Discussion indicated that in the future som might be done in surgicenters. It was stated that th Council could not alter the stand taken by the House Delegates on this matter.—**Referred to Miscellaneou Affairs Committee.**

■ Dr. Hetlage also mentioned that St. Louis City an St. Louis County are considering a joint building and i dicated that they do have common problems, but do n feel that this is a political threat to either society.—**Re ferred to Reports of Officers Committee.**

■ *District #5*—Dr. Cope said that Dr. Vernon Wilso has returned to the University of Missouri in the capacit of Professor of Family Medicine and Community Health.

REPORT OF THE PRESIDENT

Dr. Gunn reported that as per Council action, a lett had been sent to the University of Missouri suggestin Dr. William D. Mayer as a candidate for the new pos tion of Provost for Health Affairs on the Columbia cam pus.

A letter was received from the Illinois Medical Societ inviting our MSMA President or his representative to at tend its annual meeting. However, the meeting date conflict with our own.—**Referred to Medical Educatio and Public Welfare Committee.**

■ The State Board of Health had requested that th MSMA designate a representative to serve on a Techni cal Advisory Committee for Medical Communications t review existing communications proposals relating t emergency situations. The MSMA proposed the name o Dr. Allen P. Klippel, St. Louis.—**Referred to Miscel laneous Affairs Committee.**

■ The Cancer Society had asked the MSMA to endors its program for Pap Tests. A task force to stress the im portance of Pap Tests for the early detection of cervica cancer in women of Missouri has been formed.

Dr. Hetlage stated that he would go along with en dorsing the goals of this program, but would like to kno how they intend to go about it. This was then put in th form of a motion, "move that we endorse the goals o this program, but would like information on how it wil be accomplished." This was duly seconded and carried.

Dr. Gunn said that a letter regarding a grant applica tion had been received from the American Academy o Pediatrics. The Chairman indicated that this would b referred to the proper committee for study.—**Referre to Medical Education and Public Welfare Committee.**

■ It was indicated that Mr. Swarens had written a proposed news release regarding pledge cards sent in b physicians relating to their restricting use of amphetamines and other stimulant drugs. On motion of Dr. Bradshaw, duly seconded, it was agreed that this be release as proposed by the 1972 House of Delegates.

Dr. Gunn said that he had just learned that Dr. Wiliam Macon, St. Louis, was accidentally killed by a gunshot wound the previous day. Dr. Macon was President-Elect of the Southern Medical Association.

It was pointed out that the program for the Large and Small Hospitals meeting in March had been sent to the presidents and secretaries of component societies and also there was a full page in the February issue of Missouri Medicine in the yellow pages.—**Referred to Miscellaneous Affairs Committee.**

REPORT OF COMMISSION ON MEDICAL ECONOMICS, THIRD PARTY MEDICINE AND GOVERNMENTAL RELATIONS

■ Dr. Peterson reported that the Commission had held a meeting with representatives of Aetna Life and Casualy present on Jan. 11, 1973. He stated that Aetna is one of the carriers who have provided medical care coverage which covers more or less everything. They have guaraneed in their contract that they will pay the UCR. They have developed prevailing fees by specialties within posal zip code areas, using an area between the 75th and 92nd percentile updated at least every three to six months or whenever somebody made a complaint about t with no consultation from physicians about it at any point. He said that Aetna put out the letter which you have heard about which says that if the patient has not had prior discussion with the physicians about the fee, hey should not pay any additional fee to the doctor and f the physician sues, Aetna will pay for legal defense to he patient. The letter evidently was put out as a specimen copy and, supposedly, was used on the East Coast and in Texas and not anywhere else. Aetna has sold the physician services without asking them if they will be bound by the contract which Aetna has written. The Commission feels that they have now convinced Aetna hat this is what they did. There are other companies hat are probably doing the same thing. Dr. Peterson inlicated that Aetna and presumably other companies involved in this will agree to talk about things now before hey do them in the future.

Dr. Peterson said that he had discussed the "float" with many health insurance agencies and they all disclaim it. This is the business of not paying claims as soon as they are received in order to receive more interest on their money while in certificates of deposit.

Dr. Peterson said that Aetna reported that 70% of their claims are clean claims and are processed within three o five days. For all practical purposes, there is no float at all. Dr. Hetlage said that his office had analyzed their nsurance claims for 1972 and it showed that it took Aetna 45 to 60 days to pay their claims. Some insurance companies paid in less time and others took considerably more.

Dr. Peterson indicated that, in the January issue of Missouri Medicine, anyone having any unsatisfactory claim problems was asked to report them to the MSMA Office and only one was received. He said we must have some statistics in order to do anything and back up our claims. It was suggested that possibly a statewide questionnaire regarding length of time to clean up claims would be in order. Dr. Peterson indicated that this portion of the report was for information and did not feel it needed approval.

Dr. Peterson said that an ad hoc committee had been set up to study the Medicare situation concerning the furnishing of an itemized statement to the patient to enable him to collect benefits from Medicare and, in turn, pay the physician for his services. Earlier, the Commission had recommended that the selection of all alternative methods of collecting charges from the Medicare patient is the responsibility of the treating physician and that the patient should not have the option of demanding direct payment to himself for a physician's services. To support this, the ad hoc committee developed the following resolution which was unanimously adopted by the Commission:

> Whereas, There are two alternatives by which a physician rendering service to a Medicare beneficiary may secure compensation,
> 1. Taking an assignment.
> 2. By non-assignment and billing the patient directly.
>
> Whereas, By non-assignment method the physician must issue a sufficiently itemized receipted bill if the patient has paid his bill.
>
> Or, issue a sufficiently itemized non-receipted statement by which the patient may then be paid directly by the Medicare carrier.
>
> Whereas, It is not uncommon for some Medicare recipients who receive itemized non-receipted bills to collect from the Medicare carrier and fail to meet their financial obligation to the physician,
>
> *Be It Resolved,* That it is the physician's option to use either alternative he chooses in keeping with his judgment of the patient's needs and the intent of the patient in meeting his obligations to the physician.

After brief discussion regarding this resolution, it was agreed to recommend amendment to the RESOLVED portion of the resolution to read as follows: "BE IT RESOLVED, That it is the physician's option to use either alternative—assignment or direct billing—he chooses in keeping with his judgment of the patient's needs and the intent of the patient in meeting his obligations to the physician."

It was moved and duly seconded that this portion of the report be approved as amended above. Motion carried.

Dr. Peterson said that the remainder of the Commission meeting was spent discussing a draft of Constitution and Bylaws for an organization that could represent physicians in their dealings with employers and third party carriers and fiscal intermediaries, and stated he would now discuss this in his ad hoc committee report.

REPORT OF THE AD HOC COMMITTEE FOR THE NEGOTIATION OF PROFESSIONAL FEES

Dr. Peterson gave a brief background on the original charge given to the ad hoc committee following the passage of a resolution in the 1970 House of Delegates which directed MSMA to set up the mechanism for the negotiation of not only professional fees, but also the rules, regulations and procedures that establish the conditions under which the physicians render their services. This resolution further resolved that the Delegates to the AMA be instructed to establish a similar mechanism at the AMA level. This ad hoc committee was set up under the parent Commission of Medical Economics, Third Party Medicine and Governmental Relations. Dr. Peterson was named the Chairman. Dr. Peterson and Mr. Noble made a trip to Chicago to discuss this with legal counsel of AMA. It became apparent at that point that the AMA's policy was not to promote unionism. However, they were desirous of being kept informed of the activities regarding this.

As activities proceeded in this field, it was apparent that MSMA legal counsel did not have sufficient time to devote to the project and Mr. Max Lilley, a Springfield attorney, was employed.

The first approach was toward the establishment of a mechanism within the MSMA to accomplish this. Many other associations concerned with the problems of doctors in this area were investigated and several of their meetings were attended. Both Dr. Peterson and Mr. Lilley discussed this matter with a great many people involved in medical unionism. Since that time, legal counsel made an extensive brief of our legal position and informed us that as a not-for-profit corporation, the MSMA cannot be involved in union activities. Therefore, he felt that a non-incorporated association should be formed by the doctors to carry out the purposes intended.

Dr. Peterson said that there has been a great amount of interest in this. The AFL-CIO now has 11 physician groups organized under the Service Employees Union and after reading these contracts know that a service employees union is not the way for the physicians to go. The Constitution and Bylaws, which were distributed to the Council, will, in the Committee's opinion, let us have in the state of Missouri a doctors' guild which is responsive to the MSMA and will not put us in a position of ruining our image any more than it has been. In fact, it will perhaps enhance it. It will give us a strong voice so that when the MSMA says this is a desirable situation, we will have an arm that can say this is the way we will do it, which we presently do not have. Dr. Peterson said that over the past several months, the Council has said go ahead and bring us a mechanism and this has been done with these Bylaws. We will need members who are willing to spend time, energy and money to really make this go. He said he felt that this is a working document that can be what the House of Delegates requested—a mechanism that will make it possible to do this.

Dr. Peterson said that he would not defend any specific paragraph of the Constitution and Bylaws as being the last word, but it is the last word of the six members of the Ad Hoc Committee on Negotiation of Professional Fees. It is the unanimous opinion of the members of the ad hoc committee and of the members of the Commission who were at the meeting that this is a working document that will do what the House of Delegates asked.

Dr. Peterson said that what one must get used to is the fact that a physician cannot act toward his patient as a union. He can act only to a third party employer who is hiring him as a group in an employer-employee relationship, not as a single contract between patients. There is an absolute differential between these two. We are not talking about a private physician's agreement with a patient, but we are talking about hiring out to an HMO to do this on a per capita basis.

It was pointed out by Dr. Bradshaw that the President of the AMA says that the final alternative of unionism is strike or withholding services. The Bylaws' general structure is misleading. He stated that he would be opposed if this were sent to the House of Delegates.

Dr. Peterson said that a multitude of things are done before strikes. He stated that to every physician he knew, his first responsibility is to his patient. You will not find anything here or in any conversations next week that says doctors should withhold their services from patients. The people doctors are going to withhold their services from are the people who are telling us how to care for these patients and how they are going to pay us. We have no other mechanism which will make one able to put teeth in the pronouncement that "the doctors of this country will not stand for this sort of treatment."

It was agreed that we need a negotiating mechanism, but some felt that if originally services are withheld from intermediaries, eventually it could be patients. Dr. Bradshaw stated that he would like to see us pursue the HCFM to the point of seeing that many of these problems are resolved in this area rather than creating a guil
or union.

Dr. Hansbrough indicated that unions of professiona
are now at the lowest esteem. He said that he felt
would be better if we were the 30th state than the fir
one. At the present time, this guild is geared primaril
toward the salaried physicians. He sees this as being
least three years hence. He, therefore, would recommen
that the committee be commended on this fine work an
recommended that we hold the bylaws as written for th
Guild for action at an appropriate time in the future.

Dr. Hetlage stated that he disagreed with Drs. Brad
shaw and Hansbrough. He said that although he did n
totally agree with the Constitution and Bylaws as pr
sented, he feels that the physicians must be able to spea
with one voice, which they cannot do at the present tim
and that third party carriers take advantage of it. H
stated that he felt that Article I should be carefully r
written to specifically confine it to third party carrie
and employers. He said the matter in his area has bee
so widely publicized that he feels it must come befo
the Delegates at the Annual Session so they can hear th
information, discuss it and make some type of decisio

Discussion followed as to whether or not this matte
would appear before the House of Delegates. It w
pointed out that this is a Commission report and will a
pear in the Handbook with or without Council approva
However, the Council can make such recommendatio
as it cares to make regarding the report. All would the
go to the House of Delegates. Dr. Hetlage stated that h
has a great deal of confidence in the House of Delegat
and feels that it should be discussed, but, in some ma
ner, implied that we feel the concept and the Constit
tion and Bylaws might as yet be immature and that th
whole matter might be well considered and discusse
but the mechanism not be implemented during this ne
year.

Dr. Peterson stated that Missouri is not first. Some 25,
000 doctors are already involved in an operation lik
this. Some are in medical association-sponsored type o
ganizations.

Dr. Franklin indicated that at this time, at least, h
would have to regard this guild or union as another splin
ter group, possibly because he is not adequately i
formed. He said that as a Councilor, he would bring th
matter to the Council of the St. Louis Medical Societ
and to the Delegates of his Society and, of course, he w
have to go along with whatever they decide should b
done.

Discussion followed regarding the mechanism for join
ing this Missouri Physicians' Guild. There is no Missou
Physicians' Guild at this time. Dr. McAlhany reporte
that a Springfield newspaper indicated that the Missou
Physicians' Guild is a charter member of the Americ
Federation of Physicians and Dentists. This, apparentl
was an error in reporting.

After further discussion, it was moved and second
that this report be filed in light of education and car
no endorsement of the Council whatsoever. Motion ca
ried.

Dr. Peterson said that in the course of going to sever
meetings, it became apparent that there are a number o
groups which are already organized and going forwa
with union activities. The first meeting was in San Fra
cisco and the last one in Las Vegas. Dr. Peterson is th
President of the American Federation of Physicians an
Dentists. He indicated that he would presume that

lissouri ever has a Missouri Physicians' Guild, that he ould do his best to have them become a member of the merican Federation. There has been considerable pubcity on this and there will be much more.

The question was raised as to what this Guild might hieve that our present Health Care Foundation could ot. It was pointed out that, at the present time, this uestion could not be answered. There is a host of renoation going on in the structure of this now. It is conivable that it might get into some of this, but impossble to say at this time.

Dr. Cope indicated that he could find nothing that inicated that the Guild, in order to come into existence, quires endorsement of the MSMA, and that if physians wanted to start the Guild, it would immediately beme existent. It was indicated that this is true and ISMA endorsement is not required.—**Referred to Resoitions Committee.**

REMARKS OF DIRECTOR OF DIVISION OF HEALTH

■ Dr. Domke indicated that he would like to report on veral policy positions taken by the Board of Health in gard to a reorganization plan for the State Government. He stated that the Board has again affirmed its potion that there should be a Department of Natural Reurces with engineering functions regarding environiental health and it should be coordinated with the Dision of Health in environmental health surveillance.

The next item reported was that the Crippled Chilren's Service would be transferred from the University Missouri to the Department of Welfare under the tate Reorganization Plan. During discussion with the niversity, it was agreed that this service would be betr assigned to the State Division of Health. This has een so reported to the Senate Committee studying the eorganization Plan.

Under the reorganization plan, the State Board of ealing Arts and other licensing groups would be asgned to a Department of Consumer Affairs and Regution and would be completely separated from health. was felt by the Board of Health that these could be etter coordinated into the Department of Social Serices. This was reported to the Senate Committee.

Another matter brought before the Board was in rerd to the Cancer Commission. It was the feeling of the oard of Health, in concurrence with the Cancer Comission, that with the national effort to extend cancer ontrol activities to the different areas of the state, that e Cancer Commission should be given more responsiility than it had been given under the reorganization lan. This was delivered to the Senate Committee. Dr. omke also indicated that the Department of Social Serices would more or less replace the Health and Welfare epartment.

Dr. Domke stated that the Board of Health had acepted an invitation from the Governor's Advisory Counl on Comprehensive Health Planning to operate an gency to implement a statewide emergency services lan. The Board agreed with reservations about how far eir activities could go in relation to legislative matters. he Board established a Communications Committee ith Mr. Hamilton Reid of Baptist Memorial Hospital in ansas City as Chairman. The Committee is attempting develop recommendations in regard to a statewide nergency system and develop a system that will be chnically capable of handling developing needs of this rvice.

Dr. Domke stated that the Board had taken no position as yet on paramedical personnel. He reported that bills had been introduced in the Legislature to delete mandatory smallpox vaccination from state statutes.—**Referred to Miscellaneous Affairs Committee.**

■ Dr. Domke stated that he would like to refer to one item that might require action of the Council. He indicated that it is general knowledge that the Administration is proposing major changes in federal funding to a variety of health programs. He said that as of July, changes would be made in children, youth, maternal and infant care programs. Dr. Domke stated that the Division of Health would have to make policy determinations and program determinations and would very much like to have the advice of this Association and other groups.

He reported that the physician manpower report has been completed to the satisfaction of the Physician Manpower Committee and the report has been submitted to the MSMA Journal with the hope that it will be published in the May issue.

Dr. Miller moved the acceptance of this report with commendation. Motion was seconded by Dr. Bradshaw and carried.—**Referred to Medical Education and Public Welfare Committee.**

REPORTS OF DEANS

■ Dr. Guze stated that he had only one item to report. This item is the apparent change in the policy of the federal government concerning training grants for various categories of trainees in medical schools. He indicated that it looks as though the federal government will eliminate all support for training grants to medical schools, and that federal grants represents 14% of the operating budget of Washington University. He stated that he felt that American medical schools are going to face the worst financial crisis in modern times.

Dr. Miller asked about which categories of trainees would be affected. Dr. Guze stated that all training grants would be affected.

Dr. Allen stated that he would like to ask permission for Dr. Mayer to present a report from the University of Missouri on Saturday.

Dr. Thoma reported that he shared Dr. Guze's concern in reference to training grants. Dr. Thoma stated that Dr. Tom Frawley, Chairman and Professor of Medicine at St. Louis University, had asked to be relieved as Chairman of the Department of Medicine, but would continue as Professor of Medicine. A search committee has been formed to find a replacement. Dr. Thoma reported that a bill had been introduced in the legislature that would affect medical schools in the state. This bill calls for the equalization of tuition in private medical schools to the same level as that at the University of Missouri. This bill would provide enough aid so that any Missouri resident could go to any private school for the same fees and tuition he would pay at the University. This bill includes the two schools of osteopathy.—**Referred to Medical Education and Public Welfare Committee.**

REPORT OF MISSOURI MEDICAL SERVICE

■ Mr. Hughes, President of Missouri Medical Service, stated that about a year ago, he had presented the idea of the development of an open panel health care program. At that time, the Council did endorse and support the development of the concept of the open panel plan. Since that time, work has been done to develop this plan. Mr. Hughes stated that Missouri Medical Service had worked in cooperation with and with the guidance of an ad hoc committee of approximately 30 physicians from the third and fourth Councilor Districts.

Mr. Hughes indicated that the reason so many physicians are interested in this type of plan is that the open panel program offers a comprehensive scope of benefits. He indicated that the open panel plan preserves the fee-for-service concept. He stated that this plan would eliminate, as far as possible, co-pay.

Mr. Hughes stated that he did not know what the financial impact would be. The Board of Trustees had indicated that it would go on risk for a period of one year with this program. Mr. Hughes stated that he would like Council support for this program. Participation of individual physicians is needed and the Board of Trustees feels this is a positive opportunity for medicine and would like MSMA endorsement and support. He said that this program would not replace any programs now being offered by Blue Shield, but would run parallel with them.

Dr. Hetlage asked if this would be sold to individuals or to selected groups. Mr. Hughes stated that this would be offered to groups upwards of 25. Dr. Miller asked what he would anticipate would be essential from the standpoint of enrollment in order to have good exposure. Mr. Hughes stated that they would like to go into groups of more than 25 in which there already was 75% participation in a group and would like to get 50% of that 75% for this to hold up. He stated that he felt this would have appeal for groups of 5, 6, 7 or 8 hundred in the beginning. He indicated that cost to Blue Shield would be administrative and would be in the neighborhood of 10%.

Dr. Hetlage presented a resolution that would endorse and support the open panel health care program. Dr. Cope stated that the Chair felt that since the Council had not had an opportunity to study this in detail, action should be tabled until Saturday morning.

Motion was made, seconded and carried that action on Dr. Hetlage's resolution on the open panel health care program be tabled until Saturday morning.—**Referred to Resolutions Committee.**

REPORT OF THE WOMAN'S AUXILIARY

■ Mrs. Jones stated that the mid-winter Board meeting will be held on Saturday morning. A Public Affairs Breakfast will be held during the Annual Session. This Breakfast will be at 7:45 AM on March 30 and will be co-sponsored by MMPAC and the MSMA Public Affairs Commission. The Speaker for the breakfast will be Dr. James Sammons, a member of the AMA Board of Trustees, who will speak on "Here and Now Politics." Mrs. Jones invited everyone to attend the breakfast.

Mrs. Jones stated that the Auxiliary had been asked to join with the MSMA in the opening session on national legislation that will be held at the Chase Club during the Annual Session. Dr. Hansbrough has been invited to report to the Auxiliary on March 31 on the actions taken during the MSMA Convention.

Mrs. Jones stated that the St. Louis Auxiliary and the Auxiliary Board would be happy to man a joint hospitality booth or room to provide coffee and rolls to physicians during designated hours during the Annual Session.

Mrs. Jones thanked Dr. Bradshaw for writing a sumary of the Health Education Day, and she thanked Mr. Swarens and the MSMA staff for distributing the summary. The summary will be sent to other states who request it and also will be sent to those who attended the Conference.—**Referred to Reports of Officers Committe**

■ Mrs. Jones reported that with the promoting of Jacl son County a new mental health package was being d veloped and a handbook on environmental health woul be published in the near future. She indicated that th Missouri Health Manpower Survey should be complete by May 1. This survey will contain the information of th State Division of Health Survey and, also, informatio from all the schools and churches in the state. When th survey comes out, we will find out in what areas the is a shortage and why there is a lack of personnel an what the Auxiliary can do to help in obtaining medic manpower.

Mrs. Jones stated that she had attended a meeting the American Cancer Society concerning the formatio of a Uterine Cancer Task Force. She stated that sh would like to discuss five points regarding it: (1) A n tionwide effort, sponsored by the American Cancer S ciety, is being made to strongly emphasize the impo tance of the PAP test in the early detection of cervic cancer. (2) Major Goal: PAP test for every woman i the U. S. over the age of 20 by 1976 and tests for thos under 20 at risk. (3) Task Force Concept: Involve an utilize the knowledge, expertise and input of relate groups (medical and dental societies, health agencies to accomplish the goal of the Task Force. (4) State lev task force is to plan, advise and suggest appropriate a tions for the local community task force. (5) Ultimat goal in Missouri is to gain endorsement of appropriat medical groups and institute the actions of the Canc Task Force in every county in Missouri. Mrs. Jones state that the Auxiliary is urging the wives of physicians to s an example by having a PAP test and is urging all phys cians to do PAP tests on appropriate patients.—**Referre to Medical Education and Public Welfare Committee.**

■ Mrs. Jones reported that several Auxiliary membe will attend the Quality of Life Second Congress o March 7-9 in Chicago and that she will attend the AMA AMPAC Public Affairs Workshop in Washington. She a so indicated she would try to attend Dr. Bach's Secon Councilor District meeting and Dr. Cooper's Ninth Cour cilor District meeting.

Mrs. Jones made the following request:

> We would like to request at this time that a positio of Auxiliary Coordinator to the MSMA be create starting April 1, 1973. The purpose of this positio would be to attend the Council Meetings, MSMA Pu lic Affairs Commission, Legislative Committee an Health Manpower committee meetings and the Mi souri State Medical Foundation Annual Meeting or t have the privilege of appointing a representative t attend if she could not do so. This is common in man of our surrounding states, and we have been intereste in this for several years. We believe this would e hance our communications. This coordinator would b appointed by the President of the MSMA with the ad vice of the Auxiliary Medical Advisory Board and th President of the Auxiliary.

It was pointed out that the Council had already e dorsed the goals of the Uterine Cancer Task Force. D Cope stated that exhibits were dropping and that th physicians attending the Annual Session needed a plac to get together and that the cost wouldn't be excessiv The St. Louis Auxiliary had agreed to man the Hospitali ty Booth or Room.

Dr. Hetlage moved that we request the Auxiliary an the St. Louis Auxiliary to proceed with this project. Th motion was seconded and carried.

Dr. Hetlage stated that in regard to the appointment of an Auxiliary coordinator, this had been brought up at the last Council meeting. He stated that we had asked the Auxiliary to become a political force in the state. Over the last few years, they had acquired a new image and deserved to be better informed. Dr. Miller indicated support for Dr. Hetlage's views.

Dr. Chandler moved that an Auxiliary coordinator, as requested by Mrs. Jones, be appointed to serve as indicated. Motion was seconded by Dr. Hansbrough and carried. The Chair indicated that this coordinator would be an officer of the Auxiliary and not of the MSMA.—**Referred to Reports of Officers Committee.**

REMARKS OF THE SPEAKER OF THE HOUSE OF DELEGATES

■ Dr. Imes asked that suggested names of physicians to be appointed to Reference Committees be sent to the MSMA Office and, also, that resolutions be sent to the MSMA Office as soon as possible so they can be included in the Handbook. Dr. Imes then read the following statement adopted by the 1972 House of Delegates regarding the introduction of resolutions:

> "All resolutions to appear in the Handbook must be received at the Association office 45 days prior to the opening session of the House. Any resolution to be introduced after that time must be made available to the House of Delegates 24 hours before the session at which it is to be introduced. At least 200 copies of the resolution or funding for same must be supplied by the individual or society introducing the resolution. At the second session of the House of Delegates the same procedure would be followed, but such introduction would be allowed only if approved by two thirds of the delegates voting. The same procedure would be followed for the third session, but at that time it would take unanimous vote of the House to allow such introduction."

Dr. Imes stated that he felt that the Speaker of the House should be invited to attend all Council meetings throughout the year in order to know what is going on within the Association. Several Councilors expressed the same sentiment as Dr. Imes. Dr. Cope stated that the Speaker would be accorded the same position of the AMA Delegates, which is that of an observer.

Dr. Hetlage moved that the traditional operation of the Council be altered to the extent that the Speaker of the House of Delegates be invited to attend each Council meeting so that he may be even more knowledgeable as to Council activities and opinions in his deliberations as Speaker of the House. Motion was seconded and carried.—**Referred to Report of Officers Committee.**

REPORT OF COMMISSION ON MEDICAL-LEGAL AFFAIRS

■ Mr. Cooper reported that the main item discussed during the joint meeting with the MSMA medical-legal commission and the medical-legal committees of the Osteopathic Association and the Missouri Bar Association was the use of video tape depositions in court. The Committee recommends that the Bar Association Rules Committee, which is presently working on needed changes in court rules, be approached about the possibility that Missouri court rules be changed to permit the use of video tape depositions. These rules would be patterned after the federal rules concerning the use of video tape depositions.

Mr. Cooper reported that this joint committee was being used to handle statewide interprofessional grievances. The committee also discussed House Bill #173, "A bill that would change the present statute of limitations for physician's malpractice from two years from the date of the act to two years from the date of ascertainment and would also remove the dollar limit on wrongful death."

Dr. Bradshaw moved that this report be accepted and filed. Motion was seconded and carried.—**Referred to Constitution and Bylaws Committee.**

REPORT OF LEGAL COUNSEL

■ Mr. Noble reported that the Health Care Foundation suit had been brought to trial on January 15. It took a day and a half to try the case and the Court passed on it rather speedily. The Court found in favor of all defendants on all counts. The judgement does not become effective until after a lapse of 30 days. Mr. Noble stated that a motion to set aside the judgement of the court has been filed by the plaintiffs. This gives them a period of 15 days during which time an affidavit for an appeal can be filed.

Dr. Gunn moved acceptance of this report with thanks. Motion was seconded and carried.—**Referred to Resolutions Committee.**

REPORT OF THE CONSTITUTION AND BYLAWS COMMITTEE

■ The first item considered by the Committee was the constitutional amendment concerning referendums that was accepted by the House of Delegates at the 1972 Annual Session which provides for:

> "Petitions signed by 10% of the active members of the Association, including petitioners representing at least one half of the component medical societies, will initiate a referendum regarding changes in the Constitution or Bylaws or questions before the House of Delegates or Council. A majority vote of all active members of the Association responding shall determine the question."

The Committee felt that this amendment, as written above, gives rights to the minority of the members, but does not protect the majority. The Committee recommends the acceptance of the original reference committee recommendation, which is as follows:

> "Petitions signed by 10% of the active members of the Association, including petitioners representing at least one half of the component medical societies, will initiate a referendum regarding changes in the Constitution or Bylaws or questions before the House of Delegates or Council. *A majority vote of all active members of the Association shall determine the question.*"

or suggests as an alternative recommendation that "*a two-thirds vote of all active members of the Association responding shall determine the question.*"

Considerable discussion followed on how an amendment to the Constitution, which is laying on the table, can be amended in the House of Delegates. Several methods were discussed.

Dr. Franklin moved the acceptance of this portion of the report and recommended that the Council recommend to the House of Delegates the alternative recommendation of the Committee that "a two-thirds vote of all active members of the Association responding shall determine the question." Motion was seconded and carried.

The next item discussed by the Committee was the implementation of Resolution #8—"Representation for Medical Students." The Committee recommends that Article IV of the Constitution be amended by adding the following sentence thereto:

> "Included also in the House of Delegates shall be two student delegates, each from a different class, elected by the student body of each of the medical schools in the State of Missouri, who shall have the same rights and privileges as other delegates."

. . . and a corresponding Bylaws change which would amend Chapter III of the Bylaws by adding the following paragraph to Section 2 and be numbered Section 2A to read as follows:

> "Each of the medical schools in the state of Missouri shall be entitled to send each year two student delegates, each from a different class, elected by the student body of the said medical school. The names of such student delegates shall be certified by the Dean of said medical school to the Secretary of this Association thirty days before the Annual Session. Such student delegates shall have all the rights and privileges of all other delegates."

It was pointed out that if the Constitutional amendment could be adopted on Thursday, the Bylaws change could be brought up for adoption at the second session of the House on Friday. Staff was directed to contact the deans of the medical schools, inform them of the procedures for electing student delegates and request that the elections be held and the names of the student delegates be certified by the deans. If the above amendments are not adopted, the student delegates can still sit in the House as guests.

Dr. Allen stated that there was a problem with the wording as to how the students are elected. He recommended that the Bylaws amendment be amended to delete the words "elected by the student body of the said medical school."

This recommendation was discussed by the Council. The general consensus was to agree with Dr. Allen's recommendation.

Motion was made to accept and endorse this portion of the report of the Committee on Constitution and Bylaws with the recommendation to delete "elected by the student body of the said medical school" in the Bylaws. Motion was seconded and carried.

The next item discussed by the Committee was Resolution #27, "Definition of Council Chairmanship." This resolution had been referred to both the Planning and Constitution and Bylaws Committee. The Planning Committee recommended to the Council that this be implemented, but after study, it was pointed out that the resolution would be difficult to fully implement. The Council re-referred this back to the Planning Committee for further study with the Planning Committee tabling the matter and the Council accepting that action. Therefore, this Committee took no action on the issue.

The last item discussed was the Council status of the Immediate Past-President. The Planning Committee requested an opinion from legal counsel on this matter. Legal Counsel's opinion is as follows: "The Immediate Past-President is a member of the Council by virtue of the Constitution. He is not an Officer or a Councilor, but is on the Council in an advisory capacity for continuity."

Dr. Franklin moved the acceptance of the last two portions of the report. Motion was seconded and carried.

Dr. Franklin moved the acceptance of the entire report with the recommended amendment. Motion was seconded and carried.

Dr. Cope, Chairman of the Council, stated that the material in this report would be submitted to the House of Delegates in three portions for easier handling on the floor of the House.—**Referred to Constitution and Bylaws Committee.**

■ Dr. Matthews stated that a subcommittee of the Executive Committee had been appointed to study MSMA Personnel Policies. This Committee consists of Drs. Franklin, Stricker and Matthews. Dr. Matthews then read a proposed statement from the Committee:

MSMA POLICY FOR EMPLOYEE WHO BECOMES DISABLED

It will be a policy of the MSMA to provide the following salary benefits to employees who become disabled:

1. Employee less than five years continuous service: No benefits
2. Employee of more than five and less than ten years continuous service: Salary will be paid for three months
3. Employee of more than ten years continuous service: Salary will be paid for a period of six months.

All employees are eligible to participate in the pension plan after the age of 30 and after three years continuous service. Disability benefits in this plan provide for a monthly disability benefit after an employee has been disabled for a period in excess of six months.

Dr. Gunn moved acceptance of this policy. Dr. Stricker seconded the motion and the motion was carried.

Mr. Lee Mortenson of the AMA stated that he would like to discuss a few items. He stated that at the last meeting of the Council, an ad hoc committee on membership had been appointed and that a meeting would be held on February 23 in the MSMA Office in Jefferson City. He indicated that the AMA was involved in a membership project in the St. Louis area.

Mr. Mortenson mentioned vehicles of communications that are being used by surrounding states, and said the topic of communications would be taken up at the National Leadership Conference.—**Referred to Reports of Officers Committee.**

■ Mr. Mortenson stated that he would like to make a suggestion in regard to the proposed Constitution and Bylaws presented by Dr. Peterson. He stated that he would like the AMA legal staff to look at the Constitution and Bylaws and possibly make some suggestions.

Dr. Gunn moved that the above suggestion be carried out. Motion was seconded and carried.—**Referred to Resolutions Committee.**

■ Mr. Mortenson mentioned that a National Leadership Conference will be held on February 16-18 and it promises to be a good Conference. He also mentioned that an AMA-AMPAC Public Affairs Workshop will be held in Washington in March.

Mr. Mortenson reported that Mr. Gary Schnedler of Greene County had contacted him in regard to a group, Crusade for Life, which is soliticing funds for dialysis machines, and asked for information about this group. Dr. Allen pointed out that the state of Missouri has been appropriating money for those who need home or hospital dialysis and that there is no need for this type of operation.

Mr. Mortenson stated that the AMA is becoming more and more interested in state legislation and expects some shift of emphasis to state legislation.—**Referred to Miscellaneous Affairs Committee.**

REPORT OF DEANS

■ Dr. Noback reported that 360 applications had been received for next fall at the Missouri University Medical

School in Kansas City. He stated that acceptances would go out later this month.

Dr. Noback reported that the Area Health Education Center in Kansas City is now beginning to come into activation. He indicated that, initially, the program would be in the Kansas City area and later would work with the counties in the western part of the state. The plan for the first year is to get students out into the western part of the state and develop communitywide residencies to expand continuing education activities. The Area Health Education Center will work with hospitals, county societies and specialty groups in the western part of the state.

Dr. Noback reported that a quality control program is being developed within the medical school itself. He indicated that physicians had been asked to identify the kinds of questions relative to the roles of physicians.

Dr. Noback indicated that the Kansas City Medical School is again going to have family practice preceptorships during the summer for year 2 students. The number will increase from 18 last summer to 40 this summer.

Dr. Noback stated that nine students were expected to graduate this spring. So far, five of those students have been slotted in their initial house officer experience at General Hospital in Kansas City.

Mr. McIntyre asked Dr. Noback how many students they would take into the first year from the applicants. Dr. Noback stated the school would bring in somewhere between 72 and 80 students. He also stated that they were waiting to hear from the Liaison Committee on Education in regard to full approval for the medical school.

Dr. Mayer reported that over the last 20 months, he had chaired a committee of the National Board of Medical Examiners that had studied licensure, accreditation, certification and evaluation of the medical profession in this country as they relate to U. S. and foreign medical graduates. The Committee is rapidly approaching the issuance of a formal report. He stated some of the real concerns in this country have been the foreign medical graduate issue and the issue of evaluation of the medical profession as it relates to recertification and relicensure. He stated that 50% of the certification in this country is done by Specialty Boards. Dr. Mayer indicated that the Committee probably would recommend that a "qualifying" examination be given in the last year of medical school. This examination would provide for the State Board to license an individual to practice in a supervised setting. Full licensure would come following certification by his Specialty Board. Foreign medical graduates also will probably be required to take the same examination that U. S. graduates take. He stated that what will happen in regard to recertification is unclear at this point. He indicated that seven Specialty Boards were considering this matter.

Dr. Hetlage asked if the Committee was proposing that no one would receive full licensure until certification by a Specialty Board. Dr. Mayer stated that within the next five years, the vast majority of U. S. graduates would be licensed by this method. He stated that he thought that the Committee would propose that an individual who had passed the qualifying examination would not receive full licensure to practice until (1) he is certified by a specialty board and (2) he has had a minimum of two and, hopefully, three years of graduate training in an AMA-approved training program. The basis behind this change is that an M.D. degree in this country no longer prepares an individual to practice medicine.

A question was asked about how recertification will be done. He indicated that he didn't have any idea, but the Committee felt that examinations per se were not the appropriate way to go about recertification. He said that,

perhaps, this could be done on a regional peer review audit basis.

Dr. Mayer stated that at a subsequent meeting of the Council, he would appreciate an opportunity to present the Committee's report in detail. Dr. Cope stated that when the formal report is ready, a special arrangement will be made to place this on the agenda.—**Referred to Medical Education and Public Welfare Committee.**

■ A resolution presented during a report given by Mr. James Hughes, President of Missouri Medical Service, regarding their Open Panel Health Care Program was tabled on Friday until the Council had a chance to look over the program presented by Mr. Hughes.

On Saturday, Dr. Hetlage moved the following:

> Whereas, St. Louis Blue Shield (Missouri Medical Service) has developed the Open Panel Health Care Program with the consultation and advice of the medical profession; and
>
> Whereas, This Open Panel Health Care Program is designed to meet a public desire for a fully comprehensive health program for medical and surgical services and this Open Panel Health Care Program is deemed to be in the best interest of and for the benefit of the patients of physicians and the members of Blue Shield who desire to participate in this Program and thereby also for the benefit of the general public; and
>
> Whereas, This Open Panel Health Care Program reflects the suggestions and advice of the medical profession and is presented to physicians as an important comprehensive program for their support and participation; now therefore, it is hereby
>
> *Resolved*, That the Council of Missouri State Medical Association fully endorses and approves the Blue Shield Open Panel Health Care Program and urges physicians to support and participate in it.

The motion was seconded by Dr. Miller and carried.—**Referred to Resolutions Committee.**

REPORT OF SPECIAL COMMITTEE TO STUDY FEASIBILITY OF ADDITIONAL TRAINING OF PHYSICIANS IN PRIMARY PATIENT CARE IN MISSOURI

■ Dr. Bradshaw stated that the Committee considered several points and would like to present them at this time as information only. The Committee intends to continue work in this area. The points mentioned above are as follows:

1. Either medical manpower shortage or the maldistribution of medical manpower might be partially relieved by additional training in primary patient care.
2. Additional training could be advantageous for the further continuation in the specialty and sub-specialty type of practice.
3. The program could lead to better understanding of the internal problems with our present system of medical care.
4. Impressionable young people entering the profession would have greater opportunity to evaluate their own performance.
5. May be used as an economic aid for young men to further their educational pursuits at a time when economic assistance is usually needed.
6. A minimum of one year in Primary Care Practice would best be accomplished in a preceptorship situation with a salary based on economic competition. (Definitely not "Slave Labor.")
7. Such a program of Primary Care experience could and should relieve much of the burden presently existing in many areas of the United States as well as add to the basic premise that the medical professional should be a broadly educated individual.
8. Local Missouri State requirement is probably a stumbling block . . . should be expanded to AMA jurisdiction.
9. Define: Primary Patient Care!!!! What guidelines should be outlined for control? What areas of medicine are acceptable for this type of training?

Dr. Bradshaw indicated that the above thoughts are offered as a springboard for discussion.

Dr. Cope stated that this was in order on the terms for information only.—**Referred to Medical Education and Public Welfare Committee.**

REPORT OF FINANCE COMMITTEE

■ Dr. Gunn reported that the Finance Committee had met on February 2 and had discussed procedures for the Building Committee in handling loan and payments to the contractor and architect. The Committee needs official Council approval for officers of the Association to establish loan and bank accounts and to authorize the same three signatures to sign checks and notes as sign checks on the regular account. The Committee also discussed the performance of the investment account. The bank officer of our investment account will attend the Finance Committee meeting that will be held during the Annual Session and make specific investment recommendations at that time.

Dr. McAlhany moved approval of the bank signature resolutions for Missouri State Medical Association Building Construction loan and checking accounts with Mercantile Trust Company of St. Louis. Motion was seconded by Dr. Hansbrough and carried.—**Referred to Reports of Officers Committee.**

REPORT OF LEGISLATIVE COMMITTEE

■ Dr. Matthews presented a list of bills of interest to medicine that had been discussed by the Legislative Committee. The Legislative Committee indicated support for several bills. The Council approved of this action. There were several bills presented that the Legislative Committee felt that MSMA should oppose. The Council approved this action. Dr. Matthews also presented several bills for informational purposes only and indicated that no position would be taken on them. The Council approved this action.

Dr. Matthews asked for Council approval to draw up and introduce "sick doctor" legislation in this Session of the General Assembly. He indicated that this would be similar to the legislation now being used in Florida. He stated that the AMA had taken the stand encouraging states to get busy in this area.

Motion was made, seconded and carried that "sick doctor" legislation be drawn up and introduced into the General Assembly. Motion was made and seconded to approved the entire report. Motion carried.—**Referred to Miscellaneous Affairs Committee.**

■ Dr. Matthews reported that the new building is progressing nicely. He stated that approximately $90,000 will be needed for the renovation work and approximately $20,000 for the furnishing of the building. He stated that he thought the building would be completed some time this spring.

Dr. Hetlage stated that most of the members don't know too much about the new building and that perhaps some sort of progress article could appear in the Journal. It was pointed out that the Historical Society is writing a history of the building and that this could be published in the Journal.—**Referred to Reports of Officers Committee.**

■ Doctor Chandler asked about the status of the doctor-for-a-day program for the General Assembly. Mr. Cooper stated this is being sponsored by the Missouri Academy of Family Physicians and that the MSMA had offered any assistance that might be needed. He stated that a small room in the Capitol had been located and which the physician could use as an office. Mr. Cooper stated that Dr. Revare from Clay County had mailed letters requesting physicians to serve as doctor for a day. This program would run on Tuesday, Wednesday and Thursday from April to June.

The next meeting of the Council will be held on March 28 at 6 PM in the Chase-Park Plaza Hotel in St. Louis immediately preceding the Annual Session

Mr. Swarens announced that the Public Affairs Conference would start at 2 PM at the Ramada Inn. He stated that Mr. Howard Cook of the AMA Office in Washington will be the speaker at the banquet.

The Council adjourned at 1:30 AM.—**Referred to Miscellaneous Affairs Committee.**

Supplementary Council Report

Dr. Cope then presented a supplementary report on the Council Meeting held on Wednesday, March 28 in the Chase-Park Plaza Hotel in St. Louis. He reported as follows:

"The Council of the Missouri State Medical Association met on March 28, 1973 in the Chase-Park Plaza Hotel in St. Louis. The first item of business was the approval of the Minutes of the last meeting on February 2 and 3. It was moved and seconded that the Minutes be approved as published. The motion carried.

"The second item on the agenda was the President's Report. Dr. Gunn announced that students representing the Student AMA were to be given $500 to assist them as delegates to that meeting. The President described in detail much of the correspondence he receives in his role as President.

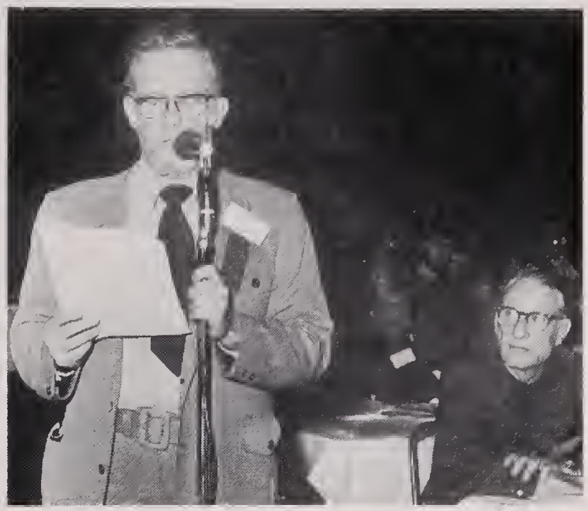
(The Speaker referred this portion of the report to the Reference Committee on Reports of Officers.)

"The third item of business was the Secretary's folder. A letter from Dr. Klear of the American Physiologic Association requested that the Missouri State Medical Association request that the Postmaster General issue a commemorative stamp for Dr. Beaumont of St. Louis, who studied gastric digestion. This motion was passed.

"Next, it was stated that the green sheet from the AMA had been placed on the bulletin boards of 170 hospitals in the state. It was requested by staff that this be continued until the next Council meeting before an evaluation is made. It was moved and seconded that mailing the green sheet be continued and that the program be expanded with additional information about state activities. The motion carried.

(The Speaker referred this portion of the report to the Reference Committee on Reports of Officers.)

"At this time, Mr. McIntyre asked Mr. Swarens to report on the VD Workshops. Nineteen Workshops have been held, and 15 were staffed by the MSMA. A summary of the entire program is being prepared for presentation. It also is felt that the same type of presentation can be used in other areas of health education.



As Chairman of the MSMA Council, Dr. James C. Cope, Columbia, presented the Supplementary Council Report. Dr. Victor B. Buhler of Kansas City, a Past-President of the MSMA, is seated at the right.

(The Speaker referred this portion of the report to the Committee on Miscellaneous Affairs.)

"Mr. McIntyre reported on the AMA-AMPAC Workshop held in Washington. This AMA meeting presents members of the MSMA with an opportunity to get together with elected representatives at a luncheon meeting in Washington. Representatives Taylor, Ichord and Randall are all sponsors of the Medicredit Bill.

(The Speaker referred this portion of the report to the Committee on Miscellaneous Affairs.)

"Mr. Noble reported that at the time the Pension Fund for MSMA employees was started, certain provisions applied only to male employees. Since the beginning of Civil Rights and equal opportunities, however, this is no longer permissible. The motion that sexual discrimination be removed was made, seconded and adopted.

(The Speaker referred this portion of the report to the Reference Committee on Reports of Officers.)

"Mr. Chairman, at this time, I would like for the House to suspend the order of business so that I can introduce and the House can vote upon a noncontroversial courtesy resolution.

(With the permission of the House, the Speaker suspended the rules.)

Resolution Honoring Mrs. Bertha A. Thomas

Whereas, Bertha A. Thomas is retiring from her position as Office Manager effective April 1, 1973, following 30 years of dedicated service as an employee of the Missouri State Medical Association; and

Whereas, She has earned the respect and friendship of the many members and others with whom she has come into contact by her sincere and energetic service to the Association; and

Whereas, Her effectiveness and competence as office manager has helped guide the Association to a position of high standing among physicians and the public; and

Whereas, Her wisdom, friendliness and personal character will be sorely missed by all those persons who come into contact with the MSMA staff; be it therefore

Resolved, By the House of Delegates of the Missouri State Medical Association sitting at its 115th Annual Session in St. Louis, Missouri, that Bert be formally commended and accorded the highest praise for devoted service to the doctors of Missouri; and be it further

Resolved, That the House express to her on behalf of the entire membership, the esteem and affection in which she is held by the doctors of the state; and be it further

Resolved, That the House extend to her the good wishes of the profession for health and happiness in the years to come.

"I move the adoption of this resolution.

(The resolution was adopted by the House of Delegates by acclamation. The Speaker reinstated the rules.)

"Mr. McIntyre asked permission to purchase a suitable gift for Mrs. Thomas to present to her in due course, with a copy of the resolution. The motion was seconded and adopted.

"Mr. Noble reported on the law suit concerning the Health Care Foundation and said that the Circuit Court of St. Louis County gave the MSMA a full and complete decision in establishing the Health Care Foundation. This decision has been appealed to the St. Louis Court of Appeals. Legal counsel indicated that there is really no basis for a new trial, and the Health Care Foundation should proceed with operation as though there is no case pending because they received a favorable decision.

(The Speaker referred this portion of the report to the Reference Committee on Resolutions.)

"Dr. Matthews stated that there are about 70 bills which need to be kept under observation. This is a tremendous task for the staff, which has been working from breakfast meetings on into late hearings distributing information. Yearly sessions of the State Legislature have aggravated this problem. The Chairman requested that we give the staff all the help, encouragement and moral support that we can.

(The Speaker referred this portion of the report to the Reference Committee on Miscellaneous Affairs.)

"Dr. Young, Chairman of the Ad Hoc Committee on Continuing Medical Education, gave a progress report on the development of a statewide program for continuing medical education. This program was discussed in some detail. The entire matter of continuing medical education is under study. There are many ramifications of the CME and PSRO activities. The Council moved to receive this report, and the entire matter will receive further study by the full Commission on Medical Education and Health Manpower. Dr. Young was given a vote of confidence concerning the conceptual framework of the committee's proposal on Continuing Medical Education.

"Dr. Young was requested to attend the hearing on Resolution #10, which is before the House.

(The Speaker referred this portion of the report to the Reference Committee on Medical Education and Public Welfare.)

"Dr. George Ladyman stated that information on the Quality Assurance Program (QAP) proposed by the American Hospital Association probably has not been available long enough for a real evaluation. This is a comprehensive, inclusive program to insure the quality of medical care throughout the United States. This program revolves centrally around the hospital. The basic objection is that medicine would be controlled by the hospital rather than by the individual physician. The motion was made and seconded that Dr. Ladyman continue his observation of the QAP Program and attend a May meeting, at which this will be considered. The motion was passed.

(The Speaker referred this portion of the report to the Reference Committee on Miscellaneous Affairs.)

"Dr. Joseph V. Finnegan, Editor, recommended reappointment of members of the present Publication Committee and Editorial Board. This was approved. The motion was made, seconded and approved that Dr. Finnegan be commended for his efforts.

"Dr. Matthews reported for the Building Committee. We will soon be in our new building. Mr. McIntyre indicated that the building will be finished in approximately two weeks. The new address is 113 Madison Street. The cost of the new building, furnishings and decorations are running close to original estimates.

"Lee Mortinson of the AMA gave a report of the Membership Study Committee. Following Mr. Mortinson's presentation, the Council decided to appoint a permanent Council Committee on Membership. This committee is to be appointed by the next Chairman of the Council.

(The Speaker referred this portion of the report to the Reference Committee on Reports of Officers.)

"Dr. Benoit then gave an information report on the Health Care Foundation. He explained the implications of the proposed changes in the Bylaws of the Health Care Foundation. These changes greatly broaden the base of the Foundation, including many lay and medical ancillary people. The Board of Directors of the HFC feels that these changes will align the Health Care Foundation with the anticipated regulations for PSRO. Dr. Benoit presented the following resolution:

That the Council of Missouri State Medical Association recommends to the House of Delegates of MSMA that endorsement be given to the Health Care Foundation of Missouri in its efforts to become the responsible agency for PSRO activities in Missouri.

"This resolution was adopted by the Council.

(The Speaker referred this portion of the report to the Reference Committee on Resolutions.)

"In Executive Session, the Council passed the following motion:

As a general rule, the Council of the Missouri State Medical Association opposes the granting of a license to practice medicine to any physician who has been convicted of a felony.

(The Speaker referred this portion of the report to the Reference Committee on Miscellaneous Affairs.)

"Mr. Speaker, this concludes the supplementary report of the Council."

(On motion, duly seconded, the supplementary report of the Council was accepted.)

At this time, the Speaker again suspended the rules to hear a motion from Dr. Hugh Stephenson, as follows:

"Mr. Speaker, the Boone County Medical Society wishes to introduce the following resolution:

Resolution Honoring Dr. M. Pinson Neal

Whereas, This is the first Annual Session of the Missouri State Medical Association in over 50 years that has not been attended by Dr. M. Pinson Neal, Emeritus Professor of Pathology at the University of Missouri, Columbia, and

Whereas, Dr. Neal is now recuperating from a fractured hip (incurred while in his office at the University of Missouri School of Medicine) and is presently making an excellent recovery, and

Whereas, Dr. Neal has served the Missouri State Medical Association in a great variety of ways during this last half century, has been an effective and dedicated teacher and friend to many generations of medical students, and

Whereas, Dr. Neal has been a longtime leader in his profession, Past President of the Southern Medical Association and was member of this House of Delegates for many, many years, and

Whereas, Dr. Neal is respected and loved by all the members of this Association, and

Whereas, Dr. Neal's son, Dr. M. Pinson Neal, Jr., has this month been named Provost of the University of Virginia Commonwealth University, therefore, be it

Resolved, That the House of Delegates of the Missouri State Medical Association express to Dr. Neal their sincere congratulations on the accomplishments of Dr. M. Pinson Neal, Jr., and, also, of their heartfelt wishes for a most speedy recovery and a return to the 116th Annual Session of the Missouri State Medical Association in Kansas City, Missouri, April, 1974, and

Further Resolved, That a copy of this Resolution be sent to Dr. M. Pinson Neal at his present address of the Candle Light Lodge in Columbia, Missouri.

(After the motion, which was seconded, the House of Delegates voted to adopt the resolution by acclamation.)

NOMINATING COMMITTEE

Dr. Gunn named the following members to the Committee on Nominations: Drs. Chris Fotopoulos, Philip Foreman, Donald Judd (Chairman), Allen Klippel, Ben Jolly, Charles Lederer, Walter Stelmach, William M. Walker, B. J. Bass, and Melvin Kasten.

Unfinished Business

The Speaker invited consideration of unfinished business.

Dr. Robert H. Felix moved that the proposed amendment to Article IV of the Constitution, which was tabled at the 1972 Annual Session, be taken from the table and passed. The resolution refers to Student Delegates.

Resolution—Representation for Medical Students

Whereas, The MSMA encourages the active participation of medical students in the affairs of the organizations of the medical profession; and

Whereas, The MSMA has made available to medical students Associate membership in the MSMA and its component local medical societies; and

Whereas, The MSMA believes that the majority voice of medical students should be heard and considered formally by the MSMA; therefore, be it

Resolved, That the MSMA shall make available in its House of Delegates seats for duly elected representatives of each school of medicine in the State of Missouri, and be it further

Resolved, That the Deans of the Medical Schools be requested to cause to be elected from the body of each of their institutions, two student Delegates to the MSMA, each student to be from a different class; and be it finally

Resolved, That the student Delegates shall be seated in the House of Delegates as full voting members of the House with all of the rights and privileges pertaining thereto.

(The motion was seconded. After a discussion and a stand-up vote, a Delegate requested a roll call vote, which was taken by the Secretary. The motion was approved by a vote of 110 to 54.)

The Speaker next asked the Delegates to consider the proposed amendment to Article IX of the Constitution concerning a referendum, which had been lying on the table from the 114th Annual Session of the MSMA in 1972.

(The Speaker referred to the Report of the Committee on Constitution and Bylaws (see page 412) in which the Committee recommends that the Constitutional amendment accepted by the House during the 1972 session not be adopted.)

The Committee further recommends the following Constitutional amendment:

> Petitions signed by 10% of the active members of the Association, including petitioners representing at least one half of the component medical societies, will initiate a referendum regarding changes in the Constitution and Bylaws or questions before the House of Delegates or Council. A majority vote of all active members of the Association shall determine the question.

The Committee also suggests an alternative recommendation to the last sentence in the above recommendation as follows:

> A two-thirds vote of all active members of the Association responding shall determine the question.

After discussion, Dr. Kenneth Hollweg moved that the following Constitutional amendment be adopted:

> Petition signed by 10% of the active members of the Association, including petitioners representing at least one half of the component Medical Societies, will initiate a referendum regarding changes in the Constitution or Bylaws or questions before the House of Delegates. A two-thirds vote of all active members of the Association responding will determine the question.

(Dr. Hollweg's motion was seconded and approved.)

The Speaker stated that this proposed amendment to the Constitution would be tabled for one year and would be voted on at the 116th Annual Session (1974).)

Dr. Felix moved that Chapter 3 of the MSMA Bylaws be amended by adding the following paragraph to Section 2 to be numbered Section 2-A:

> Each of the medical schools in the State of Missouri shall be entitled to send each year two student delegates, each from a different class, elected by the student body of the said medical school. The names of such student delegates shall be certified by the dean of said medical school to the Secretary of this Association, thirty days before the Annual Session. Such student delegates shall have all the rights and privileges of all other delegates.

(The Speaker referred this motion to the Reference Committee on Constitution and Bylaws and stated that it would be tabled for 24 hours and then be considered at the Second Session of the House of Delegates.)

Introduction of New Business

The Speaker invited the introduction of new business.

The Speaker noted that since Resolutions #1 through #14 had been submitted to the Council and were included in the Delegates Handbook, their introduction from the floor was not required. These resolutions are as follows:

Resolution #1—Emergency Medical Service

(Introduced by MSMA Ad Hoc Committee on Emergency Medical Services and St. Louis County Medical Society)

Whereas, There has been much talk about the weakness of Emergency Medical Service in our state; and

Whereas, The talk has produced only a little action by our state and local governments; and

Whereas, The carnage on our highways continues; and

Whereas, Missouri ranks rather poorly in any programs to benefit those of our citizens who are acutely ill or injured; now, therefore, be it

Resolved, That the President of the MSMA appoint an Ad Hoc Committee of this Association which will work with other organizations interested in these problems and which will prepare a detailed description for all aspects of a statewide Emergency Medical Service System; and, be it further

Resolved, That this plan should be developed to serve as a guide for a grant application for launching of such a system as has been done in Illinois and other states and regions.

(Referred to Reference Committee on Miscellaneous Affairs.)

Resolution #2—Special Committee to Study Ways and Means to Deal with the General Trend of Legislated Medical Care

(Introduced by Clay County Medical Society)

Whereas, The care of the sick and injured depends on the presence of medical expertise; and

Whereas, The members of the State Medical Association have that appropriate expertise; and

Whereas, The general trend of medical care is gradually being steered by certain uninformed members of the legislative and other political subdivisions of these United States; and

Whereas, Political considerations with respect to medical care have not been shown to be in the best interest of the patient; and

Whereas, The medical profession should have final authority for the medical care of the nation, due to its expertise; now, therefore, be it

Resolved, That the MSMA at great haste form a committee for the expedient study of ways and means to deal with the general trend of legislated medical care, present or future, by forming appropriate political groups and guild organizations.

(Referred to Reference Committee on Resolutions.)

Resolution #3—Rubella Immunization Requirements for Marriage License

(Introduced by Melvin M. Schwartz, M.D., Delegate, St. Louis County Medical Society)

Whereas, Rubella during pregnancy can be disastrous to the unborn infant; and

Whereas, A rubella titre for the identification of rubella antibodies in the blood is now inexpensively available; and

Whereas, Rubella vaccine also is available for immunization; now, therefore be it

Resolved, That the MSMA urges that in order to qualify for a marriage license in the state of Missouri, a rubella titre on the female be made mandatory; and be it further

Resolved, That if such a test be negative for rubella antibodies, rubella vaccination be made mandatory before a marriage license can be issued unless she be pregnant at the time; and be it further

Resolved, That copies of this resolution be sent to such Senators and/or Representatives of the General Assembly of the State of Missouri who the MSMA feel would introduce such legislation in their respective legislative bodies.

(Referred to Reference Committee on Miscellaneous Affairs.)

Resolution #4—Revision of Federal Narcotics Law

(Introduced by Melvin M. Schwartz, M.D., Delegate, St. Louis County Medical Society)

Whereas, Crime is rampant in the United States; and

Whereas, Illegal narcotics—smuggling and distribution—is a major portion of crime; and

Whereas, Narcotics, therefore, become very expensive to the illegal narcotics user; and

Whereas, Narcotic addicts will steal, rob, burglarize, mug and even murder to maintain their expensive habit; and

Whereas, It has been established in other countries that this type of crime can be reduced by changing the narcotics laws so that narcotics can be distributed cheaply; now, therefore, be it

Resolved, That the MSMA is in favor of revision of the Federal narcotics laws in such manner whereby clinics can be set up for the purpose of dispensing narcotics legally to narcotics addicts or, if this is not feasible in some areas, that individual physicians may be allowed to do the same in order to eliminate the necessity for criminal acts to maintain the now expensive narcotic habit; and be it further

Resolved, That the MSMA instruct its delegates to the AMA to carry this resolution to the next AMA meeting and introduce it there; and be it further

Resolved, That copies of this resolution be sent to the United States Senators and United States Representatives from the great state of Missouri in order to advise them of our feelings in this matter and, hopefully, to persuade one or all of them to introduce the proper legislation to change the narcotic laws.

(Referred to Reference Committee on Miscellaneous Affairs.)

Resolution #5—Endorsement of "Medicredit" Legislation

(Introduced by Hubert A. Ritter, M.D., Delegate, St. Louis Medical Society)

Whereas, The citizens of our country look to physicians to provide knowledgeable information regarding health care; and

Whereas, The American Medical Association is the voice of working physicians; and

Whereas, The American Medical Association through its "Medicredit Bill"—HR 2222 and S 444—has sought to increase health care access without increasing cost while maintaining the quality, which has become the hallmark of American medicine; therefore, be it

Resolved, That the Missouri State Medical Association, convened at St. Louis, Missouri, March 29, 1973, go on record as endorsing Senate Bill 444 and House Resolution 2222; and be it further

Resolved, That a copy of this resolution be forwarded to the Trustees of the American Medical Association.

(Referred to Reference Committee on Miscellaneous Affairs.)

Resolution #6—Dues for Physicians in House Staff Training Programs

(Introduced by Richard V. Bradley, M.D., Delegate, St. Louis Medical Society)

Whereas, The ultimate purpose of the Missouri State Medical Association is to be representative of the physicians within its entire domain; and

Whereas, A number of those physicians within the domain are actively employed in a progressive house staff training program; and

Whereas, The physicians actively engaged in progressive house staff training are in a period of relatively limited financial means; and

Whereas, The representation of those physicians actively engaged in progressive house staff training should be on a full-fledged active membership basis rather than anything less; now, therefore, be it

Resolved, That the Missouri State Medical Association alter its Constitution and Bylaws where necessary in order to offer to any physician actively employed in the progressive house staff training program full membership at a cost of $20 per annum.

(Referred to Reference Committee on Constitution and Bylaws.)

Resolution #7—Repeal of Missouri Controlled Substance Law

(Introduced by George L. Hawkins, M.D., Delegate, St. Louis Medical Society)

Whereas, The state of Missouri has passed a law creating licensure of physicians to prescribe drugs; and

Whereas, Federal legislation already is in existence superseding this law in Missouri; and

Whereas, The only function of this law in Missouri is to collect a fee from physicians; now, therefore, be it

Resolved, That the MSMA make every effort to have this law, creating a useless bureau in Missouri, repealed.

(Referred to Reference Committee on Miscellaneous Affairs.)

Resolution #8—Recent Decision of U. S. Supreme Court on Abortion

(Introduced by Charles A. Jost, M.D., Delegate, St. Louis Medical Society)

Whereas, The preservation of human life is an objective of this Association; and

Whereas, Abortion is the destruction of human life; and

Whereas, The recent decision of the Supreme Court tends to make abortion more widespread; now, therefore, be it

Resolved, That the House of Delegates of the MSMA petition all the Missouri members of the Congress to remove from the jurisdiction of the Supreme Court all matters pertaining to abortion; and be it further

Resolved, That copies of this petition be sent to the members of the Congress of the United States and to the President of the United States of America.

(Referred to Reference Committee on Miscellaneous Affairs.)

Resolution #9—Health and Hospital Insurance for Newborn

(Introduced by Francis X. Lieb, M.D., Delegate, St. Louis Medical Society)

Whereas, To be deprived of the right to be covered by insurance on the same basis as the rest of the population is a violation of the civil rights of an individual and must be considered as discrimination; and

Whereas, The newborn has been discriminated against in health and hospital insurance plans by requiring a waiting period after birth before they are covered as dependents; and

Whereas, It is essential that legislation eliminating such disrimination be adopted; now, therefore, be it

Resolved, That the Missouri State Medical Association urges passage of legislation that recognizes the rights of this group from he moment of conception and that provides for insurance coverge including medical, surgical and hospitalization care on the same basis as any other dependent covered by the policy. Coverge shall include hospital costs, laboratory costs, drug costs, including oxygen, the costs of specialized equipment such as incubators and monitoring devices, special nursing services and costs f transporting the child to a proper center; and be it further

Resolved, That any comprehensive health insurance policy, hospitalization, medical, surgical or accident policy issued for use in he state of Missouri shall provide for such coverage whether isued to an individual or to a group and no restrictions, limitations, waivers, amendments or other disclaimers of such coverage shall be permitted.

(Referred to Reference Committee on Miscellaneous Affairs.)

Resolution #10—Required Continued Medical Education

(Introduced by Jasper County Medical Society)

Whereas, The need for continued medical education of physicians for the benefit of the people of Missouri is acknowledged by all, and since we as physicians are committed to the highest standards in the practice of medicine, we reaffirm our commitment to continued education, and

Whereas, The American Medical Association and other states have already established guidelines of 150 hours of continued education every three years on a voluntary basis through the Physician's Recognition Award, and

Whereas, We as physicians of the state of Missouri have always aken the lead in promoting and advancing good medical care for he people of Missouri and desire to insure this continued quality of care without governmental control; therefore, be it

Resolved, That the Missouri State Medical Association recommend to the Missouri Board of Healing Arts that the Board, by administrative action, require 150 hours of continued education every hree years, similar to the guidelines set by the American Medical Association as a prerequisite to continued licensure in this State.

(Referred to Reference Committee on Medical Education and Public Welfare.)

Resolution #11—Continuing Medical Education

(Introduced by Kenneth Bruns, M.D., Delegate
St. Louis Medical Society)

Whereas, The stated purpose of the MSMA to encourage the best possible medical care for the citizens of the State of Missouri s furthered by participation in continuing medical education by he members of this Society, and

Whereas, It is a conviction of the House of Delegates of MSMA that our membership is composed of intelligent, mature, professional men capable of and regularly practicing self-discipline, and

Whereas, Such individuals are not in need of other physicians determining their needs of discipline meted out by self-appointed judges of propriety and complicity with some as yet indeterminate norms, therefore, be it

Resolved, That the Committee on Continuing Medical Education be instructed to encourage participation in educational programs by the use of positive actions, such as public recognition and the awarding of such mementos as certificates and plaques as they determine to be desirable and feasible, and be it further

Resolved, That no level of participation shall be used to initiate disciplinary action against any member without the explicit instructions of this House of Delegates of the MSMA.

(Referred to Reference Committee on Medical Education and Public Welfare.)

Resolution #12—Continuing Medical Education

(Introduced by Kenneth Bruns, M.D., Delegate,
St. Louis Medical Society)

Whereas, The promotion, organization and operation of the Committee on Continuing Medical Education should be a positive force within and for our Missouri State Medical Association, and

Whereas, There are now and will be in the future negative forces tempting to single out individual members, both from within (the Committee on Medical Ethics, Grievance Committees, etc.) and from without (PSRO, the Health Care Foundation of Missouri, etc.), now, therefore, be it

Resolved, That the Committee on Continuing Medical Education be instructed to direct its efforts to the improvement of education among the members of the MSMA but that their efforts not single out a specific physician for education in any specified field or portion of medical knowledge.

(Referred to Reference Committee on Medical Education and Public Welfare.)

Resolution #13—Constitutional Amendment on Speaker's Qualifications

(Introduced by Northwest Missouri County Medical Society)

Whereas, The Speaker and Vice-Speaker are elected by the House of Delegates at the Annual Session each spring to serve in those offices for the forthcoming Session, and

Whereas, The Delegates to the House of Delegates are not elected by component societies until the fall months preceding each Annual Session, and

Whereas, It would be conceivable that the Speaker or Vice-Speaker of the forthcoming Annual Session would not be elected a Delegate by his component society, and

Whereas, The Constitution of the Missouri State Medical Association stipulates that the Speaker and Vice-Speaker must be elected from the body of the House of Delegates, be it, therefore,

Resolved, That in order to relieve this possible conflicting situation, the Constitution of the Missouri State Medical Association be amended to provide that the Speaker and Vice-Speaker when elected are automatically Delegates-at-large in the House of Delegates for the duration of their respective terms of office.

(Referred to Reference Committee on Constitution and Bylaws.)

Resolution #14—Allergy Residency Training Program

(Introduced by Philip V. Dreyer, M.D., Delegate, Chariton-
Macon-Monroe-Randolph County Medical Society)

Whereas, The Conjoint Board of Allergy, now known as the American Board of Allergy and Immunology, was established without the approval of the AMA House of Delegates, and

Whereas, The new Board does not represent fully all physicians who practice allergy, mainly those in Dermatology, Otolaryngology and Family Practice, therefore, be it

Resolved, That the House of Delegates not approve the residency training program as prescribed by the AMA Council on Medical Education until all fields of allergy are represented, and be it further

Resolved, That the Delegates to the American Medical Association be instructed to present and support this resolution to the AMA House of Delegates.

(Referred to Reference Committee on Medical Education and Public Welfare.)

Dr. Patrick C. Hogan, Delegate, St. Louis Medical Society, introduced the following resolution:

Resolution #15—Definition of Beginning of Life in the Human

Whereas, The criteria for life, that is, growth, motion, metabolic activity and cell division, exist from conception, that is, fertilization of the ovum by a spermatozoon, and

Whereas, The same criteria exists with the implanted fertilized ovum, be it, therefore,

Resolved, That in the opinion of the Missouri State Medical Association, human life begins with conception and sustained life begins with implantation of the fertilized ovum, and, be it further

Resolved, That the Missouri State Legislature be notified of this definition.

(Referred to the Reference Committee on Miscellaneous Affairs.)

Dr. Troy O. Morgan introduced a resolution from Northwest Missouri County Medical Society.

Resolution #16—Official Declaration of Death in Certain Cases

Whereas, Most doctors are overworked and

Whereas, Many hospitals have no resident staff, and

Whereas, The law of the state of Missouri declares that a doctor must see a patient and pronounce him dead and

Whereas, This works a hardship on overworked physicians, especially during the hours of the night,

Now, Be It Therefore Resolved, That, in the case of prolonged illness and expected death, this ruling and law be changed to allow time to elapse before the body is viewed by a physician, providing, in the judgment of the physician, there is competent nursing personnel available to make this decision.

(Referred to Reference Committee on Miscellaneous Affairs.)

Dr. Gerald L. Miller introduced a resolution from the Seventh Councilor District.

Resolution #17—Recent Decision of U. S. Supreme Court on Abortions

Whereas, Medically and scientifically, a human embryo or fetus exists as a living and growing human individual from the time of conception; and

Whereas, Respect for and protection of human life has been a hallmark of civilized society for millennia; and

Whereas, Respect for and protection of unborn human life has been traditional with the medical profession since long before the beginning of the Christian era regardless of prevailing political, religious or social ideologies or dogmata; and

Whereas, A legal threat to the right to life of any individual member of a society imperils the right of every other member of that society; and

Whereas, In states in which abortion laws have recently been relaxed or repealed, professional medical ethics have proved to be wholly inadequate for the protection of the lives of the unborn; and

Whereas, The United States Supreme Court has withdrawn all legal protection from an entire class of human beings, namely, the unborn; and

Whereas, The Supreme Court in so doing has grievously exceeded its judicial authority and not only has invaded the legislative branch of the government, but has also overthrown the legislative will of the individual states; and

Whereas, The House of Representatives of the Missouri General Assembly has passed a resolution asking the Congress of the United States to propose an amendment to the Constitution which would guarantee the right to the unborn and for said action we compliment the House; now therefore, be it

Resolved, That the Missouri State Medical Association urges the Congress of the United States to take appropriate action toward amending the Constitution of the United States in order to re-establish and reaffirm that human life with legal personality begins at the time of conception and that all constitutional rights, including due process of law, apply to the unborn in the same manner and to the same extent as to all other citizens; and be it further

Resolved, That Delegates of the Missouri State Medical Association to the American Medical Association be instructed to introduce and pursue a resolution similar to this one in the House of Delegates of the AMA at the 1973 Annual Session of that body; and be it finally

Resolved, That the President of the Missouri State Medical Association be directed to forward copies of this resolution to the President of the United States, the Speaker of the House of Representatives of the United States, all members of the Missouri Congressional Delegation, the Governor of the State of Missouri, the President of the Senate of the Missouri General Assembly and the Speaker of the House of Representatives of the Missouri General Assembly.

(Referred to Reference Committee on Miscellaneous Affairs.)

Dr. Walter A. German introduced a resolution from Greene County Medical Society.

Resolution #18—Insurance Claim Forms

Whereas, There are a great number of insurance claim forms of varying complexity, be it

Resolved, That physicians should be encouraged to charge the insurance carrier for the completion of insurance claim forms which are not HIC (Health Insurance Council) approved forms. Until the Health Insurance Council standardizes its many approved forms, it will be the physicians' choice as to which HIC form he files. The physician also should feel free to make a reasonable charge for obtaining a duplicate copy of the completed form unless the form submitted contains a duplicate copy for the doctors' files; and be it further

Resolved, That physicians should feel free to charge for the additional service of filing more than one insurance claim form, especially if another HIC form is required in contrast to a photocopy of the original claim form; and be it further

Resolved, That the Health Insurance Council design and implement, after approval by the MSMA, a simplified one-sided, self-duplicating form with provision for designating patient disability and a blank for the stamp of the physician's or corporation's name and ID number.

(Referred to Reference C ommittee on Resolutions.)

Dr. Hubert A. Ritter and Dr. Denis Cavanagh introduced a resolution.

Resolution #19—Committee to Study Midwifery

Whereas, There has been a continuing decrease in maternal and infant mortality over the years since obstetrics has been practiced almost exclusively by trained physicians in hospitals, and

Whereas, A new effort is being made to include certified nurse midwives in the obstetrical team, and

Whereas, The State of Missouri has an antiquated definitio of what a midwife's training and limitation of activity should ir clude; now, therefore, be it

Resolved, That the House of Delegates of the Missouri Stat Medical Association authorize the appointment of a committee t study midwifery in the light of the joint statement on maternit care issued under the auspices of the American College of Obste tricians and Gynecologists which recognizes the nurse midwife a a member of a medically directed team. This committee woul have as its purpose to define midwifery. After defining nurse mic wifery they should determine if in the State of Missouri a need fc such services exists.

If a need exists, the committee should then propose an adequat educational program for certified nurse midwives. Finally, assum ing the need for certified nurse midwives has been determinec and the other aforementioned issues have been dealt with, the com mittee would then propose legislation to recognize the practice c nurse midwifery in Missouri, with the clear understanding that th nurse midwife will only function as a member of the obstetric team.

(Referred to Reference Committee on Medical Edu cation and Public Welfare.)

Dr. Ritter then introduced another resolution.

Resolution #20—Educational Money for the MMPAC

Whereas, The practice of medicine is being legislated in ou Congress and State General Assembly, and

Whereas, There is a need to increase physician awareness o this government involvement, thereby affecting physicians to be come politically active; now, therefore, be it

Resolved, That the House of Delegates of the Missouri Stat Medical Association authorize the Council of the Missouri Stat Medical Association to designate funds for use by the Missour Medical Political Action Committee Board to aid in promotion o this educational process.

It is anticipated that these funds will be used to pay for clerica help, printing, postage and other reasonable expense incurred by the Missouri Medical Political Action Committee Board. It shoul be further stated that none of this money shall be used for candidate or political party support.

(Referred to Refcrence Committee on Reports of Officers.)

Dr. Barney W. Finkel and Dr. Charles Jost introduced a resolution.

Resolution #21—Creed of Better Medical Care

Whereas, We hold to be self-evident that American Medicin is the best the world has ever seen and our American system of private medicine delivers the highest quality of care at the lowest possible cost, and

Whereas, The American citizen must continue to have a choic of private doctor for himself and his family, free from governmen interference, and private patients should continue to have acces to all available medical advances and treatment in full measure. without government-imposed rationing, and

Whereas, Public policy should recognize that good medical care requires that physician judgment remain free from pressures from third parties and government, and the fundamental freedoms of the American private health care system are to be preserved. e.g., freedom of choice of physician, freedom of choice of hospital and freedom to make the decisions inherent in the practice of medicine, the choice of diagnostic measure, treatment and medication. these decisions must remain the prerogative of physicians, not of government, and

Whereas, Current evaluation of the facts now lend little support to the concept of "Health Crisis," developed in the late 60's and upon which "Crisis Psychology" much "Crisis Legislation" was enacted which resulted in severe inflation of all medical care costs for which we are now paying. Improvements in the American free enterprise system of health care should be based on a careful evaluation of the performance "track record" of recommended solutions, therefore, be it

Resolved, That compulsory generic prescribing be deleted from federal programs, to prevent loss of lives and needless disability caused by the inadequacy of many of these drugs, and further be it

Resolved, That a moratorium on further Health Maintenance Organization experiments be imposed, until there has been a full accounting of the results of existing programs supported by tax subsidies, and be it further

Resolved, That all federal health programs be required to hav an independent audit, with a clear cost accounting for the services actually delivered, and a determination made whether the service intended was actually provided to the sick, and that this be regularly and widely published to keep the health programs centered on their purpose of health care of indigent citizens, and further be it

Resolved, That the MSMA recognize the responsibility of socie- for the care of the indigent sick and to provide for mutual responsibility with dignity for these citizens and to recommend that Direct Billing option be utilized in all health care programs and hat basic medical insurance coverage for the indigent be available ith supplementary "catastrophe" coverage and be it further

Resolved, That the confidentiality of medical records be pro-ected in all federal programs, especially that portion of the record ntaining personal information of citizens' private lives shall not e available to government agencies and carriers, and further

Resolved, That the MSMA decry federal control of patient care hrough the control of hospital admissions by government-approved committees computerization of illnesses through average ength of stay programs, denial of "necessity of hospitalization" by overnment clerks, Blue Cross and QAP (quality assurance programs) now being pushed by the American Hospital Association, nd the substituting of judgment of the attending physician by carriers, and government, and that the MSMA recommend that all overnment programs cease to interfere with the physician's judgment as to the admissions and discharge of patients, and be it finally

Resolved, That the MSMA oppose compulsory Universal Na-onal Health Insurance as likely to either bankrupt the country or ankrupt the patients' health by the necessary rationing of levels f care to that which the government can afford—not what the pa-ient wants or needs, and that the MSMA investigate the possibil-y of legal recourse to abolish PSRO, and the feasibility of legal ction against the government on constitutional grounds in its im-lementation of PSRO. (This course is now being very seriously tudied and contemplated by the State Medical Associations of In-iana and Oklahoma . . . and we as members of the MSMA should ssist these Associations, or take such action on our own if legal onsultation lends itself to such a course.)

(Referred to Reference Committee on Resolutions.)

Dr. Richardson K. Noback, Jackson County Medical ociety, introduced a resolution.

Resolution #22—Exclusion of Regional Medical Programs From the Federal Budget

Whereas, The Regional Medical Programs in the state of Mis-ouri have provided a positive organizational base from which phy-icians may effectively implement improvement in the health care ystems consonant with the responsible practice of medicine; and

Whereas, These same Regional Medical Programs have provid-d invaluable and irreplaceable technical assistance to the physi-ians' community and to the larger communities they serve, thus xpanding the general health care; and

Whereas, The Regional Medical Program has provided much eeded autonomy in the expenditure of federal resources directed oward local needs, now, therefore, be it

Resolved, That the Missouri State Medical Association deplores he exclusion of Regional Medical Programs from the Administra-ion's proposed 1974 federal budget; and be it further

Resolved, That the Missouri State Medical Association requests he Congress of the United States to extend the Regional Medical Program legislation and provide funding necessary for continua-ion and expansion of this valuable program; and be it further

Resolved, That the Missouri State Medical Association requests hat the Administration reexamine its position and recognize Regional Medical Program as an effective force responsible to the private sector of the health care system for improved health care services in line with regional priorities; and be it finally

Resolved, That the Missouri State Medical Association instructs ts officers to forward a copy of this resolution to members of the Missouri congressional delegation.

(Referred to the Reference Committee on Miscellaneous Affairs.)

Dr. David N. Kerr, Delegate-at-Large, introduced the ollowing resolution:

Resolution #23—Monthly Visitation to Nursing Home Residents

Whereas, The present law requiring monthly visitation by phy-icians to residents of nursing homes is unfair to those residents, he nursing home management and the physicians and is based upon the erroneous concept that such regular visitation is good and desirable for the best health of the residents, and

Whereas, There is nothing that from a strictly medical standpoint requires that any person purely because of age should be een once a month. It is not a common medical practice nor is it deemed good and desirable medicine to attend the elderly with any requently scheduled regularity prior to their residence in a nurs-ng home. There also is nothing about the change of residence that dictates a change in medical practice, and

Whereas, The law is unfair to the residents because it is unnecessary medically and, also, an unnecessary additional expense. There is generally little of medical significance that is found in the uncomplaining patient, and

Whereas, The law is unfair to the nursing home management because it places them either in the position of being unable to implement the law upon an unwilling physician or of hiring a physician to what have derogatorily come to be called gang rounds—simply to satisfy the law, and

Whereas, The law is unfair to the physician because it places a burden upon him to make medical calls that he may consider medically unnecessary, and, therefore, be it

Resolved, That the legislature be petitioned to revoke the present requirement for regular monthly visitation by a physician to all residents of nursing homes and simply require that nursing home supervisors consult with physicians as deemed medically necessary to maintain their residents optimum state of health.

(Referred to the Reference Committee on Miscellaneous Affairs.)

Dr. Ronald Hoffman, St. Louis Medical Society, introduced a resolution.

Resolution #24—Physician-Patient Privilege

Whereas, The United States Supreme Court has attempted to adopt new rules of evidence for the federal judiciary which would abolish the physician-patient privilege, except for the communications involving mental problems, and

Whereas, These new rules of evidence are discriminatory against physicians inasmuch as no other privilege—husband-wife, lawyer-client, clergyman-penitent—would be abolished or circumscribed, and

Whereas, These rules of evidence are subject to review and modification by the Congress, and

Whereas, Representatives of the Medical Profession have strongly urged Congress in testimony before a House Judiciary Subcommittee to retain the physician-patient privilege, and

Whereas, Abolition of the physician-patient privilege would interfere with good medical practice by making patients fearful of revealing important information to the physician because the physician might be forced to disclose the information in open court, and

Whereas, Adoption of these rules for federal courts would have the effect of weakening and eventually destroying state laws conferring the physician-patient privilege, therefore, be it

Resolved, that the MSMA House of Delegates urge its members to communicate with their senators and representatives urging them to vote to veto the new rule (#504) abolishing physician-patient privilege in federal courts, and be it further

Resolved, That the MSMA send a copy of the new rule (#504) to each member and poll each member for his opinion or vote for or against the new rule, and the results of the poll be sent to each U. S. senator and representative from Missouri with a letter requesting their vote against this oppressive rule and urging them to strengthen the physician-patient privilege in the federal courts as well as in the state courts.

(Referred to Reference Committee on Resolutions.)

Dr. Stanley Peterson, Greene County Medical Society, introduced the following resolution:

Resolution #25—Re: Missouri Physicians' Guild

Whereas, The organization known as "The Missouri Physicians' Guild" was organized at the request of the Greene County Medical Society, and

Whereas, The Missouri Physicians' Guild does, in fact, provide a "mechanism for negotiating not only fees but the conditions under which services will be provided," and

Whereas, The reasons for such an organization are even more compelling than they were when the above request was made, therefore, be it

Resolved, That the Greene County Medical Society endorse the Missouri Physicians' Guild as a mechanism to negotiate not only physicians' fees, but, also, the conditions under which services will be provided.

(Referred to Reference Committee on Resolutions.)

Dr. P. B. Salanga, St. Louis Medical Society, introduced a resolution.

Resolution #26—Abortion

Whereas, Conception, in woman, has been sufficiently proven, persistently and consistently, to be the beginning of and result in an Individual Human Life (even if occasionally deformed), and

Whereas, Intentional violence, as recently legalized and intended by the United States Supreme Court in its abortion decision when committed upon this natural process of growth and development of the products of conception in woman, will consistently lead to destruction and demise of that (expected) individual human life, and

Whereas, Legalization of violence of this type results in abolition of order, discipline and the likely eventual end of a free society, therefore, be it

Resolved, That the House of Delegates of the MSMA advise that abortion is:

1. In violation of the Hippocratic Oath.
2. Contrary to the mission of the physician—who is to help heal and preserve individual human life—and not to destroy it, and be it further

Resolved, That the MSMA submit this Resolution to the AMA, to all the AMA State Component Associations, a copy to all the State Supreme Courts in the United States, all of the United States Supreme Court Justices and to all U. S. senators and congressmen from and representing Missouri.

(Referred to Reference Committee on Miscellaneous Affairs.)

Dr. Donald R. Judd, St. Louis Medical Society, introduced the following resolution:

Resolution #27—Broader Participation in MSMA and AMA

Whereas, It is beneficial for organized medicine to have the broadest possible participation and representation by its membership, and

Whereas, It is particularly desirable to encourage younger physicians to represent and serve organized medicine; therefore, be it

Resolved, That the Missouri State Medical Association limit the term of its own Council members and the term of AMA delegates from Missouri to not more than three terms of two years each (overall six years) to become effective with date of passage of this resolution; and furthermore, be it

Resolved, That the AMA be urged to establish a similar term for all AMA delegates from component state societies.

(Referred to Reference Committee on Constitution and Bylaws.)

Dr. Joseph Swope, St. Louis Medical Society, introduced a resolution.

Resolution #28—Quality Assurance Program (QAP)

Whereas, In the near future (May 11-13, 1973), the MSMA and the Missouri Hospital Association are cosponsoring a so-called "educational program" on QAP or "Cook Book" approach to Peer Review Activities at the Lake of the Ozarks, and

Whereas, The QAP is being "pushed" vigorously nationwide to control medical practice and the private practicing physician with the use of clerks, nurses and paramedical personnel by the American Hospital Association, and

Whereas, The medical staffs of several large metropolitan St. Louis hospitals have unanimously rejected QAP and its attempt to control the practice of medicine; this rejection taking place after thorough study of QAP and all of its meanings, therefore be it

Resolved, That the MSMA House of Delegates and the Council of the MSMA not allow QAP to be approved or taken seriously without first allowing the individual MSMA member to participate in a referendum for this purpose . . . and it is hoped that the MSMA will not be involved in a quagmire of dissension, distrust, desertion of members and in potential legal actions being taken against the MSMA leadership for profligate authority.

(Referred to Reference Committee on Miscellaneous Affairs.)

Dr. Swope then introduced the following resolution:

Resolution #29—Legal Action Against PSRO

Whereas, The Department of HEW is preparing rules and regulations and taking other steps preparatory to enforcing the Professional Standards Review Organization Law embodied in P.L. 92-603, and

Whereas, Enforcement of PSRO would destroy the freedom of physicians to exercise independent judgment in caring for Medicare and Medicaid patients by forcing them to conform to government-imposed "norms" of diagnosis and treatment, and

Whereas, Standardization of medical care will seriously impair the quality of medical care to the detriment of these patients by restricting a physician's liberty to use his own judgment, skill and knowledge freely and without interference from government bureaucrats, and

Whereas, Physicians who deviate from government's arbitrary "norms" will be subject to punishment, no matter how much harm to the patient will result from adherence to the norms, and

Whereas, This vicious law would be employed to subject physicians to public scorn and ridicule and, thereby, undermine public confidence in the medical profession, and

Whereas, Justification for the PSRO law as based on the false assumption that government can effectively govern medical quality and control costs and the malicious libel that physicians are responsible for rising health care costs while the blame actually lies with profligate government, and

Whereas, Enforcement of the unjust and unjustified PSRO law would violate the constitutional rights of physicians and patients, and

Whereas, The only recourse open to the medical profession is legal action to restrain the government from implementing the PSRO law, therefore, be it

Resolved, That the House of Delegates of the MSMA endorses seeking assistance of and consultation with attorneys specializing in Constitutional law to test the validity of P.L. 92-603 (the PSRO portion thereof), and if the Constitutional rights of physicians/patients have been abridged, then the MSMA should join with other State Medical Associations* (if possible) to repeal this law, and the MSMA membership would be polled and informed of any such contemplated action and an assessment of the membership to cover the costs should be made to carry this case to the Supreme Court (if necessary).

(**Note:* The Oklahoma State Medical Association and the Indiana State Medical Association are presently contemplating such action.)

(Referred to Reference Committee on Resolutions.)

Dr. Richard Bowles, Clay County Medical Society, introduced a resolution.

Resolution #30—Federal Drug Administration Regulations

Whereas, The Federal Drug Administration (FDA) has been vested with unprecedented regulatory powers influencing the research, production and marketing of drugs, and

Whereas, The drug industry has been intimidated by these regulatory powers to the extent that many drugs or drug combinations extremely useful to clinicians have been removed from production, and

Whereas, Physicians actively engaged in the practice of medicine, being deprived of the use of said controversial products, are in no ways afforded any opportunity for constructive input into these determinations, be it therefore

Resolved, That the Missouri State Medical Association and the American Medical Association and the drug industry renew their protests to the Government of the United States against this agency and its arbitrary regulatory powers, to the extent that significant censorship of the FDA in this area of activity be realized.

(Referred to Reference Committee on Medical Education and Public Welfare.)

Dr. R. Bruce McCloskey, St. Louis Medical Society, introduced a resolution.

Resolution #31—PSRO

Whereas, It is apparent that progressively, rules and regulations which have been the unwritten codes for medical practice are being reduced to written, enforceable law, and

Whereas, The inevitable twin of written regulations is an enforcement agency, and

Whereas, such enforcement agencies will, necessarily, be endowed with increasing authority,

Whereas, The American tradition is based upon a philosophy that the powers of authority be delegated to those who exercise them by those over whom the authority is to be exercised, and

Whereas, Such powers will be reposited in such persons for a limited term, following which they must stand for reelection, therefore be it

Resolved, That any authoritative organization that may be developed to regulate or administer a PSRO be elected locally by the physicians over whom they shall have authority and must stand for reelection each four years, and be it further

Resolved, That if and when such an organization be formed, one half be elected for two years and one half for four years, following which all shall be elected for four-year terms.

(Referred to Reference Committee on Resolutions.)

Dr. C. W. Chastain, Mineral Area County Medical Society, introduced the following resolution:

Resolution #32—Blue Cross and Blue Shield Regulations

Whereas, The Senate and House of Representatives of the General Assembly of the state of Missouri are now considering certain proposed legislation for the regulation of health service corporations, which affects Missouri Medical Service and the other

Blue Shield and Blue Cross Plans in the State of Missouri, and

WHEREAS, Missouri Medical Service (the St. Louis Blue Shield Plan) has been sponsored by this Association, and

WHEREAS, Such proposed legislation seeks to establish a system of administrative regulation which is unnecessary in view of the existing safeguards already protecting the members of Blue Shield and Blue Cross, and

WHEREAS, Such proposed legislation establishes cumbersome administrative procedures which will make it difficult or impossible for Blue Shield and Blue Cross to adapt and extend their plans and services to meet the needs of their members, and

WHEREAS, Such proposed regulation jeopardizes the corporate structure and tax-exempt status of Missouri Medical Service, and

WHEREAS, Such proposed legislation, if put into effect, must necessarily result in an increase in the cost of the operation of Blue Shield and Blue Cross which can only be met by an increase in the dues paid by the members, and

WHEREAS, It is not in the best interest of the people of the state of Missouri, including the more than 950,000 members and their dependents of Missouri Medical Service and the more than 3 million members and their dependents of all Blue Shield and Blue Cross Plans in the state of Missouri to increase the cost and decrease the services offered by Blue Shield and Blue Cross, therefore, be it

Resolved, That this Association oppose the enactment of all legislation affecting Blue Shield and Blue Cross now pending in the General Assembly of the State of Missouri, and be it further

Resolved, That the officers of this Association be directed to transmit this Resolution to the Senate and House of Representatives of the General Assembly of the state of Missouri and to such other persons as such officers deem to be in the best interest of this Association.

(Referred to the Reference Committee on Miscellaneous Affairs.)

There being no additional business, the Speaker declared the first session of the House of Delegates adjourned.

SECOND SESSION

Friday, March 30, 1973

The Second Session of the House of Delegates was called to order at 4 PM in the Khorassan Room by Dr. E. D. Imes, Speaker, who presided.

Dr. Pennington, Chairman of the Credentials Committee, reported that a quorum was present.

The Speaker invited Dr. Robert H. Felix, Chairman of the Reference Committee on Constitution and Bylaws, to make his report.

CONSTITUTION AND BYLAWS

The Reference Committee on Constitution and Bylaws met on Thursday, March 29, following the session of the House of Delegates. All Committee Members were present.

Representation From Medical Students

The first order of business was consideration of the proposed change in Chapter 3 of the Bylaws, which was referred to this Committee by action of the House of Delegates on March 29, 1973. The proposed change would add a new paragraph to Section 2 of Chapter 3, to be numbered 2-A, which would read as follows:

> Each of the medical schools in the state of Missouri shall be entitled to send each year two student delegates, each from a different class, elected by the student body of the said medical school. The names of such student delegates shall be certified by the dean of said medical school to the Secretary of this Association 30 days before the annual session. Such student delegate shall have all the rights and privileges of all other delegates.

This change provides the mechanism for implementing the Constitutional amendment adopted by the House on March 29, 1973.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion to adopt was seconded and carried. At this time, the students were registered as Delegates and seated. They were Ms. Pat Hubble and Mr. Merlin Brown, University of Missouri-Kansas City; Mr. James Barton and Mr. Barry Farber, Washington University; Mr. R. M. Rutkow and Mr. John P. Jones, St. Louis University; and Mr. Arlin Lockard and Mr. John Brandt, University of Missouri-Columbia.)

Resolution #6—Dues for Physicians in House Staff Training Programs

The next order of business was discussion of Resolution #6.

The Committee interpreted this to mean House Officers in training, which are the physicians already covered under Chapter 1 of the Bylaws. The dues to be assessed these physicians are specified in Chapter 8 at $10 per year. Therefore, it is felt that since the objectives of Resolution #6 are already covered in our Bylaws, there is no need to take further action.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and approved.)

Resolution #13—Constitutional Amendment on Speaker's Qualifications

The next order of business was the discussion of Resolution #13. The purpose of this resolution is to clarify the procedures for election of the Speaker and the Vice-Speaker, which are contained in Article IV of the Constitution.

During the discussion of this proposed amendment, it was pointed out that since the Speaker and Vice-Speaker are not elected at the same time as other Delegates, it could be possible to have either the Speaker or Vice-Speaker fail of election with the result that the House of Delegates would be without these officers.

The Reference Committee feels that this is another example of the need for a serious review of the entire Constitution with the view to correcting such ambiguous provisions. The purpose of this Resolution will be fulfilled if Chapter 3, Section 2 of the Bylaws be modified in its last sentence, inserting the words "The Speaker and Vice-Speaker" and following the word "Association." This sentence would then read:

> All Past-Presidents of the Association, the Speaker and the Vice-Speaker, shall serve as Delegates-at-Large.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and passed.)

Resolution #27—Broader Participation in MSMA and AMA

The next order of business was the consideration of Resolution #27. Following extensive discussion of this resolution by members of the Association who were present at the hearings, the resolution was discussed and its implications were considered by the members of the Committee in Executive Session. It is the feeling of the Reference Committee that all of the objectives which the Resolution attempts to attain are presently possible under the provisions of our Constitution and Bylaws as now written.

To paraphrase, the fault is not in our Constitution and Bylaws, but in ourselves. If we lack commitment, dedication and concern, no legislative change will cure our malaise.

Mr. Speaker, I move that Resolution #27 not be adopted.

(The motion was seconded. After discussion, it was approved.)

Mr. Speaker, I move the adoption of the report as a whole.

(The motion was seconded and carried.)

The Speaker invited Dr. E. Warren Allen, Chairman, to present the report of the Reference Committee on Miscellaneous Affairs.

MISCELLANEOUS AFFAIRS

The Reference Committee on Miscellaneous Affairs convened in a general hearing session in the Lido Room of the Chase-Park Plaza Hotel on Thursday, March 29, 1973. Open discussion was held from 4:20 PM until 6:15 PM. The Executive Committee convened at 6:30 PM, with Dr. E. Warren Allen, Chairman, presiding. All members of the Committee were present.

The Committee reviewed the report of the **Commission on Public Affairs,** which was referred to the Miscellaneous Affairs Committee. These portions of the **Council Minutes** of June 3-4, 1972; September 16-17, 1972; December 9-10, 1972; and February 2-3, 1973, were all considered. The Committee recommends adoption of this portion of the report.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and carried.)

The Committee considered the report submitted by the **Commission on Public Affairs** and recommends adoption of this portion of the report.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and carried.)

The Committee considered the report submitted by the **Commission on Interspecialty Medicine.** The Committee recommends adoption of this portion of this report.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and carried.)

The Committee considered the report submitted by the **Committee on Legislative Affairs.** The Committee recommends adoption of this portion of the report.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and carried.)

The Committee reviewed the **Supplemental Report of the Council.** The Committee considered the report given on the VD Workshops and approved this as written. The Committee considered the report of the AMA-AMPAC Workshop, and recommended approval of the Medicredit Bill.

The Committee reviewed Dr. Matthews' request "That we give the staff all the help, encouragement and moral support that we can" in keeping the 70 bills now under consideration under observation. The Committee approved this portion of the report.

The Committee reviewed Dr. Ladyman's involvement in the observation of the QAP and approved his continuance in this matter.

The Committee reviewed the following motion made by the Executive Session:

"As a general rule, the Council of the Missouri State Medical Association opposes the granting of a license to practice medicine to any physician who has been convicted of a felony."

The Committee recommends approval of this portion of the Supplemental Report of the Council.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and carried unanimously.)

Resolution #1—Emergency Medical Service

The Committee considered Resolution #1 submitted by the MSMA Ad Hoc Committee on Emergency Medical Services and St. Louis County Medical Society. The Committee recommends approval of this resolution as written.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and carried.)

Resolution #9—Health and Hospital Insurance for Newborn

The Committee considered Resolution #9, which was submitted by Dr. Francis X. Lieb, St. Louis Medical Society. The Committee approved this resolution with the amendment changing the word "conception" to "birth" on the last word of the second line of the first Resolution.

Mr. Speaker, I move the adoption of this portion of the report as amended.

(The motion was seconded and passed.)

Resolution #3—Rubella Immunization Requirements for Marriage License

The Committee considered Resolution #3 submitted by Dr. Melvin M. Schwartz, St. Louis County Medical Society. The Committee recommends that this resolution not be adopted.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and passed.)

Resolution #4—Revision of Federal Narcotics Law

The Committee considered Resolution #4, submitted by Dr. Melvin H. Schwartz, St. Louis County Medical Society. The Committee recommends that Resolution #4 not be adopted.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and approved.)

Resolution #5—Endorsement of Medicredit Legislation

The Committee considered Resolution #5, which was submitted by Dr. Hubert A. Ritter, St. Louis Medical Society. The Committee recommends approval of this resolution.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and carried.)

Resolution #7—Repeal of Missouri Controlled Substance Law

The Committee considered Resolution #7 submitted by Dr. George L. Hawkins, St. Louis Medical Society. The Committee disapproved this resolution, but feels that this problem deserves further study.

Mr. Speaker I move the adoption of this portion of the report.

(The motion was seconded and approved.)

Resolution #8—Recent Decision of U.S. Supreme Court on Abortion

Resolution #17—Recent Decisions of U.S. Supreme Court on Abortions

Resolution #26—Abortion

The Committee considered Resolutions #8, #17 and #26 on abortions. By consensus of those who introduced these resolutions, they were condensed into a single resolution, which hereafter shall be referred to as Revised Resolution #17. The contents are as follows:

Revised Resolution #17

(°°° *Note:* No deletions were made from Resolution #17. After the second WHEREAS, an addition from Resolution #26 of the first Resolution was made as an additional WHEREAS. An insertion of the first Resolution of Resolution #8 was made following the first *Resolved* of Resolution #17.)

WHEREAS, Medically and scientifically, a human embryo or fetus exists as a living and growing human individual from the time of conception; and

WHEREAS, Respect for and protection of human life has been a hallmark of civilized society for millenia; and

°°° WHEREAS, The House of Delegates of MSMA advise that abortion is;

1. In violation of the Hippocratic Oath.
2. Contrary to the mission of the physician, who is to help heal and preserve individual human life—not to destroy it, and

WHEREAS, Respect for and protection of unborn human life has been traditional with the medical profession since long before the beginning of the Christian era, regardless of prevailing political, religious or social ideologies or dogmata; and

WHEREAS, A legal threat to the right to life of any individual member of a society imperils the right to life of every other member of that society; and

WHEREAS, In states in which abortion laws have recently been relaxed or repealed, professional medical ethics have proved to be wholly inadequate for the protection of the lives of the unborn; and

WHEREAS, The United States Supreme Court has withdrawn all legal protection from an entire class of human beings, namely, the unborn; and

WHEREAS, The Supreme Court in so doing has grieviously exceeded its judicial authority, and not only has invaded the Legislative branch of the government, but has also overthrown the legislative will of the individual states; and

WHEREAS, The House of Representatives of the Missouri General Assembly has passed a resolution asking the Congress of the United States to propose an amendment to the Constitution which would guarantee the right to the unborn and for said action we compliment the House; now therefore be it

Resolved, That the Missouri State Medical Association urges the Congress of the United States to take appropriate action toward amending the Constitution of the United States in order to reestablish and reaffirm that human life with legal personality begins at the time of conception, and that all constitutional rights, including due process of law, apply to the unborn in the same manner and to the same extent as to all other citizens; and be it further

°°° *Resolved*, That the House of Delegates of the MSMA petition all the Missouri members of the Congress to remove from the jurisdiction of the Supreme Court all matters pertaining to abortion; and be it further

Resolved, That Delegates of the Missouri State Medical Association to the American Medical Association be instructed to introduce and pursue a resolution similar to this one in the House of Delegates of the AMA at the 1973 Annual Session of that body, and be it finally

Resolved, That the President of the Missouri State Medical Association be directed to forward copies of this Resolution to: The President of the United States, the President of the Senate of the United States, the Speaker of the House of Representatives of the United States, all members of the Missouri Congressional Delegation, the Governor of the State of Missouri, the President of the Senate of the Missouri General Assembly and the Speaker of the House of Representatives of the Missouri General Assembly.

The Committee recommends that this consolidated resolution be adopted.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded. At this point, Dr. O. Dale Smith presented a minority report, which consisted of the following substitute resolution:

WHEREAS, The House of Delegates of MSMA has affirmed its position of liberalization of legislation on abortion, and

WHEREAS, The position of the House of Delegates of MSMA is permissive only and neither forces or encourages abortion, and

WHEREAS, The House of Delegates has always had a deep concern of legislation that is restrictive of personal rights and freedom of choice, and

WHEREAS, Laws which infringe upon individual freedom of choice where the State cannot show a compelling interest, should be ruled unconstitutional, and

WHEREAS, A definition of the time and product of conception are deemed to be a living soul, a human being, have not been clearly determined either legally, medically, morally or theologically, and

WHEREAS, Medicine today has awakened to its responsibility in dealing with the quality of life as well as the quantity of life, therefore, be it

Resolved, That the House of Delegates reaffirm its position in favor of legislation to permit the right of an individual to make a personal decision relative to pregnancy or its termination.

Dr. Smith moved that the minority report be substituted for the majority report and his motion was seconded. After extensive discussion, Dr. Joseph L. Fisher moved that both reports be tabled. Dr. Fisher's motion was seconded and carried.)

Resolution #15—Definition of the Beginning of Life in the Human

The Committee considered Resolution #15, which was submitted by Dr. Patrick C. Hogan, St. Louis Medical Society. The Committee disapproved this resolution.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded. After Dr. Hogan asked for reconsideration of Resolution #15, Dr. Smith moved that the resolution be tabled. Dr. Smith's motion was seconded and carried.)

Resolution #22—Exclusion of Regional Medical Programs From the Federal Budget

The Committee considered Resolution #22, which was submitted by Dr. Richardson K. Noback, Jackson County Medical Society. The Committee disapproved this resolution.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded. After extensive discussion, the motion was defeated.)

Resolution #23—Monthly Visitations to Nursing Home Residents

The Committee considered Resolution #23, which was submitted by Dr. David N. Kerr for Dr. Edward D. Kinsella, St. Louis Medical Society.

The Committee disapproved Resolution #23. The Committee also recommended that further accurate information is desirable for clarification.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and carried.)

Resolution #28—Quality Assurance Program (QAP)

The Committee considered Resolution #28. The Committee was in agreement with the intent of this resolution. Since a similar resolution is being considered by the Resolutions Committee, the recommendation of this Committee is that Resolution #28 not be adopted.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and defeated.)

Resolution #32—Blue Cross and Blue Shield Regulations

The Committee considered Resolution #32, which was submitted by Dr. C. W. Chastain. The Committee recommended adoption of this resolution.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded. There was considerable discussion, during which Dr. James C. Sisk, who is Chairman of the Board of Missouri Medical Service for St. Louis Blue Shield, read the following letter which he had written to doctors in the Missouri Medical Service area on March 14:

"Legislative proposals containing a large number of provisions detrimental to the best interests of Blue Shield and its physicians and subscribing members are now being considered by the Missouri General Assembly. The bills, Senate Bill #3, and House Bills #235, #256, and #321, are totally unnecessary attempts to change a clear, longstanding, public policy, which has been fully approved by the people of Missouri. All four would subject Blue Shield to regulation by the Superintendent of the Division of Insurance.

"One would impose a direct premium tax on members' dues, and all would inevitably increase Blue Shield costs, increases which would have to be paid by members in the form of higher dues. All four of the bills provide that both medical, surgical and hospitalization benefits may be furnished by the same corporation, a provision we feel is not in the best interest of the public.

"All four would require prior approval of membership benefit programs with various degrees of power vested in the Superintendent of Insurance. The three House Bills give an unrestricted power to disapprove membership agreements, while Senate Bill #3 provides a somewhat more limited power, delays in offering new programs to the public could result with accompanying expense and damage to the plan. All of the bills provide for financial examination of health services corporation by the Superintendent of Insurance. Blue Shield is regulated and supervised under the Missouri Statutes governing nonprofit corporations, by the Attorney General and the Circuit Courts. It is required to conform to high national standards set up by the National Association of Blue Shield plans. Its financial condition is audited twice each year by a nationally-recognized Certified Public Accountant. Further examination is felt to be unnecessary. All four regulatory bills exempt labor organization health plan and employer-employee plans, benefit plans from supervision. And Blue Shield is not opposed to such plans, such exemptions. However, discrimination against those who are not part of labor organizations, those who belong to groups, but are not employees, as, for example, Farm Bureau members, and those who belong to no group at all, it has the effect of increasing health care costs for those who are regulated, as compared to members of groups that are not regulated.

"Regulation of Blue Shield may, in addition, provide ways to force payment of benefits for chiropractic service. The Missouri law prohibits the issuance of health insurance policies limiting freedom of choice of physicians. surgeons, optometrists and chiropractors. The Attorney General has held that health insurance policies must not exclude payments for chiropractors. While Blue Shield membership agreements are not health insurance policies, the broad powers given the Superintendent of Insurance under the regulation proposed, may well have opened the way for an attempt to force coverage of chiropractic service corporations, including Blue Shield."

After further discussion, Dr. Paul F. Max moved that Resolution #32 be referred back to the Reference Committee on Miscellaneous Affairs for further consideration. The motion was seconded and passed.)

Mr. Speaker, I move the adoption of this report as amended.

(The motion was seconded and carried.)

Resolution #22—Exclusion of Regional Medical Programs From the Federal Budget

Dr. Smith rose to a point of order. Since action had not been taken by the House on Resolution #22, he moved the adoption of Resolution #22 as an amendment to the report of the Reference Committee on Miscellaneous Affairs.

(The motion to adopt was seconded and carried.)

Resolution #28—Quality Assurance Program (QAP)

Dr. Lawrence O'Neal introduced a motion to refer Resolution #28 back to the Reference Committee on Miscellaneous Affairs for reconsideration.

(The motion was seconded and approved.)

The Speaker invited Dr. Robert A. Mayer, Chairman, to present the report of the Reference Committee on Resolutions.

RESOLUTIONS

The meeting of the Reference Committee on Resolutions was held at 4:30 PM on March 29, 1973, in the Khorassan Room of the Chase-Park Plaza Hotel with all members present.

The **Council Minutes** as published in the *Journal* of the Missouri State Medical Association were reviewed by the Committee. They included the meetings held on April 9, 1972; June 3 and 4, 1972; September 16 and 17, 1972; December 9 and 10, 1972; and February 2 and 3, 1973. They were approved by the Committee as published.

The **Council Minutes** of February 2-3, as published in he Delegates' Manual, also were reviewed and approved.

Mr. Speaker, I move the adoption of this portion of the eport.

(The motion was seconded and carried.)

Portions of the **Supplemental Report of the Council** neeting of March 28, 1973, which were referred to the Committee on Resolutions, were reviewed and approved.)r. Hector Benoit presented the following Resolution:

> That the Council of the Missouri State Medical Association recommend to the House of Delegates of MSMA that endorsement e given to the Health Care Foundation of Missouri, in its efforts o become the responsible agency for PSRO activities in Missouri.

This was adopted by the Council.

Mr. Speaker, I move the adoption of this portion of the eport.

(The motion was seconded and passed.)

The **1973 Annual Report of the Health Care Foundation of Missouri** was reviewed by the Committee and approved as published.

Mr. Speaker, I move the adoption of this portion of the eport.

(The motion was seconded and carried.)

Report of the **Ad Hoc Committee for the Negotiation of Professional Fees, January 17, 1973.** The report was eviewed by the Committee, followed by extensive discussion of all interested parties. It was the consensus of he Committee that the idea of a Physicians' Guild was ot the most desirable mechanism at this time for dealng with the socio-economic problems of medicine as hey stand today.

The Committee strongly urges more aggressive leaderhip in establishing uniformity of action to protect the raditional rights of patient-physician relationships, et etera.

The Committee commends Dr. Stanley Peterson and is Committee for their indepth study of the problem, ut feels that an approach through the AMA is more deirable than a physicians' union or guild and recommends hat Dr. Peterson and his committee pursue this course f action.

Mr. Speaker, I move the adoption of this portion of the eport.

(The motion was seconded. After discussion, Dr. Stanley Peterson moved that the report of the Reference Committee be modified as follows:

That Paragraph 1 and Paragraph 3 be deleted and in ts place, there be a clause which says that the House of Delegates of the Missouri State Medical Association enlorses the Missouri Physicians' Guild as a mechanism hrough which physicians can negotiate not only fees, but lso the conditions under which services may be rendlered.

Dr. Peterson's motion was seconded. Dr. Allen Klippel hen spoke to the subject and moved that the matter of he Physicians' Guild be tabled to give members an opportunity to gain further information.

Dr. Klippel's motion was seconded and carried.)

The report of the **Commission on Medical Economics, Third Party Medicine and Governmental Regulations** was eviewed by the Committee. The Committee recommends its approval, except for the deletion of the last two paragraphs.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and carried.)

The Committee reviewed and approves the report of the **Ad Hoc Committee on Third Party Payments to Patients** as published.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and carried.)

The Committee reviewed the report of the **Ad Hoc Blue Shield Committee** and accepted it as submitted. The Committee also notes that a resolution has been introduced opposing Blue Shield's coming under the control of the Missouri State Insurance Commission.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and carried.)

Resolution #2—Special Committee to Study Ways and Means to Deal With the General Trend of Legislated Medical Care

The Committee considered Resolution #2, which was introduced by Clay County Medical Society. The Committee feels that this problem is being currently dealt with the Ad Hoc Committee for the Negotiation of Professional Fees. The Committee recommends disapproval of this resolution.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and passed.)

Resolution #18—Insurance Claim Forms

Resolution #18 was introduced by Greene County Medical Society. The Committee reviewed this resolution and recommends its approval.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and passed.)

Resolution #21—Creed of Better Medical Care

The Committee recommends rejection of Resolution #21 in its current form. Recognizing that the resolution has good points, the Committee, therefore, recommends that it be rewritten.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and carried.)

Resolution #24—Physician-Patient Privilege

Resolution #24, which apparently deals with a U. S. Supreme Court decision and a Senate or House Rule #504 is rejected for lack of information and failure of the presented to testify in favor of his resolution.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and passed.)

Resolution #25—Missouri Physician's Guild

The Committee rejects Resolution #25 because, as printed, it is not directed to the attention of the Missouri State Medical Association.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and carried.)

Resolution #31—PSRO

Resolution #31 was introduced by Dr. Bruce McCloskey of St. Louis. Discussion relative to PSRO was extensive, and testimony by Dr. Hector Benoit indicated that major adjustments in the Health Care Foundation bylaws paralleled the thinking of this resolution with respect to democratic elective procedures. The Committee recommends no action on this resolution.

Mr. Speaker. I move the adoption of this portion of the report.

(The motion was seconded and passed.)

Resolution #29—Legal Action Against PSRO

The Committee considered Resolution #29. The Committee recommends that the MSMA and the Health Care Foundation keep a close surveillance of the activity of the Oklahoma and Indiana state medical associations with respect to testing the constitutionality of PSRO, Public Law PL-92-603. The Committee recommends no further action on this resolution.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded. After a discussion, the motion was passed.)

Mr. Speaker, I move the adoption of this report as a whole.

(The motion was seconded and approved.)

The Speaker invited Dr. Andrew McCance, Chairman of the Reference Committee on Medical Education and Public Welfare, to give his report.

MEDICAL EDUCATION AND PUBLIC WELFARE

The Committee on Medical Education and Public Welfare met at the Chase-Park Plaza Hotel in St. Louis on Thursday, March 29, 1973 at 4:15 PM. Four members of the Committee were present. It was recommended that the published **Minutes of the Council Meetings** of June 3-4, 1972, September 16-17, 1972, December 9-10, 1972 and February 2-3, 1973, and the Supplemental Report of the Council, be approved.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and approved.)

The report of the **Commission on Continuing Education and Health Manpower**, the **Ad Hoc Committee on Continuing Medical Education**, the **Ad Hoc Committee on Health Manpower** and the **Ad Hoc Committee—115th Annual Session** were reviewed and approved.

The Committee commends the **Commission on Continuing Education and Health Manpower** for the excellent work it is carrying on.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and approved.)

Resolution #10—Required Continued Medical Education

Resolution #10 was introduced by Jasper County Medical Society. Considerable testimony was given on this resolution, including testimony by the Chairman of the Ad Hoc Committee on Continuing Medical Education. It is felt by the Reference Committee that further work currently being carried out by the Ad Hoc Committee on Continuing Medical Education will be necessary before making a recommendation concerning Required Continued Education for State Licensure.

The Committee recommends disapproval of Resolution #10.

Mr. Speaker, I move adoption of this portion of the report.

(The motion was seconded and carried.)

Resolution #11—Continuing Medical Education

Resolution #11 was introduced by Dr. Kenneth Bruns, Delegate from St. Louis Medical Society. The Reference Committee felt that if this resolution is adopted, it may restrict some of the activities of the Ad Hoc Committee on Continuing Medical Education. It was felt also that the discussion on this resolution brought out the points concerning disciplinary action as a part of continuing medical education, which needed to be discussed. The Committee recommends disapproval of the resolution.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded. After discussion, it was approved.)

Resolution #12—Continuing Medical Education

Resolution #12 was introduced by Dr. Kenneth Bruns of St. Louis Medical Society. Because of the same reasons for recommending disapproval of Resolutions #10 and #11, the Committee recommends disapproval of Resolution #12.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and carried.)

Resolution #14—Allergy Residency Training Program

Resolution #14 was introduced by Dr. Phillip V. Dreyer, Delegate from Chariton-Macon-Monroe-Randolph County Medical Society.

The Committee heard directly conflicting testimony on the facts regarding the establishment of the Con-Joint Board of Allergy. Because of uncertainty concerning the facts of the resolution, the Committee recommends disapproval.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and passed.)

Resolution #19—Committee to Study Midwifery

Resolution #19, introduced by Dr. Hubert A. Ritter and Dr. Dennis Cavanagh, would authorize a Committee to Study Midwifery.

The Committee recommends deletion of the first sentence of the last paragraph of Resolution #10, and the resolution is recommended for adoption in the following modified form:

> Whereas, There has been a continuing decrease in maternal and infant mortality over the years since obstetrics has been practiced almost exclusively by trained physicians in hospitals, and
>
> Whereas, A new effort is being made to include certified nurse midwives in the obstetrical team, and
>
> Whereas, The state of Missouri has an antiquated definition of what a midwife's training and limitation of activity should include;
>
> *Now, Therefore, Be It Resolved*, That the House of Delegates of the Missouri State Medical Association authorize the appointment of a Committee to study midwifery in the light of the joint statement on maternity care issued under the auspices of the American College of Obstetricians and Gynecologists, which recognizes the nurse-midwife as a memher of a medically directed team. This Committee would have as its purpose to define midwifery. After defining nurse-midwifery, they should determine if, in the State of Missouri, a need for such services exists.
>
> Finally, assuming the need for certified nurse-midwives has been determined, and the other aforementioned issues have been dealt with, the Committee would then propose legislation to recognize the practice of nurse-midwifery in Missouri, with the clear understanding that the nurse-midwife will only function as a member of the obstetrical team.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and approved.)

Resolution #30—Federal Drug Administration Regulations

Resolution #30 was introduced by Clay County Medical Society. The Committee listened to much discussion concerning this resolution and concluded that Resolution #30 is too general to be effective. The Committee recommends disapproval of this resolution.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and carried.)

Mr. Speaker, I move the adoption of this report as a whole.

(The motion was seconded and passed.)

The Speaker invited Dr. M. D. Bonebrake, Chairman, to present the report of the Reference Committee on Reports of Officers.

REPORTS OF OFFICERS

The Reference Committee on Reports of Officers met in the Coach Room of the Chase-Park Plaza Hotel at 4 PM on Thursday, March 29, 1973, with all members present. The remarks of the President, Walter T. Gunn, M.D.; the President-Elect, E. A. Stricker, M.D.; and the President of the Woman's Auxiliary to the Missouri State Medical Association, Mrs. Keith Jones, were accepted and recommended for approval.

The Committee recommends approval of the reports of the Secretary, Treasurer, Executive Secretary, Committee on Planning and Committee on Publications.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and approved.)

The report of the Treasurer was examined and accepted. A surplus of $18,191.85 was noted. The Committee has directed the Chairman to congratulate those responsible for having a balanced budget while, at the same time, engaging in the purchase and renovation of new Association quarters.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and carried.)

Those portions of the Council's minutes referred to this Committee, covering the Council Meetings of April 8, 1972; June 3-4, 1972; September 16-17, 1972; December 9-10, 1972; and February 2-3, 1973, were reviewed.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and carried.)

The portion of the **Supplemental Reports of the Council**, as read on the floor of the House of Delegates by Dr. James C. Cope, referred to this Committee, were approved with the proviso that the portion of the report concerning the Pension Fund for MSMA employees be changed to read, "That discrimination on the basis of sex be removed."

The Committee recommends approval of this portion of the Supplemental Report of the Council.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and approved.)

Resolution #20—Educational Money for MMPAC

Resolution #20, which was introduced by Dr. Hubert A. Ritter, was approved with the provision that in the resolution, an additional sentence be added to read as follows:

> The amount of money disbursed for this purpose will he at the discretion of the Council.

Mr. Speaker, I move that this portion of the report be accepted.

(The motion was seconded and carried.)

Mr. Speaker, I move the adoption of this report as a whole.

(The motion was seconded and passed.)

The Speaker invited Dr. T. Eugene Ruff, Chairman, to present the report of the Reference Committee on Necrology.

NECROLOGY

The Reference Committee on Necrology met in the English Room of the Chase-Park Plaza Hotel on March 29, 1973.

The Reference Committee on Necrology of the Missouri State Medical Association regretfully reports that since the 1972 Annual Session, there have been 57 deaths among members whose names are attached to this report.

Each of these members is missed as an individual and for his contributions to the practice of medicine and the Missouri State Medical Association. The loss of each member is keenly felt by our individual members, his loved ones and close associates, and, we are confident, the patients he has served with dedication.

Condolences in the form of a tribute have been sent to the immediate family of each deceased member, and this expression will continue to be sent in the future.

With these thoughts in mind, the Necrology Committee offers the following resolution:

Be It Resolved, That the House of Delegates now stand for a moment of silence and prayer to pay personal tribute and to honor the memory of the 57 members we have lost this past year and whose names will be recorded in the minutes of this Annual Session.

Be It Further Resolved, That this moment of quiet and meditation will serve as a time of our individual rededication to our purpose in the ministry of medicine as we honor the names and unselfish devotion of all departed members of the Missouri State Medical Association, and

Be It Further Resolved, That we emulate their examples and praise God for good men and women.

Mr. Speaker, I move that the report of the Reference Committee on Necrology be approved.

(The motion to adopt the report was seconded and the Speaker asked the House of Delegates to stand for a moment of silence as indication of approval of the motion.)

Members Deceased Since the 1972 Session

Bruce, Paul C., Excelsior Springs
Will, Leo A., Venice, Fla.
Haynes, Robert C., Marshall
Battersby, Richard S., Columbia
Bawell, Malcolm B., St. Louis

MacBryde, Cyril M., St. Louis

The Speaker invited new business.

Introduction of New Business

Dr. Joseph Edwards of St. Louis introduced the following resolution:

Endorsement of the American Physiological Society Request for a Commemorative Stamp Honoring William Beaumont, M.D.

Whereas, William Beaumont, M.D., was hailed as the first great American physiologist for his pioneering experiments in the physiology of digestion, which forms the basis of our present day knowledge of the digestive process, while practicing in St. Louis, Missouri between 1833 and his death in 1853, and

Whereas, Dr. Beaumont's study and examination of his patient, Alexis St. Martin, led to his international acclaim for scientific achievement and his recognition as one of the great men of American Medicine; in recognition of his outstanding contribution to knowledge and in tribute to his memory, the physicians of St. Louis in 1964 opened a Medical Historical Museum in St. Louis with a life-size diorama describing his work, which is rapidly earning the reputation of "the country's most significant medical museum" and

Whereas, Dr. Beaumont was the Post Surgeon at Fort Michilimackinac on Mackinac Island, Michigan, in 1822 when he recognized his opportunity for research, which has exerted a profound influence upon generations of medical thought, and

Whereas, The medical societies of Connecticut, where Dr. Beaumont was born; Vermont, where he was first licensed to practice medicine; Michigan, where he began his treatment of the patient and his study; Wisconsin, where he continued his research begun in Michigan and Missouri, and where he became a leader among his contemporaries and world-famous for the contribution to medical science through his teaching and writing and where he died and is buried, are jointly engaged in an effort to further honor the name and memory of William Beaumont, M.D., now, therefore, be it

Resolved, That the House of Delegates of the Missouri State Medical Association join the cooperative efforts of the American Physiological Society to petition and urge the Postmaster General of the United States to issue a commemorative postage stamp honoring William Beaumont, M.D., on the 75th Anniversary of the Publication of the *Journal of Physiology* (1898-1973).

(The motion to adopt the resolution was seconded and approved.)

Dr. R. Bruce McCloskey reintroduced the following resolution:

Resolution #31—PSRO

Whereas, It is apparent that progressively, rules and regulations which have been the unwritten codes for medical practice and are being reduced to written, enforceable law, and

Whereas, The inevitable twin of written regulations is an enforcement agency, and

Whereas, Such enforcement agencies will, necessarily, be endowed with increasing authority, and

Whereas, The American tradition is based upon a philosophy that the powers of authority be delegated to those who exercise them by those over whom the authority is to be exercised, and

Whereas, Such powers will be reposited in such persons for a limited term, following which they must stand for reelection,

Therefore, Be It Resolved, That any authoritative organization that may be developed to regulate or administer a PSRO be elected locally by the physicians over whom they shall have authority, and must stand for reelection each four years,

And Be It Further Resolved, That if and when such an organization be formed one half be elected for two years and one half for four years, following which all shall be elected for four-year terms.

(Referred to the Reference Committee on Resolutions.)

Dr. Donald E. Kuenzi, Clay County Medical Society, introduced the following resolution:

Resolution #33—Introduction of Resolutions

WHEREAS, At the 112th Annual Session, MSMA, a resolution was introduced whicb would require all resolutions considered by the House of Delegates to be submitted at the Association Office 45 days prior to the opening session of the House, and printed in be Handbook; and

WHEREAS, This resolution was referred to the Committee on Constitution and Bylaws; and

WHEREAS, The Committee on Constitution and Bylaws, recognizing tbe good sense of this concept, recommended that the House adopt tbe following policy concerning the introduction of resolutions:

> All resolutions to appear in tbe Handbook must be received at tbe Association Office 45 days prior to the opening session of the House. Any resolutions to be introduced after that time must be made available to the House of Delegates 24 bours before the session at whicb it is to be introduced. At least 200 copies of the resolution or funding for same must be supplied by tbe individual or society introducing the resolution. At tbe second session of tbe House of Delegates, the same procedure would be followed, but sucb introduction would be allowed only if approved by two tbirds of the delegates voting. The same procedure would be followed for the third session, but, at that time, it would take unanimous vote of the House to allow such introduction; and

WHEREAS, At the opening session of the House of Delegates of the 114tb Annual Session this policy, duly adopted by the House of Delegates of tbe 113th Annual Session, was suspended by the Speaker of the House; and

WHEREAS, 18 impromptu resolutions were presented at the 114tb Opening Session, many of which did not qualify under the above policy statement, thereby burdening the delegates to this session with resolutions to wbich neitber they nor their constituents ould give prior consideration; and

WHEREAS, It would seem, from our experience, yesterday at the opening session March 29, 1973, that this policy concept needs the force of a Bylaw so that it can be depended upon by tbe delegates of this Association in future years;

Now, Be It, Therefore, Resolved, That the House of Delegates, n accordance with Article XI, Constitution, MSMA, amend the Bylaws of MSMA, Chapter III, Section I, to follow tbe sentence

> "It sball remain in continuous session on the first day of the Annual Session and complete the work coming before it at that session."
>
> "All resolutions to be considered by tbe House of Delegates must be received at the Association Office 45 days prior to the opening session of the House for publication in the Handbook. Any resolutions to be introduced after that time must be made available to the House of Delegates 24 hours before tbe session at wbich it is to be introduced. At least 200 copies of the resolution, or funding for same, must be supplied by the individual or society introducing the resolution.
>
> "At the second session of the House of Delegates, the same procedure would be followed, but sucb introduction would be allowed only if approved by two thirds of the delegates voting. The same procedure would be followed by the third session, but, at that time, it would take a unanimous vote of the House to allow such introduction. At the discretion of the Speaker, these conditions would not apply for resolutions of good wishes, condolences, congratulations and other personal topics."

(Referred to Reference Committee on Constitution and Bylaws.)

Dr. Patrick C. Hogan, St. Louis Medical Society, introduced the following resolution:

Resolution #34—Scientific Definition of Beginning of Life in the Human

WHEREAS, The criteria for life, that is, growth, motion, metabolc activity and cell division, exist from conception, that is, fertilization of the ovum by a spermatozoon, and

WHEREAS, The same criteria exists with tbe implanted fertilized ovum, be it, therefore,

Resolved, That in the opinion of the Missouri State Medical Association, buman life begins with conception and sustained life begins with implantation of the fertilized ovum, and, be it further

Resolved, That tbe Missouri State Legislature be notified of this definition.

(Referred to Reference Committee on Miscellaneous Affairs.)

There being no further business, the Speaker adourned the Second Session of the House of Delegates with the announcement that the Annual Meeting of the Missouri State Medical Foundation would be held immediately following adjournment.

THIRD SESSION
Sunday, April 1, 1973

The Third Session of the MSMA 115th House of Delegates was called to order by the Speaker, Dr. E. D. Imes, at 7:30 AM in the Khorassan Room of the Chase-Park Plaza Hotel.

In the absence of Dr. Pennington, Chairman, Dr. George Lytton gave the report of the Credentials Committee and declared the presence of a quorum. With unanimous consent, the Speaker dispensed with a roll call and the reading of the minutes of the two previous meetings.

Dr. Donald Judd, Chairman of the Nominating Committee, was invited to present the report of his committee.

NOMINATING COMMITTEE

The Nominating Committee met in this room at the close of our Second Session on Friday. Present at the meeting were Dr. Chris Fotopolous, First District; Dr. Donald Judd, Third District; Dr. Walter Stelmach, Seventh District; Dr. William M. Walker, Eighth District; Dr. Billy J. Bass, Ninth District; and Dr. Melvin Kasten, Tenth District.

The Committee presents the following slate of officers for approval by the Association:

Vice-President—Dr. Rae W. Froelich, Lebanon
Vice-President—Dr. R. Lee Cooper, Warrensburg
Vice-President—Dr. Robert W. Kelley, St. Louis
AMA Delegate—Hector W. Benoit, Jr., Kansas City
AMA Alternate Delegate—Dr. Hugh E. Stephenson, Jr., Columbia
AMA Delegate—Dr. Hubert A. Ritter, St. Louis
AMA Alternate Delegate—Dr. Lawrence W. O'Neal, St. Louis
Speaker of the House—Dr. Robert A. Slickman, Kansas City
Vice-Speaker of the House—Dr. James T. Brown, Springfield

Mr. Speaker, I move the adoption of this portion of the report.

The Speaker invited additional nominations from the floor. Hearing none, he entertained a motion that the nominations cease and that a unanimous ballot be cast for the slate as presented by the Nominating Committee.

(The motion was seconded and approved.)

At this time, the Speaker invited nominations for the office of President-Elect. Dr. Hugh E. Stephenson, Jr. of Columbia nominated Dr. James C. Cope of Columbia. The nomination was seconded by Dr. T. Eugene Ruff of Poplar Bluff. A Delegate moved that nominations cease and that Dr. Cope be elected by acclamation. The motion was seconded and approved.

The new President-Elect was escorted to the Speaker's stand where he made a brief acceptance statement.

Dr. John I. Matthews, Secretary, announced that the following Councilors had been elected for two-year terms:

Dr. Lysle M. Bach, Second District
Dr. Louis P. Hetlage, Fourth District
Dr. William D. Bradshaw, Sixth District
Dr. Howard J. McAlhany, Eighth District

Dr. Eugene T. Hansbrough, Tenth District

The Speaker then called for additional reports of reference committees.

Dr. Robert Felix, Chairman, was invited to present the additional report of the Reference Committee on Constitution and Bylaws.

CONSTITUTION AND BYLAWS

Resolution #33—Introduction of Resolutions

The Committee on Constitution and Bylaws met at 6:50 PM on March 30, 1973, to consider Resolution #33, which was referred to it at the Second Session of the House of Delegates. After considering the resolution, it is recommended that Chapter III, Section 1 of the Bylaws be amended by inserting at the end of the second sentence thereof, the following, which is to replace the third sentence. That last is not in the written report, but should have been, which is to replace the third sentence. It would then read as follows:

> The House of Delegates shall meet annually at the time and place of the annual session. It shall remain in continuous session on the first day of the Annual Session and complete the work coming before it at that session.

Now, this is the insertion which is to replace the third sentence as previously indicated:

> All resolutions to be considered by the House of Delegates must be received at the Association Office 45 days prior to the opening session of the House for publication in the Handbook. Any resolution to be introduced after that time must be made available to the House of Delegates 24 hours before the session in which it is to be introduced. At least 200 copies of the resolution, or funding for same, must be supplied by the individual or society introducing the resolution.
>
> At the Second Session of the House of Delegates, the same procedure would be followed, but such introduction would be allowed only if approved by two thirds of the Delegates voting. It (the House of Delegates) shall meet on the last day of the Annual Session to receive the report of the Nominating Committee and to complete unfinished business and the election of officers. The same procedure with regard to resolutions would be followed at that session, but it would then take a unanimous vote of the House to allow such introduction. At the discretion of the Speaker, these conditions would not apply for Resolutions of good wishes, condolences, congratulations, and others of a personal nature.

Then the last sentence of Chapter III, Section 1 of the Bylaws will remain as it is now, as follows:

> No new business shall be introduced at the last session without the unanimous consent of the Delegates.

Mr. Speaker, I move the adoption of this report.

(The motion was seconded. There was discussion. Dr. John C. Soucy moved to amend the second sentence of Resolution #33 to read as follows:

> Must be postmarked 45 days prior to the opening session.

Dr. Soucy's motion was not seconded. After further discussion, the Speaker called for a standing vote on the motion to adopt this report. The Committee Report was approved by a two-thirds majority.)

The Speaker invited Dr. Robert Mayer, Chairman, to present the additional report of the Reference Committee on Resolutions.

RESOLUTIONS

The Reference Committee on Resolutions met immediately following the House of Delegates session in the Khorassan Room on Friday afternoon.

Resolution #31—PSRO

With reference to Resolution #31, which was presented by Dr. Bruce McCloskey, in lieu of the previous presentation, the Committee recommends that the House of Delegates disapproves this resolution.

Mr. Speaker, I move the adoption of this report.

(The motion was seconded. After discussion the motion to adopt the Committee report which disapproved Resolution #31 was defeated.

At this time, Dr. McCloskey moved the adoption of Resolution #31. After discussion, Dr. Edwin Burford moved that Resolution #31 be tabled for further study. Dr. Burford's motion was seconded and carried.)

The Speaker invited Dr. Andrew McCanse, Chairman, to present the additional report of the Reference Committee on Medical Education and Public Welfare.

MEDICAL EDUCATION AND PUBLIC WELFARE

Dr. McCanse stated that this Reference Committee did not have an additional report.

The Speaker invited Dr. Thomas M. Macdonnell to present the additional report of the Reference Committee on Miscellaneous Affairs.

MISCELLANEOUS AFFAIRS

(As a member of this Reference Committee, Dr. Macdonnell commended members of the House of Delegates for the 115th Annual Session for expressing their majority opinion. In the absence of the Chairman, Dr. E. Warren Allen, he then yielded the floor to Dr. Joseph V. Vacca, also a member of the Reference Committee, who presented the additional report.)

The Reference Committee on Miscellaneous Affairs convened in a second session in the Coach Room of the Chase-Park Plaza Hotel on Friday, March 30, 1973. The Chair assigned four resolutions to this Committee for consideration. These resolutions are to be considered by the House of Delegates on Sunday, April 1, 1973. All members of the Committee were present.

Resolution #16—Official Declaration of Death

The Committee reviewed Resolution #16 which was submitted by Dr. B. F. Byland, President, Northwest Missouri Medical Society. The Committee recommends disapproval of Resolution #16 as written. The consensus of opinion of the Committee members on this subject matter was that there was a question of the correctness of the premise that a physician must see the patient to pronounce him dead. It was felt that this could best be handled by local custom.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and carried.)

Resolution #28—Quality Assurance Program (QAP)

The Committee reviewed Resolution #28. We recommend that no action be taken on this resolution at this time. The reason for this recommendation is as follows: Within 60 to 90 days, Dr. Ladyman, a member of a Missouri State Medical Commission, will be attending a meeting pertaining to this proposal. We recommend that his report be given to the Council for consideration, and that the Council acts on this by reporting to the House of Delegates at the next Annual Session.

Mr. Speaker, I move the adoption of this portion of he report.

(The motion was seconded and carried unanimously.)

Revised Resolution #32—Blue Shield and Blue Cross Regulations

The Committee reviewed Resolution #32. With your permission, I would delete the next paragraph from reading it and merely state that we struck all reference to he Blues, other than Missouri Medical Service, from the original resolution and, then, recommend adoption of the evised Resolution #32, which is as follows, beginning t the bottom of Page 1 of the report:

WHEREAS, The Senate and House of Representatives of the General Assembly of the state of Missouri are now considering ertain proposed legislation for the regulation of health service orporations, which affects Missouri Medical Service, and

WHEREAS, Missouri Medical Service (the St. Louis Blue Shield Plan) has been sponsored by this Association, and

WHEREAS, Such proposed legislation seeks to establish a system of administrative regulation which is unnecessary in view of the xisting safeguards already protecting the members of Missouri Medical Service, and

WHEREAS, Such proposed legislation established cumbersome administrative procedures which will make it difficult or impossible or Missouri Medical Service to adapt and extend their plans and ervices to meet the needs of their members, and

WHEREAS, Such proposed regulation jeopardizes the corporate tructure and tax-exempt status of Missouri Medical Service, and

WHEREAS, Such proposed legislation, if put into effect, must necessarily result in an increase in the cost of the operation of Missouri Medical Service, which can only be met by an increase n the dues paid by the members, and

WHEREAS, It is not in the best interest of the people of the state of Missouri, including the more than 950,000 members and their dependents of Missouri Medical Service, to increase the cost and decrease the services offered by Missouri Medical Service, therefore, be it

Resolved, That this Association opposes the enactment of all egislation affecting Missouri Medical Service now pending in the General Assembly of the state of Missouri, and

Further Resolved, That the Officers of this Association be directed to transmit this resolution to the Senate and House of Representatives of the General Assembly of the state of Missouri and to such other persons as such Officers deem to be in the best interest of this Association.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded and passed.)

Resolution #34—Scientific Definition of Beginning of Life in the Human

The Committee considered Resolution #34, submitted by Dr. Patrick C. Hogan, St. Louis Medical Society.

After discussion, Resolution #34 was recommended for approval as amended by the deletion of the words "in the human" in the subject matter of this resolution and, also, by the deletion of the word "human" in the second line of the first *Resolved*, thus making Resolution #34 to read as follows:

WHEREAS, The criteria for life, that is, growth, motion, metabolic activity and cell division, exist from conception, that is, fertilization of the ovum by the spermatazoa, and,

WHEREAS, The same criteria exists with the implanted fertilized ovum, be it, therefore,

Resolved, That in the opinion of the Missouri State Medical Association, life begins with conception and sustained life begins with implantation of the fertilized ovum, and, be it further

Resolved, That the Missouri State Legislature be notified of this definition.

Mr. Speaker, I move the adoption of this portion of the report.

(The motion was seconded. Dr. Smith requested permission to submit a minority report and moved that Resolution #34 be tabled. His motion was seconded and defeated. After extensive discussion, the motion to accept this portion of the Committee's report was defeated by a standing vote of 66 to 65.)

Mr. Speaker, I move the adoption of this report as amended.

(The motion was seconded and approved.)

REPORTS OF OFFICERS

The Speaker invited Dr. McDonald Bonebrake, Chairman, to present the additional report of the Reference Committee on Reports of Officers. There was no additional report.

NECROLOGY

The Speaker invited Dr. Eugene T. Ruff, Chairman, to present the additional report of the Reference Committee on Necrology. In the absence of Dr. Ruff, a member of the Committee stated that this Committee had no additional report.

This concluded reports of the Reference committees.

At this time, Mr. Ira Rutkow, Delegate from St. Louis University, made the following statement:

"On behalf of all the recently seated Delegates from the four medical schools throughout the state of Missouri, we wish to express our sincerest thanks for our recent seating as voting Delegates in the Missouri State Medical Association's House of Delegates and, by doing so, giving us the opportunity to become better acquainted with both the structure and function of organized medicine in the state. We hope this will be a mutually rewarding experience and one in which we will be able to introduce the ideas and viewpoints of our classmates to this august body and, in return, present yours to them. Once again, we thank you and look forward to a very exciting and rewarding year."

Dr. Donald Judd moved to untable the portion of the report of the Reference Committee on Resolutions which referred to the matter of a Missouri Physicians' Guild and had been tabled during the Second Session of the House of Delegates. The portion of the report under consideration is as follows:

"The report of the Ad Hoc Committee for the negotiation of professional fees, January 17, 1973. The report was reviewed by the Committee, followed by extensive discussion of all interested parties. It was the consensus of the Committee that the idea of a physicians' Guild was not the most desirable mechanism at this time for dealing with the socio-economic problems of medicine as they stand today. The Committee strongly urges more aggressive leadership in establishing uniformity of action to protect the traditional rights of patient-physician relationships, et cetera.

"The Committee commends Dr. Stanley Peterson and his Committee for their in depth study of the problem, but feels that an approach through the AMA is more desirable than a physicians' union or Guild, and recommends that Dr. Peterson and his Committee pursue this course of action."

(The motion by Dr. Judd to untable was seconded and defeated.)

Installation of Officers

The Speaker then invited the Officers and Councilors to come to the front of the room where the Association

Dr. R. A. Slickman, Vice-Speaker of the House of Delegates, was elected as Speaker of the House for 1973-1974 and presided at the closing of the Third Session.

Secretary, Dr. John I. Matthews, administered the oath of office.

At this time, Dr. Imes turned the gavel over to the newly-elected Speaker of the House, Dr. Robert Slickman.

There being no further business, the Speaker invited President E. A. Stricker to announce his commission and committee appointments for the 1973-1974 year. Members whose terms had not expired were not mentioned and it is assumed they will continue to serve.

Committee Appointments

Committee on Constitution and Bylaws—R. Stacy Long, Kansas City and Donald Judd, St. Louis (terms to expire in 1976); Miles C. Whitener, St. Louis County, Chairman for 1973-1974.

Committee on Legislative Affairs—John I. Matthews, Jefferson City, Chairman; R. Allen Chandler, Kansas City; James C. Cope, Columbia; Robert E. Bregant, Jefferson City; Lawrence W. O'Neal, St. Louis (one-year terms).

Committee on Planning—T. N. Cofer, Chillicothe and Paul H. Rother, St. Charles (terms to expire in 1978); David N. Kerr, St. Louis, Chairman for 1973-1974.

Committee on Voluntary Health Agencies—Joseph L. Fisher, St. Joseph and Paul S. Quinn, Springfield (terms to expire in 1976); Carl Siegel, Kansas City, to serve the unexpired term of Max E. Teare, Kansas City, to 1975; William C. Allen, Columbia, Chairman for 1973-1974.

Commission Appointments

Commission on Public Affairs—Richard Bowles, Liberty; Byron E. Watts, Jefferson City; Hubert A. Ritter, St. Louis; A. W. Neilson, St. Louis; Richard Sutter, St. Louis County (terms to expire in 1976); Richard Bowles, Liberty, Chairman for 1973-1974.

Commission of Medical Economics, Third Party Medicine and Governmental Relations—Herbert C. Wiegand, St. Louis; Max A. Heeb, Sikeston; Kenneth K. Keown, Columbia; Rae W. Froelich, Lebanon; E. J. Cunningham, Jr., St. Louis County (terms to expire in 1976); Stanley S. Peterson, Springfield, Chairman for 1973-1974.

Commission on Continuing Education and Health Manpower—Andrew McCanse, Kansas City; A. Sherwood Baker, Columbia; Richard J. Dames, St. Louis; John C. Soucy, St. Charles; Charles A. Worley, Sweet Springs (terms to expire in 1976); George H. Ladyman, Poplar Bluff, Chairman for 1973-1974.

Commission of Medical-Legal Affairs—David W. Brown, Springfield; Francis X. Paletta, St. Louis; Frederick J. McCoy, Kansas City; Bernard Draper, Rolla; Robert L. Wilcoxon, Joplin (terms to expire in 1976); Frederick J. McCoy, Kansas City, Chairman for 1973-1974.

Commission on Interspecialty Medicine—(The name of the Representative will be followed by the name of the Alternate.) *Missouri State Surgical Society*, Cyril Costello, St. Louis and William Van Buskirk, Kansas City; *St. Louis Society of Neurological Sciences*, Herbert E. Rosenbaum, St. Louis and E. Robert Schultz, St. Louis; *Missouri Ophthalmological Society, Inc.*, Truman Schertz, North Kansas City and H. Berry Ivy, Springfield; *Missouri Society of Internal Medicine*, Hugh R. Waters, St. Louis and William Ames, St. Joseph; *Missouri Psychiatric Association*, George J. Lytton, Kansas City and James Haddock, St. Louis; *Missouri Chapter, American Academy of Pediatrics*, Francis X. Lieb, St. Louis and Don S. Overend, Springfield; *Missouri State Society of Neurological Surgeons*, William S. Coxe, St. Louis and August W. Geise, Jr., St. Louis; *Missouri State Allergy Association*, James W. Willoughby, Kansas City and William T. K. Bryan, St. Louis; *Missouri Dermatological Society, Inc.*, Norman Asel, Columbia and Bruce V. Drowns, Kansas City; *Physical Medicine and Rehabilitation*, Robert W. Allen, Columbia and Franz U. Steinberg, St. Louis; *Missouri OB-GYN Society*, William Walker, Springfield and B. J. McGinnis, St. Louis; *Missouri Chapter, American College of Surgeons*, G. Lynn Krause, St. Louis; *Missouri Ear, Nose and Throat Association, Inc.*, Robert M. Hazen, Kansas City and W. Joel Wurster, Kansas City; *Missouri Pathology Society*, Henry C. Allen, St. Louis and David L. Zacharias, Kansas City; *Missouri Radiological Society*, George P. Wilson, Columbia and Byron E. Watts, Jefferson City; *Federation of Missouri Urologists*, Larry G. Markel, Kansas City; *Missouri Society of Anesthesiologists*, Edwin Bowe, Jefferson City and Donald J. Dickler, St. Louis.

The Speaker requested an invitation for the meeting place of the next Annual Session of the Association. On behalf of Jackson County Medical Society, Dr. R. Allen Chandler, Seventh District Councilor, invited the MSMA to hold the 1974 Annual Session in Kansas City. The invitation was accepted.

The Speaker announced that the 116th Annual Session of the Missouri State Medical Association will be held on April 4-7, 1974 at the Crown Center Hotel in Kansas City.

There being no additional business, the Speaker declared the 115th Annual Session adjourned.

REGISTRATION AT THE 115TH ANNUAL SESSION

Missouri State Medical Foundation

Minutes of the Annual Meeting
Chase-Park Plaza Hotel
Friday, March 30, 1973

The meeting was called to order by Byron M. Stuart, M.D., President. A quorum was declared present. Dr. Stuart stated that the minutes of the 1972 Annual Meeting in Kansas City, which immediately followed the Friday afternoon, April 7 Session of the MSMA House of Delegates, had been published in the July, 1972 issue of Missouri Medicine. It was moved and seconded that the minutes of the 1972 meeting be approved as published. The motion carried.

Dr. Stuart directed attention to the financial statement of the Foundation as of Dec. 31, 1972, a copy of which was offered to those in attendance and which reads as follows:

FINANCIAL STATEMENT FOR THE YEAR 1972

LENNERTSON & COMPANY
Certified Public Accountants
ST. LOUIS, MISSOURI 63105

January 27, 1973

Missouri State Medical Foundation
515 East High Street
Jefferson City, Missouri 65101

Gentlemen:

The Balance Sheet of the Missouri State Medical Foundation, a nonprofit Missouri corporation, was examined for the year 1972. The Balance Sheet at December 31, 1972 is on a cash basis and the additions for the year are set forth in Exhibit A.

Recorded receipts for the year were traced in total into the bank account as deposits and paid checks were seen for the disbursements. A direct confirmation was received from the depository in verification of the cash balances on deposit.

A summary of the loans to medical students follows:

Loans Receivable January 1, 1972	$367,844.37
Loans made during the year	70,750.00
Total	$438,594.37
Less Loan Repayments	17,540.87
Loans Receivable December 31, 1972	$421,053.50

Positive confirmations were mailed as of August 31, 1972 by the Foundation on 226 individual loans which we had received positive confirmation in 1971. On 53 new loans and 10 loans not previously confirmed we mailed positive confirmations with requests to return the confirmations direct to the auditors. Of the 289 loans, 274 were confirmed for a total of $406,816.08 out of total loans of $421,053.50. No additional loans were made after August 31, 1972. Interest income on loans is recorded on a cash basis and the amount received in 1972 was $5,154.57. Accrued interest on outstanding loans at December 31, 1972 amounted to $32,221.46 and is not included in the loan balances in Exhibit A.

Interest received on the savings account and the certificate of deposit amounted to $1,753.28. The certificate of deposit due January 6, 1973 was renewed for six months and interest of $477.08 was received on that date.

The Foundation received a check on January 11, 1973 in the amount of $15,000.00 from the Dr. Richard S. Battersby Estate which represents a partial distribution of the bequest to the Foundation. It is anticipated that the Foundation will receive a total of $28,000.00 and the contribution will be recorded in the year received.

The Missouri State Medical Foundation paid expenses for the year ended December 31, 1972 as follows:

State Registration Fee	$ 1.0
Professional Fees	965.0
Surety Bond	52.6
Printing	170.2
Total	$1,188.8

Missouri State Medical Association had paid these expenses in prior years and continues to subsidize some of the Foundation expenses.

U. S. Treasury Department form 990 and Schedule A will be prepared for the year 1972 and are due for filing by May 15, 1973. The Foundation is not liable for Federal Income Taxes as it is classified as a Tax Exempt Charitable Organization. A refund claim has been filed for $216.16 taxes paid for the year 1970.

MISSOURI STATE MEDICAL FOUNDATION

Balance on hand, 12-31-72		$26,540.40
Income—January 1973		1,156.13
Transferred to Checking from Savings		11,000.00
		$38,696.53
January loans 1973 (Spring) (Number of loans—62)		36,650.00
		$ 2,046.53
Cash on hand 1-31-73		
Checking account	$ 2,046.53	
Savings account	10,978.52	
Certificate of Deposit	19,083.51	
Certificate of Deposit (Battersby Estate)	15,000.00	
Total cash on hand 1-31-73		$47,108.56

We have examined the Balance Sheet of Missouri State Medical Foundation as of December 31, 1972, prepared on the cash basis. The examination was made in accordance with generally accepted auditing standards and include such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances. Since the Balance Sheet is on the cash basis, no opinion is expressed on the attached statement as accrued interest on loans of $32,221.46 and $477.08 of accrued interest on certificate of deposit is not shown.

On September 21, 1971 the Foundation cancelled its life insurance on borrowers and became self-insured.

A reserve for losses on uncollectable loans and unpaid loans of deceased borrowers is being set up on the books at a rate of .05% of the outstanding monthly loan balances. An amount of $619.92 has been set up for 1971 and $2,450.35 for the year ended December 31, 1972. One uncollectable loan in the amount of $670.49 has been charged off against the reserve, leaving a balance of $2,399.78 at the year end. With the exceptions above, the Balance Sheet is prepared on a basis consistent with that of the preceding year.

Yours very truly,
Lennertson & Co.
Certified Public Accountants

MSMA NEWS ROUND-UP

JULY, 1973

egislative Session termed successful

flurry of action during the final two days of 77th Missouri General Assembly resulted in a successful Session for Medicine in Missouri. f the five Senate bills and three House bills ported by the Missouri State Medical Associa- which survived the calendar striking of last th, all were PASSED.

erhaps far more important, none of the bills ch were actively opposed by the MSMA sur- d into the final days of legislative action. In- ed in this group were five House bills and one ate bill.

n his report to the MSMA Council on June 2, John I. Matthews, Legislative Committee irman, said if the Session ended that day (June t would have to be termed a success. At that , all of the MSMA-opposed measures had been oped from further consideration by the General embly.

ut, the Session became even more of a success he MSMA-supported bills were passed in the ing hours.

he MSMA followed, to one degree or another, House bills and 19 Senate bills during the Ses- . MSMA members from all parts of the state vided expert testimony, pro or con, on 18 bills re House Committees and on 13 bills consid- by Senate Committees. Additionally, written port or opposition was supplied on several mea- s.

ourteen bills of direct interest to Missouri sicians were passed during the Session. Most he measures must still be signed by the Gover- before becoming law.

or the first time, Blue Cross and Blue Shield come under regulatory guidelines of the Mis- ri Division of Insurance. The Blues Bill (SB 3) supported by Kansas City Blue Cross and eld and St. Louis Blue Cross. St. Louis Blue eld opposed the bill. The MSMA did not take a ition on the measure until after the 115th An- l Session in St. Louis, March 29-April 1, when House of Delegates passed a Resolution oppos- all bills regulating the Blues.

owever, by the time the House acted, SB 3 had ady been passed in differing versions by the ate on a 33-0 vote and by the House on a 156-3 vote. The compromise version of SB 3 passed in the final hours of the Session on a near unanimous vote.

One bill which has already been signed by the Governor removes smallpox from the list of **mandatory** immunizations required for public school pupils.

Other measures which will become law if signed by the Governor include ones which relieve physicians of liability in certain review situations, reverse the present law on prescription labeling, provide regulations for ambulances and allow a physician to refuse to perform an abortion if it is against his religious, moral or ethical principles.

A "Good Samaritan" bill, long sought after in Missouri, was not passed due mainly to an internal struggle in the Senate which resulted in the 13 Republican Senators boycotting all actions for a period of about four hours. It was during this time the "Good Samaritan" bill came up for debate and there were too few Senators present to gain the Constitutional majority required to pass the bill.

However, in later action, the House and Senate tacked "Good Samaritan" language onto the ambulance bill which was passed.

Following is a list of actions taken on some of the more important medically-related bills introduced in the 77th General Assembly.

BILLS PASSED

Physician Immunity (SB 62) relieves physicians of liability for actions taken by medical review, hospital review or other review committees of which they are members, if the actions were taken without malice and after efforts to establish the facts.

County Medical Examiner (SB 122) establishes a County Medical Examiner System in Greene and Clay Counties to replace the Coroner System. The Examiner MUST be a physician. Other counties have the option to adopt the Examiner System. Amendments to the bill which would have made a physician **optional** as an Examiner and which would have eliminated the

Please See Next Page

General Assembly passes 14 medically- related bills

Continued from Previous Page

opportunity of other counties adopting the new system were defeated.

Prescription Labeling (SB 42) requires pharmacists or a physician to place exact name and dosage of a prescribed drug on every container label, **unless** otherwise directed by the physician.

Embalmers-Eye Enucleation (SB 34) Permits licensed embalmers, who have completed a certified medical course, to enucleate eyes when they have been donated by the deceased.

Ambulance Regulations (SB 57) provides for licensing and regulation of ambulances, drivers and attendents by the Division of Health. Also sets equipment standards. A "Good Samaritan" amendment added by House Committee was included in this bill.

Smallpox Immunization (HB 342) removes smallpox from the list of **mandatory** immunizations required for public school pupils. This measure has been **signed** into law by Governor Bond.

Emergency Medical Services (HB 437) creates the "Missouri Emergency Medical Services Act" and sets up funding mechanism to receive and dispense federal monies for emergency medical services.

"Good Samaritan" (HB 311) although this bill was not passed, "Good Samaritan" provisions were included in SB 57.

Blue Cross-Blue Shield (SB 3) places the Blues under regulation of the Missouri Division of Insurance. The original bill carried 17 amendments, including one which would have included payment of chiropractic services. Following several days of a Joint Committee Conference debate, the bill was reported out in the waning hours of the Session **without** the chiropractic amendment and promptly passed both Houses.

Abortion Conscience (HB 731-793) provides that no physician, allied personnel or hospital would have to treat or admit any woman for the purpose of abortion if such treatment was against the policy of the hospital or against the religious, moral or ethical principles of the medical personnel. Several bills which would have limited the methods of abortion were defeated.

Home Health Care Services (HB 397) establishes a Bureau of Health Care Services for the Aged and Chronically Ill within the State D sion of Health.

Hearing Aid Regulations (HB 257-396) requi persons fitting hearing aids to be licensed the Department of Public Health and Welfa Those persons 18-years-old or younger m see a physician before fitting. An attempt drop the requirement for youths to see a ph cian was defeated.

Speech Pathology (HB 329) creates a Comr tee of Examiners for Speech Pathology and C ical Pathology under the Board of Healing A

Hospital Aid (HB 605) provides that the st will reimburse a city, county, corporation district one-tenth of the net amount of pul funds spent for the operation of a hospital.

BILLS NOT PASSED

Statute of Limitations (HB 610) would have tended the Statute of Limitations in malpract suits from the present **two** years to fi years from the act complained of.

Delegation Amendment (HB 314) would ha provided that non-licensed technicians could employed by a physician to carry out certa duties under responsible supervision. Bill w actively opposed by optometrists and pharn cists.

Chiropractic-Hand (HB 132-SB 95) would ha eliminated the restriction that chiropract can only adjust or treat the spine "by hand."

Chiropractic-Scope (HB 451) would have tended the scope of practice of chiroprac through language changes in the statutes.

Chiropractic-Education (HB 376) would ha required applicants to chiropractic college have a minimum of 60 semester hours of lege credit leading toward an Arts and Scie degree from an accredited college or universi MSMA did not take position. Chiroprac "straights" and "mixers" could not agree bill.

Radiologists-Licensing (HB 340) extended cr ibility to chiropractors in the area of radiolo technology.

"Sick Doctor" (HB 805) was put in as a "tr balloon" this Session. Bill is designed to p vide an opportunity for an agency to help s doctors before those doctors lose their licen

MSMA Council begins action on House Resolutions

Several items of business referred from the House of Delegates were taken up by the MSMA Council at its June 2-3 meeting in Jefferson City.

The Council carried out House directions by naming two committees and referring several Resolutions to permanent committees and commissions for action.

An Ad Hoc Committee on Midwifery legislation in Missouri. William T. Griffin, M.D., of Columbia, has accepted the appointment as chairm Other committee member's names will be releas on their acceptance.

The Council requested Richard P. Bowl M.D., Chairman of the Public Affairs Comm sion, to re-appoint an MSMA Ad Hoc Commit on Emergency Medical Services to work on E and to provide assistance to other agencies invol with EMS.

Please See Next P

MSMA Council Begins Action on House Resolutions

(Continued from preceding MSMA News Round-Up*)*

The House Resolution calling for health and hospital insurance for the newborn was referred to he Constitution and Bylaws Committee and the Resolution seeking educational funds for MMPAC was referred to the Finance Committee.

In other actions, the Council:

- Voted to continue the project whereby the *AMA Newsletter* is mailed to key personnel on each hospital staff to be posted on the bulletin board.
- Voted to recommend discontinuance for the present of the Mini-Estes Hospital program because of declining attendance.
- Agreed to appoint a MSMA representative to he newly-established Missouri Family Planning Health Council. The new organization has been established in an effort to combine the activities of all family planning clinics in out-state Missouri under one funding agency.
- Received a report on the Hospital Discharge Data program proposed by the Missouri Division of Health.
- Endorsed proposed "Breast Cancer Detection Demonstration Projects" by the Cancer Research Center, Columbia.
- Recommended no change in the format for the House of Delegates at the 1974 Annual Session, April 4-7, in Kansas City. A Bylaws change regarding resolution introduction may have some effect on the House's way of doing business. However, it was felt that the House may propose its own solution if problems do crop up.
- Endorsed AMA Nutrition Seminars to be held at several colleges in Missouri this fall. The MSMA will co-sponsor the Seminars but the AMA will bear all related costs.
- Recommended that the MSMA Membership Committee proceed with implementing projects to educate members and non-members on the advantages of joining or re-joining the MSMA and AMA.
- Voted to request an AMA Survey Team to survey the MSMA as to member services and other related matters. The survey is at no charge to the MSMA.
- Referred correspondence from the AMA concerning "Sick Doctor" legislation to Legal Counsel.
- Voted to set up a "Leadership Crash Course" in cooperation with the AMA. Dates will be announced later.

Additional MSMA Members Named to CHP Council

Four additional MSMA members have been named to the Governor's Advisory Board on Comprehensive Health Planning by Gov. Christopher S. Bond.

Those appointed are Robert W. Kelly, M.D., St. Louis; Robert W. Edmonds, M.D., Sedalia; Charles P. McGinty, M.D., Cape Girardeau; and George Q. Dunmire, M.D., Kennett.

Bond previously named seven MSMA members to the Council as reported in the June issue of Missouri Medicine.

Participants in Annual Session Programs

Dr. Maxwell G. Berry, Kansas City, served as Moderator for the General Session on Saturday. Panelists were Dr. Edward C. Rosenow, Jr., Philadelphia, Pa.; Dr. Robert A. Chase, Stanford, Calif.; and Dr. William B. Hildebrand, Menasha, Wisc.

Dr. W. Mitchell Sams, Jr. of Denver, Colo. and Dr. Norma D. Farmer of Farmington. Dr. Sams, who is Professor and Head of the Division of Dermatology, University of Colorado Medical Center, conducted a scientific session.

Sub-total	$4,590.24
Contributions under $100 each	563.00
Total Contributions	$5,153.24

In referring to the financial report, Dr. Stuart pointed out that the MSMF had received $15,000 on Jan. 11, 1973 from the estate of the late Dr. Richard S. Battersby of Boone County. He also expressed appreciation for the generous contributions and support received during the past year from the Woman's Auxiliary to the MSMA.

Mr. Tom Fox, Assistant Secretary, discussed the fact that the MSMF office would move to 113 Madison Street in Jefferson City in May and described office equipment needs. Dr. Kenneth Hollweg moved that necessary office equipment be purchased at the discretion of Mr. Fox. His motion was seconded and approved.

Mr. Fox then pointed out that the MSMF had processed 59 loan applications in 1968 and that number had increased to 119 loan applications in 1972. Since the workload had increased to this extent and is continuing to increase, it was moved to tentatively approve hiring a part-time secretary and bookkeeper if and when her services are needed. The motion was seconded and approved.

Dr. Miles C. Whitener reported that he had been informed that the Woman's Auxiliary to the MSMA will increase its efforts on behalf of the MSMF during the coming year by assigning to one member in each county auxiliary the responsibility of raising funds for the Foundation.

Dr. Stuart called for the next order of business which was election to the Board of Trustees. He asked Dr. David N. Kerr, Chairman, to present the report of the Nominating Committee.

Dr. Kenneth C. Hollweg was reelected by unanimous vote to serve another five-year term on the Board of Trustees.

Dr. E. A. Stricker, incoming MSMA President, was unanimously elected as an Ex Officio Member of the Board to replace Dr. Walter T. Gunn, retiring President.

The President then called for introduction of additional new business. There being none, he announced that a short meeting of the MSMF Board of Trustees would immediately follow the Annual Meeting of the Missouri State Medical Foundation.

The meeting was adjourned.

Minutes of the MSMF Board of Trustees Meeting Chase-Park Plaza Hotel Friday, March 30, 1973

The meeting of the Board of Trustees of the Missouri State Medical Foundation was called to order by Byron M. Stuart, M.D., President, immediately after the adjournment of the Annual Meeting.

There was a discussion of a method for solicitation of contributions from the full membership of the MSMA. It was pointed out that results from letters and other promotional material published in Missouri Medicine again exceeded contributions made in previous years in response to a mailing to the full membership. After discussion, it was decided that solicitation for contributions again be made through Missouri Medicine in 1973-1974.

The next order of business was the election of officers. On behalf of the Nominating Committee, Chairman David N. Kerr, M.D. announced the following nominations: Byron M. Stuart, M.D. of Boonville, President; Max S. Franklin, M.D., St. Louis, Vice-President; and Charles R. Doyle, M.D., St. Louis, Secretary-Treasurer. It was moved, seconded and approved that these officers be reelected by acclamation.

Mr. Thomas P. Fox was reappointed Assistant Secretary and will continue to assist in the administration of the Foundation's program.

There being no further business, the meeting was adjourned.

The Council Reports

Meeting of April 1, 1973

E. A. Stricker, M.D., St. James, President, called the meeting to order. Those present were Drs. Stricker; Walter T. Gunn, St. Louis; James C. Cope, Columbia; Gerald L. Miller, Kansas City; John I. Matthews, Jefferson City; Donald Judd, St. Louis; Robert A. Slickman, Kansas City; R. Allen Chandler, Kansas City; Max S. Franklin, St. Louis; John N. Martin, St. Joseph; Lysle M. Bach, Hannibal; Louis P. Hetlage, Troy; Robert E. Bregant, Jefferson City; William D. Bradshaw, Clinton; Howard J. McAlhany, Springfield; Claude W. Cooper, Thayer; Eugene T. Hansbrough, Poplar Bluff; William C. Allen, Columbia; Messrs. Lee Mortenson, Chicago, Ill.; John Noble, Kennett; Tom Papreck, Columbia; Allen D. Smith and Roger Weis, Kansas City; Hollister Smith, St. Louis; Ray McIntyre, Royal O. Cooper and C. C. Swarens, Jefferson City, Staff.

Dr. Stricker opened the meeting and introduced the new Councilor from the 5th District, Dr. Robert E. Bregant of Jefferson City.

Dr. Miller thanked the Councilors, Officers and staffs for their cooperation and for the privilege of working with them during his tenure in the various offices.

Dr. R. Allen Chandler was nominated and elected Chairman of the Council by unanimous vote and, thereby, became the presiding officer.

Dr. Max S. Franklin was elected Vice-Chairman of the Council. Dr. Donald Judd was elected Treasurer and Dr. John I. Matthews was elected Secretary.

The next meeting of the Council will be held on June 2-3, 1973, at the Ramada Inn, Jefferson City.

Dr. Chandler then made the following appointments to the Finance and Budget Committee, indicating that this would now be one committee: Drs. Judd, Chairman; Stricker; McAlhany; Cope; and Chandler.

Dr. Hetlage said that he wished to introduce several resolutions at this time. He moved that the following resolution entitled "Increased Socioeconomic Activity by the AMA Officers and Board of Trustees" be adopted. This motion was seconded and carried.

> WHEREAS, The practice of medicine is beset at this point in history by a multitude of socioeconomic problems, and
>
> WHEREAS, The American Medical Association, as the national body of Medicine, properly should represent the profession on a national basis in the resolution of these problems, and
>
> WHEREAS, It is the desire of the members of the Missouri State Medical Association to be so represented, therefore be it
>
> *Resolved*, That the Council of the Missouri State Medical Association calls upon the officers and Board of the American Medical Association to adopt a continuing "hard line" in dealing with those outside influences which are disruptive to the harmony of the profession and which are producing socioeconomic problems

Newly-elected Fifth District Councilor Robert E. Bregant *(third from left)* visits with the five Councilors who were reelected at the April 1 Council meeting. *(From the left)* Drs. Eugene T. Hansbrough, Tenth District; Lysle M. Bach, Second District; Howard J. McAlhany, Eighth District; William D. Bradshaw, Sixth District; and Louis P. Hetlage, Fourth District.

for the individual practitioner, and be it further

Resolved, That this resolution be carried by our AMA Delegation to the June, 1973 session of the American Medical Association House of Delegates for their further implementation.

Dr. Hetlage then introduced a resolution regarding the composition of the Missouri Mental Health Commission. A bill presently in the General Assembly seeks to change the present composition of the Commission. Dr. Hetlage moved that the following resolution be adopted. Motion was seconded and carried.

Whereas, A bill has been introduced to change the composition of the Missouri State Mental Health Commission from four physicians and three laymen to three physicians and six laymen, and

Whereas, The orientations for diagnosis, treatment and comprehension of psychiatric cases and problems should be primarily medical, and

Whereas, Input by laymen is desirable, therefore be it

Resolved, That the Councilors of the MSMA recommend that the composition of the Missouri State Mental Health Commission be preserved as is, and be it further

Resolved, That this resolution be forwarded to the members of the Missouri General Assembly.

Dr. Hetlage indicated that he had a third resolution, but did not have copies of it. He suggested that he would send copies to the Council prior to the next Council meeting and would like for this resolution to be tabled until that time. He stated that this resolution regarded the possible appointment of a special ad hoc committee to study the constitutional structure of MSMA in comparison to those constitutions of other states and to make recommendations to the standing committee on Constitution and Bylaws regarding changes.

Dr. Bradshaw said that he felt that a courtesy resolution should be introduced in future House of Delegates meetings regarding the attendance of whatever AMA representative is present, thanking them for their attendance. It was suggested that Dr. Sammons be sent a letter expressing appreciation of his presence at the 115th Annual Session of MSMA.

COMMITTEE TO STUDY PRIMARY PATIENT CARE

Dr. Bradshaw said that the committee to study the feasibility of additional training of physicians in primary patient care had met, and he submitted a committee report for education only. He stated that they had no recommendations to make at this time. He indicated that he would like to expand the size of the committee and continue to study this problem. He asked each Councilor to submit a name of a physician from his district who might be interested in serving on this committee.

REPORT OF MEMBERSHIP COMMITTEE

Dr. Martin reported on activities of the membership committee and indicated that he would like to keep the same members on this committee and add Dr. Hetlage and Dr. Judd. Dr. Martin presented four resolutions regarding a membership drive and recruitment, which were seconded and passed by the Council. These resolutions are as follows:

FURTHER MEMBERSHIP DRIVE STUDY

Resolved, That the newly appointed membership committee study the costs and specific means of implementing the following membership programs and report back to this Council at its June, 1973 meeting, with recommendations for action on:

1. A slide and script "road show" for use by Councilors at county meetings on the benefits of AMA-MSMA membership.
2. A year-end mailing to nonmembers from members of their specialty society urging their joining.
3. A year-end mailing to nonmembers by members of their hospital staff.
4. A one-day practice management clinic, discussing organized medicine, in cooperation with the appropriate institution and be it

Resolved, That this committee continue its studies on all si areas of membership recruitment and report to this Council on it findings as they progress.

PAC EDUCATIONAL FUNDING AND PAC NEWSLETTER

Whereas, The MSMA House of Delegates recently approve the transfer of MSMA dollars to MMPAC for educational pu poses, and

Whereas, Less than 50% of MSMA members are MMPAC AMPAC members, therefore be it

Resolved, That newly formed Membership Committee, in co operation with the MMPAC Board, study and make specific rec ommendations on the costs and implementation of the followin and report to this Council at the June, 1973 Council meeting:

1. A regular and separate MMPAC newsletter.
2. A separate PAC brochure on PAC benefits and plans fo distribution to nonmembers in conjunction with a separat billing to nonmembers.
3. A PAC workshop this fall on PAC key-man programs an next year's political contests.

INTERN & RESIDENT RECRUITMENT DRIVE

Whereas, Interns and residents are the future of organize medicine and the medical profession, and

Whereas, Many interns and residents do not realize that or ganized medicine is open to them, therefore be it

Resolved, That MSMA, in cooperation with the AMA regiona office, immediately undertake the following actions from the stat office:

1. Send a welcome letter with an invitation to join their loca society and direct responses to the appropriate local so cieties.
2. Work with those component societies in the area of medica schools to undertake a "person-to-person" campaign.

IMMEDIATE MEMBERSHIP DRIVE

Whereas, The number of Missouri members in the AMA ha recently decreased, and

Whereas, The percentage of physicians in Missouri is decreasing and

Whereas, There is an immediate and compelling need fo MSMA to begin a 1973 membership recruitment drive, therefor be it

Resolved, That the staff of MSMA, in cooperation with the AMA Regional Office, immediately undertake the following actions from the state office:

1. Send "thank you" notes to new and renewing members.
2. Send a letter to all physicians who have not renewed AMA or MSMA membership by July 1 of every year, requesting that they reconsider.
3. Undertake a statewide "person-to-person" membership solicitation program, directly to rural counties and in cooperation with large metropolitan counties as suggested in the Membership Committee's report.
4. Develop a basic combination AMA-MSMA benefits brochure for distribution to non-renewing and new nonmembers.

Dr. Bradshaw asked what the position of the Guild presently is, and what will be the activity of the Ad Hoc Committee who worked on this, if any, due to the action of the House of Delegates regarding the Guild. The Chairman asked Legal Counsel to present the Council with a status report at the next meeting.

Mr. McIntyre indicated that previously, resolutions had been passed authorizing three individuals to sign checks from both main bank accounts at Mercantile Trust Company—our regular checking account and the new building fund. He proposed that the resolutions which had been passed be passed again with three names authorized to sign checks on the two different accounts. Motion was made, seconded and passed that Dr. Stricker, Dr. Judd and Mr. McIntyre be so authorized. Mr. McIntyre said that all three are bonded.

Dr. Hetlage brought up the matter of the insurance that the Association carries on the Council, Officers, Commission and Committee members when on official business. He asked whether or not this insurance is in force if he, as a Councilor, attends a meeting in Jefferson County. It was stated that, possibly, this should be clarified. The Chairman asked the Executive Secretary to include this in his report at the next Council meeting.

The meeting was adjourned.

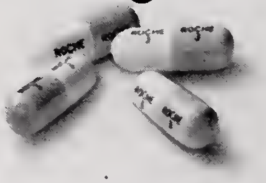
How strong must a tranquilizer be for severe anxiety?

As strong as Librium® 25 mg (chlordiazepoxide HCl)

ROCHE 3
ROCHE 3

The achievement of desired therapeutic results is often a function of the dosage *strength* as well as the drug's intrinsic action. Thus, when anxiety is *severe*, the 25-mg strength of Librium frequently provides the necessary antianxiety action with a minimum of unwanted adverse reactions. Librium 25 mg is a convenient dosage form for the relief of severe, incapacitating anxiety, specifically formulated to supplement your counsel and reassurance.

Benefits-to-risks ratio permits higher dosage



For over 13 years, Librium has been recognized for its excellent benefits-to-risks ratio, an asset in the *higher* dosage ranges as in more common clinical applications. Thus, the frequency of dosage with Librium 25 mg can be flexibly adjusted to the needs and response of the individual patient, up to 100 mg daily if required. Total daily dosage for the elderly and debilitated should not exceed 20 mg. When severe anxiety has been reduced, Librium dosage should be correspondingly reduced or discontinued entirely.

basic support in severe anxiety

Librium® 25 mg
(chlordiazepoxide HCl)
1 capsule t.i.d./q.i.d.

ROCHE
Roche Laboratories
Division of Hoffmann-La Roche Inc
Nutley, N.J. 07110

Before prescribing, please plete product information, a su which follows:

Indications: Relief of anxi occurring alone or accompanying states.

Contraindications: Patien hypersensitivity to the drug.

Warnings: Caution patien combined effects with alcohol an depressants. As with all CNS-act patients against hazardous occup complete mental alertness (*e.g.*, ery, driving). Though physical a dependence have rarely been re mended doses, use caution in ad addiction-prone individuals or increase dosage; withdrawal sy convulsions), following discon drug and similar to those seen have been reported. Use of any drug in pre lactation, or in women of childbearing age r that its potential benefits be weighed agains possible hazards.

Precautions: In the elderly and debili and in children over six, limit to smallest ef tive dosage (initially 10 mg or less per day) preclude ataxia or oversedation, increasing ally as needed and tolerated. Not recommen in children under six. Though generally not ommended, if combination therapy with ot psychotropics seems indicated, carefully con individual pharmacologic effects, particular use of potentiating drugs such as MAO inhi and phenothiazin bserve usual precauti presence of im enal or hepatic functi Paradoxical r *e.g.*, excitement, stim and acute been reported in psych patients a active aggressive children Employ u precautions in treatment of a states with evidence of impending depressi suicidal tendencies may be present and prot measures necessary. Variable effects on bloo coagulation have been reported very rarely patients receiving the drug and oral anticoa lants; causal relationship has not been establ clinically.

Adverse Reactions: Drowsiness, ataxi confusion may occur, especially in the elderl debilitated. These are reversible in most inst by proper dosage adjustment, but are also oc sionally observed at the lower dosage ranges few instances syncope has been reported. Als countered are isolated instances of skin erup edema, minor menstrual irregularities, naus constipation, extrapyramidal symptoms, inc and decreased libido—all infrequent and gen controlled with dosage reduction; changes in patterns (low-voltage fast activity) may app during and after treatment; blood dyscrasias cluding agranulocytosis), jaundice and hepa dysfunction have been reported occasionally ing periodic blood counts and liver function advisable during protracted therapy.

Supplied: Librium® Capsules contain 5 mg, 10 mg or 25 mg chlordiazepoxide HC Libritabs® Tablets containing 5 mg, 10 mg o 25 mg chlordiazepoxide.

Purposes of Association

THE PURPOSES of the Missouri State Medical Association are to bring into compact organization the entire medical profession of the State of Missouri with the view of the extension of medical knowledge and the advancement of medical science, to promote and elevate the standards of medical education and the enactment and enforcement of just medical and public health laws, to encourage friendly intercourse among physicians, to guard and sustain measures of interest and advantage to the public and the medical profession and to promote science, knowledge and skill among the medical profession.

1950 MSMA Handbook
Centennial Issue

How to Use This Directory

This Directory includes two rosters of physicians who are members of the Missouri State Medical Association.

The **Roster of Members by County Societies** on page 539 lists each county medical society in alphabetical order, the members of each county medical society and their **street addresses.**

If you are seeking a street address and do not know to which county medical society a member belongs, turn to the **Alphabetical Roster of Members** on page 523 which lists that member's name and the community in which he lives.

Locate the name of that community in the **Guide to County Medical Societies** on page 521 which tells you the county in which that community is located and the county medical society to which that member normally would belong.

The **Roster for the Woman's Auxiliary to the MSMA,** beginning on page 561, lists the officers, directors, committee chairmen, MSMA Advisory Council, presidents of county auxiliaries, districts, state past-presidents and members of each county auxiliary.

For other departments, please refer to the table of contents on the cover page.

Guide to County Medical Societies

Following is a list of Missouri communities in which MSMA member-physicians are in active practice or reside. Name of the community is followed by the county in which it it is located and the medical society to which physicians of that community normally would belong.

Town	*County*	*Medical Society*
	A	
Affton	St. Louis*	
Albany	Gentry	Northwest Missouri
Altenburg	Perry	Perry-Ste. Genevieve
Appleton City	St. Clair	West Central
Arnold	Jefferson	Jefferson
Aurora	Lawrence	Ozarks
Ava	Douglas	South Central
	B	
Ballwin	St. Louis*	
Belton	Cass	West Central
Berkeley	St. Louis*	
Bethany	Harrison	Grand River
Bloomfield	Stoddard	SEMO
Blue Springs	Jackson	Jackson
Bolivar	Polk	Dallas-Hickory-Polk-Dade
Bonne Terre	St. Francois	Mineral Area
Boonville	Cooper	Cooper
Bourbon	Crawford	Mid-Missouri
Bowling Green	Pike	Pike
Branson	Taney	Ozarks
Braymer	Caldwell	Grand River
Brentwood	St. Louis*	
Bridgeton	St. Louis*	
Brookfield	Linn	Grand River
Browning	Linn	Grand River
Brunswick	Chariton	Chariton-Macon-Monroe-Randolph
Buckner	Jackson	Jackson
Buffalo	Dallas	Dallas-Hickory-Polk-Dade
Butler	Bates	West Central
	C	
Cabool	Texas	South Central
Cainesville	Harrison	Grand River
California	Moniteau	Moniteau
Camdenton	Camden	Camden
Cameron	Clinton	Clinton
Cape Girardeau	Cape Girardeau	Cape Girardeau
Cardwell	Dunklin	Dunklin
Carrollton	Carroll	Grand River
Carthage	Jasper	Jasper
Caruthersville	Pemiscot	Pemiscot
Cassville	Barry	Ozarks
Centralia	Boone	Boone
Charleston	Mississippi	SEMO
Chesterfield	St. Louis*	
Chillicothe	Livingston	Grand River
Clarksville	Pike	Pike
Clayton	St. Louis*	
Clinton	Henry	Henry
Columbia	Boone	Boone
Concordia	Lafayette	Lafayette-Ray
Crane	Stone	Ozarks
Creve Coeur	St. Louis*	
Crystal City	Jefferson	Jefferson
Cuba	Crawford	Mid-Missouri
	D	
Desloge	St. Francois	Mineral Area
DeSoto	Jefferson	Jefferson
Dexter	Stoddard	SEMO
Doniphan	Ripley	Butler-Wayne-Ripley
	E	
East Prairie	Mississippi	SEMO
Edina	Knox	North Central
Eldon	Miller	Miller
El Dorado Springs	Cedar	West Central
Elsberry	Lincoln	St. Charles-Lincoln
Everton	Jackson	Jackson
Excelsior Springs	Clay	Clay
	F	
Farmington	St. Francois	Mineral Area
Fayette	Howard	Howard
Fenton	St. Louis*	
Ferguson	St. Louis*	
Festus	Jefferson	Jefferson
Flat River	St. Francois	Mineral Area
Florissant	St. Louis*	
Forsyth	Taney	Ozarks
Fort Leonard Wood	Pulaski	Mid-Missouri
Fredericktown	Madison	Mineral Area
Frontenac	St. Louis*	
Fulton	Callaway	Callaway
	G	
Gallatin	Daviess	Grand River
Gashland	Clay	Clay
Gerald	Franklin	Franklin-Gasconade-Warren
Gideon	New Madrid	SEMO
Gladden	St. Louis*	
Glasgow	Howard	Howard
Glendale	St. Louis*	
Grandview	Jackson	Jackson
Grant City	Worth	Northwest Missouri
Gravois Mills	Morgan	Morgan
Greenfield	Dade	Barton-Dade
	H	
Hamilton	Caldwell	Grand River
Hannibal	Marion	Marion-Ralls-Shelby
Harrisonville	Cass	West Central
Hayti	Pemiscot	Pemiscot
Herculaneum	Jefferson	Jefferson
Hermann	Gasconade	Franklin-Gasconade-Warren
Hickman Mills	Jackson	Jackson
Higginsville	Lafayette	Lafayette-Ray
Hillsboro	Jefferson	Jefferson
Hornersville	Dunklin	Dunklin
Houston	Texas	South Central
Humansville	Polk	Dallas-Hickory-Polk-Dade
Huntsville	Randolph	Chariton-Macon-Monroe-Randolph
	I	
Illmo	Cape Girardeau	Cape Girardeau
Independence	Jackson	Jackson
Ironton	Iron	Mineral Area
	J	
Jackson	Cape Girardeau	Cape Girardeau
Jefferson Barracks	St. Louis*	
Jefferson City	Cole	Cole
Jennings	St. Louis*	
Joplin	Jasper	Jasper
	K	
Kansas City	Jackson	Jackson
Kennett	Dunklin	Dunklin
King City	Gentry	Northwest Missouri
Kirksville	Adair	North Central
Kirkwood	St. Louis*	
Knobnoster	Johnson	Johnson
Knox City	Knox	North Central
Koch	St. Louis*	
	L	
Ladue	St. Louis*	
Lamar	Barton	Barton
Lawson	Ray	Lafayette-Ray
Leawood (Kan.)		Jackson
Leadwood	St. Francois	Mineral Area

*** Member may belong to St. Louis County Medical Society or St. Louis Medical Society.**

Town	*County*	*Medical Society*
Lebanon	Laclede	Mid-Missouri
Lee's Summit	Jackson	Jackson
Lemay	St. Louis*

Constitution and Bylaws

of the

Missouri State Medical Association

Adopted 1903

1973 Revision

113 MADISON JEFFERSON CITY, MO. 65101

Constitution

ARTICLE I. NAME OF THE ASSOCIATION

The name and title of this organization shall be the Missouri State Medical Association.

ARTICLE II. PURPOSE

The purpose of this Association is the promotion of the science and art of medicine, the protection of public health, the betterment of the medical profession, and, by uniting with similar organizations in other states and territories of the United States, to form the American Medical Association.

ARTICLE III. MEMBERSHIP

Membership in this Association shall be limited to and include all members in good standing in component societies which hold charters from this Association.

ARTICLE IV. HOUSE OF DELEGATES

The House of Delegates shall be the legislative body of this Association and shall consist of delegates elected by the component societies as well as all Past-Presidents of the Association who will serve as Delegates-at-Large. It shall elect a Speaker and Vice-Speaker from its body. Its Secretary shall be the Secretary of the Missouri State Medical Association.

Included also in the House of Delegates shall be two student delegates, each from a different class, elected by the student body of each of the medical schools in the State of Missouri, who shall have the same rights and privileges as other delegates.

ARTICLE V. COUNCIL

The Council shall be the executive body of this Association when the House of Delegates is not in session. It shall be the judicial body of the Association when matters are referred to it for decision by the Association, by component societies or by individual members thereof. It shall consist of the President, President-Elect, Immediate Past-President, Secretary, Treasurer and the duly elected Councilors from each Councilor District. Nine members shall constitute a quorum.

ARTICLE VI. SESSIONS AND MEETINGS

Section 1. The Association shall hold an Annual Session at a place fixed by the House of Delegates, the time of which shall be fixed by the Council.

Sec. 2. Special meetings of the Association or of the House of Delegates may be called by a two thirds vote of the Council and shall be called upon a petition signed by members equal in number to one third of the total number of delegates certified for the last Annual Session.

ARTICLE VII. OFFICERS

Section 1. The officers of this Association shall be a President, a President-Elect, three Vice-Presidents, a Secretary, a Treasurer, a Speaker and a Vice-Speaker of the House of Delegates and ten Councilors selected as provided for.

Sec. 2. All officers except Councilors shall be elected annually. The terms of Councilors shall be two years. Half of the membership of the Council shall be elected each year. The Secretary and the Treasurer shall be elected by the Council. The delegates present from each Councilor District shall meet prior to the last day of the Annual Session and elect the Councilor from that district. In the event of death, resignation or removal of any Councilor, the Council may appoint a successor to serve until the vacancy is filled at the next Annual Session. All of the officers shall serve until their successors are elected and installed.

ARTICLE VIII. FUNDS, EXPENSES AND BUDGET

Funds shall be raised by a per capita assessment on each component society. The amount of the assessment shall be fixed by the House of Delegates. Funds may also be raised in any other manner approved by the House of Delegates. The Council shall submit an annual budget to the House of Delegates. All resolutions providing for appropriations shall be referred to the Council and all appropriations approved by the Council shall be included in the annual budget.

ARTICLE IX. REFERENDUM

At any General Meeting of the Association it may, by a two thirds vote, order a general referendum upon any question pending before the House of Delegates. The House of Delegates may, by a vote of its members, submit any question to the membership of the Association for its vote. A majority vote of all members of the Association shall determine the question.

ARTICLE X. SEAL

The Association shall have a common seal. The power to change or renew the seal shall rest with the House of Delegates.

ARTICLE XI. AMENDMENTS

The House of Delegates may amend any article of this Constitution by a two-thirds vote of the delegates present and voting at any Annual Session, provided that such amendment shall have been presented in open meeting at the previous Annual Session and that it shall have been published twice during the year in the Journal of this Association or sent officially to each component society at least two months prior to the meeting at which final action is to be taken.

Bylaws

Chapter I. Membership

Section 1. Members of this Association shall be physicians whose names have been certified by secretaries of component societies to the Secretary of this Association that they are duly elected members of a component society and are legally qualified physicians practicing in Missouri except as otherwise provided. Each member must be of good moral and professional standing, and must not support, nor practice, nor claim to practice any exclusive system of medicine.

Sec. 2. No person who is under sentence of suspension or expulsion from any component society of this Association or whose name has been dropped from its roll of members shall be entitled to any of the rights or benefits of this Association.

Sec. 3. There shall be three classes of members as follow:

Active Members shall be limited to those members of component societies who (1) hold the degree of Doctor of Medicine or Bachelor of Medicine, and (2) if permitted by the bylaws of the component society, members who hold the degree of Doctor of Osteopathy, and (3) are entitled to exercise the rights of active membership in their component societies, as determined by their component societies, subject to the provisions of these Bylaws.

Junior members shall be limited to those members of component societies who are serving a full-time training internship or residency in a hospital approved by the American Medical Association and shall enjoy all of the privileges of active membership.

Honor members shall be limited to Honor members of component societies, which societies have requested that active members who have reached advanced years and have long served the Association and the profession be made Honor members of the Association. They shall enjoy all the privileges of active membership and shall be exempt from the payment of dues.

Sec. 4. **Associate members** shall be limited to persons not provided for in the various classes of membership who are engaged in the pursuit of a medical or allied science, and by action of the component societies, become Associate members of the Association. Associate members shall have the right to attend scientific sessions and such other privileges as may be extended to them by the House of Delegates. They shall not be eligible to vote and shall be exempt from the payment of dues.

Chapter II. General Meetings

Section 1. The General Meetings shall be open to all registered members and guests.

Sec. 2. Any paper read before this Association shall be considered for publication in the Journal if the Author so desires. Such papers may be given publication priority over regularly submitted papers but shall be subject to the same editorial review and selection policies.

Sec. 3. No person in the active practice of medicine in the State of Missouri shall appear on the program of the Association unless he or she is a member of the Missouri State Medical Association or an affiliated association or organization.

Chapter III. House of Delegates

Section 1. The House of Delegates shall meet annually at the time and place of the Annual Session. It shall remain in continuous session on the first day of the Annual Session and complete the work coming before it at that session.

All resolutions to be considered by the House of Delegates must be received at the Association office 45 days prior to the opening session of the House for publication in the handbook. Any resolution to be introduced after that time must be made available to the House of Delegates 24 hours before the session in which it is to be introduced. At least 200 copies of the resolution or funding for same must be supplied by the individual or society introducing the resolution.

At the second session of the House of Delegates, the same procedure would be followed, but such introduction would be allowed only if approved by two thirds of the delegates voting. It (The House of Delegates) shall meet on the last day of the annual session to receive the report of the Nominating Committee and complete unfinished business and the election of officers. The same procedure with regard to resolutions would be followed at that session, but it would then take a unanimous vote of the House to allow such introduction. At the discretion of the Speaker, these conditions would not apply for resolutions of good wishes, condolences, congratulations and others of a personal nature.

Sec. 2. Each component county society shall be entitled to send each year one delegate or one alternate to the House of Delegates for each fifty full paid members or fraction thereof in the Association on December 31 of the previous year, plus one addiional delegate or alternate for each one hundred nembers or a major fraction thereof; provided, iowever, that each component society which is composed of two or more county societies shall be entitled to at least one delegate from each of the counties of which it is composed; and provided that when two or more counties hereafter combine into a hyphenated society, such society shall not lose any lelegates by reason thereof; however, such delegates nust reside or practice in the county they represent. Alternate delegates may be elected from the entire nembership of the component medical societies. All Past-Presidents of the Association shall serve as Delegates-at-Large.

Sec. 2A. Each of the medical schools in the State f Missouri shall be entitled to send each year two student delegates, each from a different class, lected by the student body of the said medical school. The names of such student delegates shall be certified by the Dean of said medical school to he Secretary of this Association thirty days before he Annual Session. Such student delegates shall have all the rights and privileges of all other delegates.

Sec. 3. Forty delegates shall constitute a quorum of the House of Delegates. All meetings of the House of Delegates shall be open to members of the Association.

Sec. 4. From among members of the House of Delegates the Speaker shall appoint reference committees to which reports and resolutions, on a majority vote of the House of Delegates, shall be referred as follows:

Reference Committee on Amendments to the Constitution and Bylaws.

Reference Committee on Resolutions.

Reference Committee on Miscellaneous Affairs.

Reference Committee on Medical Education and Public Welfare.

Reference Committee on Reports of Officers.

The Speaker may appoint such other reference committees as he may deem necessary, upon approval of the House of Delegates.

The President shall appoint a Committee on Credentials.

Sec. 5. The House of Delegates shall elect delegates and alternates to the House of Delegates of the American Medical Association in accordance with the Constitution and Bylaws of that body.

Sec. 6. The House of Delegates shall divide the state into Councilor Districts specifying what counties each district shall include and, when the best interest of the Association and the profession will be promoted thereby, organize in each a district medical society of which all members of the component county societies shall be members.

Sec. 7. The House of Delegates shall have authority to appoint committees for special purposes from among members of the Association who are not members of the House of Delegates. Such committees shall report to the House of Delegates and may be present and participate in the debate on their reports.

Sec. 8. The House of Delegates shall receive and act upon a complete and detailed annual audit of receipts and expenses of the preceding year and a proposed budget for the current calendar year which shall have been prepared by the Council and submitted to the component county societies at least four weeks prior to the Annual Session. These shall be published in the Journal.

Sec. 9. The following shall be the general order of business of the House of Delegates for the first meeting of the session:

1. Call to order by the Speaker.
2. Report of the Committee on Credentials.
3. Roll call.
4. Reading and adoption of minutes.
5. Report of officers.
6. Report of committees.
7. Unfinished business.
8. New business.

The following shall be the general order of business of the House of Delegates for the last meeting of the session:

1. Call to order by the Speaker.
2. Report of the Committee on Credentials.
3. Roll call.
4. Reading and adoption of minutes.
5. Report of the Nominating Committee.
6. Election of officers.
7. Reports of officers.
8. Reports of committees.
9. Unfinished business.
10. New business (see Sec. 1, Chap. III).
11. Installation of officers.
12. President's appointments and installation of members to committees.
13. Selection of the place for the next Annual Session.

At any meeting of the House of Delegates, the order of business may be changed by a two thirds affirmative vote of the members present and voting.

CHAPTER IV. ELECTION OF OFFICERS

Section 1. The President on the first day of the Annual Session shall select a Committee on Nominations consisting of ten delegates, no two of whom shall be from the same Councilor District. The Committee on Nominations shall report the result of its deliberations to the House of Delegates in the form of a ticket containing the name of one member for each of the offices listed in Article VII of the Constitution which are to be filled at that Annual Session excepting the President-Elect who shall be nominated from the floor of the House of Delegates.

Sec. 2. All elections of officers shall be by acclamation unless ballot is called for. A majority of the votes cast shall be necessary to elect except for delegates and alternates to the American Medical Association, who shall be elected as follows:

In case no delegates or alternates for the American Medical Association receive on the first ballot a majority of the votes, the nominees shall be declared elected in the order of the highest number of votes received until the allotted number shall have been chosen. In case of a tie vote for delegate or alternate, the tie shall be determined by lot.

In case no nominee for general offices of the Association (see Article VII, Constitution) receives a majority of the votes on the first ballot, the nominee receiving the lowest number of votes shall be dropped and a new ballot taken. This procedure shall be continued until one of the nominees receives a majority of all the votes cast, when he shall be declared elected.

Sec. 3. Nothing in this chapter shall be construed to prevent additional nominations being made from the floor by members of the House of Delegates.

Sec. 4. Delegates present at the Annual Session from Councilor Districts whose Councilors' terms expire shall hold meetings on or before the morning of the last day of the Annual Session and elect a Councilor for their District for a term of two years. The name of the elected Councilor shall be given on a prescribed form to the Secretary for presentation to the House of Delegates. Each candidate for Councilor must reside or practice in the district for which he is elected.

Sec. 5. The Speaker and Vice-Speaker shall not serve more than three consecutive terms.

Sec. 6. The Speaker shall appoint a parliamentarian to serve as such during the session of the House of Delegates at each Annual Session and upon whom the Speaker may call before deciding points of order or procedure.

CHAPTER V. DUTIES OF OFFICERS

Section 1. The **President,** or his designated representative, shall preside at all scientific sessions of the Association. He shall preside at the House of Delegates in the absence of the Speaker or Vice-Speaker and until their successors are elected. He shall appoint all committees not otherwise provided for. He shall deliver an annual address at such time as may be arranged and shall perform such other duties as custom or parliamentary usage requires. He shall be the real head of the profession of the state and assist the Councilors in building up the county societies and in making their work more practical and useful.

Sec. 2. The **President** and the **President-Elect** shall be members of the Council and shall attend all meetings of the Council. Should the office of President-Elect become vacant through death or otherwise the Council may fill the vacancy until the next Annual Session of the Association.

Sec. 3. The **Vice-Presidents** shall assist the President in the discharge of his duties. In the event of the death, resignation or removal of the President the Council shall select one of the Vice-Presidents to serve the unexpired term.

Sec. 4. The **Treasurer** shall give bond in the sum of $20,000. He shall demand and receive all funds due the Association, together with bequests and donations. He shall pay money out of the treasury only on a written order of the President, countersigned by the Secretary; he shall subject his accounts to such examination as the House of Delegates may order, and he shall annually render an account of his actions and of the state of the funds in his hands.

Sec. 5. The **Secretary** shall attend the General Meetings of the Association and the meetings of the House of Delegates, and shall keep minutes of their respective proceedings in separate record books. He shall be Secretary of the Council and shall keep a record of its proceedings. He shall be custodian of all record books and papers belonging to the Association, except such as properly belong to the Treasurer, and shall keep account of and promptly turn over to the Treasurer all funds of the Association which come into his hands. He shall provide for the registration of the members and delegates at the Annual Session. He shall, with the cooperation of the secretaries of the component societies, keep a card index register of all the legal practitioners of the state by counties, noting on each his status in relation to his county society, and shall transmit a copy of this list to the American Medical Association, transmitting to its Secretary each month a report containing the names of new members and the names of those dropped from the membership roster during the preceding month. He shall conduct the official correspondence, notifying members of meetings, officers of their election and committees of their appointment and duties. He shall employ such assistants as may be ordered by the Council and shall make an annual report to the House of Delegates. He shall supply all component societies with the necessary blanks for making their reports and shall collect from them the regular per capita dues and assessments and turn the same over to the Treasurer. The amount of his salary shall be fixed by the Council.

CHAPTER VI. COUNCIL

Section 1. The Council shall meet during the Annual Session at such times as necessity may require, subject to the call of the Chairman or on petition of three Councilors. It shall meet on the last day of the Annual Session to organize. The Council shall elect a Chairman and a Vice-Chairman for a term of one year. The Chairman may be reelected to serve not more than four consecutive terms of one year each. The Council shall, through its Chairman, make an annual report to the House of Delegates.

Sec. 2. Each Councilor shall be organizer, peacemaker and censor for his district. He shall visit each county in his district at least once a year for the purpose of organizing component societies where none exists, for inquiring into the condition of the profession, and to keep in touch with the activities of and to aid in the betterment of the component societies of his district. He shall make reports of his work and the condition of the profession of each county in his district to the Council. The necessary traveling expenses incurred by each Councilor in the line of duties herein imposed may be allowed on a proper itemized statement submitted monthly and within the current year, but this shall not include his expense in attending the Annual Session of the Association. No Councilor shall be eligible for the position of Delegate to the House of Delegates during his term of office as Councilor, nor shall he vote in the House of Delegates.

Sec. 3. The Council shall be the executive body of the House of Delegates and between sessions shall exercise the power conferred on the House of Delegates by the Constitution and Bylaws.

Sec. 4. The District Councilor together with two members of component societies within the Council District, selected by the Councilor, shall serve as a Board to hear and by a majority vote adjudicate any questions involving the right and standing of members, either in relation to other members or to component societies or to the Association, and all matters of discipline affecting the conduct of members of component societies, or other matters.

The Council shall be the appellate Board of Censors of the Association. It shall hear and adjudicate all matters on appeal from the decision of the Councilor Board; it shall hear and adjudicate matters of an ethical nature brought before the House of Delegates or the general meeting which shall be referred to the Council without discussion. On original decision or appellate determination, its decision shall be final unless appealed to the then convened meeting or the next meeting of the House of Delegates.

Sec. 5. Charters shall be issued to county societies only on approval of the Council, and shall be signed by the President and Secretary of this Association. Upon the recommendation of the Council, the House of Delegates may revoke the charter of any component society whose actions are in conflict with the letter or spirit of this Constitution and Bylaws.

Sec. 6. In sparsely settled sections the Council shall have authority to organize the physicians of two or more counties into societies, to be suitably designed so as to distinguish them from district societies, and these societies, when organized and chartered, shall be entitled to all rights and privileges provided for component societies until such counties shall be organized separately.

Sec. 7. The Council shall provide for and supervise the issuance of all publications of the Association including proceedings, transactions and memoirs, and shall have authority to appoint an Editor and such assistants as it deems necessary. It shall prescribe the methods of accounting and through a committee of three of its members, to be known as a Committee on Auditing and Appropriations, shall audit all accounts of this Association. The Council shall adopt an annual budget providing for the necessary expenses of the Association for the following calendar year. This budget shall be prepared and presented for consideration in the last quarter of each year by the Committee on Auditing and Appropriations. A complete and detailed report shall be submitted to the component county medical societies as provided in Section 8, Chapter III. The Council shall submit an annual report of the House of Delegates which shall specify the character and cost of the publications of the Association, the amount and character of all its property, and shall provide full information concerning the management of all affairs of the Association which the Council is charged to administer.

Sec. 8. The Council shall appoint at least six months before the Annual Session, a committee consisting of three of its members to be known as the Committee on Arrangements for the Annual Session. On recommendation of the Committee, the Council shall appoint a general chairman of a Local Committee on Arrangements, who shall be a member of the component society of the county in which the Annual Session is to be held, and who shall appoint and organize from the members of this county society the personnel of the Local Committee on Arrangements. The Local Committee on Arrangements shall provide suitable meeting places and shall have general charge of all local arrangements subject to the approval of the Committee on Arrangements for the Annual Session. All receipts and disbursements related to the Annual Session shall be handled by the Committee on Arrangements on recommendations of the Committee on Budget and Appropriations.

Sec. 9. The Council shall by appointment fill any vacancy in office not otherwise provided for which may occur during the interval between Annual Sessions of the House of Delegates; the appointee shall serve until his successor has been elected and has qualified.

Sec. 10. The salaries of all employees of the Association shall be fixed by the Council.

Sec. 11. The Council shall provide such headquarters for the Association as may be required to conduct its business properly.

Sec. 12. The Council shall be empowered to elect an Executive Secretary and Assistant Executive Secretary and such other personnel as may be necessary, who need not be members of the Missouri State Medical Association, each of whom shall perform such duties as the Council may designate and receive such salary and serve for such periods and under such conditions as the Council may determine.

CHAPTER VII. COMMITTEES AND COMMISSIONS

Section 1. Standing Committees of the Missouri State Medical Association, the chairman of which shall be appointed by the Association President unless otherwise provided in these Bylaws, will be as follows:

Executive Committee.
Committee on Constitution and Bylaws.
Committee on Publication.
Committee on Legislative Affairs.
Committee on Planning.
Committee on Voluntary Health Agencies.

The **Executive Committee** shall consist of the Association President, President-Elect, Secretary, Treasurer, Council Chairman and Council Vice-Chairman. The President of the Association shall be Chairman of the Executive Committee. The Executive Committee shall plan and execute such work as may be necessary for the welfare of the Association and the conduct of the Executive Secretary's Office between meetings of the Council, but shall be responsible at all times to the Council.

The Committee on **Constitution and Bylaws** shall consist of five members named by the President and shall propose such amendments to the Constitution and Bylaws as are deemed wise and expedient, and bring before the House of Delegates such amendments as it or other members of the Association may present for consideration. The President shall appoint one member for one year, two members for two years and two members for three years. As the term of each expires, his successor shall be appointed for a term of three years.

The Committee on **Publication** shall consist of five members and be appointed annually by the Council and shall be responsible for general publication and distribution policies of the Journal. The Editor of the Journal shall be designated by the Council and also shall serve as Chairman of the Committee on Publication. The Editor shall be empowered to nominate an Editorial Board, subject to approval by the Council. The members of the Editorial Board will assist the Editor in soliciting, preparing and reviewing material for publication in the Journal.

The Committee on **Legislative Affairs** shall consist of five members of the Association, appointed annually by the President. The Committee shall consider legislative proposals affecting health problems of the people of the state and the practice of medicine and shall make recommendations to the Council and the House of Delegates as well as directing staff activities in such matters.

The **Planning Committee** shall consist of ten members to be appointed by the President. Two members shall be appointed for one year, two for two years, two for three years, two for four years and two for five years. As the term of each expires, his successor shall be appointed for a term of five years. In making such appointments, the President shall be governed by experience of the member, the size of his medical society and his geographical area, so as to have a representative committee. Age of the members shall be considered to the end that one-third to one-half of the committee shall be of an age group that should contemplate ten to twenty years more of active practice.

The Committee on **Voluntary Health Agencies** shall consist of five members of the Association appointed by the President. Two members shall be appointed for three years, two members for two years and one member for one year. As the term of each expires, his successor shall be appointed for a term of three years. The Committee on Voluntary Health Agencies shall provide liaison and work with all voluntary health organizations.

Section 2. Standing Commissions of the Missouri State Medical Association, who shall be responsible to the Council and whose chaiman shall be appointed by the Association President, will be as follows:

Commission on Public Affairs.

Commission on Medical Economics, Third Party and Governmental Relations.

Commission on Continuing Education and Health Manpower.

Commission on Medical-Legal Affairs.

Commission on Interspecialty Medicine.

Subsection a. The standing Commissions, unless otherwise provided in these Bylaws, shall consist of fifteen members serving three-year terms and the terms will be staggered so that the President will appoint five members of each Commission each year. Initially, the President will appoint five members to one-year terms, five members to two-year terms and five members to three-year terms and no member shall serve more than two consecutive terms.

Subsection b. The Chairman of each Commission may appoint Ad Hoc Committees to carry out the Commission's programs. These Ad Hoc Committees may include any Missouri State Medical Association member.

Subsection c. The Chairman of the Council shall appoint each year an appropriate Councilor to serve as advisor to each respective Commission.

The Commission on **Public Affairs** shall plan and execute programs designed to enhance the relationship between the public and the medical profession. The Commission shall have responsibility in the fields of industrial health, environmental health, medicine and religion, trauma, disaster medical care and national defense and other public matters.

The Commission on **Medical Economics. Third Party Medicine and Governmental Relations** shall keep close liaison and work with peer and utilization review mechanisms, insurance intermediaries and governmental agencies.

The Commission on **Continuing Education and Health Manpower** shall determine the character and scope of the scientific proceedings of the Association for each annual session as well as to make all arrangements for such annual sessions, subject to the instructions of the House of Delegates. The Commission shall also be responsible for the entire continuing education program of the Association, shall have all matters pertaining to hospitals referred to it, shall carry on all programs in the recruitment of health manpower in professional as well as in allied health fields and shall be responsible for programs in the rural health field.

The Commission on **Medical-Legal Affairs** shall investigate and study medical-legal matters affecting the practice of medicine, make recommendations to the Council and House of Delegates and also make certain that all Association members are kept informed of important developments in this field. The Commission also may work with similar groups formed by the State Bar Association on matters of joint interest and concern as well as with governmental and insurance agencies in this field.

The Commission on **Interspecialty Medicine** shall be composed of one representative of each statewide specialty group as recognized by the Association Council. The President of the Missouri State Medical Association shall appoint annually to the Commission a representative from each of the authorized groups as submitted to him by the specialty organization. In the event that such a nominee is not submitted to him by an organization, the Association President may designate a member of that specialty group to serve on the Commission.

The Commission shall be charged with the responsibility of reviewing organization problems with respect to scientific programs, socio-economic and legislative matters that affect their particular specialties; in addition the Commission shall have the responsibility for programs and activities in fields relating to disease and health services involving the citizens of our state and such other matters as the Council shall direct. Also, the Commission shall provide close liaison between the various specialty organizations and the Missouri State Medical Association.

Section 3. Fifty percent of a Committee or a Commission should be present at an official meeting to constitute a quorum.

Section 4. Special committees may be appointed by the President or the Council as circumstances may demand.

CHAPTER VIII. DUES AND ASSESSMENTS

Section 1. (a) The annual dues of this Association shall be $65.00, which shall be applicable to each active member of the Association beginning in 1970 and shall be levied per capita on the active members of the component societies; the per capita levy for junior members shall be $10.00 per year; honor and associate members shall not be required to pay dues. Dues shall be payable on January 1 of the year for which they are levied.

(b) An assessment of $10.00 per year on each active member of the Association shall be applicable for a three-year period beginning in 1972. The assessment shall be payable with the dues of the Association, and the monies collected therefrom shall be remitted to the Missouri State Medical Foundation.

Sec. 2. Three dollars of the annual dues shall be credited to the account of the Journal for each member's annual subscription. The remainder of the amount shall be credited to the general fund of the Association.

Sec. 3. The House of Delegates may, when in its judgment the best interest of the Association demands, recommend an assessment on each active and junior member. Such assessment shall be levied only by consent of two thirds of the members of the House of Delegates present and voting. Funds obtained from such special assessments shall be allocated only for the purposes for which such assessment is levied and in accordance with substantiating budgets. Unexpended balances from such assessments must be reported to the House of Delegates for re-allocation.

Sec. 4. The secretary of each component society shall cause to be collected and remitted to the Treasurer of this Association the per capita levies. Any member whose name has not been reported for enrollment and whose dues have not been remitted to the Treasurer of this Association on or before March 1 shall stand suspended until his name is properly reported and his dues for the current year are paid. On December 31 of each year, members delinquent in payment of dues, and assessment if such has been made, or any part thereof shall, ipso facto, forfeit their memberships. No suspended member shall be eligible to register at an annual session.

Chapter IX. Rules of Conduct

The ethical principles governing the members of the American Medical Association shall govern members of this Association.

Chapter X. Rules of Order

The deliberations of this Association shall be conducted in accordance with parliamentary usage as defined in *Robert's Rules of Order*.

Chapter XI. County Societies

Section 1. All county societies now in affiliation with the State Association or those that may hereafter be organized in this state, which have adopted principles of organization not in conflict with this Constitution and Bylaws shall, upon application to the Council, receive charters from this Association provided that their Constitutions and Bylaws shall have been submitted to the Council and received its approval.

Sec. 2. Only one component medical society shall be chartered in each county.

Sec. 3. Each county society shall judge of the qualifications of its members, subject to review and final decision by the Council of the State Association. Every reputable and legally qualified physician who does not practice, nor profess to practice sectarian medicine, and who resides or practices in the same county, who shall apply for membership on the prescribed form and subscribe for the Journal and pay the annual dues and assessments for the current year, shall be eligible for election to membership.

A member of a component society whose license has been revoked shall be dropped from membership automatically as of the date of revocation. The Council of the State Association shall have final authority to expel a member should a component county society fail to do so after being so requested by the Council.

The Council may upon request of a component society remit the state dues and assessment of a member who has become totally and permanently incapacitated through mental or physical disability and has been a member in good standing during the three consecutive years immediately preceding his disability; provided, that the component society shall remit the county society dues of such member.

The Council may, upon request of a component society, remit the state dues and assessments of a deserving member, found to fall within what is classified as a hardship case, during the period of said hardship until such time as the dues again become payable; provided that the component society shall remit the county society dues of such member.

The Council may, upon the request of a component society, waive the dues of any member in good standing for such a period as the member is serving in the Armed Forces of the United States of America, or similar service with any of the allies of the United States, and for six months thereafter.

A physician living near a county line may hold his membership in that county most convenient for him to attend, on permission of the component society in whose jurisdiction he resides.

Sec. 4. Any physician who may feel aggrieved by the action of the society of his county in suspending or expelling him shall have the right to appeal to the Council whose decision shall be final. A county society shall at all times be permitted to appeal or refer questions involving membership to the Council of the State Association for final determination.

Sec. 5. In hearing appeals the Council may admit oral or written evidence or both as in its judgment will most fairly present the facts.

Sec. 6. When a member in good standing in a component county society moves to another county in this state, he shall be given a written certificate of these facts by the secretary of his society, without cost, for transmission to the secretary of the society in the county to which he moves. Pending his acceptance or rejection by the society in the county to which he moves such member shall be considered to be in good standing in the county society from which he was certified and in the State Association to the end of the period for which his dues have been paid.

A member of a component society who moves to and engages in the practice of medicine at a location in another county in which there is a component society shall forfeit his membership in this Association and the Secretary shall remove his name from the roster of members of the Missouri State Medical Association unless within one year after such change of residence he becomes a member of the component society in the county to which he has moved.

Sec. 7. Each county society shall have general direction of the affairs of the profession in the county, and its influence shall be constantly exerted for bettering the scientific, moral and material condition of every physician in the county. Systematic efforts shall be made by each member, and by the society as a whole, to increase the membership until it includes every eligible physician in the county.

Sec. 8. At some meeting in advance of the Annual Session of this Association, each component county society shall elect one or more delegates and an equal number of alternates therefor to represent it in the House of Delegates of this Association, in accordance with Chapter III, Section 2 of these Bylaws. The secretary of each county society shall send a list of such delegates and alternates to the Secretary of this Association at least sixty days before the Annual Session. Representation in the House of Delegates shall be contingent on compliance with the foregoing provisions.

Sec. 9. The secretary of each county society shall keep a roster of its members and, if practicable, a list of non-affiliated physicians, in which shall be shown the full name, address, college and date of graduation, date of license to practice in this state, and such other information as may be deemed necessary by the Council. He shall send a copy of the program of each meeting to his district councilor and to the Secretary of the State Association.

Sec. 10. Any county component society, in a manner approved by the State Association, or the State Association with the consent of the county society or societies affected, may undertake, organize and put into effect plans for the medical care of indigent persons or indigent groups, and low income groups, by agreements with physicians, public officials or others and by the use of contributions, cooperative funds or other means; provided, however, that a free choice of the available and participating physicians in that territory shall be allowed to the patient and that all relationships, legal or otherwise, between the physician and the patient shall be and remain as though it were strictly an individual employment.

CHAPTER XII. AMENDMENTS

Section 1. These Bylaws may be amended at any Annual Session by a two-thirds vote of the delegates present and voting at that session, if the proposed amendment has been properly submitted to the House of Delegates and has laid on the table for one day.

Sec. 2. Upon the adoption of this Constitution and these Bylaws all previous constitutions and bylaws are thereby repealed.

Component Society Meeting Dates

Audrain County Medical Society—third Tuesday of each month.

Andrew County Medical Society—meets only on call.

Barton-Dade County Medical Society—third Wednesday of each month.

Benton County Medical Society—meets only on call.

Boone County Medical Society—first Tuesday of each month at 7 p.m.

Buchanan County Medical Society—first Wednesday of each month.

Butler-Wayne-Ripley County Medical Society—first Wednesday of each month.

Callaway County Medical Society—third Thursday of each month.

Cape Girardeau County Medical Society—first Monday of each month.

Chariton-Macon-Monroe-Randolph County Medical Society—second Thursday of each month, September through May.

Clay County Medical Society—fourth Tuesday of each month.

Clinton County Medical Society—meets only on call.

Cole County Medical Society—fourth Tuesday of each month.

Cooper County Medical Society—first Monday after the 15th of each month.

Dallas-Hickory-Polk-Dade County Medical Society—first Wednesday of each month.

Dunklin County Medical Society—third Monday of each month.

Franklin-Gasconade-Warren County Medical Society—first Tuesday of each month at the St. Francis Hospital, Washington, at 7 PM.

Grand River Medical Society (Caldwell-Carroll-Livingston, Grundy-Daviess, Harrison, Linn, Mercer, DeKalb)—second Thursday of each month.

Greene County Medical Society—fourth Friday of each month.

Henry County Medical Society—meets only on call.

Howard County Medical Society—meets only on call.

Jackson County Medical Society—March, May, October and December.

Jasper County Medical Society—second Tuesday of each month, September through May.

Jefferson County Medical Society—meets first Wednesday of each month at 7:30 PM.

Johnson County Medical Society—meets only on call.

Lafayette-Ray County Medical Society—second Tuesday of each month at 7:30 PM, at the Victory Cafe, Lexington.

Lewis-Clark-Scotland County Medical Society—meets only on call.

Lincoln-St. Charles County Medical Society—fourth Tuesday of each month.

Marion-Ralls-Shelby County Medical Society—third Tuesday of each month, 7:30 p.m.

Mid-Missouri County Medical Society (Phelps-Crawford-Dent-Pulaski-Maries-Laclede)—fourth Thursday of each month.

Miller County Medical Society—meets only on call.

Mineral Area County Medical Society (St. Francois-Iron-Madison-Washington-Reynolds-Ste. Genevieve)—fourth Thursday of each month.

Moniteau County Medical Society—second Thursday of each month.

Montgomery County Medical Society—meets only on call.

Morgan County Medical Society—meets only on call.

North Central Counties Medical Society (Adair-Schuyler-Knox-Sullivan-Putnam)—meets only on call.

Northwest Missouri Medical Society (Nodaway-Holt-Atchison-Gentry-North)—second Thursday of each month.

Ozarks Medical Society (Barry-Lawrence-Stone-Christian-Taney-Newton-McDonald)—second Tuesday of each month, September through June.

Pemiscot County Medical Society—second Thursday of each month.

Perry County Medical Society—second Thursday of each month.

Pettis County Medical Society—third Monday of each month, September through May.

Pike County Medical Society—third Tuesday of each month.

Platte County Medical Society—meets only on call.

St. Louis County Medical Society—second Wednesday of each month, September through May.

St. Louis Medical Society—third Tuesday of each month, October through May.

Semo County Medical Society (Stoddard, New Madrid, Mississippi, Scott)—third Wednesday of each month, September through May.

South Central Counties Medical Society (Howell-Oregon-Texas-Wright-Douglas-Ozark)—fourth Wednesday of each month.

Webster County Medical Society—meets only on call.

West Central Missouri Society (Bates-Cass-St. Clair-Vernon-Cedar)—second Thursday of each month.

116th MSMA Annual Session
April 4-7, 1974 Kansas City

Everybody experiences psychic tension.

Most people can handle this tension.

Some people develop excessive psychic tension and need your counse

and a few may need counseling
and the psychotropic action of Valium® (diazepam).

efore deciding to make Valium
epam) part of your treatment
check on whether or not the
nt is presently taking drugs
f so, what his response has
Along with the medical and
l history, this information can
you determine initial dosage,
ossibility of side effects and
ltimate prospects of success
lure.

hile Valium can be a most
ul adjunct to your counseling,
uld be prescribed only as long
cessive psychic tension per-
nd should be discontinued
you decide it has accom-
ed its therapeutic task. In
ral, when dosage guidelines
llowed, Valium is well
ted (see Dosage). For con-
nce it is available in 2-mg, 5-mg
o-mg tablets.

rowsiness, fatigue and ataxia
been the most commonly re-
d side effects.

ntil response is determined,
nts receiving Valium should
utioned against engaging in
rdous occupations requiring
lete mental alertness, such
iving or operating machinery.

Before prescribing, please consult complete product information, a summary of which follows:

Indications: Tension and anxiety states; somatic complaints which are concomitants of emotional factors; psychoneurotic states manifested by tension, anxiety, apprehension, fatigue, depressive symptoms or agitation; symptomatic relief of acute agitation, tremor, delirium tremens and hallucinosis due to acute alcohol withdrawal; adjunctively in skeletal muscle spasm due to reflex spasm to local pathology, spasticity caused by upper motor neuron disorders, athetosis, stiff-man syndrome, convulsive disorders (not for sole therapy).

Contraindicated: Known hypersensitivity to the drug. Children under 6 months of age. Acute narrow angle glaucoma; may be used in patients with open angle glaucoma who are receiving appropriate therapy.

Warnings: Not of value in psychotic patients. Caution against hazardous occupations requiring complete mental alertness. When used adjunctively in convulsive disorders, possibility of increase in frequency and/or severity of grand mal seizures may require increased dosage of standard anticonvulsant medication; abrupt withdrawal may be associated with temporary increase in frequency and/or severity of seizures. Advise against simultaneous ingestion of alcohol and other CNS depressants. Withdrawal symptoms (similar to those with barbiturates and alcohol) have occurred following abrupt discontinuance (convulsions, tremor, abdominal and muscle cramps, vomiting and sweating). Keep addiction-prone individuals under careful surveillance because of their predisposition to habituation and dependence. In pregnancy, lactation or women of childbearing age, weigh potential benefit against possible hazard.

Precautions: If combined with other psychotropics or anticonvulsants, consider carefully pharmacology of agents employed; drugs such as phenothiazines, narcotics, barbiturates, MAO inhibitors and other antidepressants may potentiate its action. Usual precautions indicated in patients severely depressed, or with latent depression, or with suicidal tendencies. Observe usual precautions in impaired renal or hepatic function. Limit dosage to smallest effective amount in elderly and debilitated to preclude ataxia or oversedation.

Side Effects: Drowsiness, confusion, diplopia, hypotension, changes in libido, nausea, fatigue, depression, dysarthria, jaundice, skin rash, ataxia, constipation, headache, incontinence, changes in salivation, slurred speech, tremor, vertigo, urinary retention, blurred vision. Paradoxical reactions such as acute hyperexcited states, anxiety, hallucinations, increased muscle spasticity, insomnia, rage, sleep disturbances, stimulation have been reported; should these occur, discontinue drug. Isolated reports of neutropenia, jaundice; periodic blood counts and liver function tests advisable during long-term therapy.

Dosage: Individualize for maximum beneficial effect. *Adults:* Tension, anxiety and psychoneurotic states, 2 to 10 mg b.i.d. to q.i.d.; alcoholism, 10 mg t.i.d. or q.i.d. in first 24 hours, then 5 mg t.i.d. or q.i.d. as needed; adjunctively in skeletal muscle spasm, 2 to 10 mg t.i.d. or q.i.d.; adjunctively in convulsive disorders, 2 to 10 mg b.i.d. to q.i.d. *Geriatric or debilitated patients:* 2 to 2½ mg, 1 or 2 times daily initially, increasing as needed and tolerated. (See Precautions.) *Children:* 1 to 2½ mg t.i.d. or q.i.d. initially, increasing as needed and tolerated (not for use under 6 months).

Supplied: Valium® (diazepam) Tablets, 2 mg, 5 mg and 10 mg; bottles of 100 and 500. All strengths also available in Tel-E-Dose® packages of 1000.

Valium®
(diazepam)

To help you manage excessive psychic tension

Integument!

Our skin—the human integument—covers us, defines us, protects us. But skin is subject to cuts, burns, abrasions. And infections. Neosporin Ointment fights infection by providing broad antibacterial action against susceptible skin invaders. It contains antibiotics that are rarely used systemically, reducing the risk of sensitization.

INDICATIONS: *Therapeutically*, used as an adjunct to appropriate systemic therapy for topical infections, primary or secondary, due to susceptible organisms, as in: • infected burns, skin grafts, surgical incisions, otitis externa • primary pyodermas (impetigo, ecthyma, sycosis vulgaris, paronychia) • secondarily infected dermatoses (eczema, herpes, and seborrheic dermatitis) • traumatic lesions, inflamed or suppurating as a result of bacterial infection.

Prophylactically, the ointment may be used to prevent bacterial contamination in burns, skin grafts, incisions, and other clean lesions. For abrasions, minor cuts and wounds accidentally incurred, its use may prevent the development of infection and permit wound healing.

CONTRAINDICATIONS: Not for use in the external ear canal if the eardrum is perforated. This product is contraindicated in those individuals who have shown hypersensitivity to any of the components.

PRECAUTION: As with other antibiotic preparations, prolonged use may result in overgrowth of nonsusceptible organisms and/or fungi. Appropriate measures should be taken if this occurs. Articles in the current medical literature indicate an increase in the prevalence of persons allergic to neomycin. The possibility of such a reaction should be borne in mind.

Complete literature available on request from Professional Services Dept. PML.

NEOSPORIN® Ointment

(POLYMYXIN B-BACITRACIN-NEOMYCIN)

Each gram contains: Aerosporin® brand Polymyxin B Su
5,000 units; zinc bacitracin 400 units; neomycin sulfate 5
(equivalent to 3.5 mg. neomycin base); special white petrol
q.s. In tubes of 1 oz. and ½ oz. and 1/32 oz. (approx.) foil pac

Information for Contributors

Articles are accepted for publication on condition that they are contributed solely to this journal. Material appearing in MISSOURI MEDICINE is protected by copyright. Permission will be granted on request for reproduction in reputable publications provided proper credit is given and author gives permission.

Manuscripts should be typewritten, double spaced, and the original with one carbon copy submitted. Retain another carbon copy for proofreading. Used manuscripts are not returned. School and hospital appointments of the author should accompany the manuscript. It is desirable that a synopsis-abstract of approximately 135 words accompany the manuscript. References should be arranged at the end of the article in the order in which the references are cited in the text. The reference should give name of author, title of article, name of periodical, volume number, initial page number and year. Authors are responsible for reference accuracy.

Illustrations should be glossy prints or drawings in India ink on white paper. They should not be mounted and name of author and figure number should be penciled lightly on the backs. Legends should appear on a separate sheet. Colored illustrations will be used when suitable if author assumes the actual cost.

Legal difficulties may arise from unauthorized use of names, initials or photographs in which individuals can be identified. Permission should be secured from patient or legal guardian and signed duplicate or photostat submitted with such photographs or identification. The Editor and Editorial Board assume no responsibility for the opinions and claims expressed in articles contributed by authors. If citation of an institution related to the article is made, approval of the chief of service should be given in a letter accompanying the article.

Reprint order blanks will accompany proof, which will be sent to authors prior to publication.

All material other than scientific should be received prior to the first of the month preceding month of publication.

Please give notice of change of address at least one month in advance of the change, giving old and new addresses.

The diabetic who has too much...
too much sugar, too much fat.

Maybe the last thing she needs is more of her own insulin. Especially when you consider that many overweight diabetics already have normal or high levels of endogenous insulin and that insulin is lipogenic.

If she just won't diet and oral therapy is indicated in adult-onset, nonketotic diabetes...

DBI-TD® Geigy
phenformin HCl

lowers blood sugar without raising blood insulin.

For complete details, including dosage, please read the prescribing information. It's summarized below.

phenformin HCl
ts of 25 mg.
D® phenformin HCl
-Disintegration
ules of 50 and 100 mg.

ations: Stable adult diabetes mellitus; sulfonyl-
ailures, primary and secondary; adjunct to
n therapy of unstable diabetes mellitus.
aindications: Diabetes mellitus that can be
ated by diet alone; juvenile diabetes mellitus
uncomplicated and well regulated on in-
acute complications of diabetes mellitus
bolic acidosis, coma, infection, gangrene);
g or immediately after surgery where insulin
spensable; severe hepatic disease; renal dis-
with uremia; cardiovascular collapse (shock);
disease states associated with hypoxemia.
ngs: Use during pregnancy is to be avoided.
utions: 1. *Starvation Ketosis:* This must be
entiated from "insulin lack" ketosis and is
cterized by ketonuria which, in spite of relatively normal blood and urine sugar, may result from excessive phenformin therapy, excessive insulin reduction, or insufficient carbohydrate intake. Adjust insulin dosage, lower phenformin dosage, or supply carbohydrates to alleviate this state. **Do not give insulin without first checking blood and urine sugar.**
2. *Lactic Acidosis:* This drug is not recommended in the presence of azotemia or in any clinical situation that predisposes to sustained hypotension that could lead to lactic acidosis. To differentiate lactic acidosis from ketoacidosis, periodic determinations of ketones in the blood and urine should be made in diabetics previously stabilized on phenformin, or phenformin and insulin, who have become unstable. If electrolyte imbalance is suspected, periodic determinations should also be made of electrolytes, pH, and the lactate-pyruvate ratio. The drug should be withdrawn and insulin, when required, and other corrective measures instituted immediately upon the appearance of any metabolic acidosis.
3. *Hypoglycemia:* Although hypoglycemic reactions are rare when phenformin is used alone, every precaution should be observed during the dosage adjustment period particularly when insulin or a sulfonylurea has been given in combination with phenformin.
Adverse Reactions: Principally gastrointestinal; unpleasant metallic taste, continuing to anorexia, nausea and, less frequently, vomiting and diarrhea. Reduce dosage at first sign of these symptoms. In case of vomiting, the drug should be immediately withdrawn. Although rare, urticaria has been reported, as have gastrointestinal symptoms such as anorexia, nausea and vomiting following excessive alcohol intake (B) 98-146-103-E (6/72)

For complete details, including dosage, please see full prescribing information.

When the pharmacist reco
mends that a drug product othe
the one ordered be dispensed, t
prescriber invariably permits th
change when he feels the best i
ests of the patient will be servec

Shortcomings of Pro-Substitutio Argument

The fact remains that it is
sary for the prescriber to know t
the change is being contemplat
and to be in a position to conser
demur. Without that opportunit
unilateral decision of the pharm
made in the absence of clinical
edge of the patient, could expos
to needless risks, and in additio
jeopardize the relationship betw
the professions of Pharmacy an
Medicine. In my view, there is n
in the pro-substitution argumen
offsets these risks.

The Issue of Drug Knowledge

Substitution advocates cla
that the primary justification fo
changing the rules is the desire
better utilize pharmacists' know
about drugs. Yet the pharmacis
task to keep current on the enti
field of drug therapy, to some d
puts him at a disadvantage. Mo
often, a practicing physician wil
expert knowledge of no more th

ld be an obligation of medical tice...

"Medical societies ought to con- continuing campaigns to point e substantial savings that could alized thru deductible insurance protection for catastrophic ill- . At the very least, they should, in atients' interest, question the cs of any insurance organization raises health care costs by forc- olicyholders to buy insurance may not need or want and prob- won't ever use.

"Too many doctors are indiffer- the economic consequences of decisions. Too many, for ex- e, habitually hospitalize patients e convenience of the MD. It's ense to deny such habits exist...

"Doctors, thru their medical so- es, have unhesitatingly appealed eir patients for support in the against government interference the private practice of medicine. the public in the past has re- ded. It's time the American Med- Association and state and local ical societies paid off the debt by sive action to hold down the cost edical care."

of Drugs

Insurance rates and hospital ges are only two factors in health care costs. The cost of drugs—both prescription and nonprescription—is another.

And when it comes to drug costs, the nation's pharmacists *are concerned*. Through their national professional society, the American Pharmaceutical Association, pharmacists are advising the public to use nonprescription medication cautiously and conservatively, and to seek the advice of their pharmacist before selecting or purchasing such drugs.

Outdated Laws

The pharmacist also is aware that when it comes to prescription drugs, often he has an even greater opportunity to reduce the cost to the patient—with no sacrifice in the quality of the medication dispensed. But in many states, outdated and antiquated laws prevent the pharmacist from engaging in drug product selection. "Drug product selection" simply means that the pharmacist functions in the patient's interest by consciously choosing, from the multiple brands available, a low-cost quality brand of the specific drug to be dispensed in response to the physician's prescription order.

Much *misinformation* has been purposely spread by those who stand to gain financially by maintaining high drug costs to the public. An endless stream of propaganda has emanated from the drug industry in an effort to persuade the medical profession that these so-called anti-substitution laws should be retained. And as long as these laws are retained, the drug industry will continue its current marketing practices which contribute unnecessarily to high drug costs to patients. These practices also are inviting government agencies to expand their restrictive controls on physicians and pharmacists.

APhA Efforts

As pharmacists, we are concerned about health care costs. We hope that every physician shares our concern on this vital issue, and will give his personal support to the constructive efforts APhA has undertaken in the interest of all patients.

(For a complete discussion of drug product selection, you are invited to request a free copy of the "White Paper on the Pharmacist's Role in Product Selection" from: American Pharmaceutical Association, 2215 Constitution Avenue, N.W., Washington, D.C. 20037.)

) drugs that he selects to treat the rity of conditions encountered in ractice. Moreover, the physi- s choice of a specific brand is d on his knowledge of the pa- 's medical history and current ition, and his experiences with articular manufacturer's uct.

Some substitution proponents argued that the dispensing of a cription is a simple two-party action between the pharmacist the patient, and that a substitut- harmacist may avoid even a nical breach of contract by simply ying the patient that he is making ubstitution. I would judge that ourts would be sympathetic rd a pharmacist who substituted out physician approval and who rtook a legal defense that seeks ake the patient responsible for harmacist's actions.

ced Prescription Prices?

Substitution advocates are esting to the consumer, and par- arly the consumer activist, that ced prescription prices could w legalization of substitution. ave seen absolutely no evidence stify this claim. To the contrary, rience in Alberta, Canada, where titution is authorized, suggests the opposite.

Many pharmacists understandably are concerned about the cost of maintaining multiple stocks of similar products. While there is no doubt that inventory costs rise when additional brands are stocked, it would be interesting to know how much they rise, and how many pharmacists actually stock *all* brands — of, say, ampicillin or tetracycline — or how long they keep "slow moving" products on their shelves before they are returned for credit. To ask that the industry eliminate multiple sources is to ask competitors to stop competing.

Drug Substitution—A License for the Unethical

Anti-substitution repeal would favor "corner cutting" pharmacists and manufacturers. For them, free substitution would be not a right, but a license. As an aftermath, it is quite likely that the confidence of both physicians and patients in the profession of Pharmacy would be eroded, as revelations about the unconscionable behavior of an undisciplined few were magnified in the press or in professional circles.

Summary

In short, what the American Pharmaceutical Association advocates as a broad-spectrum panacea looks to us to be not only a minority view (advocacy of substitution is by no means a uniform policy in Pharmacy), but also an extraordinarily costly and ineffective remedy, whose side effects are odious. We believe (1) that an impressive majority of pharmacists prefer to work with Medicine and with industry, for the consumer, and for the general good, (2) that they seek the privilege to substitute when the patient might gain and when the patient's doctor agrees, and (3) that they seek to work for the resolution of genuine grievances openly and professionally.

(For amplification of PMA views, please write for our booklet, "The Medications Physicians Prescribe: Who Shall Determine the Source?" It is available from: Pharmaceutical Manufacturers Association, 1155 Fifteenth Street, N.W., Washington, D.C. 20005.)

Impact of Changing Pesticide Usage on the Medical Community

By
ANNE R. YOBS, M.D.
U. S. Environmental Protection Agency

This article was developed to alert the medical community to the impact of changes in pesticide usage patterns and potential health problems which may develop consequent to the ban on DDT, which became effective on Dec. 31, 1972. It provides adequate and timely information regarding pesticide poisoning and rapid delivery of correct treatment. Dr. Yobs is Chief, Training and Education Branch, Operations Division, Office of Pesticide Programs, U. S. Environmental Protection Agency.

THE USE OF CHEMICAL SUBSTANCES has been increasing steadily in the modern world, filling man's physical environment with a myriad of substances which are potentially toxic to man himself or to parts of his environment. In trace amounts in the human body, some substances have no demonstrable effects and others are essential to life; in larger amounts, these same substances may be toxic.

Similarly, the number and usage of pesticide products has increased significantly during the last 30 years with the availability of organic chemicals for convenient, effective and economical pest control in a wide variety of situations. Benefits have included increased food production and control of disease vectors and nuisance pests. At first, relatively little effort was directed to safe application and controlled use of these chemicals, and knowledge of possible harmful side effects did not keep pace with the development of chemical pesticides. Beginning in the late 1940s, evidence developed that certain chlorinated hydrocarbon compounds, such as DDT, accumulate in fatty tissues of fish, birds, other wildlife and man. Later, studies showed that excessive concentrations of these pesticide residues have adverse effects on reproduction, physiology and behavior in some birds and represent a threat to wildlife. The hazard to future generations of man is not known, but results of controlled experiments in laboratory animals indicate a need for further investigation.

The general use of DDT in this country was cancelled by the U. S. Environmental Protection Agency effective Dec. 31, 1972 following several years of intensive review and inquiry into the environmental and human health hazards related to the use of this chemical. This administrative action will necessitate a change to other available chemicals, such as organophosphates and carbamates, which have been marketed for a number of years. They are more easily broken down in the environment and in biologic systems and, therefore, pose less risk of long-range contamination and buildup in the environment. However, many of the chemicals which will be substituted for DDT are highly toxic and present greater short-range acute hazard to the user and to others coming into direct contact with them. Since these replacement chemicals are less stable, more frequent application will be required to maintain the same level of pest control, thereby further increasing the hazard—particularly to untrained users.

Project Safeguard, an intensive educational program directed to farmers at risk in 14 states, is a joint effort of the U. S. Environmental Protection Agency, U. S. Department of Agriculture and the State Cooperative Extension Services. The target states include those southern and southeastern states where the greatest use of DDT has occurred in recent years in the treatment of their major crops, cotton, peanuts and soybeans. A special effort also is being made to alert physicians and emergency health personnel in these states to the potential problem and to review diagnostic and treatment measures with them.

Everyone engaged in health delivery should become familiar with all aspects of pesticide poisoning including prevention, populations at risk, signs and symptoms, diagnostic confirmation and treatment. Review of all pertinent details is not possible within the space allotted, but a few salient points should be emphasized.

Pesticide poisoning is preventable if the user reads and observes all label instructions regarding usage, storage and disposal. At risk are not only the farmers or applicators, but, also, their helpers and families.

Pesticides may be absorbed by ingestion, by inhalation or through the intact skin as a result of negligence, accident or deliberate action. Absorption of certain organophosphates is at least as effective following dermal exposure as after ingestion. Dermal exposure is of major importance in occupational poisonings, accounting for 77.5% of the cases of occupational poisonings by industrial and agricultural chemicals in California in one year.[1] There is wide variation in the toxicity of individual compounds within a given group of pesticide chemicals, such as the organophosphates. Malathion has a low toxicity, while Temik, TEPP and ethyl parathion have considerably higher toxicity. Both the organophosphates and the carbamates inhibit acetylcholinesterase; organophosphates are permanent inhibitors, carbamates, reversible inhibitors. Illness results from accumulation of excess acetylcholine and, while similar, may vary in intensity from compound to compound and group to group. Signs and symptoms include sweating, headache, giddiness, miosis, tearing, increased salivation, excessive respiratory tract secretions, nervousness, blurred vision, weakness, nausea, vomiting, abdominal cramps and diarrhea; subsequent symptoms include chest discomfort, cyanosis, papilledema, muscle twitches and, in most severe cases, convulsions, coma and loss of reflexes and sphincter control. Miosis is commonly present, but mydriasis may occur; in either, pupils are nonreactive.[2] If symptoms begin more than six hours after the last known exposure, the illness is probably due to some cause other than pesticides. The end of exposure may be difficult to determine, especially if the patient does not practice good personal hygiene or continues to wear contaminated clothing or protective equipment.

Rapid delivery of correct treatment in suspected cases of pesticide poisoning is of primary importance. Treatment consists of *Support, Decontamination* and *Specific Antidotes* where available. Support therapy includes, most importantly, administering artificial respiration when indicated, while maintaining a free airway. Mechanical means may be used if available; if not, mouth-to-mouth resuscitation should be followed. Oxygen should be administered when cyanosis or severe respiratory difficulty is present. Sedatives may be used with caution to combat hyperexcitability or convulsions; sodium phenobarbital is the drug of choice because of its rapidity of action, but it should be used with care when there is respiratory impairment. After continuation of respiration has been assured, decontamination of the patient should follow promptly to end exposure to the toxic chemical. Depending on the circumstances of exposure, decontamination may include one or more of the following: removal of contaminated clothing, washing of skin and hair, rinsing of eyes, gastric lavage or induction of vomiting and, eventually, evacuation of the intestinal tract.

Specific antidotes are not known for all pesticides, but antidotes of considerable value are available for use in organophosphate poisoning. They are safe enough to administer cautiously on the basis of symptoms before the diagnosis is firmly established. Favorable response to the antidote helps confirm the diagnosis. (Absolute confirmation requires laboratory analysis of proper samples to prove that a sufficient amount of the chemical was in the body at the time of onset of illness.)

Atropine sulfate is a physiological antidote which does not affect the inhibited cholinesterase but blocks of acetylcholine on parasympathetic receptors. Atropine sulfate should be administered to adults intravenously in doses of 2 mg to 4 mg as soon as cyanosis is overcome and should be repeated every five to ten minutes until signs of atropinization appear. In all cases in which atropine treatment is indicated, a mild degree of atropinization should be maintained for 24 hours and for 48 hours or more in severe cases. Doses for children should be proportional to weight, about 0.05 mg/kg body weight. Patients poisoned by organophosphates show an unusual tolerance to atropine because of the accumulation of excess acetylcholine.

Pralidoxime chloride (2-PAM chloride) (Protopam® Chloride, Ayerst Laboratories) is a specific antidote for poisoning by organophosphates, acting to break the bond between the enzyme and the pesticide metabolite. Treatment is more effective if started early and should always be given in conjunction with atropinization. The dose is 1 g for an adult and 0.25 g for infants, given slowly and preferably by infusion for 15 to 30 minutes. If infusion is not practical, the dose may be given slowly by IV injection as a 5% solution in water over *not less than two minutes*. If the first dose produces improvement, it may be repeated after an hour. *2-PAM is contraindicated in suspected carbamate poisoning.*

Patients who require treatment with antidotes should be watched continuously for not less than 24 hours, because serious and sometimes fatal relapse can occur due to continuing absorption or dissipation of the effects of antidotes.

A pamphlet entitled "Diagnosis and Treatment of Poisoning by Pesticides" developed by Project Safeguard discusses pesticide poisoning in more detail and is available in single copies on request to the author at the following address: *Anne R. Yobs, M.D., Chief of Training and Education Branch, Operations Division, Office of Pesticide Programs, U. S. Environmental Protection Agency, 4770 Buford Highway, Chamblee, Ga. 30341.*

Annual Seminar on Industrial Injuries of the Hand

The annual professional program of the Millikin Hand Rehabilitation Center is scheduled for Sept. 8, 1973 in the East Pavilion Auditorium at Barnes Hospital in St. Louis. The program is limited to "Industrial Injuries of the Hand" and is designed primarily for physicians providing the initial and definitive care of the injured hand.

Preregistration is encouraged, but registration on the day of the program will open at 8:15 AM. The morning session will continue until 12-noon with a coffee break from 10:45-11 AM. Luncheon at Barnes Hospital will be served for the group to facilitate continued discussion of case problems. The afternoon session will be conducted from 1:15 PM until 4 PM with a coffee break at 2:15 PM.

Program topics for the morning session are as follows: "Management of Acute Amputations," R. C. Wray, M.D., Assistant Professor of Surgery (Plastic and Reconstructive Surgery), Washington University School of Medicine; "Management of Crush Injuries," John E. Keiter, M.D., Washington University School of Medicine; "Late Management of Amputation Stumps," Carl Hartrampf, M.D., Northside Hospital, Atlanta, Ga.; "Replantation and Transplantation in Hand Reconstruction," Harry J. Buncke, Jr., M.D., Stanford University, Palo Alto, Calif.; "Fractures and Dislocations of the Metacarpals and Phalanges," Paul M. Weeks, M.D., Director, Milliken Hand Rehabilitation Center, Professor of Surgery (Plastic and Reconstructive Surgery), Washington University School of Medicine; "Fractures and Dislocations of the Carpal Bones," Arthur C. Stein, M.D., Professor of Surgery (Orthopedics), Washington University School of Medicine.

The highlight of the morning session will be the Annual Hand Rehabilitation Center Lecture to be presented this year by Harry J. Buncke, Jr., M.D. Dr. Buncke, an international authority on limb replantation, has been primarily responsible for development of the techniques of replantation.

The afternoon session will include "Emergency Care of the Injured Hand," Arthur C. Stein, M.D.; "Problem Cases," panel consisting of Drs. Buncke, Hartrampf, Stein and Wray; and "Management of the Stiff Hand," Ms. Patricia Phelps, O.T. and Ms. Virginia Woods, P.T., Milliken Hand Rehabilitation Center, Irene Walter Johnson Institute of Rehabilitation, St. Louis. The afternoon session will be highlighted by a presentation of "Determining Disability Ratings of the Upper Extremity," by Mr. John R. Dixon, Attorney at Law, St. Louis.

For additional information, please write to Paul M. Weeks, M.D., Director, Milliken Hand Rehabilitation Center, 4960 Audubon Ave., St. Louis, Mo. 63110.

IN ASTHMA
IN EMPHYSEMA

optional therapy

THE mudranes

All Mudranes are bronchodilator-mucolytic in action, and are indicated for symptomatic relief of bronchial asthma, emphysema, bronchiectasis and chronic bronchitis. **MUDRANE tablets** contain 195 mg. potassium iodide; 130 mg. aminophylline; 21 mg. phenobarbital (Warning: may be habit-forming); 16 mg. ephedrine HCl. **Dosage** is one tablet with full glass of water, 3 or 4 times a day. **Precautions** are those for aminophylline-phenobarbital-ephedrine combinaations. **Iodide side-effects:** May cause nausea. Very long use may cause goiter. Discontinue if symptoms of iodism develop. **Iodide contraindications:** Tuberculosis; pregnancy (to protect the fetus against possible depression of thyroid activity). **MUDRANE-2 tablets** contain 195 mg. potassium iodide; 130 mg. aminophylline. **Dosage** is one tablet with full glass of water, 3 or 4 times a day. **Precautions** are those for aminophylline. **Iodide side-effects and contraindications are listed above. MUDRANE GG tablets** contain 100 mg. glyceryl guaiacolate; 130 mg. aminophylline; 21 mg. phenobarbital (Warning: may be habit-forming); 16 mg. ephedrine HCl. **Dosage** is one tablet with full glass of water, 3 or 4 times a day. **Precautions** are those for aminophylline-phenobarbital-ephedrine combinations. **MUDRANE GG-2 tablets** contain 100 mg. glyceryl guaiacolate; 130 mg. aminophylline. **Dosage** is one tablet with full glass of water, 3 or 4 times a day. **Precautions:** Those for aminophylline. **MUDRANE GG Elixir.** Each teaspoonful (5 cc) contains 26 mg. glyceryl guaiacolate; 20 mg. theophylline; 5.4 mg. phenobarbital (Warning: may be habit-forming); 4 mg. ephedrine HCl. **Dosage:** Children, 1 cc for each 10 lbs. of body weight; one teaspoonful (5 cc) for a 50 lb. child. Dose may be repeated 3 or 4 times a day. Adult, one tablespoonful, 4 times daily. All doses should be followed with ½ to full glass of water. **Precautions:** See those listed above for Mudrane GG tablets.

MUDRANE—original formula

First choice

MUDRANE-2

When ephedrine is too exciting or is contraindicated

MUDRANE GG

During pregnancy or when K.I. is contraindicated or not tolerated

MUDRANE GG-2

A counterpart for Mudrane-2

MUDRANE GG ELIXIR

For pediatric use or where liquids are preferred

Clinical specimens available to physicians.

WILLIAM P. POYTHRESS & COMPANY, INC., RICHMOND, VIRGINIA 23217

Manufacturers of Ethical Pharmaceuticals

The Council Reports

Meeting of June 2-3, 1973

R. Allen Chandler, M.D., Kansas City, Chairman, called the meeting to order. Those present were Drs. Chandler; E. A. Stricker, St. James; John I. Matthews, Jefferson City; Donald Judd, St. Louis; James C. Cope, Columbia; Walter T. Gunn, St. Louis; John N. Martin, St. Joseph; Lysle M. Bach, Hannibal; Max S. Franklin, St. Louis; Louis P. Hetlage, Troy; Robert Bregant, Jefferson City; Howard J. McAlhany, Springfield; Claude W. Cooper, Thayer; E. T. Hansbrough, Poplar Bluff; Stanley S. Peterson, Springfield; J. Loren Washburn, Versailles; Hector W. Benoit, Jr., Kansas City; Joseph V. Finnegan, St. Louis; William D. Mayer and William C. Allen, Columbia; Samuel B. Guze, St. Louis; George E. Thoma, St. Louis; R. K. Noback, Kansas City; Herbert R. Domke, Jefferson City; William L. Donegan, Columbia; Mrs. Charles Willman, St. Joseph; Mrs. George Lytton, Kansas City; Mrs. Terry Watson, St. Louis; Messrs. John Noble, Kennett; Lee Mortenson, Chicago, Ill.; Hollister S. Smith, St. Louis; Allen D. Smith, Kansas City; E. Mark Halvorson, Jefferson City; Ray McIntyre, Tom P. Fox, Royal O. Cooper, C. C. Swarens, Staff.

Dr. Chandler called the meeting to order and requested approval of the minutes of the April 1, 1973 Council Minutes. On motion, duly seconded, the Council Minutes were approved as distributed.

REPORT OF THE EXECUTIVE SECRETARY

Mr. McIntyre read thank you notes from Mrs. Thomas for the retirement gifts recently presented to her; from Mrs. Keith D. Jones expressing appreciation to the Council and Officers for their cooperation during her year as President of the Auxiliary; and from SAMA for renewing MSMA's sustaining membership. He also read a letter from the Missouri State Surgical Society expressing their appreciation for the fine cooperation from the MSMA. Dr. M. Pinson Neal also sent a letter of appreciation for the resolution which was passed in his behalf at the 1973 Annual Session.

Mr. McIntyre stated that the MSMA is presently sending the *AMA Newsletter* to key physicians in Missouri hospitals and asked the Council whether or not this should be continued. On motion, duly seconded, the Council agreed that this practice should be continued.

Mr. McIntyre stated that Dr. Bradshaw had previously asked each Councilor to name a physician in his respective district to his Primary Care Committee. These names should be sent to the State Office or directly to Dr. Bradshaw.

Dr. Benoit has been proposed by the AMA Board of Trustees as a candidate for the Council on Medical Service. Dr. Benoit has served a one-year term on this Council and is up for reelection. MSMA has sent a telegram to Dr. Howard endorsing Dr. Benoit for this post and a number of contacts with state delegations have been made in his behalf.

It was stated that unless there were an objection from the Council, the MSMA would retain membership in the Organization of State Medical Association Presidents. The annual dues are $50.

Mr. McIntyre indicated that a copy of a resolution on PSRO passed by the Georgia House of Delegates was included in the Council folders and said there will be much more discussion on this issue.

The MSMA 1973 House of Delegates passed a resolution regarding a commemorative stamp honoring Dr. William Beaumont. This information was sent to the U. S. Postal Department. The MSMA has been informed that such a commemorative stamp is not possible at this time, but our request will be held for future consideration.

Mr. McIntyre stated that the 1973 House of Delegates passed a statement endorsing the Health Care Foundation of Missouri to be the responsible agency for PSRO activities in Missouri. A letter was sent to Dr. William Bauer, Director, Office of PSRO, informing him of this action. Mr. McIntyre read the letter of reply from Dr. Bauer.

Clarification of insurance coverage for Councilors and Officers while on official business had been requested. Mr. Fox researched this matter and stated that Councilors and Officers are covered under our present insurance policy when on official business as a Councilor.

Mr. McIntyre said that we have cosponsored the Mini-Estes Conference for the past two years. The Regional Medical Program has been the coordinator of these conferences. Attendance this year was about 100 less than the previous year. It has been suggested by the Missouri Hospital Association that this conference be discontinued at least for one year and, possibly, be resumed again the following year. Dr. Bowles, Chairman of the MSMA Commission on Public Affairs, concurs that this conference should definitely be postponed, if not completely discontinued. Mr. McIntyre asked for the Council's opinion in this regard. On motion, duly seconded, it was agreed that the Mini-Estes Conference should be discontinued for the present time.

REPORTS OF DISTRICT COUNCILORS

District #1—Dr. Martin indicated that Sisters' Hospital in St. Joseph is under reorganization and a Board has been formed to take over the operation of this hospital in November. The Board is made up of 21 lay people and two doctors. He indicated that there are many problems involved.

They are having their usual problems with CHP, but stated he felt physicians should definitely get involved in CHP activities so that they know what is going on and can help make policy and direct activities.

District #2—Dr. Bach reported that several new physicians have recently located in his area. He further stated that at his Councilor District meeting held in March, concern was expressed regarding PSRO.

District #4—Dr. Hetlage thanked the Council for implementing some of the suggestions of the fourth District and stated that, at this time, members in his district did not feel that they would make any further proposals.

District #5—Dr. Bregant stated that PSRO is the main concern in his district at the present time.

District #8—Dr. McAlhany indicated that Dr. Bonebrake's insurance committee is looking over life, overhead and major medical insurance and, hopefully, will be able to pursue this matter and make recommendations to the Council for the development of a statewide program. Both St. Louis Medical Society and Jackson County Medical Society have recently changed their programs. This insurance committee will continue its study.

Dr. Grebel spoke to the Greene County Medical Society regarding the Health Care Foundation and did a very commendable job.

Dr. McAlhany reported that in April, the Court of Appeals upheld the IRS tax decision in favor of the "Singing Doctors."

District #9—Dr. Cooper indicated that in his area, there are a few physicians who do not belong to any organization such as the local society, etc. They are trying to get these physicians involved in organized medicine. There are a number of concerns in his district regarding PSRO and still a few complaints about the manner in which Medicaid and Medicare handle their claims.

District #10—Dr. Hansbrough indicated that he recently spent a night at Crown Center Hotel in Kansas City where the MSMA 1974 Annual Meeting will be held and thought it was very nice.

District #3—Dr. Franklin said they had a ballot opinion of their membership regarding the building of new facilities to house both the St. Louis Medical Society and the St. Louis County Medical Society. About 50% of the membership returned their ballots and the vote was 57% to stay and 43% to move. For the St. Louis County Society, the vote was about 50% each way. Further meetings will be held in this regard.

Dr. Franklin stated that he had received a letter from Blue Shield regarding its Open Panel Program. Along with this letter of invitation to be a sponsor of the plan was literature which they plan to include in their selling program. Included in this selling material was the resolution from MSMA supporting the Open Panel Program. Dr. Franklin indicated that he did not feel this was truly an open panel program and read his letter of reply to Blue Shield.

Dr. Franklin stated that he received the new, revised Bylaws of the Health Care Foundation. He said that in Subsection 5, he interpreted one part as giving the Judicial Committee the authority to suspend or expel members in the MSMA or the MAOPS. Dr. Benoit stated that this was a misinterpretation; the HCF definitely has no control over membership in either organization and has no such intention. The wording of this will be changed to make the meaning clear.

The St. Louis Medical Society has produced a Handbook on Health Careers and also a Reference Book for Physicians.

Dr. Hetlage explained that the Blue Shield Open Panel Program was developed over a year and a half period of time with much physician input. He stated that he doubted that the MSMA resolution would be used in their advertising.

Dr. Franklin said he has discussed this open panel program with many St. Louis physicians, and it seemed that most OB's and Surgeons were for it and many GP's and internists were against it.

District #7—Dr. Chandler reported that Dr. Hoffman, President of the AMA, will attend an informal dinner meeting at the Plaza III in Kansas City on June 14. He invited those in the area to attend.

Dr. Chandler stated that a PSRO Study Committee has been formed in Jackson County and is made up of members of the Jackson County Medical Society Blue Shield, Hospital Association, HCF and Osteopathic Association.

The Chairman indicated that he had received many suggestions from the Council on how the Council Meetings should be conducted, etc. and asked the Council to think about having an informal session on Friday evening prior to the Council Meeting to go over some of the material so that the Saturday sessions could be more concise with less discussion.

Dr. Chandler also asked the Council to think about taking advantage of some of the programs offered by the AMA, such as a leadership conference for which the Council might select a small group of young, promising physicians in their respective areas, these people to be the captive audience. The AMA has experts in these fields. The only cost to the MSMA would be for the motel and the food.

Dr. Chandler said that another thing to think about is an MSMA Goals Committee patterned after the Battelle Report made for the AMA on goals of the future.

REPORT OF TOUR COMMITTEE

The Chairman then named the following Councilors to a Tour Committee to work with Royal Cooper on suggested upcoming tours to be sponsored by MSMA: Drs. Cooper, Martin and Bregant.

REPORT OF MSMA LEGAL COUNSEL

At the previous Council Meeting, Legal Counsel was asked for an opinion concerning the present status of the Ad Hoc Committee on the Negotiation of Professional Fees in view of the House of Delegates action on the Guild proposal.

Mr. Noble reported on this, giving background information regarding the Committee, the House action, etc. He stated that it would appear that the special Ad Hoc Committee ceased to exist upon its report of January 17, 1973 to the Commission on Medical Economics, Third Party Medicine and Governmental Relations.

Mr. Noble reported that the transcript in the Health Care Foundation Law Suit has been filed. This case will be set for hearing during the week of Jan. 7, 1974. After a case is set for hearing, the appellant's brief is due some 90 days before the date of hearing and the respondent has an additional 30 or 60 days to file a reply.

After brief discussion, motion was made, seconded and carried that the report of the Legal Counsel be accepted.

REPORT OF THE PRESIDENT

President Stricker made the following appointments of Councilor Advisors to the various Commissions: Commission on Public Affairs—Dr. Bradshaw; Commission on Continuing Education and Health Manpower—Dr. Hansbrough; Commission on Medical Economics—Dr. Hetlage; Commission on Medical-Legal Affairs—Dr. McAlhany; and Commission on Interspecialty Medicine—Dr. Cooper.

One of the resolutions adopted by the 1973 House of Delegates called for a Committee to Study Midwifery.

Dr. Stricker made the following appointments to that committee: Drs. William Griffin, Columbia, Chairman; Harry Jonas, Independence; Denis Cavanagh, St. Louis; Henry C. Willumsen, St. Joseph; and W. Alexander Hoja, Poplar Bluff.

Dr. Stricker indicated that he and Drs. Benoit, Cope, Richard Bradley and Mr. McIntyre attended a meeting called by the AMA in Washington. Thirty-six states were represented. This meeting was concerned with the appropriate areas for PSRO. The Missouri delegation was unable to obtain appointments with Senator Eagleton and Congressman Symington. However, they did have an opportunity to discuss certain matters with their Legislative Aides. Dr. Stricker indicated that Dr. Benoit would discuss this further.

Dr. Cope reported that he had had the pleasure of attending Alumni Day at Central Methodist College on April 28. Dr. William Bailey, a St. Louis ophthalmologist, and Dr. Robert Hodge, a Kansas City internist, were presented Distinguished Alumni Awards. Also receiving this Distinguished Alumni Award was Ray McIntyre. Dr. Cope extended his congratulations to Mr. McIntyre and read the following biographical information on his many accomplishments:

"Noted Executive Secretary of the Missouri State Medical Association and a veteran of more than 30 years in the health care field.

"Raymond R. McIntyre, class of 1932, was born in Holt County, Missouri. During his high school years, he was active in many school organizations and played on Oregon's state championship basketball team.

"During his years at Central, Mr. McIntyre was a four-year member of the 'C' Club, winning letters in both basketball and football. He played on Central's basketball conference championship teams all four years, was quarterback of the football team and captain of the basketball team. In addition he was a student body officer, member of the Aristotelian Literary Society, Theta Chi Delta, Delta Phi Alpha and a 'Campus Leader.'

"Mr. McIntyre returned to CMC in the spring of 1935 as assistant enrollment secretary to E. E. Rich, following three years of teaching in Montgomery City and Macon. He also was assistant basketball coach under C. A. Clingenpeel and received his master's degree in education from the University of Missouri during this time.

"He was principal and basketball coach at Fayette High School for two years, returning in 1941 to the University of Missouri as a doctoral candidate in education during the fall semester and assisting the enrollment secretary in the spring semester. He continued his interest in basketball, playing on semiprofessional and independent teams and officiating at high school games.

"In 1942, Mr. McIntyre joined the staff of the Missouri State Medical Association in the St. Louis offices. From 1944 to 1946, he served in the United States Naval Reserve, holding at his release the rank of Lieutenant and administrative assistant to the commanding officer of Barin Field, Pensacola, Fla.

"Returning to the State Medical Association as field secretary, he worked with doctor placement, county medical societies and the Missouri State Medical Foundation. He was instrumental in organizing the Missouri Health Council and served as its president. He also served as executive secretary for the Missouri Academy of General Practice.

"In 1965, Mr. McIntyre became executive secretary of the Missouri State Medical Association, and in 1966 directed the transference of the offices to Jefferson City, where he now lives.

"Mr. McIntyre has been awarded the Distinguished Service Award of the Missouri Academy of General Practice and was elected an associate member of the Southern Medical Association. He holds an affiliate membership in the American Medical Association and is a member of the American Association of Medical Society Executives.

"Mr. McIntyre was married in 1938 to the former Martha Donaldson, then a women's physical education instructor at CMC. They have two daughters and five grandchildren. Mr. McIntyre is a member of the Chamber of Commerce in Jefferson City, the Rotary Club and the United Methodist Church."

REMARKS OF DR. BENOIT RE: HCF AND PSRO

Dr. Benoit gave a brief account of what took place at the most recent Board Meeting of the Health Care Foundation. He stated that the MSMA has given the HCF endorsement as being the PSRO agency in Missouri and that a similar action was taken by the MAOPS. He said that this should be of help in their ongoing efforts.

He said that the Council had been circularized with a set of revised Bylaws for HCF. Sixteen were returned; 14 without comment. One of the comments was Dr. Franklin's in regard to Subsection 5, and the other was relative to the appointment of chairmen of local review committees. The Bylaws stated that the Central Coordinating Committee would have this responsibility, and the suggestion made was that each review committee should have the prerogative of electing its own chairman. These changes were made and the new Bylaws have gone into effect. Dr. Benoit indicated that the funding situation for HCF is in a critical state. The EMCRO grant was denied. RMP has been giving a nominal fee to HCF monthly, but it is felt this would terminate due to the RMP funding situation. Another solicitation letter is being sent out. However, we cannot determine as yet what the response will be.

He said that time had been spent with Dr. Domke in relation to the computer program in the Division of Health on hospital discharge summaries. The HCF has gone on record as being in favor of further study of this matter.

Another major item discussed by the Board was a draft of a concept for delivery of services for PSRO through the HCF. It is the intention of the Foundation to develop this so that if and when in dealings with Dr. Bauer there is discussion as to whether or not the HCF would qualify, this can be used.

Dr. Benoit gave background information regarding how the meeting in Washington on PSRO came about. Several of the larger states were concerned about the geographical distribution. They requested an informal confrontation with HEW. The AMA arranged this meeting and invited all the states. The AMA provided everyone who came to the meeting with a kit of information which capsulized what the facts were as they related to the development of local PSRO's. There were certain good reasons for having an umbrella PSRO. Dr. Benoit said that his reaction was that an overwhelming percentage of Senators and Congressmen who voted on this legislation had no real insight as to what they were voting on. There is nothing in the law that states the number of physicians, minimum or maximum, for a PSRO. It was the feeling that certain staff people with the U. S. Senate are making the decisions as to the intent of the law.

Most of the delegations at the Washington meeting

WASHINGTON

The HEW Department issued interim regulations to guide the new chronic kidney disease treatment benefit program which it estimated will cost $250 million in the first year and could arise to $1 billion a year in five years. The expansion of Medicare to cover costs of kidney dialysis and transplants for beneficiaries of all ages started July 1. Under interim rules, the number of facilities providing dialysis and transplants has been frozen at those now operating. The regulations also freeze reimbursement to a level of cost or charge representing an average of the charges during the previous year. Reimbursement for maintenance dialysis is limited to a "ceiling" set by the Department ($150 per dialysis) above which a justification would be required. All facilities must agree to the assignment method of reimbursement. Final regulations are due by the first of the year.

* * *

Sen. Wallace F. Bennett, ranking Republican on the Senate Finance Committee, won't run for reelection next year. The 74-year-old Republican from Utah has served four terms in the Senate. Replacing Bennett as top Republican on the powerful Finance Committee will be Sen. Carl Curtis (R.-Neb.). Bennett, one of the Senate's most influential conservatives, is author of the controversial Professional Standards Review Organization (PSRO) amendment to the Medicare-Medicaid bill of last year. He cited his age as a factor in his decision. "I can't deny the calendar." A few days earlier, Sen. Norris Cotton (R.-N. H.) had announced he will not run again.

* * *

President Nixon cited "a spirit of partnership" with Congress as he signed a one-year extension of major Public Health Service programs. The extension had been strongly opposed by the Administration which wanted to eliminate five of the 12 programs and cut others.

The Chief Executive declared that the bill strikes "a reasonable compromise with the Administration," noting that it keeps the programs alive for only one year instead of the customary three. In adopting the bill by overwhelming votes, Congress expressed an intention to review the programs to determine if it agreed with the Administration's policy decisions.

The 12 programs involved and the money authorizations for the fiscal year that started on July 1 are the following:

—Health services research and demonstration ($42.6 million); National health statistics ($14.5 million); Public health training ($23.3 million); Migrant health services ($26.7 million); Comprehensive health planning ($360.5 million); Medical libraries ($8.4 million); Hospital construction ($197.2 million); Allied health training ($44.3 million); Regional medical programs ($159 million); Family planning ($118 million); Community mental health centers ($234 million); Developmental disabilities ($41.7 million).

The Administration had urged Congress to eliminate or phase out the hospital construction or Hill-Burton program, public health training, allied health training, regional medical program (RMP) and community mental health centers.

In a statement released with the signing of the bill and two other measures, President Nixon said, "While the authorization levels are higher than I believe desirable, they will not damage our overall fiscal position if the Congress now follows my recommendations in the appropriations process.

"So long as the Congress follows a responsible course in the passage of future spending bills, I will cooperate in a spirit of partnership. But as we go forward, let there be no mistake about one fundamental point: if bills come to my desk which are irresponsible and would break open the federal budget, forcing more inflation upon the American people, I will veto them."

The RMP program has already been disbanded at HEW headquarters. Apparently, some sort of a makeshift arrangement will have to be set up to keep it operating for one more year anyway.

There was only one vote in Congress—by Rep. Philip Crane (R.-Ill.) in either house of Congress against the extension bill, which made unlikely any successful veto.

The chief Administration argument for closing down the five programs was that they were inefficient, had outlived their usefulness or could be handled more appropriately by the states.

* * *

The important national Professional Standards Review Council has been established with the appointment of 11 physicians. The Council will advise HEW Secretary Caspar Weinberger on the Professional Standards Review Organizations (PSRO) program to monitor the quality of medical care in Medicare and Medicaid.

"The contribution of this Council will be vital to the accomplishment of the objectives of the PSRO legislation, and we are indeed fortunate to be able to draw upon such a high caliber of expertise," Weinberger said.

Members of the council were selected from among 200 physicians of recognized standing and distinction in the appraisal of medical practice, who were nominated by national organizations representing practicing physicians and by consumer groups and other health care interests.

Those appointed to serve a three-year term on the council are Brown, Clement R., M.D., Director, Medical Education, Mercy Hospital and Medical Center, Chicago; Covell, Ruth M., M.D., Assistant to the Dean of School of Medicine, University of California at San Diego; Duval, Merlin K., M.D., Vice-President for Health Sciences, University of Arizona, former Assistant HEW Secretary for Health; Greene, Thomas J., M.D., Surgeon, Detroit; Haggerty, Robert J., M.D., Professor of Pediatrics, University of Rochester, N. Y. School of Medicine and Dentistry; Harrington, Donald C., M.D., obstetrician-gynecologist and medical director, San Joaquin Foundation for Medical Care, Stockton, Calif.; Hunter, Robert B., M.D., family physician, Sedro Woolley, Wash., member of the board of the AMA; Nelson, Alan R., M.D., internist, Salt Lake City, Utah, Alternate Delegate to AMA; Saloom, Raymond J., D.O., osteopathic physician, Harrisville, Penn.; Saward, Ernest W., M.D., Professor of Social Medicine, University of Rochester School of Medicine and Dentistry, Rochester, N. Y.; Scrivner, Willard C., M.D., obstetrician-gynecologist, Belleville, Ill., president of the Illinois State Medical Society and member of AMA Committee on Health Care of the Poor.

Notes of interest from Here .... and There

Dr. H. Mitchell Perry, St. Louis, was elected president of the Missouri Heart Association at the 24th annual meeting held at Ramada Inn in Jefferson City on June 15. Other officers elected were **Dr. John D. Arnold** of Kansas City, president-elect; **Dr. Clifford R. Talbert** of Cape Girardeau, vice-president; **Dr. David Thomasson** of Springfield, secretary; and **Mr. David L. Babel** of Columbia, treasurer.

Dr. Irwin I. Rosenthal has been appointed director of the medical-surgical unit at St. Joseph State Hospital. A staff physician at the hospital for four years, Dr. Rosenthal previously was in practice in St. Joseph for approximately 30 years, except for a four-year period of military service.

Dr. Martin Ware, editor of the *British Medical Journal,* visited in the United States for two weeks recently in an effort to talk with general practitioners and learn more about medical procedures in this country. According to the *Kingdom Daily News,* he stated that his tour included visits in Columbia and Fulton because another British physician had visited the area previously on an exchange program and was impressed with facilities and services offered by area doctors. Dr. Ware held discussions with Dr. Sherwood Baker of the University of Missouri Medical Center in Columbia and with Dr. George Groce in Fulton. He also visited the Churchill Memorial in Fulton.

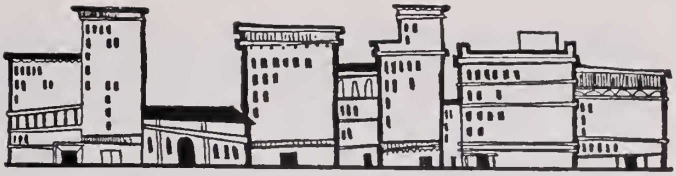
Dr. Starks J. Williams, Director of Medicine at Wayne Minor Health Center in Kansas City, has been selected as the state medical consultant for the Sickle Cell Anemia Program in Missouri. The state legislature appropriated funds for the Missouri Division of Health to implement the statewide program. Dr. Williams also is a member of the Sickle Cell Anemia Advisory Committee of Missouri, which is composed of informed persons from various parts of the state.

Dr. Theodore Fischer of Altenburg was honored with an open house in observance of his 40 years of medical service to the people of the area. On behalf of the City of Altenburg, Mayor Harry Seibel presented a plaque to Dr. Fischer commemorating the anniversary.

Dr. Hugh S. Brady, Concordia, was the guest of honor at a surprise dinner in June on the occasion of the 25th anniversary of his medical practice in the Concordia community. Hosts at the event were the members of the executive board of the Concordia Civic Club and their wives. He received a plaque of appreciation from **Mayor Curtis Ellis** of Concordia.

Dr. David S. Long, who has practiced medicine in Harrisonville for more than a half century, was honored in May by members of the Cass County Memorial Hospital Auxiliary. Dr. Long began his practice of medicine in Harrisonville in 1911. He is still active, although he limits his practice to office calls.

From the Medical Schools



UNIVERSITY OF MISSOURI-COLUMBIA

In recognition of his exceptional qualities as a scholar, surgeon and teacher, the Marion S. DeWeese Surgical Society has been founded by 24 former resident physicians who trained under Dr. DeWeese. Few people have received this kind of honor while still in active practice.

Chairman of the Department of Surgery at the University of Missouri-Columbia School of Medicine and Medical Center, Dr. DeWeese also holds the title of W. Alton Jones Distinguished Professor of Surgery. The academic chair was endowed by the family of the late chairman of the board of the Cities Service Petroleum Co.

The first formal meeting of the new surgical society will be held in Chicago in October during the annual meeting of the American College of Surgeons. The purpose of the group is to assist in surgical education and training, as well as to promote continuing fellowship among the members.

A multidisciplinary study underway at the University of Missouri-Columbia is the first systematic investigation of the relationship between a high meat diet and the incidence of bowel cancer in humans.

The year-long study, funded by a contract of $240,648 from the National Cancer Institute, will combine the expertise of UMC faculty from several fields. Dr. David Hentges, the principal investigator, is a professor of microbiology at the School of Medicine. Co-investigators and consultants include: Drs. Glenna C. Burton, C. Richard Dorn and Donald C. Blenden, microbiologists in the School of Veterinary Medicine; Bruce R. Maier, microbiologist; John M. Franz and Robert L. Wixom, biochemists, Daniel Winship, gastroenterologist, School of Medicine; Charles W. Gehrke and Klaus O. Gerhardt, chemists in the College of Agriculture; Margaret A. Flynn, nutritionist in the School of Home Economics and the School of Medicine; and Robert K. Tsutakawa, statistician in the College of Arts and Science.

Recent studies have attributed a high incidence of bowel cancer to the nature of the intestinal flora which synthesizes carcinogenic agents from food and intestinal secretions. The study hopes to provide an insight into the role intestinal bacteria play in converting food and intestinal secretions into active carcinogens.

WASHINGTON UNIVERSITY

James A. Wood, M.D., internist, succeeded James M. Stokes, M.D., surgeon, as president of the Washington University Medical Center Alumni Association on July 1.

Donald H. Finger, M.D., an internist, is president-elect, and George B. Rader, M.D., a surgeon, is vice-president of the 6,000-member organization. Secretary-treasurer Duane C. Hellam, M.D., is an assistant professor of medicine at the School of Medicine.

Dr. Wood also is an instructor in clinical medicine at the Medical School. Dr. Stokes is associate professor of clinical surgery; Dr. Finger, assistant professor of clinical medicine; and Dr. Rader, instructor in clinical surgery.

Washington University School of Medicine's Faculty Council has elected its first woman chairman. Jessie L. Ternberg, Ph.D., M.D., professor of surgery, succeeds John M. Kissane, M.D., professor of pathology, as presiding officer of the 350-member organization.

Richard D. Aach, M.D., associate professor of medicine, was elected vice-chairman.

Dr. Ternberg joined the medical faculty in 1959. She earned the Ph.D. degree from the University of Texas in 1950 and the M.D. degree from Washington University in 1953. In 1972, she was awarded an honorary Doctor of Science degree from Grinnell College, where she received her A.B. degree in 1946.

Washington University's Department of Ophthalmology has received $5,000 from Research to Prevent Blindness, Inc. (RPB). The RPB grant will be used to develop new techniques and advanced concepts in the saving of sight. Over the past 14 years, RPB has awarded $70,000 to the medical school.

Farmer's Lung

Man's Oldest Occupational Illness

FARMER'S LUNG is an occupational disease probably as old as food storage and a settled agrarian civilization. In 1713, Ramazzini described a "Disease of Sifters and Measurers of Grain" in men who were exposed to the dust of crumbling, overheated cereal grain which had not been properly dried before storage. They developed cough, dyspnea and, later, cachexia that "heaped a thousand curses on their calling" and they rarely reached old age.[1] This disease did not receive much attention, however, until 1932 when Campbell gave a classical description of the symptoms in the acute stage in five farmers in Westmoreland, England. He noted that the summer of 1931 had been a bad season for haymaking because of rain and much of the hay eventually was taken in in an unsatisfactory condition.[2]

Farmer's lung has since been reported in Sweden, Norway, Belgium, Denmark, France, Switzerland, Eire, Iceland, Canada and the United States.[3] It is now recognized as a serious occupational hazard, especially in areas where storage of a large amount of hay and grain is needed for livestock feed. Wet summers, which make drying of the hay difficult, and severe winters which make necessary the construction of relatively airtight barns that favor a high and prolonged dust concentration, also may be important factors in the prevalence of disease. In 1965, farmer's lung became a compensable occupational disease in Great Britain.[4]

The prevalence of farmer's lung is unknown. In England and Wales, an annual incidence of 10.5 to 193.1 per 100,000 has been reported,[5] and the incidence has been found to vary with the summer rainfall totals.

The typical symptoms of acute farmer's lung appear four to eight hours after exposure to dust of moldy hay. They are dyspnea and cough usually accompanied by malaise, chills and fever and occasional blood spitting (hemoptysis). The usual physical findings are tachypnea and basilar rales, and cyanosis may be present in severe cases. Provided that further exposure is avoided, the acute symptoms usually subside spontaneously within seven to ten days, but the dyspnea may persist for several months.[3] The chest roentgenogram usually shows widely distributed, miliary-type infiltrations or a ground glass appearance which resolves within weeks or months of the attack.[6] However, the acute form may not be the most frequent manifestations of the disease. In two studies,[5,6] half of the patients gave a history of insidious onset of symptoms, which slowly progressed over weeks or months before they sought medical aid. Some of these milder cases resembled "asthmatic bronchitis."[5] Although the disease is initially reversible, recurrent or continuous exposure may

Progress in understanding the pathogenesis of farmer's lung has been made during the last decade. However, treatment of this disease is still unsatisfactory. The main hope for its control lies in prevention. A team of scientists at the University of Missouri is making a collaborative attack on this Missouri health program and seeks the cooperation of Missouri physicians and farm families. Dr. Kilburn is Director, Division of Pulmonary Disease at the University of Missouri School of Medicine, and Dr. Asmundsson is from Reykjavik Hospital, Iceland.

lead to pulmonary fibrosis and permanent disability.[7, 8]

Physiologic studies in acute cases have shown impairment of function. This decrease in pulmonary compliance, reduced diffusing capacity, non-uniform distribution of regional ventilation and blood flow and arterial hypoxemia[8–10] are characteristic. Airway obstruction is common in farmer's lung, but usually is absent in the acute stages.[10]

The pathological changes in the acute stage of farmer's lung consist of granulomatous, interstitial pneumonitis. The histology usually shows granulomatous reaction with round cell infiltrations, epitheloid cells and poorly defined tubercles with occasional giant cells. The giant cells, however, may be numerous in some sections. The bronchioles are frequently involved, resulting in obstructive bronchitis. Vasculitis is common. The alveolar septa are thickened and infiltrated by plasma cells and lymphocytes.[7, 9, 11–14] Intra-alveolar fluid and histiocytes containing vacuolated cytoplasm are found frequently[15] and may be a prominent pathological feature causing the filling of many alveolar spaces.[16] Much less is known about the pathology of the chronic stages. Noncharacteristic interstitial fibrosis and "emphysema," sometimes resulting in pulmonary hypertension and cor pulmonale, have been described.[7, 9, 14]

Progress has been made in understanding the pathogenesis of farmer's lung during the last decade. Pepys *et al* have found that serum from patients with farmer's lung contained precipitins against extracts of moldy hay.[17, 18] This was soon confirmed by others.[19, 20] Gregory and Lacey[21, 22] simultaneously demonstrated that hay which caused farmer's lung had evidently become heated spontaneously during maturation, that it had a higher pH than good hay and that its dust contained more thermophilic molds and actinomycete spores but not appreciably more herbage fragments. One of these actinomycetes was Thermopolyspora polyspora (Micropolyspora faeni). Pepys *et al*[6, 23] provided convincing evidence that extracts of T. polyspora obtained from cultures on ordinary media contained antigens similar to those found in moldy hay. Eighty-seven percent of sera from patients with farmer's lung reacted to T. polyspora compared to 89% reacting to extracts from moldy hay. However, 52% of sera from these patients also reacted to Micromonospora vulgaris, and, thus, the organisms appeared to have a common antigen.[6] However, precipitins against moldy hay were not diagnostic of farmer's lung as 17% of farmers without clinical signs of this disease had positive reactions.[6] These studies have been confirmed by others.[24–26] Thus, serological tests are helpful in diagnosing farmer's lung in spite of the occurrence of false positive and false negative tests. In absence of antigen challenge, such tests become negative in three to five years.[8, 10]

Further evidence for the etiology of farmer's lung has come from inhalation studies with extracts from moldy hay or T. polyspora cultures which cause similar reactions.[6, 27, 28] In susceptible individuals, a febrile illness with clinical and physiological features similar to farmer's lung occurs in four to six hours after inhalation of the antigen. However, the symptoms are similar and usually disappear within 24 hours with the small doses of antigens used. Therefore, in selected patients in whom suspicion is high but symptoms are atypical and serological tests were inconclusive, the use of inhalation tests to diagnose farmer's lung appears justifiable. Skin tests are of no value in the diagnosis of farmer's lung.[25]

The hypersensitivity reactions involved in farmer's lung is thought to be an Arthus type reaction.[11, 29, 30] Two patients with farmer's lung who were skin tested with T. polyspora antigen had a positive reaction in four hours. This was biopsied and found to be an Arthus reaction by light and immunofluorescent microscopy.[30] We are not aware of immunopathologic studies of lungs that confirm this concept. Animal models of hypersensitivity pneumonitis have been developed[31, 32] and ought to be helpful in solving this question.

Little is known about the prognosis of farmer's lung. The acute attacks may be fatal,[11] although this occurrence is rare. A few deaths have been reported due to the chronic stage of farmer's lung.[7, 14, 33] In the only study on the prognosis of farmer's lung by Barbee *et al*,[8] 50 patients with farmer's lung were followed for at least three years (average of six years). Five patients died of pulmonary causes during follow-up (10% mortality rate). However, there is no information on the duration of the disease in these patients and no autopsy findings to confirm that the deaths were due to farmer's lung.

The treatment of farmer's lung is unsatisfactory. Adrenal corticosteroids are said to be of help in treating the acutely ill patients,[8] but no studies have been done to prove this. Masks to filter the spores from the inhaled air are uncomfortable and have not been helpful. Attempts of desensitization have been futile because of serious reactions to the antigen.[34] Patients who have been successful in avoiding exposure to moldy hay have been able to continue farming, but others usually have had to change their occupation.[8] The main hope for control of this disease lies in prevention. Methods for drying and storing hay must be improved to prevent the growth of molds.

Resources of three medical centers have been organized in Wisconsin under a lung center sponsored by the National Heart and Lung Institute. Scientists from Medical College of Wisconsin in Milwaukee, Marshfield Clinic in Marshfield and University of Wisconsin have joined together to study the clinical, epidemiological physiological features and to relate these to mold exposure.

Several years ago, Dr. Milton Feather in the Department of Agricultural Chemistry at the University of Missouri-Columbia began isolating, characterizing and identifying fractions from Aspergillus; much progress has been made in separating these components.

A team of medical scientists, which came to the Columbia campus in June, is headed by one of us (KHK) and is working on a problem which is similar to farmer's lung in human and in cellular and animal models. A collaborative attack on one of Missouri's health programs is in the offing as Dr. Feather and his chemists are joined by our human biologists with their sights trained on the prevention of the distressing symptom of shortness of breath due to inhaled molds in Missouri farmers. The cooperation of Missouri physicians and farm families will be requested as the study of farmer's lung progresses this summer.

Vascular Surgery in the Community Hospital

Results and Analysis of a Three-Year Experience

THE PAST SEVERAL YEARS have seen a gradual delineation of cardiac and peripherovascular surgery as two separate fields. The cardiac surgeon, who is generally a member of a multidisciplinary team, has remained in the medical center while the peripherovascular surgeon has attempted to break the bond with the medical center and, in some instances, has moved into the community hospital. In this respect, it has been pointed out that he has become more like the neurosurgeon who has been able to transfer his practice to the community hospitals while maintaining his standards of performance. Little information, however, is available on the success with which the vascular surgeon has effected this migration. Also, in a recent critical review,[1] vascular surgery in the community setting often was found to be lacking in quality and sufficient volume.

Dr. Edwin Wylie, in his presidential address to the Cardiovascular Society, pointed out that no uniform level of training existed for vascular surgeons.[2] In an effort to control the standards of practice for vascular surgeons, it has been suggested that centers of excellence be developed in which the standards of vascular surgery would be uniformly high. However, quite clearly, this would stifle the incentive of the vascular surgeon to return to community practice and would not result in an adequate output of capable vascular surgeons to meet the need of the general public. The interest in these problems is documented in the literature.[3, 4]

This detailed analysis of the development and quality of peripherovascular surgery in a rural community hospital indicates that results are similar to those published by various medical centers. It also justifies the conclusion that standards of excellence can be maintained by properly-trained surgeons under these circumstances. Dr. Dupont is from the Department of Surgery, Missouri Delta Community Hospital. This paper was originally presented in a summarized form at the meeting of the Missouri Chapter, American College of Surgeons on June 2, 1972.

The following is an analysis of the development and quality of peripherovascular surgery in a rural community hospital over a three-year period. The surgeons involved fulfilled the qualities of Dr. Wylie's Group I. They practice in a 180-bed hospital with modern roentgen facilities. A fully-staffed and equipped seven-bed intensive care unit was opened during the second year of this study.

RESULTS

In the fall of 1968, a program of vascular surgery was launched in Sikeston, a rural community of approximately 17,000 with hospital facilities adequate to support such a program. An arteriogram service was established in the hospital and patients with vascular disease were actively sought. This report of 182 cases deals with the first three years of this experience.

Prior to the establishment of a vascular service in this hospital, only an occasional arteriogram was performed. In 1969, 78 arteriograms were done; in 1970, there were 109; and in 1971, 162 arteriograms of all types were done in our hospital (Fig. 1). Currently, we average between 20 and 30 arteriograms a month, and we now have a radiologist who is actively interested in angiography.

a. *Femoral popliteal disease* (Table 1): Thirty-eight limbs were operated on in 34 patients with femoral popliteal disease. The average age of these patients was 70 years. There were 20 men and 14 women in the group. Operative mortality is defined as the mortality within 30 days of surgery. In this series, three patients died within 30 days of their surgery. There were two early occlusions and one superficial wound infection. Both patients with the early occlusions were reoperated on and the problems successfully corrected. Indications for surgery

10 Patients Died Over 3 Years—7 With Patent Grafts

in this group of patients were severe claudication in ten patients, rest pain in 14 and frank gangrenous changes in 14. The type of operation performed was vein bypass in 24, Dacron bypass (all of them above the knee) in eight and endarterectomy and patch graft angioplasty on the popliteal and profunda femoris arteries in six. There was an associated sympathetomy in 21 extremities. The results of operations on the femoral popliteal area were as follows: 13% of the patients required major amputations in spite of revascularization; long term patency rate for the autogenous saphenous vein grafts was 75% and for the Dacron grafts above the knee, 75%. In 5% of the limbs, the graft is clinically occluded but the limb has remained viable.

It is noteworthy that ten patients have died over the past three years; seven of them had patent grafts.

b. *Extracranial cerebrovascular disease* (Table 2): Forty-seven revascularizations were performed in 23 men and 18 women averaging 70.3 years of age. Two patients died within 30 days of surgery. In three patients in the recovery room, transient hemi- or monoplegia was noted briefly with subsequent restoration of function. In three patients in the recovery room, there was transient systolic hypertension with blood pressure over 220 ml of mercury. Postoperative bleeding was encountered in one patient, but it did not require surgical intervention. The indications for operation on the extracranial internal carotid artery are well established and are the same as used by most vascular surgeons.[5] In 15 arteries, a patch graft angioplasty was performed. Twenty-five arteries were operated on with the use of an internal temporary shunt. In this group of patients, there were no deaths from cerebrovascular accidents in the past three years. There was one cerebrovascular accident on the operated side in a patient with a patent vessel by arteriography one week following surgery. One patient has had a minor cerebrovas-

cular accident on the operated side three years later with subsequent near complete recovery of function.

c. *Aorto-iliac occlusive disease* (Table 3): Twenty-eight revascularizations were carried out in the aorto-iliac system in 21 men and seven women. The average age in this group of patients was 61.4 years. Two patients died within 30 days of the operation. The following complications were encountered: superficial wound infection, 1; acute myocardial infarction, 1. Nine aorto-bilateral-femoral Dacron bypass grafts were performed. Ten aorto-bilateral-iliac bypass grafts or iliac artery endarterectomies were done. In seven patients, the iliac artery was resected and replaced with a Dacron tube graft or local endarterectomy was accomplished. In two patients, axillary femoral or femoral-femoral bypass was the procedure used. At the present time, all grafts are patent in the survivors. In nine cases, an associated sympathectomy was performed. One patient also had renal artery revascularization at the time of the aorto-iliac surgery and in one patient, the gallbladder was removed.

d. *Abdominal aortic aneurysms:* Seventeen patients had abdominal aortic aneurysm; 15 men and two women were operated on during the period of time in question. The average age was 70 years for the whole group. For the ruptured abdominal aortic aneurysm, the average age was 76. Among the electively operated patients, one died postoperatively. The operative mortality for ruptured aneurysms was 50%. This figure included two patients who had sustained cardiac arrest prior to surgery. Congestive heart failure was encountered postoperatively in one patient. Pulmonary complications were encountered in three, and a transiently rising BUN was seen in four patients, all of whom had ruptured aneurysms. In eight patients, the aneurysm was ruptured, in three it was symptomatic, in three it was clotted and in three it was an incidental finding. Seven patients required a tube graft and ten a bifurcating graft.

e. *Embolic occlusions:* Twenty-four limbs were operated on for embolic occlusion in 14 men and seven women averaging 59.6 years of age. Four patients died within 30 days of surgery. Two limbs required major amputations. Table 4 shows the anatomic site and etiology of the embolic occlusions in this series.

f. *Peripheral aneurysms:* Eight aneurysms were encountered in the lower extremities of six male patients averaging 65 years of age. Two were located in the common femoral arteries and six were in the popliteal artery, two of which were traumatic. In four, the aneurysm was resected and replaced with a Dacron graft and replaced in four with autogenous saphenous vein. To date, all eight grafts are patent. There were no amputations in this group.

Table 5 shows a variety of miscellaneous vascular procedures carried out in our hospital during the three years of this study. Of the four patients with renal artery stenosis, two are currently taking no medication for hypertension, one is taking one, instead of three, drugs and is normotensive and the third is moderately hypertensive with one drug. All were severely hy-

He has Trichomonas vaginalis?

It’s his infection but her problem...

Men with trichomonal infection are virtually always asymptomatic, which is why they seldom know they have the disease. But many do have it, nevertheless.

Trichomonal infection is so common that estimates[1] indicate one out of every four women of reproductive age has the disease. *Almost half of the husbands of women infected with* Trichomonas vaginalis *have it, too.*[2-9]

CONCURRENT THERAPY WITH FLAGYL PROVIDES
ALMOST CERTAIN CURE FOR BOTH OF THEM.

- It is the most effective drug available for the treatment trichomoniasis in both men and women.
- In men, it eliminates infection from the genitourinary tra
- In women, it eliminates trichomonal infection from the v gina, the paravaginal crypts, cavities, and glands.
- Consistent cure rates above 90 percent are to be expecte The rate often approaches 100 percent.
- Simple, sure treatment for women: One 250-mg. tablet thr times daily for ten days.
- Simple, sure treatment for men: One 250-mg. tablet twi daily for ten days concurrent with treatment of the fema partner.
- Side effects are generally mild and infrequent.
- Flagyl is economical because it is so effective.

Flagyl® can cure them both.

(metronidazole)

Indications: For the treatment of trichomoniasis in both male and female patients and in the sexual partners of patients with a recurrence of the infection provided trichomonads have been demonstrated by wet smear or culture. The oral tablets are indicated also for acute intestinal amebiasis (amebic dysentery) and amebic liver abscess.

Contraindications: Evidence or history of blood dyscrasia, active organic disease of the CNS, the first trimester of pregnancy and a history of hypersensitivity to metronidazole.

Warnings: Use with discretion during the second and third trimesters of pregnancy and restrict to those pregnant patients not cured by topical measures. Flagyl (metronidazole) is secreted in the breast milk of nursing mothers. It is not known whether this can be injurious to the newborn.

Precautions: Mild leukopenia has been reported during Flagyl use; total and differential leukocyte counts are recommended before and after treatment with the drug, especially if a second course is necessary. Avoid alcoholic beverages during Flagyl therapy because abdominal cramps, vomiting and flushing may occur. Discontinue Flagyl promptly if abnormal neurologic signs occur. Exacerbation of moniliasis may occur. In amebic liver abscess, aspirate pus during metronidazole therapy.

Adverse Reactions: Nausea, headache, anorexia, vomiting, diarrhea, epigastric distress, abdominal cramping, constipation, a metallic, sharp and unpleasant taste, furry or sore tongue, glossitis and stomatitis possibly associated with a sudden overgrowth of *Monilia*, exacerbation of vaginal moniliasis, an occasional reversible moderate leukopenia, dizziness, vertigo, incoordination and ataxia, numbness or paresthesia of an extremity, fleeting joint pains, confusion, irritability, depression, insomnia, mild erythematous eruptions, "weakness," urticaria, flushing, dryness of the mouth, vagina or vulva, pruritus, d
cystitis, a sense of pelvic pressure, dyspa
fever, polyuria, incontinence, decre
libido, nasal congestion, proctitis, pyur
darkened urine have occurred in patie
ceiving the drug. Patients receiving
may experience abdominal distress, n
vomiting or headache if alcoholic bev
are consumed. The taste of alcoholic
ages may also be modified. Flattening
T wave may be seen in ECG tracings.

Dosage and Administration: For T
moniasis. *In the female:* One 250-mg.
orally three times daily for ten days. C
may be repeated if required in especially
born cases; in such patients an interval
to six weeks between courses and total a
ferential leukocyte counts before, durin
after treatment are recommended. Vagi
serts of 500 mg. are available for use, p
larly in stubborn cases. *When the vagi*
serts are used, one 500-mg. insert is place

he vaginal vault each day for ten days and oral dosage is reduced to two 250-mg. tab- daily during the ten-day course of treat- it. Do not use the vaginal inserts as the sole n of therapy. *In the male:* Prescribe Flagyl when trichomonads are demonstrated in urogenital tract, one 250-mg. tablet two es daily for ten days. Flagyl should be taken oth partners over the same ten-day period n it is prescribed for the male in conjunc- with the treatment of his female partner.

Amebiasis. *Adults:* For acute intestinal biasis, 750 mg. orally three times daily 5 to 10 days. For amebic liver abscess, 500 50 mg. orally three times daily for 5 to 10 s. *Children:* 35 to 50 mg./kg. of body ght/24 hours, divided into three doses, ly for ten days.

sage forms: Oral tablets 250 mg.
Vaginal inserts 500 mg.

Discussion

The results reported in this study conform to a large extent to those reported for vascular surgery from established services in the medical centers.[1] Admittedly, the series is small and spans only a three-year period. However, a clear trend is discernible and it is reasonable to expect the five- and ten-year results to follow this pattern. The dismal, long-term survival of patients with femoral popliteal disease had been reported elsewhere.[6, 7]

Our series does not pretend to give support to the question of vein vs Dacron bypass for femoral popliteal disease. It is reasonably well established that autogenous saphenous vein is the material of choice for use below the knee. However, there also is no question but that when circumstances dictate, Dacron tube grafts may be used successfully in patients with a good distal runoff and in whom an anastomosis is done well above the knee. Our preference has been to attach the distal anastomosis to as normal a segment of popliteal artery as we can find. The proximal anastomosis is best made in the common femoral artery.[8, 9]

The operation on the extracranial internal carotid artery is a very satisfying one. The operative mortality usually is low (1% to 5%), and the results are good when the acute stroke is avoided.[10, 11] The two deaths in our series were both from acute myocardial infarctions in patients who lived more than five days postoperatively and who were otherwise doing well. Since we abandoned the use of hypercarbia during anesthesia, there has been very little tendency to transient hypertension in the recovery room. We use a shunt at times, depending upon the arteriographic findings and the backflow from the carotid artery at surgery. However, we prefer to operate without a shunt and do not always consider it necessary. Whether or not a shunt is used seems to influence the results in our hands very little, although I believe we tend to use the shunt in patients who have more extensive disease. We have not operated on the asymptomatic carotid bruit except in an occasional patient who was scheduled to undergo major intraabdominal vascular surgery or procedures in which hypotension might ensue. We use a patch only if we cannot close the arteriotomy without narrowing the lumen of the vessel.

The ruptured abdominal aortic aneurysm continues to be a fatal entity (35% to 65% operative mortality) and our results in this area are no different from anyone else's.[12] I believe that we frequently get the patient into our Emergency Room a little sooner than do surgeons practicing in the city or in the medical center. Especially in the last couple of years, there has been a tendency for us to see these cases soon after they had ruptured and, consequently, the results in this group of patients have improved from year to year. Almost all of the complications follow emergency surgery for ruptured abdominal aortic aneurysms rather than surgery for the electively treated lesion.

The mortality rate for patients with embolic occlusion of the lower extremities is high, and our mortality rate here is higher than elsewhere in the series. This is in keeping with the findings of Cranley.[13] The mortality rate and morbidity in this group of patients reflect the severity of the underlying disease.

It is interesting to note that the results in peripherovascular surgery in a hospital such as ours frequently are directly proportional to the education of the surrounding physician population. As the physicians in the area have become "tuned" to vascular disease, case material has been referred to us earlier in the course of illness. Specifically, the results in ruptured abdominal aortic aneurysms and in embolic occlusions of the lower extremities have improved during the third year of this study, when compared to the first two.

We believe that vascular surgery can be practiced with acceptable results in a rural community hospital and without compromising established standards of excellence. In many ways, the type of practice which develops under these circumstances may be more satisfying than it is in the referral center. Important factors are not merely hospital facilities or the experience of the vascular surgeon who performs these operations, but a great deal of success or failure in this practice rests on the readiness with which the illness is diagnosed and the promptness with which the patient is referred for corrective therapy by the primary physician. Physician education in the rural community, therefore, is of the utmost importance to the establishment and success of a vascular practice. The present size of this practice and the rapid growth of peripherovascular surgery in a relatively small community emphasizes the concept that most patients prefer to be treated at home when proper services are available. Furthermore, it would appear that the migration of adequately trained vascular surgeons away from the larger centers could be a successful one.

Care has been taken in this study to report all results, good and bad, without selectively eliminating any. We, therefore, feel that this is a critical and accurate appraisal of vascular surgery in this rural community.

SUMMARY

We have analyzed the results of 182 peripherovascular operations carried out over a three-year period in a rural community hospital. Our results are similar to those published from various centers and justify the conclusion that standards of excellence can be maintained by properly trained surgeons under these circumstances and that a case volume sufficient to maintain technical proficiency can be developed in rural practice. However, an all-important factor in the development of a vascular service away from established centers is education of the primary physician.

Joint Distention Arthrography

Alternate Method of Treatment of Osteoarthritis of the Hip

THE MEDICAL TREATMENT for chronic osteoarthritis in elderly patients, especially, is often disappointing. Physical therapy, oral medication, including steroids, and local injections in and around the joints often offer only transitory relief.

Recently, extensive operative procedures, which include fusion or total hip replacement, have been utilized to relieve the incapacitating pain accompanying this affliction.[1]

In the early 1960s, Dr. Lars Andren of the Malmo, Sweden, General Hospital began a project of arthrography of the hips for delineation of the normal and abnormal internal radiographic anatomy.[2] The procedure consisted of injecting several cubic centimeters of water-soluble contrast material through the joint capsule, thereby opacifying the joint space. This was carried out in normal, rheumatoid and osteoarthritic hips. He noted that certain patients experienced almost immediate relief from the symptoms of pain and improvement in the degree of limitation of motion after the joint capsule was distended. After observing a number of these individuals over a period of several months, he determined that a distinct therapeutic result could be effected by deliberately overdistending the joint capsule in selected patients, usually those with osteoarthritis.

He developed the following procedure. A metallic marker is placed over the groin area and a radiograph is exposed. From this localization film, a special needle with an obturator is manipulated into the joint space. The location of the needle between the capsule and the bone is verified by injecting several cubic centimeters of water-soluble contrast material, such as diatrizoate sodium (Hypaque). At this time, the capsule is overdistended with from 10 cc to 50 cc of saline solution. Sharp pain, which is often an intense reproduction of the patient's regular complaint, is usually experienced. The needle is withdrawn, leaving the joint distended. Immediately, the patient is asked to ambulate. Within 24 hours, it usually is apparent to what degree amelioration of symptoms was achieved. Most patients experience an immediate apparent improvement. Some return to their preinjection state within a matter of hours.

This article includes a report of the experience of the author in performing this therapeutic procedure on 76 patients with follow-up periods ranging to six years.

MATERIAL AND METHODS

After evaluation of the patient's history, present chief complaint and review of plain films, the subject is placed in a supine position. The inguinal region is shaved and prepared. A scout film with a metallic marker is obtained with a Polaroid camera (Fig. 1). Using sterile technique, cutaneous and subcutaneous infiltration with 1% procaine hydrochloride (Novocain) is carried out. A special shallow, beveled Cournand needle 2.5 cm in length is manipulated into the joint space in the inferior distal femoral neck region. At this point, the joint capsule reflects upwards onto the trochanteric ridge creating a more accessible potential space (Fig. 1). After injection of 3 cc to 5 cc of a water soluble contrast material such as Hypaque 60%, a Polaroid exposure is again made (Fig. 2). The anatomical characteristics of the joint space give

The author describes this therapeutic procedure and reports his experience with 76 patients with follow-up periods ranging to six years. He concludes that in selected patients with partially incapacitating osteoarthritis of the hip, improvement may be afforded by this inexpensive, relatively risk-free and simple procedure. Dr. Spector is from the Department of Radiology, The Jewish Hospital of St. Louis, and is an Instructor in Clinical Radiology, Washington University School of Medicine. This work was supported by The Harry Freund Memorial Foundation, St. Louis.

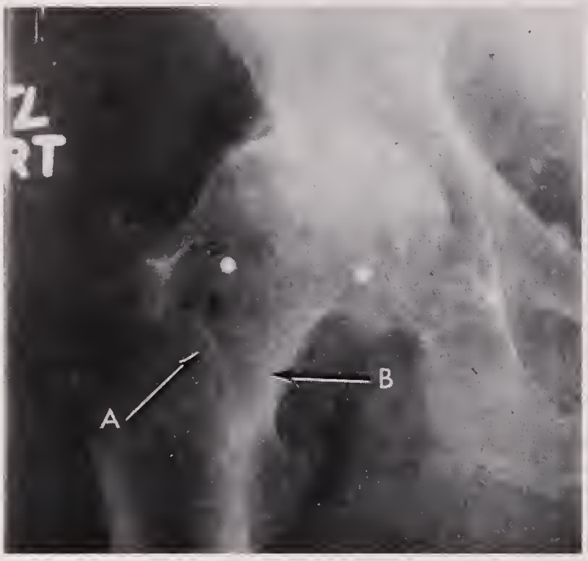

Fig. 1 Scout film with localization markers. (A) Reflection of capsule. (B) Potential space ideal for injection site.

a distinct radiographic pattern as opposed to an interstitial injection (Fig. 3). In addition to the film verification of the intracapsular portion of the needle, the hydraulic communication of the syringe in the joint space bounded by the slightly elastic capsule causes the plunger to be forced back after injection when hand pressure is removed.

Gradually, in increments of 5 cc to 10 cc, normal saline is injected into the joint with intermittent relief of pressure on the syringe. This causes alternating distention and decompression. A maximum of 50 cc of saline is injected, depending on the patient's tolerance of discomfort. Additional Polaroid exposures may be obtained to document the distention of the capsule (Fig. 4). Often, these later films show disappearance of linear radiolucencies which may be regarded as synechiae, although this is by no means definitely established (Figs. 2 & 4). The needle is removed at the moment of maximum distention. The patient is instructed and aided to walk immediately. Follow-up visits are requested at regular intervals.

DURATION OF RESULTS

Up to 3 mos.	*3 mos. -1 yr.*	*1 yr.*
19	21	27

Results

There were 76 patients treated by this method during a six-year period. This included 45 men and 31 women. Their ages ranged from 47 years to 83 years.

In four patients, both hips were treated. Retreatment was performed on 12 patients at intervals from one week to six months. The patients were referred from internists, general surgeons, rheumatologists and orthopedic surgeons. At first, all patients referred were treated. However, it soon became apparent that no enduring results could be anticipated in those individuals with severe degenerative hip changes, including either marked overgrowth of the femoral capital, fragmentation and partial resorption of the femoral capital or virtually complete resorption of the articular cartilage. Recently, approximately one half of those patients referred were rejected because of the severe anatomical distortions mentioned.

Tables 1 and 2 indicate the result of the injections and the duration of the relief of symptoms. Unfortunately, it is difficult to objectively measure the subjective quality and intensity of pain. This may be indirectly accomplished, however, by evaluating the ability of patients to perform routine daily tasks. Simple maneuvers, such as bending down to pick up an object or putting on shoes and tying the laces and the pain experienced during these attempts are measures of function. The need for supportive aids in walking, the ability to walk and the pain experienced during the attempt to assume an upright stance from sitting or lying also may be used to evaluate hip disability. Twenty-four hours after treatment, the patient is well aware of any improvement in terms of these daily functions.

Recently, we have been using the Harris[3] method for hip evaluation. This is a relatively objective approach for grading pain and dysfunction before and after treatment. With the number 100 arbitrarily assigned to the normal hip, those patients below a score of 50 were rejected. The treated patients were in the 50 to 70 range. The post-treatment scores of these selected patients range from 80 to 93. However, follow-up information on these few patients is inadequate for definitive interpretation of the value of this method in pre- and post-treatment evaluation.

In general, it seems that those patients who have at least mild improvement after the injection tend to maintain improved hip function with diminished pain for up to a year. As a rule, they then begin to experience a gradual deterioration of the joint status.

Complications

Except for moderate soreness for 24 hours, no significant complications have been encountered. Strict sterile technique has prevented infection. No deterioration of hip function or increase in pain attributable to the injection was noted.

Discussion

It is certain that although objective and subjective improvement in hip function is brought about by this method, significant structural change on this weight-bearing joint is not achieved. In view of the altered radiographic appearance of the joint space before, during and after the distention, it is appealing to postulate a mechanical disruption of internal adhesions by the applied force. This is partially supported by the change in the radiographs during the examination which was previously mentioned and illustrated (Figs. 2 & 4).

However, there is no anatomical verification of this theory at this time. Another attractive explanation suggests that the severe overdistention of the capsule partially denervates the normally sensitive synovial tissue, thereby blocking afferent pain impulses. Again, there is no proof of this interpretation. No radiographic deterioration of hips in successfully treated patients was detected. It is unlikely, therefore, that localized "Charcot-like" joints were created. The proper cause of the improvement of the treated joints has yet to be elucidated. Nevertheless, it

GUIDO PODRECCA, M.D., ***Springfield***

Cytology Program in the Private Practice of Greene County and Surrounding Area

A Survey

During a 12-year period (1960-1971), 228,400 cervical pap smears were collected by private physicians in their own offices. A few were from the city clinic, a Cancer Society program and small community hospitals. The smears were examined in our private laboratory. The overall number of women screened is not known. About 50% of them resided in the city of Springfield, Mo., which had a population of 98,000 in 1960 and 120,000 in 1970. The remaining 50% lived in the surrounding towns and counties, which have an estimated population of 150,000.

This study differs from others as follows:

1. It represents the private practice of medicine, not that of large medical centers or city clinics. It does not represent socialized medicine. No grants or organized efforts were involved.

2. Repeat smears before biopsies were kept at a minimum, since the patients were paying their own bills. Biopsies were suggested to discover and treat cancer, but not to study its epidemiology. They were carried out if the attending physician considered them of benefit to his patients but not to comply with the rules of a program.

3. The physicians were personally acquainted and had direct contact with their patients, the pathologists and the cytoscreeners.

4. Most histologic diagnoses were issued by pathologists who had not been involved with the cytologic screening. Therefore, the biopsy results were not biased.

5. The correlation between smears and biopsies was not manipulated. That is to say, the tissue diagnoses were tabulated as issued, without excluding those about which there was diagnostic disagreement or those whose biopsies were not fully adequate.

6. Most women were of Caucasian extraction, the nonwhite population in this area being very small.

7. The study was carried out without the help of a computer or the wisdom of a statistician. Personal time and finances were used, which greatly limited the data collecting possibilities.

During the 12 years, 617 malignancies and 187 dysplasias were found. Since the follow-up known to us was about 53%, we may presume that almost twice as many women had a pathologic condition. Table 1 shows the overall picture. The number of women screened not being

TABLE 1

During a 12-year period, 228,400 cervical pap smears were collected in the private offices of the physicians of Greene County and surrounding area and were screened. Even though the number of women involved was not known and the statistical analysis had to be related to the number of smears, the data obtained are similar to those in recent published results of surveys in which the number of women screened was known. Dr. Podrecca is in the private practice of pathology.

known, the incidence per thousand had to be related to the number of smears. A steady decline of positive smears, dysplasias and malignancies occurred through the year 1969. In 1970, there was a sharp increase, which only moderately diminished in 1971. It is believed that such increase was due to a larger than usual number of newly screened women and to the somewhat less strict criteria that are now applied to the diagnoses of dysplasia and in situ carcinoma.[1–5] It is to be noted that there was no increase in the incidence of invasive squamous cell carcinoma and adenocarcinoma. (A survey of the 1972 pap smears up to November 1 shows an incidence of positive smears of 0.59%.)

Table 2 correlates the positive pap smears to the biopsy diagnoses. It shows more biopsies than were performed in reality because it is based on the number of positive smears rather than on the number of biopsies, and some patients had more than one smear before surgery was carried out. For instance, if one patient had two smears, each of which was positive, and a single biopsy reported malignant tissue, this is recorded as two positive smears and two positive biopsies, meaning two positive smears with a positive biopsy.

The actual figures are as follows:

Smears	*Biopsies*
687 positive smears	617 malignancies
194 positive smears	187 dysplasias
130 positive smears	116 negative biopsies

We do not have data about false negative smears which, according to the information available, were negligible. Of the five Class V with negative biopsies, three were from two pregnant women. Even in retrospect, we were not sure we could differentiate malignant cells from trophoblastic cells. The attending physicians had been personally contacted and warned about the possibility of trophoblastic cells. (A few cases of in situ and invasive carcinoma of the cervix during pregnancy also were found. One pregnant patient with two Class V smears had a Class I smear about two months after delivery. Two years later, she had a Class III pap smear; after three months, she had a Class IV pap smear. She was referred to Ellis Fischel State Cancer Hospital. It is not known at this time if a biopsy has been carried out.) No further follow up is available in the other two negative Class V. We have seen several cases of positive pap smears, which needed more than one biopsy before the malignancy was finally discovered at times, in the vagina or vulva.

TABLE 2

HISTOLOGIC DIAGNOSES OF
1,011 POSITIVE SMEARS

Negative	*Dysplasia*	*In Situ*	*Invasive*	*Adeno Ca*
130	194	495	159	33
(12.8%)	(19.2%)	(48.9%)	(15.7%)	(3.2%)

Negative	*Dypslasia*	*In Situ*	*Invasive & Adeno Ca*
CLASS III 633 (62.6%)			
103	153	301	76
(16.2%)	(24.1%)	(47.5%)	(12.0%)
CLASS IV 300 (29.6%)			
22	40	165	73
(7.3%)	(13.3%)	(55.0%)	(24.3%)
CLASS V 78 (7.7%)			
5	1	29	43
(6.4%)	(1.3%)	(37.1%)	(55.1%)

Table 3 shows the changes in the pattern of the screening program which occurred between the first and the last years of the period. The total number of smears not only increased, but the emphasis shifted from the middle to the young and elderly ages. By comparing the number of malignancies discovered in 1960 to those discovered in 1971, one can appreciate that the changes, indeed, were fruitful. (The total number of smears is slightly less than given elsewhere, since in a few cases the age of the women was not known.)

Table 4 shows the number of pathologic conditions found in the various age groups. (We recently have had a positive smear with carcinoma in situ of the cervix in a 16-year-old girl at conization.) The youngest patients were two 19-year-olds with in situ carcinoma; one 25-year-old with invasive squamous cell carcinoma; one 25-year-old with adenocarcinoma of the endocervix.

Although our analysis has been based on the number of pap smears rather than on the number

of the screened population, the data derived are similar to those of publications in which the number of women involved was known.[5-8] Our tables show the peak incidence of carcinoma in situ to be in the 31-35 year group and that of invasive squamous cell carcinoma in the group over 61 years. This differs from the older statistics, which placed the peak incidence of in situ carcinoma at about 40 to 45 years and that of invasive carcinoma at about ten years later. It is similar, however, to those of more recent studies.[5-8] Perhaps, the reason is that, in the past, fewer smears were obtained in the younger and older ages. In our study, we could not find the minor, secondary peak of incidence of carcinoma in situ that others have described as occurring in the 50 to 60-year group.[6, 7]

By involving an ever increasing number of women, we hope that the screening program will show the gradual disappearance of invasive squamous cell carcinoma of the uterine cervix.

Acknowledgement: The author wishes to express appreciation to the attending physicians who collaborated by furnishing the requested data on their patients.

Joint Distention Arthrography

(Continued from page 607)

can be stated that in selected patients with partially incapacitating osteoarthritis of the hip, objective as well as subjective improvement may be afforded by this inexpensive, relatively risk free, simple procedure.

In those patients in whom medical management fails or who are incapacitated sufficiently to preclude major surgery and for those individuals unwilling to undergo operative correction, this therapeutic approach may offer at least temporary partial relief.

MSMA NEWS ROUND-UP

August, 1973

'Examiner system' needs M.D. leaders

Missouri communities have the opportunity to pdate and upgrade the anachronistic coroner sys- m under provisions of a law passed by the 1973 eneral Assembly

Supported by the Missouri State Medical Asso- ation, Senate Bill 122, which was recently signed y the Governor, establishes a "medical examiner ystem" in two Missouri counties and includes the echanism that would allow other counties in the ate to adopt the new system.

"It is hoped that our local Medical Societies ill lead the drive for implementing the medical xaminer system in their communities," stated ohn I. Matthews, M.D., chairman of the MSMA egislative Committee. "The provisions of this w, if pursued by physicians in each county, can ad to the replacement of the outdated coroner ystem by a modern medical examiner system, a uch needed change in our governmental setup."

Effective Sept. 28, the coroner's office in Greene nd Clay Counties will be replaced by a county edical examiner. The examiner MUST be a phy- cian.

Although the law applies only to these two counties at this time, provisions in the measure allow other counties in the state (either singly or jointly) and St. Louis City to adopt the medical examiner system by a majority vote of the electorate.

County Medical Societies are urged to contact County Court judges concerning the advantages of setting up the medical examiner system. The County Court can place the issue on the ballot.

Physicians are reminded that if the County Court believes an individual county is too small for a medical examiner, the law provides that two or more counties may combine efforts to obtain an examiner for the multi-county region.

The law gives medical examiners increased responsibilities in determining the cause of deaths which occur under violent or suspicious circumstances. It has been hailed by many as a step forward in modern law enforcement.

Physicians interested in leading the way for the establishment of a medical examiner system in their area should contact the MSMA Headquarters for further information.

Arthur W. Neilson, M.D., AMA Delegate, dies at age 66

Arthur W. Neilson, M.D.

Arthur W. Neilson, .D., 66, died July 8 at eaconess Hospital. One f Missouri's four dele- ates to the American Me- ical Association, Dr. eilson was a member of e AMA's Council on En- ironmental, Occupational nd Public Health. He was nown throughout Missouri s a conservationist and vironmentalist.

Dr. Neilson served as President of the St. Louis edical Society in 1958 and President of the staff of eaconess Hospital. He was a member of the Board f Trustees of Deaconess Hospital and served on the taff of St. Lukes and St. Johns Mercy Hospital. He as instrumental in the development of an affiliation etween the University of Missouri Medical School

Smallpox removed from list of mandatory vaccinations

A bill passed by the 1973 General Assembly and signed into law by Gov. Christopher Bond removes smallpox from the list of mandatory immunizations required for public school pupils in Missouri.

Physicians, of course, retain the option to vaccinate for smallpox, but it is no longer **required.**

Certain procedural precautions should be undertaken when administering smallpox vaccinations.

1. Physicians should obtain **informed consent** *from those who desire vaccination or those who the physician decides should be vaccinated.*

2. All physicians should be alert to the contraindications of smallpox vaccinations for infants up to one year old and infants, children and adults who have eczema, allergies or other dermatoses and children and adults with open wounds.

Eight anorectic drugs placed on Controlled Substance list

Eight anorectic drugs have recently been placed under regulations of federal and state Controlled Substances Acts according to final orders published in the Federal Register.

Placed in Schedule III of the Controlled Substance Act are:

* Benzphetamine—Marketed under the name of Didrex by Upjohn Company.

* Clortermine—New drug soon to be marketed under the name of Voranil by USV Pharmaceutical Corporation.

* Clorphentermine—Marketed under the name of Pre-Sate by Warner-Chilcott Laboratories.

* Mazindol—New drug to be marketed under the name of Sanorex by Sandoz Pharmaceutical.

* Phendimetrazine—Marketed under a variety of names by at least 20 companies, including Plegine by Ayerst Laboratories.

Anorectic drugs added to Schedule IV of the Controlled Substance Act are:

* Fenfluramine—New drug marketed under the name of Pondamin by A. B. Robins Company.

* Diethylpropion—Marketed under the name of Tepanil by Riker and as Tenuate by Merrill-National.

* Phentermine—Marketed under the name of Ionamin by Pennwalt.

In order to prescribe or dispense the above medications, physicians must be registered with the Federal Drug Enforcement Administration and the Missouri Division of Health. Also, effective Sept. 1, 1973, these drugs must be stored in accordance with Controlled Substances Regulations and all registrants required to keep records must take an inventory of stocks on hand on that date.

Prescriptions for these drugs must comply with the controlled prescriptions requirements: Name and address of patient; signature of prescriber (unless phoned in); prescriber's BNDD number and address; prescription dated on day prescribed.

Any prescriptions for these products issued before March 1, 1973, or prescriptions which have been refilled more than five times, may not be refilled after Sept. 1, 1973.

Dr. Neilson

CONTINUED

at Columbia and the Deaconess Hospital Residency program. He served as chairman of public relations for the St. Louis Medical Society for 25 years.

A dermatologist, Dr. Neilson attended Washington University, Ohio Wesleyan University and St. Louis University Medical School. He was an honorary member of the Missouri University Medical School Alumni Association, an honor member of the St. Louis Medical Society and a life member of the Southern Medical Association.

His father was the well-known internist Dr. Charles Hugh Neilson. He is survived by wife, Janet; five sons, Arthur W. Neilson, Jr., M.D., of Honolulu, Hawaii; Robert Neilson, Naval Air Station, Brunswick, Maine; Hugh Neilson, Dennie Neilson, and William Neilson, all of St. Louis; a daughter, Mrs. Janet Wells and a sister, Mrs. Reka Fisher, both of St. Louis.

Feds 'do their thing' with fee sign rules!

Physicians who express the belief that more government controls over medicine will result in even more confusion are probably smiling broadly over the administration of the regulation that doctors post fee schedule signs in their offices.

Under Phase 1, no fee signs were required. However, when Phase 2 came along, up went the signs. Then Phase 3 arrived and the signs could be taken down again.

Earlier this summer Phase 3½ went into effect and, of course, fee signs were again required to be posted — however, the signs had to be worded differently and had to be larger than the original Phase 2 signs.

Now Phase 4 is here!

You guessed it — the Cost of Living Council says that fee signs are **not required** *to be posted under Phase 4 guidelines.*

Physicians again regulated by Phase 3 price controls

Physicians and the rest of the health servic industry now are again operating, temporaril under Phase 3 mandatory price controls.

The Administration's July 19 order call for development of revised rules by the Healt Industry Advisory Committee, but at presen physicians are limited to a 2.5% annual fee i crease, provided it does not raise the profi margin.

Institutions can raise prices 2.5% withou notifying IRS, but must report charge increase between 2.5% and 6%; increases above 6% mus be approved by the Cost of Living Council.

The AMA and MSMA protested early thi year to President Nixon and the Cost of Livin Council that the Phase 3 controls discriminat against physicians.

The Administration's recent order was e fective retroactively to July 1 for the purpos of determining price increases under cost r imbursement contracts.

The Health Industry Advisory Committe was directed to develop detailed recommend tions to the Cost of Living Council "so th revised controls for hospitals and nursin homes can become effective no later than Oc 1."

The Cost of Living Council said it also wi consider revisions in the controls for phys cians, dentists, and other non-institutional car

Smallpox Law Changed

Gov. Christopher Bond signs a bill removing smallpox from the list of mandatory mmunizations required for public school pupils. Looking on are (left to right) Rep. es Langsford, Springfield; Lee H. Vensel, M.D., Springfield; Rep. Harold F. Reisch, olumbia; and Rep. Bill J. Crigler, Fayette. The three Representatives co-sponored the bill. Dr. Vensel appeared in behalf of the bill during hearings.

MSMA President protests standards for chiropractors

Proposed standards and regulations involving the inclusion of chiropractic services under Medicare were protested in a letter by MSMA President E. A. tricker to the U.S. Department of Health, Educaion and Welfare.

In the letter, Dr. Stricker said that although ublic Law 92-603 requires HEW to set "uniform ninimum standards" for chiropractors who would ractice under Medicare, the proposed regulations s published in the *Federal Register* are "insuficient standards."

Dr. Stricker also pointed out the sad irony in L 92-603. One section of the law demands the stablishment of PSROs to insure the highest deree of medicare care by M.D.s and D.O.s, while he section which includes chiropractors contains inimal requirements which can only serve to diinish the high quality of care for patients.

Specifically, the letter challenged the standard hich states a chiropractor is eligible under new edicare guidelines if he has been graduated from college of chiropractic. Dr. Stricker noted that one of the "colleges" are accredited and that the .S. Office of Education recently again denied acreditation because the applicants failed to comply ith a number of standards. "Is it a 'minimum tandard' or 'non-standard' to require graduation rom such a college?," Dr. Stricker asked.

The letter also stated that qualified physicians must determine if an X-ray taken by a chiropractor emonstrates a subluxation of the spine before payment can be made.

Seminars on health insurance planned for office personnel

The most effective way to file insurance claims and the problems experienced with commercial insurance companies will be the main topics at the fourth annual Seminar on Health Insurance Problems.

Sponsored by the Missouri Hospital Association and the Health Insurance Council, the Seminar is open to physicians' office personnel who are involved in insurance claim work.

For easy access, five meetings will be held in various cities. The $6 registration fee covers a coffee break and lunch.

The meetings will be held:

Sept. 27 — Ramada Inn East, Kansas City
Oct. 4 — Holiday Inn, Springfield
Oct. 11 — Ramada Inn, Jefferson City
Oct. 17 — Sheraton Inn, St. Louis
Oct. 18 — Holiday Inn, Cape Girardeau

To enroll office personnel in the seminar, fill out the following information form and mail it to the Missouri Hospital Association, P.O. Box 1044, Jefferson City, Mo. 65101. Additional information will be furnished by the MHA.

Please send registration information for the

Seminar on Health Insurance Problems

AMA acts on PSRO'S, FDA rules

The AMA House of Delegates — confronted with the largest business agenda in the Association's history — acted on a wide range of issues during the 122nd Annual Convention in New York.

Delegates selected Malcom C. Todd, M.D., California, as President-Elect. Others elected or re-elected were E. Bryce Robinson, M.D., Alabama, Vice President; Tom E. Nesbitt, M.D., Tennessee. Speaker of the House; William Y. Rial, M.D., Pennsylvania, Vice Speaker; and John H. Budd, M.D., Ohio, Richard E. Palmer, M.D., Virginia, James H. Sammons, M.D., Texas, and Kenneth C. Sawyer, M.D., Colorado, Trustees.

A brief summary of House action follows:

Physicians and the Government

PSRO's: House passed three Resolutions which (1) stated that only review organizations made up of practicing physicians can provide proper review: (2) requested that rules be written so existing successful review organizations be continued rather than implementing costly new agencies; (3) recognized that repeal or modification of PSRO legislation ultimately may be required to insure high quality of patient care.

Wage-Price Controls: Resolved that the AMA continue to work by all lawful means to assure non-discriminatory treatment for physicians under Economic Stabilization Programs.

FDA Drug Regulations: Directed AMA to (1) protest current and proposed FDA regulatory activities which restrict use of prescription drug to "official labelling;" (2) study possibility of proposing modivications to Food, Drug and Cosmetic Act; (3) work closely with FDA to develop effective methods for evaluating durgs used primarily to alleviate subjective symptoms, or drugs for which controlled clinical studies seem inappropriate; (4) develop system of communicating views of practicing physician when action is proposed which may remove frequently prescribed drug from market.

Physicians, Hospitals, Medical Schools

Institutional Licensure: House called for AMA to oppose extension of institutional licensure in lieu of individual professional licensure to physicians and nurses.

Quality Assurance Program: Adopted report stating reservations about QAP (peer review of hospital care and utilization) and recommended AMA offer suggestions to American Hospital Association. Recommended testing QAP in limited number of hospitals. Did NOT endorse QAP.

Support for Medical Staffs: Opposed changes in medical staff bylaws by hospital boards which usurp perrogatives of medical staffs.

Family Medicine: Emphasized need to increase opportunities for medical students to obtain exposure to family medicine.

Physician Distribution by Specialty: Declared (1) AMA should adopt immediately, publicize widely and promote a goal to have at least 50% of all medical graduates enter resident training in primary care specialties in coming years; (2) need for numbers and type of physicians should be monitored regularly with report to House.

Physicians and the Public

Emergency Telephone Number: Directs AMA to support current efforts to set up #911 as nationwide emergency telephone number.

Temporary Licensure in Medically-Deprived Areas: Encouraged state medical societies to support laws to permit out-of-state physicians to practice temporarily in areas of medical need.

Internal Matters

Unions: Reaffirmed tradition of the medical profession of not withholding services and opposed unionism among self-employed physicians. Recommended AMA assist physicians in employment situations.

Intern-Residents: Approved by-law change to seat resident-intern member on Council on Medical Service and Council on Medical Education.

Membership-Dues: (1) Delinquency date for remittance of AMA dues changed from June 1 to April 30; (2) requirement that members who have been dropped for non-payment of dues must pay one year's past dues is eliminated.;

Abortions: Reaffirmed AMA policy; "Abortion is a medical procedure and should be performed only by a duly licensed physician and surgeon in accredited hospitals acting only after consultation with two other physicians, and in conformance with standards of good medical practice and the Medical Practice of his state. Neither physician, hospital, nor hospital personnel shall be required to perform any act violative of good medical judgement or personally held moral principles."

Missouri Notes

Hector W. Benoit, Jr., M.D., of Kansas City, a Past President of the Missouri State Medical Association and a Missouri delegate to the AMA since 1968, was re-elected to the AMA Council on Medical Service.

Dr. Benoit was first elected to the Council in 1972 to complete an unexpired term. Dr. Benoit also serves on the AMA Advisory Committee on PSRO.

John W. Fries, M.D., of St. Louis, was one of four M.D.s to win a Master Award in the American Physician Art Association exhibit at New York. To qualify for a Master Award, the physician-artist won first place in previous exhibits.

A substitute Resolution for Resolution 8, introduced by the Missouri Delegation, was adopted by the AMA House. The Substitute resolves; "That the Officers and Board of Trustees of the AMA take steps to increase the capacity of the AMA to speak with authority in representing the medical profession and the public in the socioeconomic areas."

Loren Washburn, M.D., of Versailles, Missouri Delegate to AMA, served on Reference Committee C—Medical Education, which considered 12 Reports and 17 Resolutions.

President's Message

Now that the dust has settled over the 122nd American Medical Association's convention in New York City, we find that about 9,000 physicians and an equal number of guests and paramedical members attended the scientific exhibits and meetings.

The AMA House of Delegates took action on the largest volume of business in its history. In a significant move to open the door to house staff in organized medicine, the House of Delegates voted to give intern-residents representation on two councils that play major roles in the lives of young physicians. They were given seats on the Council on Medical Education and the Council on Medical Services. An intern-resident member was seated last year on the Council on Long Range Planning and Development.

E. A. Stricker, M.D.

Another subject which was much "cussed and discussed" was PSRO. While many resolutions to repeal or modify the PSRO law sparked energetic discussion in reference committee hearings and in debate on the floor, delegates finally agreed that the AMA should continue its major role in implementing the PSRO law.

At our opening meeting of state presidents, Dr. William I. Bauer gave the latest status of PSRO. He told us that by mid-July, the state medical organizations will receive a packet of material from the federal agency containing information for designating PSRO areas. He also expressed the hope that doctors would continue to take the lead in implementing this law, rather than have nonmedical personnel make the regulations for them.

Missouri's executive staff, Delegates and officers maintained a hospitality room in the convention's hotel headquarters as a convenient place for any and all M.D.s to meet and visit and plan and as a place to return the hospitality of other state delegations. The Delegates and Alternates who represent Missouri at the AMA are conscientious and do a fine job. We can all be proud of them.

One who served his colleagues in this capacity for many years was the late Dr. Arthur W. Neilson of St. Louis. We will all miss his leadership and guidance.

Dr. Hector Benoit of Kansas City won reelection to the Council on Medical Services and will ably represent us at the national level.

Must vasodilators and therapy for other diseases come into conflict?

not if the vasodilator is

VASODILAN®

(ISOXSUPRINE HCl)

the compatible vasodilator… no treatment conflicts reported

The cerebral or peripheral vascular disease patient often has coexisting disease[1] which calls for another drug along with his vasodilator. It may be a hypoglycemic, miotic, antihypertensive, diuretic, anticoagulant, corticosteroid, or coronary vasodilator.

Vasodilan is not incompatible with any of these drugs—no treatment conflict has been reported. And, unlike other vasodilators, Vasodilan has not been reported to affect carbohydrate metabolism, liver function, or intraocular pressure—or to complicate treatment of diabetes, hypertension, peptic ulcer, glaucoma, or liver disease.

In fact, there are no known contraindications to the use of Vasodilan in recommended oral doses, other than that it should not be given in the presence of frank arterial bleeding or immediately postpartum.

Indications: Based on a review of this drug by the National Academy of Sciences-National Research Council and/or other information, the FDA has classified the indications as follows:

Possibly Effective:

1. For the relief of symptoms associated with cerebral vascular insufficiency.
2. In peripheral vascular disease of arteriosclerosis obliterans, thromboangiitis obliterans (Buerger's Disease) and Raynaud's disease.
3. Threatened abortion.

Final classification of the less-than-effective indications requires further investigation.

Composition: Vasodilan tablets, isoxsuprine HCl, 10 mg. and 20 mg.

Dosage and Administration: 10 to 20 mg. three or four times daily.

Contraindications and Cautions: There are no known contraindications to oral use when administered in recommended doses. Should not be given immediately postpartum or in the presence of arterial bleeding.

Adverse Reactions: On rare occasions, oral administration of the drug has been associated in time with the occurrence of severe rash. When rash appears, the drug should be discontinued. Occasional overdosage effects such as transient palpitation or dizziness are usually controlled by reducing the dose.

Supplied: Tablets, 10 mg.—bottles of 100, 1000, 5000 and Unit Dose; 20 mg.—bottles of 100, 500 and Unit Dose.

Woman's Auxiliary

50th Anniversary

I am writing en route from the Annual Convention of the AMA and the AMA Woman's Auxiliary in New York City on June 25-28 to report on highlights of this outstanding national meeting at which the MSMA Woman's Auxiliary again was recognized.

As always, I was proud to be a part of our Missouri Delegation. The Missouri Auxiliary is regarded nationally as being "right at the top" in our accomplishments and efforts toward improving the quality of health care. Also, we were awarded a certificate for increasing our membership in 1972-1973.

The AMA Annual Convention is a highlight of our auxiliary year. It provides a special opportunity to learn about the projects and accomplishments of all the other state auxiliaries and to compare notes, so to speak. It is an inspiring experience. We also learn from the distinguished speakers who are featured.

It was a privilege to hear Harry Schwartz, Ph.D., who spoke to the House of Delegates. A member of the Editorial Board of the *New York Times*, Mr. Schwartz is the author of "The Case for American Medicine." He stated that if the revolutionary proposals of the most radical critics for transforming American Medicine are adopted, medical care in this country will cost more but provide less care for millions of the aged and poor. Everyone interested in medicine should read his book.

Mrs. Charles R. Willman
President

Mrs. Robert Beckley, retiring President of the AMA Woman's Auxiliary, presented a check for $965,256 to Kenneth C. Sawyer, M.D., AMA-ERF president. This check represented the largest amount of money every raised by the Woman's Auxiliary and contributed to this important fund. Our goal for 1973-1974 is $1 million, and we will need the help of every doctor and doctor's wife to reach that goal.

Mrs. Willard Scrivner of East St. Louis, Ill. was installed as President of the AMA Woman's Auxiliary for 1973-1974. Many of you met Mrs. Scrivner when she was a distinguished guest at our MSMA Auxiliary Convention in St. Louis this spring. She asked us all to assume the many tasks ahead and to aid the medical profession in its objectives and efforts for improvement in the quality of life through better health care for every American.

Miss Margaret Wolfe, who retired on July 1, was honored for her 31 years of service as executive secretary of the AMA Woman's Auxiliary. She received a lovely gold watch as a token of appreciation.

The Missouri Delegation held its breakfast on June 25 at the Waldorf-Astoria Hotel with 16 Delegates, Alternates and guests attending. Once again, I and the other members of the Woman's Auxiliary express our appreciation for the interest shown by the entire Delegation.

EDITORIAL

CHANGE IS ETERNAL!

While most of us would agree with the above, the majority of physicians tend to be passive rather than active in what is going on in the world around them. During the past year, the St. Louis County Medical Society has shown change in that the meeting pattern reverted to monthly gatherings, most of which were well attended, especially where the personal interests of the physicians were concerned.

In hospital corridors, social gatherings and wherever physicians meet, there is talk of "socialized medicine, the changing order of things, take-over by universities, HMOs and now HR-1." My personal experience in such gatherings has been only to hear various mutterings from physicians, sometimes regretful and sometimes angry. "It is easy to criticize Senator Kennedy and others seeking social change, but mere disagreement is in no way constructive or helpful."

It is a rare experience for doctors to get together and help make the wheel go in the direction it should, namely, in such a way that it will benefit not only the practice of medicine but directly benefit the community.

Many doctors have become too busy to attend to the matters above, and to a large degree have abdicated these functions to social scientists and politicians. Texas Congressman Burleson recently observed that doctors do not write their congressmen. The legislators ARE interested! In addition to writing congressmen, much more would be accomplished by active participation in your medical society so that knowledgeable forces could guide and assist those concerned with health care problems.

It is true that the American physician is held in high esteem by the community. This status must be preserved and we physicians can help preserve it by moving in a positive direction. We must not ignore the problems that exist in the practice of medicine. It will only antagonize the consumer rather than help the cause of the physician if we are obstructive rather than constructive.

Let us, as physicians, unite and use the already present and potentially powerful frameworks of the medical societies, both local and national, to express our views. Since change IS eternal, let us, as interested and dedicated physicians, be forces in change for the better, not only for our profession, but for all people.

LETTERS to the Editor

To the Editor:

I am editing a book on renowned and notable physicians and their faiths.

I am interested in obtaining contributors who have a special knowledge of the faith or religion or both of one or more notable and outstanding physicians. I am considering such physicians as Sir William Osler and Sir William Fleming. However, the notable physicians could still be alive.

Anyone interested in this project or who would suggest renowned physicians to write about may contact me at the following address:

Claude A. Frazier, M.D.

County Society News

FIRST DISTRICT

COUNCILOR
JOHN N. MARTIN, M.D., ST. JOSEPH

Buchanan County Medical Society

Sixty-two physicians and dentists from St. Joseph and Northwest Missouri attended the 21st consecutive annual joint meeting of the Buchanan County Medical Society and Northwest Dental Society on May 2.

The two organizations' presidents, Elza F. Butler, M.D. and Donald W. Barr, D.D.S., presided jointly at the dinner and program held at the St. Joseph Country Club.

The speaker was Ronald Gier, D.D.S., chairman of the Department of Oral Diagnosis of the University of Missouri-Kansas City Dental School. He presented a paper on "Pain Evaluation and Treatment."

G. Tyson Carpenter, M.D., *Secretary*

SIXTH DISTRICT

COUNCILOR
WILLIAM D. BRADSHAW, M.D., CLINTON

West Central Missouri Medical Society

The spring meeting of the West Central Missouri Medical Society was held at Irene's Harvest House in Harrisonville on June 7.

Members present were Drs. Curtis W. Long, President; John Torontow, Secretary; Alfred W. Ecklund, Robert D. Henry, Robert L. Wheeler and Edward S. Jones, Cass County; Robert L. Magee, Cedar County; and Arthur L. Hansen, Bates County.

The speaker for the evening was Dr. Robert Raich from St. Luke's Hospital in Kansas City, who gave an excellent talk on "Newer Aspects of Drug Therapy in Tuberculosis."

President Long called the business meeting to order. There was a discussion of problems associated with the poor delegate attendance at the MSMA Annual Session this year. It was the feeling of the group that one of the problems associated with attendance at the St. Louis meeting is that St. Louis is a considerable distance from the Medical Society area. Some members voiced the feeling that they would like to see the convention held at a more central location, if possible.

The Society decided to remove itself from activities associated with the Mid-Missouri Comprehensive Health Care Planning Unit in Kansas City. Also, there was a discussion regarding the possibility of accepting Osteopathic members into the Society. It was pointed out that a Bylaws change would be necessary and the general feeling of the membership is that they do not desire to make this change at this time.

There being no further business, the meeting was adjourned.

R. John Torontow, M.D., *Secretary*

Annual Congress on Occupational Health

The 33rd Annual Congress on Occupational Health will be held at The Benjamin Franklin Hotel in Philadelphia on September 17-18.

The Congress will be cosponsored by the AMA Department of Environmental, Public and Occupational Health; American College of Radiology; and National Institute for Occupational Safety and Health, U. S. Department of Health, Education and Welfare.

Russell B. Roth, M.D., President of the American Medical Association, will deliver the keynote address at 9 AM on September 17.

Arthur W. Neilson, Sr., M.D., St. Louis, will preside at the session at 1 PM on September 17. He is a member of the AMA Council on Environmental, Occupational and Public Health.

The distinguished guest lecture will be delivered at 3:15 PM on September 18 by Theodore F. Hatch, Sc.D., Emeritus Professor, University of Pittsburgh.

The Physician's Award Luncheon will be held at 12:15 PM on September 18.

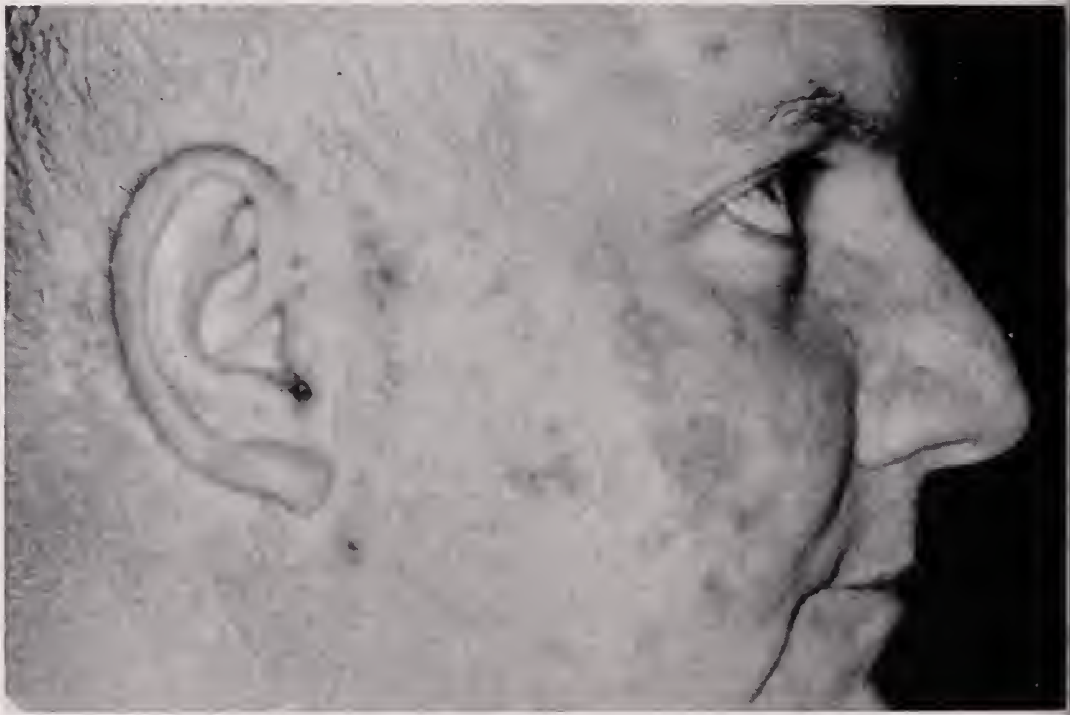
The Congress Program is acceptable for credit toward AMA Physician's Recognition Award and for 12 elective hours by the AAFP.

Advance registrations are $25 for AMA members or industrial nurses, $15 for medical students and $35 for all others. Wives of registrants are admitted free. Registrations should be addressed to Department of Environmental, Public and Occupational Health, AMA, 535 N. Dearborn, Chicago, Ill. 60610.

What's on you patient's face...

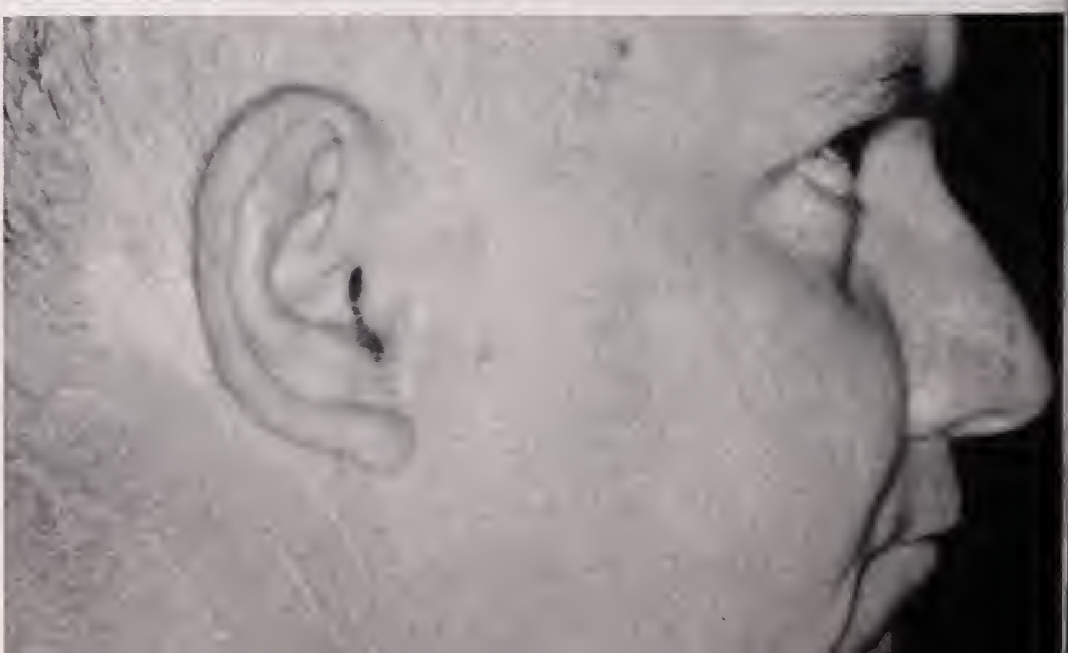
may be more important than his chief complaint

Patient P.T.* seen on 3/29/67 shows typical lesions of moderately severe keratoses. Note residual scarring on ridge of nose from previous cryosurgical and electrosurgical procedures.



Patient P.T.* seen on 6/12/67, seven weeks after discontinuation of 5% FU cream. Reaction has subsided. Residual scarring not seen except that due to prior surgery. Inflammation has cleared and face is clear of keratotic lesions.

*Data on file, Hoffmann-La Roche Inc., Nutley, N.J



he lesions on his face re solar/actinic– -called "senile" keratoses... nd they may be premalignant.

lar, actinic or senile keratoses

se lesions may be called by several names, but they
lly can be identified by the following characteris-
The typical lesion is flat or slightly elevated, of a
nish or reddish color, papular, dry, rough, adherent
sharply defined. They commonly occur as multiple
ns, chiefly on the exposed portions of the skin.

quence of therapy– ectivity of response

r several days of therapy with Efudex® (fluorouracil),
hema may begin to appear in the area of the lesions;
reaction usually reaches its height of unsightliness
discomfort within two weeks, declining after dis-
inuation of therapy. This reaction occurs in affected
s. Since the response is so predictable, lesions that
ot respond should be biopsied.

ceptable results

tment with Efudex provides highly favorable cos-
c results. Incidence of scarring is low. This is par-
larly important with multiple facial lesions. Efudex
ld be applied with care near the eyes, nose and mouth.

Before prescribing, please consult complete product information, a summary of which follows:

Indications: Multiple actinic or solar keratoses.

Contraindications: Patients with known hypersensitivity to any of its components.

Warnings: If occlusive dressing used, may increase inflammatory reactions in adjacent normal skin. Avoid prolonged exposure to ultraviolet rays. Safe use in pregnancy not established.

Precautions: If applied with fingers, wash hands immediately. Apply with care near eyes, nose and mouth. Lesions failing to respond or recurring should be biopsied.

Adverse Reactions: Local—pain, pruritus, hyperpigmentation and burning at application site most frequent; also dermatitis, scarring, soreness and tenderness. Also reported—insomnia, stomatitis, suppuration, scaling, swelling, irritability, medicinal taste, photosensitivity, lacrimation, leukocytosis, thrombocytopenia, toxic granulation and eosinophilia.

Dosage and Administration: Apply sufficient quantity to cover lesion twice daily with nonmetal applicator or suitable glove. Usual duration of therapy is 2 to 4 weeks.

How Supplied: Solution, 10-ml drop dispensers—containing 2% or 5% fluorouracil on a weight/weight basis, compounded with propylene glycol, tris(hydroxymethyl)-aminomethane, hydroxypropyl cellulose, parabens (methyl and propyl) and disodium edetate.

Cream, 25-Gm tubes—containing 5% fluorouracil in a vanishing cream base consisting of white petrolatum, stearyl alcohol, propylene glycol, polysorbate 60 and parabens (methyl and propyl).

Morton P. Hanet, M.D., 415 E. 63rd, St. Louis, a graduate of George Washington University, 1951; member Jackson County Medical Society; age 46; died June 15, 1973.

James G. Montgomery, M.D., 310 W. 49th, Kansas City, a graduate of Rush Medical College, 1913; member Jackson County Medical Society, age 90; died June 17, 1973.

William J. Shaw, M.D., Fayette, a graduate of the University of Nebraska, 1925; member Howard County Medical Society; age 81; died June 22, 1973.

Robert F. Hickey, M.D., 15 Cricklewood Pl., St. Louis, a graduate of St. Louis University, 1926; member St. Louis Medical Society; age 72; died June 25, 1973.

Luke A. Knese, M.D., 31271 Paseo Sereno, San Juan Capistrano, Calif., a graduate of St. Louis University, 1936; member St. Louis Medical Society; age 61; died June 27, 1973.

From the Medical Schools

(Continued from page 595)

Symphony Hall. Conferral of degrees was made by Rev. Paul C. Reinert, S.J., University president, who presided at the graduation exercises. Dr. Theodore A. Cooper, director of the National Heart and Lung Institute of the Department of Health Education and Welfare's National Institutes of Health, who spoke on "Precious Life and Costly Care" received both the M.D. and Ph.D. degree in physiology at St. Louis University. He also was the recipient of the alumni merit award in medicine conferred by St. Louis University during Founders Week in 1972.

Dr. Natalie Ann Connors, assistant professor of anatomy and Dr. Arthur E. McElfresh, Jr., professor and chairman of the Department of Pediatrics at the School of Medicine, were named the winners of the Golden Apple Awards for the best teachers.

Dr. Connors was chosen as the best teacher for the freshman and sophomore years of study while Dr. McElfresh was selected as the best teacher for the clinical years of study.

The 1973 graduating class gave the School an American College of Physicians New Medical Skills Library. The audiovisual teaching tool has a film viewer and book which can be used by the medical students and interns.

Dr. Philip A. Katzman attended the First Symposium on Ribosomes and Ribonucleic Acid Metabolism held at Smolenice Castle, Czechoslavakia on June 17-23. The symposium was sponsored by the Biological Instiute of the Slovak Academy of Sciences in Bratislavia. Dr. Katzman presented a paper titled "Effect of Adenovirus 2 Infection of KB Cells on the Synthesis and Methylation of rRNA and tRNA. Theodore W. Munns was co-author.

Many members of the biochemistry department attended the International Congress of Biochemistry in Stockholm July 1-7. Scientists who presented papers included Dr. Robert E. Olson, Dr. Ronald S. Cockrell, Graduate fellows Michael G. Douglas and William P. Dubinsky, Dr. Carmine J. Coscia, Dr. William H. Elliott and Dr. Katzman. Dr. Elliott was the recipient of a travel grant by the American Society of Biological Chemists which enabled him to attend the Congress and also visit laboratories in Glasgow, Edinburgh, London and Paris. Dr. Max K. Horwitt is chairman of the International Symposium on Vitamin E scheduled to be held in Minneapolis on September 26-27.

The Council Reports

(*Continued from page 591*)

did see their elected officials or their legislative aides to indicate to them that medicine's views on PSRO should be given attention and informational material was left with them. After looking at the material and at the law, it is hoped that they would be willing to contact HEW Secretary Weinberger. Dr. Benoit stated that he felt more formal trips to Washington by representatives of MSMA with better preparation, to the extent of having luncheons and meetings with the Missouri elected officials, should be looked at more than in the past.

Dr. Benoit, as a member of the AMA Council on Medical Service, reported on the activities of that Council. The Council had a meeting in Washington with people from the Bureau of Health Insurance and went over such problems as reimbursements under Medicare and Medicaid; the role which they visualize the physician assistant has; etc. Another matter discussed quite extensively has to do with including all people on dialysis under Medicare. A lot of the input that the Bureau of Health Insurance had on this matter was from an ad hoc committee of the National Kidney Foundation. We reviewed some of the reports having to do with this program. The Council on Medical Service took strong exception to the per capitation concept with the basic philosophy being that what is really different in chronic renal dialysis than other diseases such as diabetes, arthritis, etc. The Bureau of Health Insurance would have the sole power to certify and recertify the centers. Any patient not considered as a potential transplant candidate could not be on the program. The program called for extremely elaborate review mechanisms on a local, regional and national basis. Appropriate letters were sent to BHI and Secretary Weinberger regarding this proposal.

Lengthy discussion followed in regard to Dr. Benoit's report. Many questions arose regarding the Health Care Foundation and PSRO. Dr. Benoit stated that a hospital will not qualify as a PSRO, no matter how large it is. He stated that his personal goals for the HCF regarding PSRO would be for the HCF to act as an umbrella organization and become the contracting agency with HEW to see that PSRO is done right in Missouri. He feels that the local review areas of HCF should be able to qualify as separate PSROs. Dr. Benoit stated that there would be a State Advisory Council to serve as a second step between what goes on in a local PSRO and the National Advisory Council. No PSRO will be approved unless at least 50% of the physicians in the area agree to it. However, the review process will be 100%.

PHONE 816-221-0206

Dr. Benoit then called attention to Intermediary Letter #10 which calls for establishment of preadmission certification on all beneficiaries under SSA Health Care Programs in every hospital in the country by July 1, 1973. He said that he was told that this is only an advance copy and was directed to the Regional Offices for discussion.

Dr. Benoit said that the Health Care Foundation is writing every member of the Missouri delegation in Congress, pointing out what the PSRO law calls for, what the problems are and what the HCF has to offer to try to implement the law.

It was suggested that along with the legislators being educated, the MSMA should be educating the physicians, since many aspects of this law are not clear to them.

Mr. Mortenson indicated that a bulletin that came to the AMA Office just prior to the Council Meeting gave the names of the physicians appointed to the National Advisory Council on PSRO. He stated that at least four of these individuals are strong friends of organized medicine.

Dr. Cope pointed out that during the trip to Washington, they were assured that probably no regulations concerning PSRO would be forthcoming until after the program is well underway.

Dr. Chandler thanked Dr. Benoit for bringing the Council up to date on the various activities.

REPORT OF THE MISSOURI DIVISION OF HEALTH

Dr. Domke indicated that most of those present were acquainted with the "Icepick" Program of the Division of Health. He stated that the State Board of Health has taken the position that the Hospital Discharge Data Program should be a required activity and that the program should be carefully developed in cooperation with MSMA, MAOPS, HCF and the Hospital Association. Dr. Domke said that the Board of Health would like to get a system which will not lead to duplication or conflict with any other system being used. He stated there are demands for good hospital use data and this program can be developed to provide the information that users and providers need without having conflicting systems. He indicated that the Board would like to have providers and users participate in the design of the program. Dr. Domke said that presently, 80% of the hospitals and 65% of the discharges in the state in the program are on a voluntary basis. He stated that the hospital associations are eager to see a system that will avoid duplication and that the present "Icepick" Program probably is not sufficient for most hospitals and the medical profession. The only additional cost involved would be for providing the data on the face sheet of a chart. He indicated that we have a poor impression of what is going on in hospital utilization in the state, primarily because the "Icepick" Program has almost 100% participation in rural areas, but does not have good participation in the metropolitan areas.

Dr. Domke stated that the Board of Health was asking participation and review to see if we can have a single state system that would be satisfactory to providers as well as economical in getting the information out.

Mr. McIntyre asked that since this program would be made mandatory, if there would be any additional cost to hospitals in supplying this information. Dr. Domke stated that the present program is funded out of their general fund. Basically, the information required would be face sheet information and the Division of Health would provide forms if hospitals wanted them, but they would take the information in any form. Dr. Chandler stated that Dr. Domke had written a letter asking for the views of MSMA in regard to this program and he did not see that this required any action.

Dr. Domke reported that the bill deleting mandatory smallpox vaccination from state statutes had been sent to the Governor. He stated that Senate Bill #57, which calls for regulation of ambulances, is awaiting final passage.

Dr. Domke said that he would like to call the Council's attention to Senate Bill #103, which calls for a Division of Developmental Disabilities for the mentally retarded. The purposes would be to provide leadership in the planning, operation and evaluation of all programs for the developmentally disabled and to establish priorities and use funds to assure the orderly development of a statewide comprehensive network of services for them. He indicated that perhaps the bill should have attention from the Legislative Committee.

REPORT OF THE LEGISLATIVE COMMITTEE

Dr. Matthews presented a list of favorable Senate bills and Senate bills of interest that the Legislative Committee had been following. Dr. Matthews also presented a list of favorable House bills and House bills of interest to the Council. Dr. Matthews informed the Council that several House bills had been stricken from the calendar.

Dr. Matthews stated that Dr. Domke had brought up Senate Bill #103 and that the Committee will look into it further and try to get an opinion about the bill.

Dr. Matthews stated that he would like to extend congratulations to the staff who have worked hard and long this session because it looks as if this will be a most productive year.

Motion was made by Dr. Hetlage to accept this report with commendation. Motion was seconded and carried.

CANCER RESEARCH CENTER

Dr. William Donegan of the Cancer Research Center indicated that he appreciated the privilege of bringing before the Council the proposal by the Center for "Breast Cancer Detection Projects" and asked for MSMA approval and support.

This project is sponsored by the National American Cancer Society and the National Cancer Institute. Facilities will be established to provide a comprehensive screening examination for asymptomatic women at no cost to them using physical examination, mammography and thermography. Any individual with suspicious findings is referred to her family physician or a physician of her choice for definitive diagnosis and treatment. Dr. Donegan stated that an examination of this type can detect breast cancer early enough to effect a cure rate. He indicated that this type of examination has been tried before on a limited basis and seems to work.

Dr. Cope asked about the cost of the project. Dr. Donegan indicated that he was not sure as to the specific cost, but that it had been worked out at the National Cancer Institute. Dr. Stricker asked how often a woman should have one of these examinations. Dr. Donegan indicated it probably would be annually.

Motion was made by Dr. Hetlage to approve the program as outlined. The motion was seconded by Dr. Bach and carried.

MATTERS REFERRED TO THE COUNCIL BY THE 1973 HOUSE OF DELEGATES

Resolution regarding endorsement of American Physiological Society request for a Commemorative Stamp honoring William Beaumont, M.D.—Dr. Chandler indicated that the necessary correspondence had been sent to the Postmaster General.

Resolution regarding Bert Thomas—Mr. McIntyre reported on this in the Executive Secretary's report.

Resolution regarding M. Pinson Neal, M.D.—Copy of resolution has been sent to Dr. Neal.

Resolution #1—Emergency Medical Services—Called for President of MSMA to appoint ad hoc committee to work with organizations in this area. Dr. Chandler reported that we have an Ad Hoc Committee on Emergency Medical Services under the Public Affairs Commission, appointed by the Chairman of that Commission, and he would like to recommend to the President, subject to Council approval, that this present committee be reappointed. This recommendation was given Council approval.

Resolution #5—Medicredit Legislation—Correspondence has been sent to Dr. Howard of the AMA and to our Congressmen.

Resolution #9—Health and Hospital Insurance for Newborn—The Chairman referred this to the Legislative Committee for study and recommendations.

Resolution #13—Speaker's Qualifications—Mr. Noble pointed out that this would require a constitutional amendment. The Chairman referred this resolution to the Committee on Constitution and Bylaws.

Resolution #18—Insurance Claim Forms—The Chairman reported that this resolution has been sent to HIC and to the AMA Council on Medical Service, but a reply has not been received from them.

Resolution #19—Committee to Study Midwifery—The Chairman indicated that a committee had been appointed.

Resolution #20—Funds for MMPAC, to be used for educational purposes only—The Chairman indicated that this would be turned over to the Finance Committee to find a way to obtain the money.

Resolution #22—Exclusion of Regional Medical Programs from the Federal Budget—This resolution has been sent to the Missouri Congressional delegation.

Resolution #32—Regulation of Missouri Medical Service—The Chairman reported that a copy of the resolution has been sent to the Governor and to all members of the Missouri General Assembly.

Resolution #33—Introduction of Resolutions—Mr. Fox reported that this had been discussed at a joint

meeting of the Commission on Continuing Education and Commission on Interspecialty Medicine as it would relate to the necessity of changing the time schedule for the Annual Session. He indicated that proposed time changes had been submitted to the joint meeting of the commissions. Mr. McIntyre reported that this had been discussed thoroughly and the entire group felt that without experiencing what might happen to the Annual Session time schedule, that, perhaps, it would be better to leave the time schedule as it is for another year. It was pointed out that a full Commission report would be given later in the meeting and that no decision or recommendation be made until that time.

Dr. Chandler stated that, perhaps, it would be a good idea to move the Council Meeting to 3 PM on Wednesday afternoon at the 1974 Annual Session. This had been suggested in the proposed time schedule given to the meeting of the joint Commissions.

Motion was made by Dr. Franklin that the Council Meeting on Wednesday afternoon of the Annual Session be moved to 3 PM. The motion was seconded and carried.

REPORT OF THE MEMBERSHIP COMMITTEE

Dr. Martin reported that the Membership Committee had met and the areas discussed were in three parts: (1) Projects for Immediate Implementation; (2) Study of Special Projects; and (3) MMPAC Educational Projects. Those items for immediate implementation are as follows: (1) Thank you letters to new and renewing members; (2) Letter urging reconsideration to physicians not renewing MSMA or AMA membership by July 1; (3) Statewide rural membership campaign from state level; (4) MSMA benefits brochure for present members, new members and nonrenewing members; (5) Welcome letter from state level to interns and residents, return would be to local societies; (6) Large component societies encouraged to undertake "person-to-person" campaign with I and R. This is being done in Kansas City and St. Louis, but, perhaps, the state might offer assistance to Boone County.

Special Projects included (1) Composition of a slide and script "road show" on MSMA/AMA benefits for use by Councilors at county meetings; (2) Year-end mailing to nonmembers by specialty society and hospital staff; (3) Implementation of practice-management workshop for interns, residents and students at schools and hospitals. MMPAC Educational Projects include: 1. Develop separate MMPAC Newsletter for educational purposes only; 2. Produce and distribute separate MMPAC Educational brochure; 3. Implement a viable MMPAC Educational Workshop for stressing voters' responsibility. Dr. Martin stated that this information was not sent out in advance to the Councilors and that, perhaps, they should look it over and discuss it later in the meeting.

REPORT OF THE WOMAN'S AUXILIARY

Mrs. Willman stated that she appreciated being invited to the meeting and that she would like to introduce Mrs. George Lytton of Kansas City, President-Elect of the Woman's Auxiliary.

Mrs. Willman reported that the Auxiliary held a Legislative Day on April 11 in Jefferson City. Approximately 100 women from 12 counties attended. Each county took their Senators and Representatives to lunch.

Mrs. Willman stated that she had visited in Hannibal and that the Auxiliary there had decided to again become active after having disbanded in 1965. She stated that she was glad to see the women in Hannibal become so interested.

Rally Day Workshops have been held covering nine districts. The Auxiliary has talked to approximately 300 doctors' wives about Auxiliary programs in order to better inform their members.

Mrs. Willman reported that the Auxiliary is planning an Ecology Seminar on September 21 in Kansas City. All County Presidents, Presidents-Elect and County Environmental Health Chairmen will be encouraged to attend. Mrs. Raymond Hartwig is working with the Environmental Protection Agency to provide funding. She encouraged all those present to attend.

Mrs. Willman stated that representatives from the Auxiliary would attend the following MSMA Committee meetings in order to better coordinate endeavors: Commission on Continuing Education and Health Manpower, Legislative Committee, Commission on Public Affairs, MMPAC and the Association's Medical Student Loan Foundation. She reported that she had given names to Dr. Chandler and that the Auxiliary would be glad to help in any way they could.

REPORT OF THE BUILDING COMMITTEE

Dr. Matthews reported that the staff had moved into the new building and are happily located. He stated that he hoped all of those present will tour the new building later in the afternoon. He indicated that they are still a few items that need to be installed, but that they are on order. Dr. Matthews stated that the overall arrangements and development of the building have been extremely satisfactory and hoped that everyone will like it.

Dr. Matthews reported that final details regarding financing have not been developed as yet. Final bills are about to be accumulated. Then, it will be the responsibility of the Finance Committee to handle the loan program.

REPORT OF MISSOURI FAMILY PLANNING HEALTH COUNCIL

Dr. William Allen reported that he had represented MSMA at an organizational meeting of the Missouri Family Planning Health Council and that the MSMA has been requested to name a representative to serve on the Board of Directors of this Council. The purpose of the Council is to become the coordinating agency for family planning projects in outstate Missouri, but the Council would not affect metropolitan family planning projects.

Dr. Allen stated that the Family Planning Council in Missouri had been urged by HEW to submit a state proposal for family planning. The Bylaws of this Council provide for a 24-member Board and call for representation from MSMA, MAOPS, Missouri Nurses Association and a physician to be appointed by the President of the Board. The latter also is to be Chairman of the Medical Advisory Committee. The Board will meet quarterly and the Council will meet twice yearly. A grant proposal of approximately $2 million, which has been submitted, would not cover the entire state immediately.

Dr. Allen stated that he felt that although the project proposal had been submitted and the Bylaws adopted, this group could use medical direction and urged MSMA to give serious consideration to appointing someone to serve on this Board. He also stated that he fully agreed with the four recommendations of the Ad Hoc Family Planning Committee which were presented to the Council in September. The recommendations are as follows:

1. Recommend that due to the divergence in nature

of the clinics, local medical societies and/or local physicians be urged to take a more active role in the establishment and operation of family planning clinics.

2. Recommend frequent appraisal of each clinic's programs as to its continued effectiveness and in its respect for medical ethics.

3. Recommend frequent appraisal of the clinic's programs in such areas as number of patients reached and costs-per-patient.

4. Recommend frequent appraisal of the clinics as to the extent they are invading the private practice of medicine.

Dr. McAlhany asked if this program would void those now in existence. Dr. Allen stated that the programs now in existence would make application to this group rather than directly to Washington.

Dr. Hansbrough indicated that the MSMA should go on record as reminding that Board of our recommendations in these four fields. Dr. Chandler stated that the MSMA had been asked to appoint a member to the Board and that man can take these recommendations to the Board.

Dr. Domke stated that the Council recommendations are sensible and, at least, provide a minimal guide to evaluating a project. Dr. Domke stated that he would like to recommend that in addition to sending the information about Council action to that group, that we also forward it to the Governor's Advisory Council on Comprehensive Health Planning, A & B agencies and to the Board of Health. He stated that the recommendations are sound and would provide some basis for this. The Council also would be able to see that there is some statewide review of what these programs were accomplishing.

Motion was made, seconded and carried that these four points be sent to the Division of Health, A & B agencies and the Governor's Advisory Council on Comprehensive Health Planning and that MSMA appoint a member to the Board as requested by the Family Planning Health Council. Dr. Chandler asked Dr. Stricker to make the appointment.

Dr. Chandler stated that a request had been received from the AMA Council on Foods and Nutrition asking for MSMA endorsement and cosponsorship of a program of seminars and lectures on college campuses this fall. The program is to inform students and faculty of recent developments and to stimulate interest in the medical sciences. The colleges participating in Missouri are Central Missouri State, Drury College, Missouri Southern College, Northwest Missouri State, Northeast Missouri State and Southeast Missouri State College.

Motion was made by Dr. Gunn to give MSMA endorsement to this program. It was seconded by Dr. Hansbrough and carried.

Dr. Martin asked that Missouri Western in St. Joseph be added to the list of colleges.

MSMA-SPONSORED TOURS

Mr. Cooper reported that the Rhine Tour is selling exceptionally well. Approximately 140 persons have signed for the tour. Another mailing will be sent late in June.

Mr. Cooper indicated that a travel committee, consisting of Drs. Cooper, Bregant and Martin, had a meeting and that Dr. Cooper would make a report regarding future tours.

Dr. Cooper indicated that the committee had considered three tours as follows: Greek Tour, European Tour and a Hawaiian Tour.

Dr. Cooper moved that the three tours be accepted for MSMA in 1974. Motion was seconded and carried.

REPORTS OF THE DEANS

Dr. Mayer stated that he would like to present a follow-up report on several items that he presented previously. He indicated recommendations had been made to the Chancellor for names for the Provost for Health Affairs at the University.

Dr. Mayer reported that the University had a significant increase in the number of applicants for medical school. The University had 570 Missouri applicants last year and 700 applicants this year. Of the 700 applicants, 140 had been accepted by the University.

Another item he reported on was the University budget. Dr. Mayer stated that the University would be in trouble with operational dollars if the budget were not approved by the General Assembly. Dr. Mayer indicated that the report of the National Board of Medical Examiners had been released recently and that he could obtain copies for the members of the Council, if they so desire.

Dr. Mayer stated that he would like to comment in regard to HR #1. The law separates teaching hospitals and their physicians as totally separate from the rest of the practitioners. The SSA will be deciding whether teaching hospitals will be cost hospitals or usual and customary fee hospitals. There is a high likelihood that the University Hospital will be a cost hospital.

Dr. Mayer stated that he had the good fortune to be involved in some national medical activities and would be glad to be helpful in the communication processes at this level.

Dr. Noback reported that the Medical School in Kansas City had graduated nine students. All have taken part two of the National Boards and have passed. The family practice preceptorship program in Year 2 will start its second year in about a month. This program provides each Year 2 student a month with a family practitioner in Western Missouri.

Dr. Noback reported that the Kansas City Medical School has had a quarterly profile examination in existence for just over a year. One part deals with the evaluation of the students and the other part deals with factual information.

Dr. Noback stated that there has been increasing interest in the school on the part of students. This year they received just under 400 applicants from Missouri.

TAP INSTITUTE

Mr. Fox, in the absence of Dr. Ladyman, reported on the TAP Institute which had been cosponsored by MSMA and the Hospital Association. Dr. George Ladyman, Chairman of the Commission on Continuing Education, represented the MSMA and gave the welcoming address at the first session. The program was presented by

the Joint Commission on Accreditation and consisted basically of three sessions covering utilization review, medical audit, credentials, legal liability and administration. It was pointed out that it is evident that JCAH hopes to be involved in the administration of PSRO. Mr. Fox stated that two of the Councilors, Drs. Martin and Chandler, were present at the institute representing local medical society staffs and, perhaps, they would like to make a few comments.

Dr. Martin stated that the only comment he would like to make was that he was impressed with Mr. Jacobs from the JCAH, who conducted the program. Dr. Chandler stated that he was interested in the medical audit area of the program. He stated that General Hospital in Kansas City had been using this for some months, that it was very appealing and would be to all doctors since they set up their own criteria for such an internal audit.

Motion was made by Dr. Hansbrough that Dr. Ladyman's report be accepted with commendation. Motion was seconded and carried.

REPORT OF JOINT MEETING OF COMMISSIONS ON CONTINUING EDUCATION AND INTERSPECIALTY MEDICINE

Mr. Fox, in the absence of Dr. Ladyman, reported that the Commission on Continuing Education and Commission on Interspecialty Medicine had met jointly to discuss the past annual session and plan the 1974 Annual Session. The two groups discussed revision of the Bylaws by the House of Delegates during this year's annual session regarding introduction and processing of resolutions. The joint Commissions recommended that for one more year at least, the present time schedule should be retained and, pending experience at the Kansas City meeting in 1974, time schedule revision would be reconsidered. It also was recommended that the General Session on Saturday morning be replaced with one or more scientific sessions sponsored by the respective specialties and that concurrent scientific sessions be set at a maximum of five.

Dr. Young's proposal for guidelines to set up a statewide CME program also was discussed. The Commission on Interspecialty Medicine agreed to contact their respective specialty organizations regarding development of guidelines. The Commission will request that the medical specialty representatives respond by Jan. 1, 1974, indicating their willingness to draft respective guidelines.

Dr. Franklin moved that the Commission's recommendations on the format for the Annual Session be accepted. Motion was seconded and carried.

Mr. Fox stated that the date of April 17-20, 1975, Chase Hotel, was being held for the 117th Annual Session and that the Hotel needs confirmation of this date. He indicated that other hotels in St. Louis had been checked, but none met our space requirements.

Dr. Hetlage moved that the above recommendation for the 1975 Annual Session be accepted. Motion was seconded and carried.

Dr. Hansbrough moved that the entire Commission report be accepted. Motion was seconded and carried.

Dr. Chandler stated that requests from Dr. Howard of the AMA had been received asking for names of individuals for various federal commissions and committees. Often these come on such short notice, and there is not enough time to contact these individuals or prepare CV's on them. Dr. Chandler stated that we should be given more warning, and that he would like for Mr. Mortenson to carry this message back to the AMA and report back at the next meeting on the mechanism of recommending people.

MEMBERSHIP COMMITTEE

Dr. Martin stated that some action needed to be taken in regard to the budgetary items in the membership committee report that had been given previously. He stated that some of the items in the report were of an immediate nature and need to be funded.

Motion was made that money be spent and other money budgeted for the purposes outlined in Dr. Martin's report. Motion was seconded and carried.

Dr. Chandler stated that Dr. Finnegan was present and, perhaps, he would like to say a few words. Dr. Finnegan thanked the Council for the nice presentation at the Annual Meeting. He stated that he is indebted to Helen Penn, Allen Smith and Jean Duensing, who have been managing editors since Dr. Finnegan has been Editor, for their real service to the Journal.

Dr. Judd stated that he did not have a Treasurer's Report at this time, but would present a full report at the September meeting.

Dr. Judd reported that a service offered recently by the AMA had come to his attention and that he would like to mention it at this time. On request, the AMA sends a survey team to local and state societies to examine methods of operation and make suggestions on various matters that could be improved. He indicated that the St. Louis Medical Society had looked at this and had requested the AMA to send a team to St. Louis. Dr. Judd stated that he would like to recommend that MSMA ask the AMA to send a survey team to the State Association. He indicated that this was not criticism of the operation of the Association, but might be a means of improving the association to make it more attractive to new members. This service is to be provided by the AMA without cost to the Association.

Dr. Martin asked who composed the survey team. Mr. Mortenson stated that this service is provided by the Field Service Department and consisted of five or six individuals selected by Mr. Layton, head of the Field Service Department. The team varies from state to state and covers a period of three or four days. He reported that the survey team looks at what the society is doing, whether it is doing it right and how the society can improve things. The motion was made, seconded and carried that the MSMA ask the AMA to send a survey team to the State Association.

Dr. Cope stated that he would like to present a suggestion in regard to long range planning and financing. He indicated that he had sent this suggestion to Dr. Dave Kerr, Chairman of the Planning Committee, and that it eventually would come before the Council.

Dr. Cope stated that many times requests for unbudgeted money were made and many good, worthwhile suggestions and ideas have gone down for lack of money. He stated that the Missouri State Medical Foundation is now funded at the level of about one-half million dollars and that loans are being repaid, although not as fast as desired. Dr. Cope said that his suggestion was that the special assessment each year now going towards the funding of the Missouri State Medical Association be continued, but be diverted into an "educational" fund for the use of the Council, with no more than one-half being used during the year and the other half used for an investment fund. We would have approximately $20,000 a year to use on special projects that are unbudgeted.

Dr. Cope stated that we are in a position in which we have to balance what MSMA is doing against the needs of the society. He indicated that he merely wanted the Councilors to think about this.

It was pointed out that Dr. Chandler had previously mentioned the possibility of having an informal meeting of the Council on Friday evening before the Council Meeting to consider the material to be covered during the Council Meeting. It was indicated that this would be a meeting of the members of the Council only and that staff and guests would not be invited.

The motion was made, seconded and carried that such an informal meeting of the Council be held on Friday evening of the December meeting to formalize Councilor reports and go over Committee reports submitted prior to the meeting and other pertinent matters.

Dr. Chandler stated that the AMA has proposed that state associations and county societies appoint special committees to deal with the "sick doctor" problems. He indicated that "sick doctor" legislation had been introduced in this session of the General Assembly, but that it did not go anywhere. Florida has passed legislation of this type and copies can be made available to those who want them. Dr. Chandler stated that these committees would be established for the purpose of assisting a physician with certain problems. He stated that this probably should be referred to the Public Affairs Commission for study and report back.

Dr. Cope stated that, perhaps, an opinion should be obtained about this matter. He indicated he would like to know from a legal standpoint how much authority this type of committee would have.

Mr. McIntyre said that the "sick doctor" legislation would be a legal situation whereby the Board of Healing Arts could take away a license under certain circumstances and that it was his understanding that the committee proposed by the AMA would try to help the sick physician before he would come before the Board of Healing Arts.

Dr. Chandler stated that Dr. Cope's point was well taken and it did not require any action other than giving it to the legal counsel to report back at the next meeting.

Dr. Chandler stated that he had mentioned earlier about the possibility of having a leadership conference. This conference is provided by the AMA at no cost. Dr. Chandler indicated that, possibly, this could be held in late summer or early fall and would be a meeting for which the Councilors would pick young men who are being groomed for medical leadership to meet in a quiet area and get a "crash course" in what the AMA has to offer. Mr. Mortenson reported that he had contacted Mr. Enright of AMA who arranges these conferences, and he suggested the dates of August 11-12. He stated that the conference would consist of 40 people maximum and would cover topics of parliamentary procedure, the decision making process and the communications process.

Dr. Hetlage stated that he felt this is a very good idea, but he did not see how we could get this conference together by August. Also, there is a conflicting meeting date the same weekend. Mr. Mortenson stated that Mr. Enright also had suggested a date in February, 1974.

Motion was made by Dr. Hetlage that the leadership conference be accepted using the February date. Motion was seconded and carried.

NEXT COUNCIL MEETING

At the invitation of Dr. Cope, the next Council Meeting will be held on September 29-30 at the Ramada Inn in Columbia.

The Council adjourned to an Executive Session.

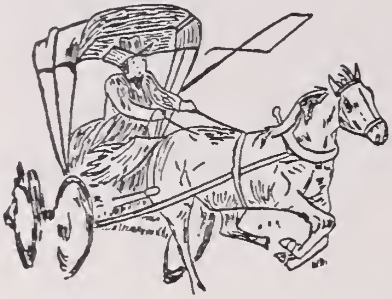
Missouri Medicine in Review



FORTY YEARS AGO

Louis C. Boisliniere, M.D., St. Louis, reports: "It is of great interest to the Missouri State Medical Association to know that the first state or federal investigation of silicosis as a health hazard in this country was undertaken in the Joplin district of Southwestern Missouri. It was a matter of common knowledge that there was an unusual amount of consumption among the miners in that district. In 1914, this society petitioned the Surgeon General of the Public Health Service for assistance. In response to this request, Dr. A. J. Lanza, Past Assistant Surgeon, U. S. Public Health Service, together with Mr. Edwin Higgins, Mining Engineer of the Bureau of Mines, launched in 1916 a most complete investigation of the whole subject from every possible angle. The prevalence of silicosis and silicotuberculosis in certain specific industries and occupations throughout the United States is very great, especially among granite workers, sandblasters, miners, excluding coal miners, grinding gravel for roofing and other purposes, in the manufacture of glass and abrasives, pottery makers and other industries where the air contains large quantities of fine powder silica."

An outstanding feature of the 76th Annual Session of the MSMA held in Kansas City on May 1-4 was the Testimonial Dinner tendered by a group of friends of Dr. Arthur Rochford McComas of Sturgeon. This occasion in honor of a Past-President of the Association and Chairman of the Council continuously since 1916, except for the year of his presidency, was planned by a committee of sponsors who believe in honoring those to whom honor is due. Upon completion of 43 years of practice in the community in which he was born and in the territory in which his father, the late Dr. J. M. McComas, was a pioneer physician, Arthur R. McComas lives among friends under blue Missouri skies in an environment that is rich with memories for him.

TWENTY-FIVE YEARS AGO

Editorial: Today, interns and residents, during their medical training period, hear little about the opportunities and advantages of rural practice. Most of them receive their training from medical schools located in cities, from hospitals located in cities and under instructors who are specialists. Such a situation is not conducive to interesting young physicians in rural practice.

Robert Mueller, M.D., St. Louis, President-Elect of the MSMA, comments:

"Missouri medicine with its present scale of activities cannot reduce the state dues under the present $15. Whether one calls it dues and assessment or just plain dues, it is the income that counts. It may be of interest to compare Missouri state dues with those of other states. The dues for Missouri, at present, are $8 and $7 special assessment. The dues of other states are as follows: California, $67; Oklahoma, $47; Wisconsin, $33; Minnesota, $20; South Dakota, $50; Utah, $50; North Dakota, $35; Louisiana, $25; Arizona, $35. Only four states out of 48 have lower state dues than Missouri."

TEN YEARS AGO

The Washington University Medical Alumni Association elected Heinz Haffner, M.D., president-elect, and Robert W. Kelley, M.D., vice-president. Richard V. Bradley, M.D., was reelected as secretary-treasurer.

Newly-elected officers of the St. Louis University Alumni Association are Louis Keller, M.D., president; Hubert A. Ritter, M.D., president-elect; James L. Donahoe, treasurer; and A. M. Ahern, M.D., secretary.

The staff of Bothwell Memorial Hospital in Sedalia reelected Dr. J. W. Boger as chief of staff. Dr. Robert H. Stewart will serve as vice-chief of staff.

In June, a "retirement" dinner was held by the Independence Hospital Nurses' Alumni Association in honor of two brothers, Dr. John R. Green and Dr. Stanley L. Green. Dr. Stanley Green has retired, but Dr. John Green is still in practice.

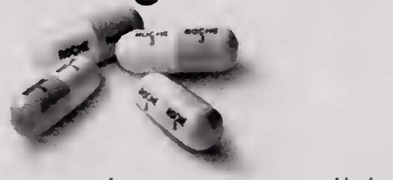
How strong must a tranquilizer be for severe anxiety?

As strong as Librium® 25 mg
(chlordiazepoxide HCl)

The achievement of desired therapeutic results is often a function of the dosage *strength* as well as the drug's intrinsic action. Thus, when anxiety is *severe*, the 25-mg strength of Librium frequently provides the necessary antianxiety action with a minimum of unwanted adverse reactions. Librium 25 mg is a convenient dosage form for the relief of severe, incapacitating anxiety, specifically formulated to supplement your counsel and reassurance.

Benefits-to-risks ratio permits higher dosage



For over 13 years, Librium has been recognized for its excellent benefits-to-risks ratio, an asset in the *higher* dosage ranges as in more common clinical applications. Thus, the frequency of dosage with Librium 25 mg can be flexibly adjusted to the needs and response of the individual patient, up to 100 mg daily if required. Total daily dosage for the elderly and debilitated should not exceed 20 mg. When severe anxiety has been reduced, Librium dosage should be correspondingly reduced or discontinued entirely.

basic support in severe anxiety
Librium® 25 mg
(chlordiazepoxide HCl)
1 capsule t.i.d./q.i.d.

Nutley, N J 07110

Before prescribing, pleas
plete product information, a s
which follows:

Indications: Relief of anx
occurring alone or accompanyin
states.

Contraindications: Patie
hypersensitivity to the drug.

Warnings: Caution patie
combined effects with alcohol a
depressants. As with all CNS-ac
patients against hazardous occu
complete mental alertness (*e.g.*,
ery, driving). Though physical
dependence have rarely been re
mended doses, use caution in a
addiction-prone individuals or
increase dosage; withdrawal sy
convulsions), following discon
drug and similar to those seen
have been reported. Use of any drug in preg
lactation, or in women of childbearing age re
that its potential benefits be weighed against
possible hazards.

Precautions: In the elderly and debilit
and in children over six, limit to smallest effe
tive dosage (initially 10 mg or less per day) t
preclude ataxia or oversedation, increasing g
ally as needed and tolerated. Not recommend
in children under six. Though generally not
ommended, if combination therapy with oth
psychotropics seems indicated, carefully cons
individual pharmacologic effects, particularl
use of potentiating drugs such as MAO inhib
and phenothiazines. Observe usual precautio
presence of impaired renal or hepatic functi
Paradoxical reactions (*e.g.*, excitement, stimul
and acute rage) have been reported in psychi
patients and hyperactive aggressive children.
Employ usual precautions in treatment of an
states with evidence of impending depressio
suicidal tendencies may be present and prote
measures necessary. Variable effects on blood
coagulation have been reported very rarely
patients receiving the drug and oral anticoag
lants; causal relationship has not been establi
clinically.

Adverse Reactions: Drowsiness, ataxi
confusion may occur, especially in the elderl
debilitated. These are reversible in most inst
by proper dosage adjustment, but are also oc
sionally observed at the lower dosage ranges.
few instances syncope has been reported. Als
countered are isolated instances of skin erup
edema, minor menstrual irregularities, naus
constipation, extrapyramidal symptoms, incr
and decreased libido—all infrequent and gen
controlled with dosage reduction; changes in
patterns (low-voltage fast activity) may appe
during and after treatment; blood dyscrasias
cluding agranulocytosis), jaundice and hepa
dysfunction have been reported occasionally,
ing periodic blood counts and liver function
advisable during protracted therapy.

Supplied: Librium® Capsules contain
5 mg, 10 mg or 25 mg chlordiazepoxide HC
Libritabs® Tablets containing 5 mg, 10 mg o
25 mg chlordiazepoxide.

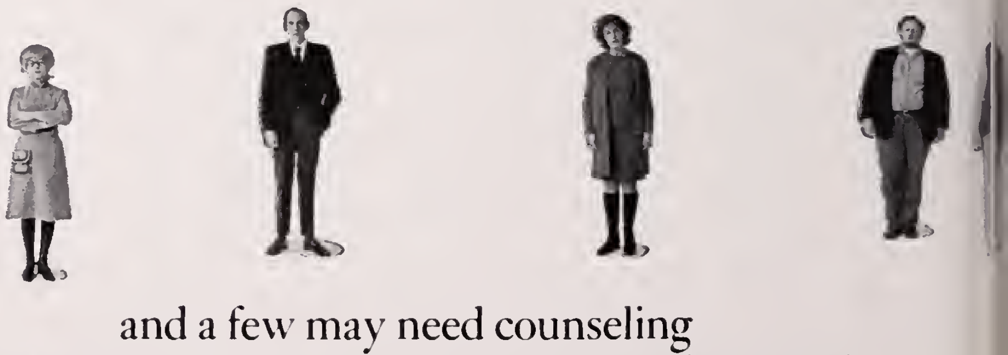
116th MSMA Annual Session
April 4-7, 1974 Kansas City

Everybody experiences psychic tension.

Most people can handle this tension.

Some people develop excessive psychic tension and need your counse



and a few may need counseling
and the psychotropic action of Valium® (diazepam).

Before deciding to make Valium epam) part of your treatment , check on whether or not the ent is presently taking drugs if so, what his response has . Along with the medical and l history, this information can you determine initial dosage, ossibility of side effects and ltimate prospects of success ilure.

While Valium can be a most ful adjunct to your counseling, ould be prescribed only as long cessive psychic tension per- and should be discontinued n you decide it has accom- ed its therapeutic task. In ral, when dosage guidelines ollowed, Valium is well ated (see Dosage). For con- ence it is available in 2-mg, 5-mg 10-mg tablets.

Drowsiness, fatigue and ataxia been the most commonly re- ed side effects.

Until response is determined, nts receiving Valium should utioned against engaging in rdous occupations requiring plete mental alertness, such iving or operating machinery.

ROCHE
Roche Laboratories
Division of Hoffmann-La Roche Inc.
Nutley, N.J. 07110

Before prescribing, please consult complete product information, a summary of which follows:

Indications: Tension and anxiety states; somatic complaints which are concomitants of emotional factors; psychoneurotic states manifested by tension, anxiety, apprehension, fatigue, depressive symptoms or agitation; symptomatic relief of acute agitation, tremor, delirium tremens and hallucinosis due to acute alcohol withdrawal; adjunctively in skeletal muscle spasm due to reflex spasm to local pathology, spasticity caused by upper motor neuron disorders, athetosis, stiff-man syndrome, convulsive disorders (not for sole therapy).

Contraindicated: Known hypersensitivity to the drug. Children under 6 months of age. Acute narrow angle glaucoma; may be used in patients with open angle glaucoma who are receiving appropriate therapy.

Warnings: Not of value in psychotic patients. Caution against hazardous occupations requiring complete mental alertness. When used adjunctively in convulsive disorders, possibility of increase in frequency and/or severity of grand mal seizures may require increased dosage of standard anticonvulsant medication; abrupt withdrawal may be associated with temporary increase in frequency and/or severity of seizures. Advise against simultaneous ingestion of alcohol and other CNS depressants. Withdrawal symptoms (similar to those with barbiturates and alcohol) have occurred following abrupt discontinuance (convulsions, tremor, abdominal and muscle cramps, vomiting and sweating). Keep addiction-prone individuals under careful surveillance because of their predisposition to habituation and dependence. In pregnancy, lactation or women of childbearing age, weigh potential benefit against possible hazard.

Precautions: If combined with other psychotropics or anticonvulsants, consider carefully pharmacology of agents employed; drugs such as phenothiazines, narcotics, barbiturates, MAO inhibitors and other antidepressants may potentiate its action. Usual precautions indicated in patients severely depressed, or with latent depression, or with suicidal tendencies. Observe usual precautions in impaired renal or hepatic function. Limit dosage to smallest effective amount in elderly and debilitated to preclude ataxia or oversedation.

Side Effects: Drowsiness, confusion, diplopia, hypotension, changes in libido, nausea, fatigue, depression, dysarthria, jaundice, skin rash, ataxia, constipation, headache, incontinence, changes in salivation, slurred speech, tremor, vertigo, urinary retention, blurred vision. Paradoxical reactions such as acute hyperexcited states, anxiety, hallucinations, increased muscle spasticity, insomnia, rage, sleep disturbances, stimulation have been reported; should these occur, discontinue drug. Isolated reports of neutropenia, jaundice; periodic blood counts and liver function tests advisable during long-term therapy.

Dosage: Individualize for maximum beneficial effect. *Adults:* Tension, anxiety and psychoneurotic states, 2 to 10 mg b.i.d. to q.i.d.; alcoholism, 10 mg t.i.d. or q.i.d. in first 24 hours, then 5 mg t.i.d. or q.i.d. as needed; adjunctively in skeletal muscle spasm, 2 to 10 mg t.i.d. or q.i.d.; adjunctively in convulsive disorders, 2 to 10 mg b.i.d. to q.i.d. *Geriatric or debilitated patients:* 2 to 2½ mg, 1 or 2 times daily initially, increasing as needed and tolerated. (See Precautions.) *Children:* 1 to 2½ mg t.i.d. or q.i.d. initially, increasing as needed and tolerated (not for use under 6 months).

Supplied: Valium® (diazepam) Tablets, 2 mg, 5 mg and 10 mg; bottles of 100 and 500. All strengths also available in Tel-E-Dose® packages of 1000.

Valium®
(diazepam)

To help you manage excessive psychic tension

Must vasodilators and therapy for other diseases come into conflict?

not if the vasodilator is

VASODILAN®

(ISOXSUPRINE HCl)

the compatible vasodilator... no treatment conflicts reported

The cerebral or peripheral vascular disease patient often has coexisting disease[1] which calls for another drug along with his vasodilator. It may be a hypoglycemic, miotic, antihypertensive, diuretic, anticoagulant, corticosteroid, or coronary vasodilator.

Vasodilan is not incompatible with any of these drugs—no treatment conflict has been reported. And, unlike other vasodilators, Vasodilan has not been reported to affect carbohydrate metabolism, liver function, or intraocular pressure—or to complicate treatment of diabetes, hypertension, peptic ulcer, glaucoma, or liver disease.

In fact, there are no known contraindications to the use of Vasodilan in recommended oral doses, other than that it should not be given in the presence of frank arterial bleeding or immediately postpartum.

---

[1] Gertler, M. M., et al.: Geriatrics *25*:134-148 (May) 1970.

Indications: Based on a review of this drug by the National Academy of Sciences-National Research Council and/or other information, the FDA has classified the indications as follows:

Possibly Effective:

1. For the relief of symptoms associated with cerebral vascular insufficiency.
2. In peripheral vascular disease of arteriosclerosis obliterans, thromboangiitis obliterans (Buerger's Disease) and Raynaud's disease.
3. Threatened abortion.

Final classification of the less-than-effective indications requires further investigation.

Composition: Vasodilan tablets, isoxsuprine HCl, 10 mg. and 20 mg.

Dosage and Administration: 10 to 20 mg. three or four times daily.

Contraindications and Cautions: There are no known contraindications to oral use when administered in recommended doses. Should not be given immediately postpartum or in the presence of arterial bleeding.

Adverse Reactions: On rare occasions, oral administration of the drug has been associated in time with the occurrence of severe rash. When rash appears, the drug should be discontinued. Occasional overdosage effects such as transient palpitation or dizziness are usually controlled by reducing the dose.

Supplied: Tablets, 10 mg.—bottles of 100, 1000, 5000 and Unit Dose; 20 mg.—bottles of 100, 500 and Unit Dose.

Information for Contributors

Articles are accepted for publication on condition that they are contributed solely to this journal. Material appearing in MISSOURI MEDICINE is protected by copyright. Permission will be granted on request for reproduction in reputable publications provided proper credit is given and author gives permission.

Manuscripts should be typewritten, double spaced, and the original with one carbon copy submitted. Retain another carbon copy for proofreading. Used manuscripts are not returned. School and hospital appointments of the author should accompany the manuscript. It is desirable that a synopsis-abstract of approximately 135 words accompany the manuscript. References should be arranged at the end of the article in the order in which the references are cited in the text. The reference should give name of author, title of article, name of periodical, volume number, initial page number and year. Authors are responsible for reference accuracy.

Illustrations should be glossy prints or drawings in India ink on white paper. They should not be mounted and name of author and figure number should be penciled lightly on the backs. Legends should appear on a separate sheet. Colored illustrations will be used when suitable if author assumes the actual cost.

Legal difficulties may arise from unauthorized use of names, initials or photographs in which individuals can be identified. Permission should be secured from patient or legal guardian and signed duplicate or photostat submitted with such photographs or identification. The Editor and Editorial Board assume no responsibility for the opinions and claims expressed in articles contributed by authors. If citation of an institution related to the article is made, approval of the chief of service should be given in a letter accompanying the article.

Reprint order blanks will accompany proof, which will be sent to authors prior to publication.

All material other than scientific should be received prior to the first of the month preceding month of publication.

Please give notice of change of address at least one month in advance of the change, giving old and new addresses.

Butazolidin® alka Geigy

Each capsule contains:
100 mg. phenylbutazone USP
100 mg. dried aluminum hydroxide gel USP
150 mg. magnesium trisilicate USP

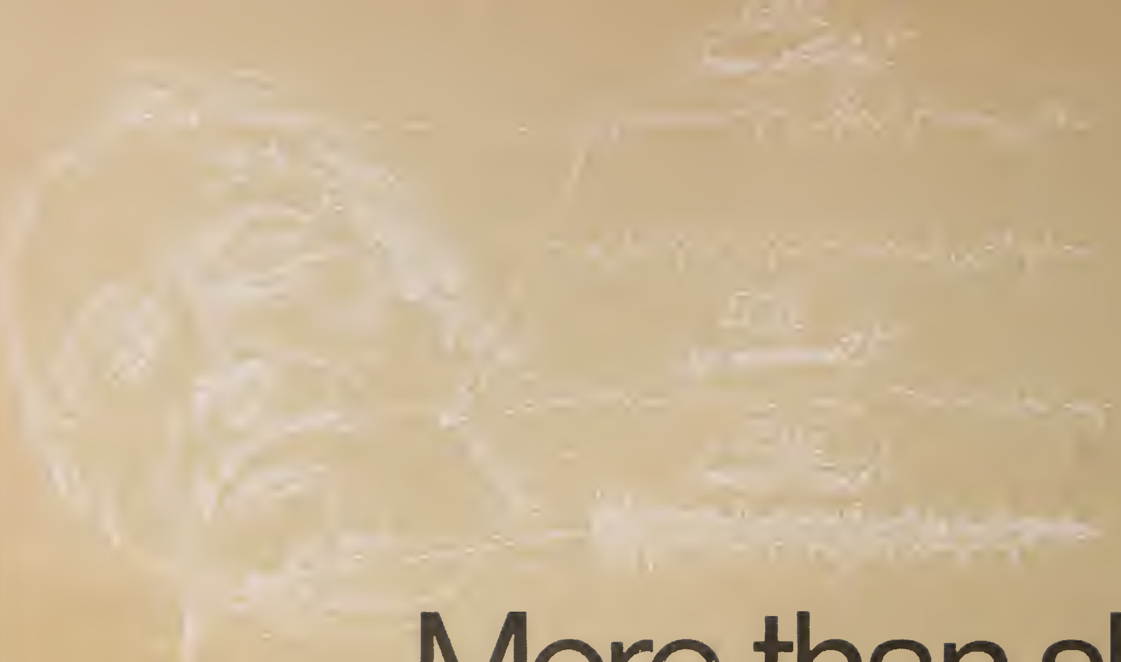
If it doesn't work in a week, forget it.

and in nursing mothers. Drug may appear in cord blood and breast milk Serious, even fatal, blood dyscrasias, including aplastic anemia, may occur suddenly despite regular hemograms, and may become manifest days or weeks after cessation of drug Any significant change in total white count, relative decrease in granulocytes, appearance of immature forms, or fall in hematocrit should signal immediate cessation of therapy and complete hematologic investigation. Unexplained bleeding involving CNS, adrenals, and G I. tract has occurred The drug may potentiate action of insulin, sulfonylurea, and sulfonamide-type agents Carefully observe patients taking these agents. Nontoxic and toxic goiters and myxedema have been reported (the drug reduces iodine uptake by the thyroid) Blurred vision can be a significant toxic symptom worthy of a complete ophthalmological examination Swelling of ankles or face in patients under sixty may be prevented by reducing dosage If edema occurs in patients over sixty, discontinue drug *Precautions:* The following should be accomplished at regular intervals: Careful detailed history for disease being treated and detection of earliest signs of adverse reactions; complete physical examination including check of patient's weight, complete weekly (especially for the aging) or an every two week blood check; pertinent laboratory studies Caution patients about participating in activity requiring alertness and coordination, as driving a car, etc Cases of leukemia have been reported in patients with a history of short- and long-term therapy The majority of these patients were over forty Remember that arthritic-type pains can be the presenting symptom of leukemia
Adverse Reactions: This is a potent drug; its misuse can lead to serious results Review detailed information before beginning therapy Ulcerative esophagitis, acute and reactivated gastric and duodenal ulcer with perforation and hemorrhage, ulceration and perforation of large bowel, occult G.I. bleeding with anemia, gastritis, epigastric pain, hematemesis, dyspepsia, nausea, vomiting and diarrhea, abdominal distention, agranulocytosis, aplastic anemia, hemolytic anemia, anemia due to blood loss including occult G I bleeding, thrombocytopenia, pancytopenia, leukemia, leukopenia, bone marrow depression, sodium and chloride retention, water retention and edema, plasma dilution, respiratory alkalosis, metabolic acidosis, fatal and nonfatal hepatitis (cholestasis may or may not be prominent), petechiae, purpura without thrombocytopenia, toxic pruritus, erythema nodosum, erythema multiforme, Stevens-Johnson syndrome, Lyell's syndrome (toxic necrotizing epidermolysis), exfoliative dermatitis, serum sickness, hypersensitivity angiitis (polyarteritis), anaphylactic shock, urticaria, arthralgia, fever, rashes (all allergic reactions require prompt and permanent withdrawal of the drug), proteinuria, hematuria, oliguria, anuria, renal failure with azotemia, glomerulonephritis, acute tubular necrosis, nephrotic syndrome, bilateral renal cortical necrosis, renal stones, ureteral obstruction with uric acid crystals due to uricosuric action of drug, impaired renal function, cardiac decompensation, hypertension, pericarditis, diffuse interstitial myocarditis with muscle necrosis, perivascular granulomata, aggravation of temporal arteritis in patients with polymyalgia rheumatica, optic neuritis, blurred vision, retinal hemorrhage, toxic amblyopia, retinal detachment, hearing loss, hyperglycemia, thyroid hyperplasia, toxic goiter, association of hyperthyroidism and hypothyroidism (causal relationship not established), agitation, confusional states, lethargy; CNS reactions associated with overdosage, including convulsions, euphoria, psychosis, depression, headaches, hallucinations, giddiness, vertigo, coma, hyperventilation, insomnia; ulcerative stomatitis, salivary gland enlargement (B)98-146-070-H(10/71)

For complete details, including dosage, please see full prescribing information.

GEIGY Pharmaceuticals
Division of CIBA-GEIGY Corporation
Ardsley, New York 10502

BU 9337



More than sleep

your choice of sleep medication is wisely based on more than sleep-inducing potential

sleep with relative safety

Chronic tolerance studies have confirmed the relative safety of D (flurazepam HCl); no depression of cardiac or respiratory f was noted in patients administered recommended or highe for as long as 90 consecutive nights.

In most instances when adverse reactions were reported, they were mild, infrequent and sel quired discontinuance of therapy. Morning "hang-over" with Dalmane has been relatively infrequen ness, drowsiness, lightheadedness and the like have been the side effects noted most frequently, particularly in the elderly and debilitated. (An initial dose of Dalmane 15 mg should be prescribed for these patients.)

sleep for 7 to 8 ho without need to repeat dosage

No slee cation has been as rigorously evaluated in the sleep research laboratory as Dalmane. Insomnia given one 30-mg capsule of Dalmane at bedtime, on average: fell asleep within 17 minutes, had fewe time awakenings, spent less time awake after sleep onset, and slept for 7 to 8 hours with no need t dosage during the night.

ep with
nsistency

Dalmane has been shown to be consistently effective even during consecutive nights of administration, with no need to increase dosage.

mane (flurazepam HCl) is a distinctive sleep medication—a
iazepine specifically indicated for insomnia. It is not a bar-
or methaqualone, nor is it related chemically to any other
e hypnotic.

en your evaluation of insomnia indicates the need for a sleep
tion, consider Dalmane—a single entity nonnarcotic, non-
ate agent proved effective and relatively safe for relief of
ia.

DALMANE®
(flurazepam HCl)

When restful sleep is indicated

One 30-mg capsule *h.s.*—usual adult dosage
(15 mg may suffice in some patients).
One 15-mg capsule *h.s.*—initial dosage for elderly or debilitated patients.

Before prescribing Dalmane (flurazepam HCl), please consult Complete Product Information, a summary of which follows:

Indications: Effective in all types of insomnia characterized by difficulty in falling asleep, frequent nocturnal awakenings and/or early morning awakening, in patients with recurring insomnia or poor sleeping habits, and in acute or chronic medical situations requiring restful sleep. Since insomnia is often transient and intermittent, prolonged administration is generally not necessary or recommended

Contraindications: Known hypersensitivity to flurazepam HCl

Warnings: Caution patients about possible combined effects with alcohol and other CNS depressants. Caution against hazardous occupations requiring complete mental alertness (*e.g.*, operating machinery, driving). Use in women who are or may become pregnant only when potential benefits have been weighed against possible hazards. Not recommended for use in persons under 15 years of age. Though physical and psychological dependence have not been reported on recommended doses, use caution in administering to addiction-prone individuals or those who might increase dosage

Precautions: In elderly and debilitated, initial dosage should be limited to 15 mg to preclude oversedation, dizziness and/or ataxia. If combined with other drugs having hypnotic or CNS-depressant effects, consider potential additive effects. Employ usual precautions in patients who are severely depressed, or with latent depression or suicidal tendencies. Periodic blood counts and liver and kidney function tests are advised during repeated therapy. Observe usual precautions in presence of impaired renal or hepatic function.

Adverse Reactions: Dizziness, drowsiness, lightheadedness, staggering, ataxia and falling have occurred, particularly in elderly or debilitated patients. Severe sedation, lethargy, disorientation and coma, probably indicative of drug intolerance or overdosage, have been reported. Also reported were headache, heartburn, upset stomach, nausea, vomiting, diarrhea, constipation, GI pain, nervousness, talkativeness, apprehension, irritability, weakness, palpitations, chest pains, body and joint pains and GU complaints. There have also been rare occurrences of sweating, flushes, difficulty in focusing, blurred vision, burning eyes, faintness, hypotension, shortness of breath, pruritus, skin rash, dry mouth, bitter taste, excessive salivation, anorexia, euphoria, depression, slurred speech, confusion, restlessness, hallucinations, and elevated SGOT, SGPT, total and direct bilirubins and alkaline phosphatase. Paradoxical reactions, *e.g.*, excitement, stimulation and hyperactivity, have also been reported in rare instances

Dosage: Individualize for maximum beneficial effect. *Adults:* 30 mg usual dosage, 15 mg may suffice in some patients. *Elderly or debilitated patients:* 15 mg initially until response is determined.

Supplied: Capsules containing 15 mg or 30 mg flurazepam HCl.

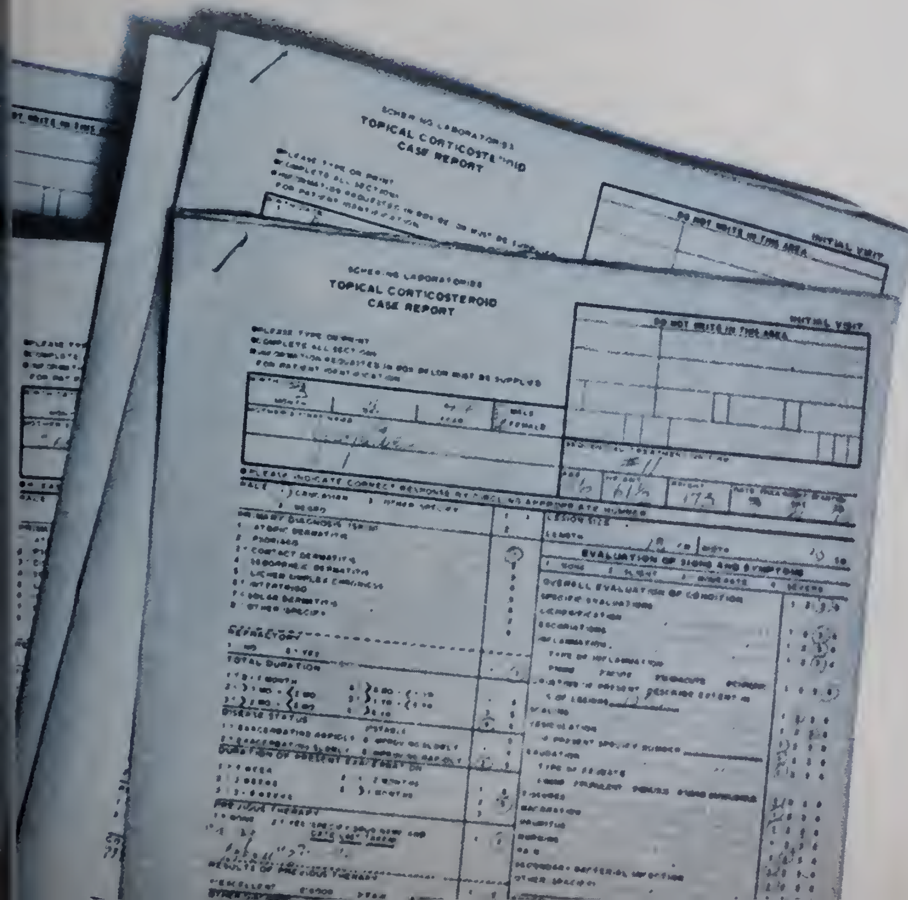
Valisone®

brand of

betamethasone valerate (0.1%) Cream/Ointment

Plus economy *B.i.d. dosage often found effective!*[1]
Available in 5, 15, and 45 Gm. tubes.

6% in contact dermatitis
(81 of 84 patients)[1]



CLINICAL CONSIDERATIONS:

Description VALISONE products contain betamethasone valerate (9-fluoro-11$_\beta$,17,21-trihydroxy-16$_\beta$-methylpregna-1,4-diene-3,20-dione 17-valerate). Each gram of VALISONE Cream 0.1% contains 1.2 mg. betamethasone valerate (equivalent to 1.0 mg. betamethasone in a soft, white, hydrophilic cream of water, mineral oil, petrolatum, polyethylene glycol 1 monocetyl ether, cetostearyl alcohol, monobas sodium phosphate, and phosphoric acid; 4-chloro-m-cresol is present as a preservative. E gram of VALISONE Ointment 0.1% contains 1.2 mg. betamethasone valerate (equivalent to 1.0 mg. betamethasone) in an ointment base o liquid and white petrolatum, and hydrogenate lanolin. VALISONE Cream and Ointment contain no parabens.

Indications VALISONE Cream and Ointment are indicated for the relief of the inflammatory manifestations of corticosteroid responsive dermatoses.

Contraindications VALISONE Cream ar Ointment are contraindicated in vaccinia and varicella. Topical steroids are contraindicated those patients with a history of hypersensitivit to any of the components of the preparation.

Precautions If irritation develops with the use of VALISONE Cream or Ointment, treatment should be discontinued and appropriate therapy instituted. In the presence of an infection, the use of an appropriate antifungal or antibacterial agent should instituted. If a favorable response does not occur promptly, the corticosteroid should be discontinued until the infection has been adequately controlled. If extensive areas are treat or if the occlusive technique is used, the possibility exists of increased systemic absorption the corticosteroid and suitable precautions sh be taken. Although topical steroids have not been reported to have an adverse effect on pre nancy, the safety of their use in pregnant fema has not been absolutely established. Therefor they should not be used extensively in pregna patients, in large amounts, or for prolonged periods of time. VALISONE Cream and Ointment are not for ophthalmic use.

Adverse Reactions The following local adverse reactions have been reported with topical corticosteroids: burning, itching, irritation, dryness, folliculitis, hypertrichosis, acneform eruptions, and hypopigmentation. T following may occur more frequently with occlusive dressings than without such therapy maceration of the skin, secondary infection, skin atrophy, striae, and miliaria.

Dosage and Administration Apply a thin film of VALISONE Cream or Ointment to th affected skin areas one to three times a day. Clinical studies of VALISONE have indicated that dosage only once or twice a day is often feasible and effective. AUGUST 1972

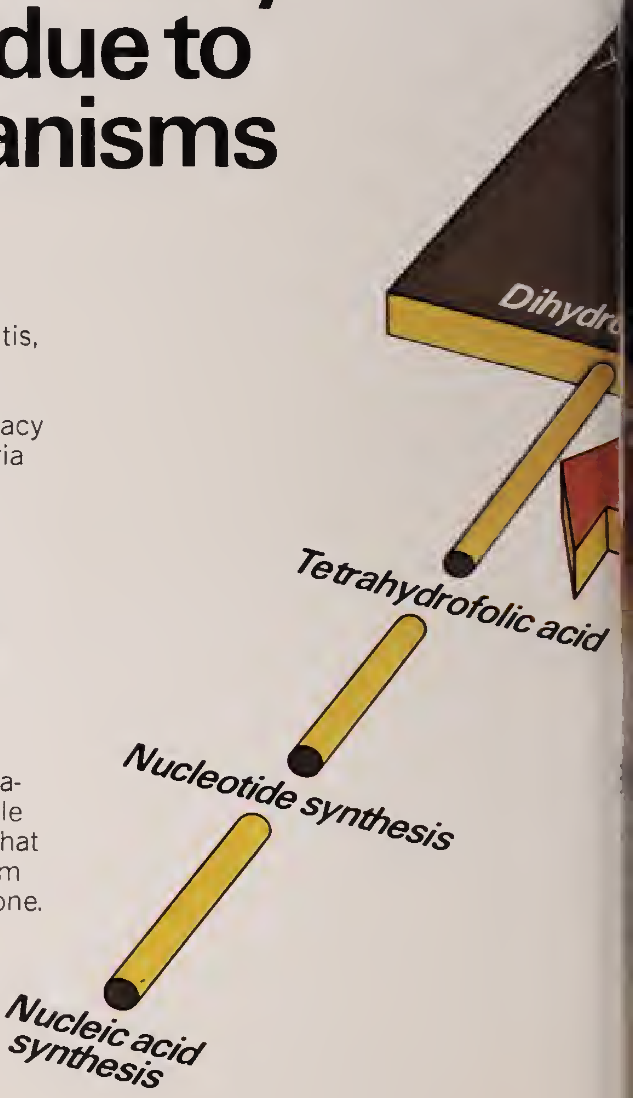
SL

ROCHE announces new BACTRIM™

Each tablet contains 80 mg trimethoprim and 400 mg sulfamethoxazole.

a new type of antibacterial for a two-pronged attack against chronic urinary tract infections due to susceptible organisms

Bactrim is highly effective in the treatment of these infections – primarily pyelonephritis, pyelitis and cystitis, when due to susceptible organisms (usually *E. coli, Klebsiella-Enterobacter, Proteus mirabilis,* and, less frequently, indole-positive proteus species). This efficacy is related to the unique mode of action against bacteria (see opposite page), an action that, in effect, makes Bactrim a new type of antibacterial.

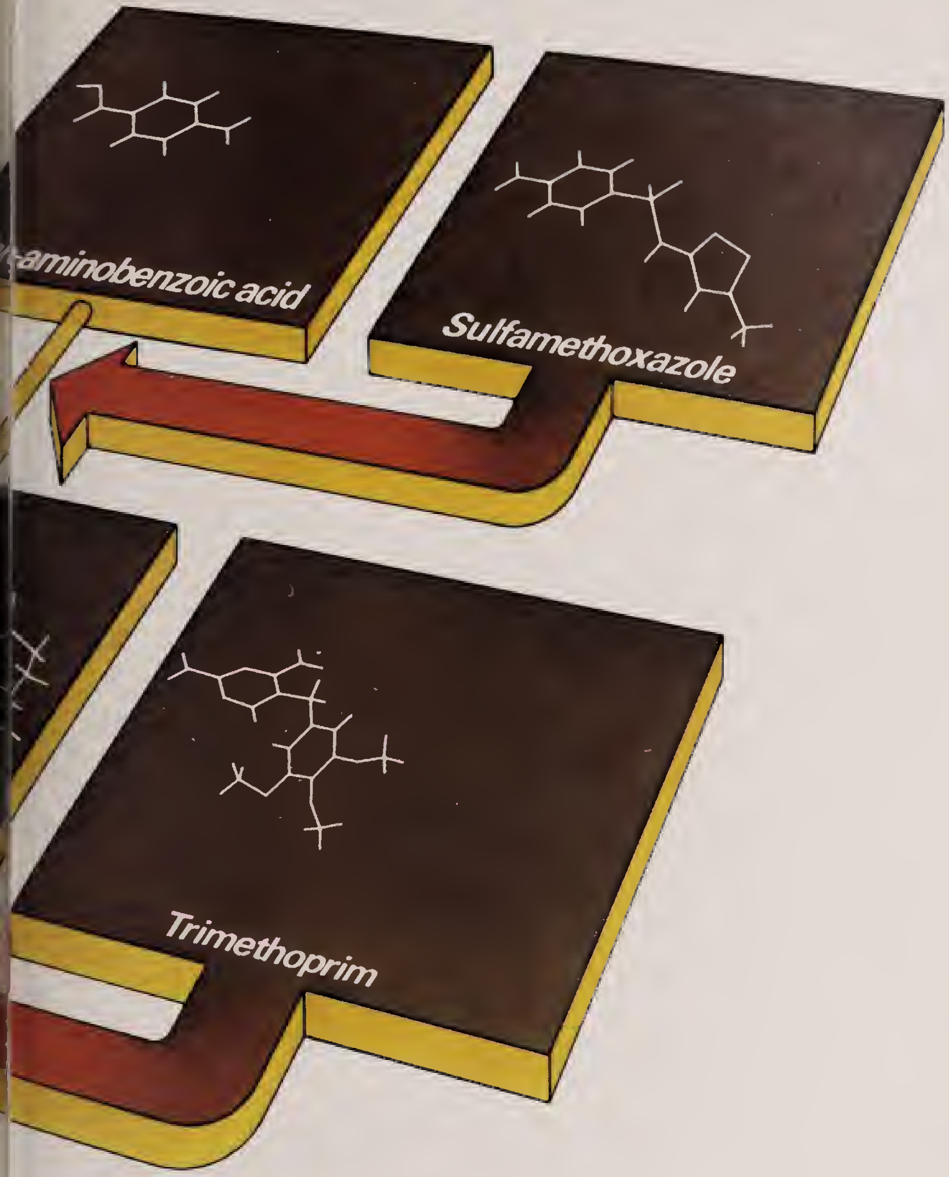


Bactrim significantly superior to constituents in patients with obstructive complications

In the presence of obstructive uropathy, Bactrim has demonstrated efficacy which is superior to either sulfamethoxazole or trimethoprim alone against susceptible organisms. In addition, *in vitro** studies have shown that bacterial resistance develops more slowly with Bactrim than with either trimethoprim or sulfamethoxazole alone.

---

*Please note that clinical conclusions cannot be extrapolated from *in vitro* studies.



ROCHE

errupts life cycle of susceptible bacteria

ue mode of action interrupts the life cycle at two important points, thereby impeding
roduction of nucleic acids and proteins essential to these bacteria. These consecutive
ruptions occur because sulfamethoxazole and trimethoprim resemble naturally existing
trates. By competitive replacement of these substrates, they inhibit further synthesis.

new **BACTRIM**™

Each tablet contains 80 mg trimethoprim and 400 mg sulfamethoxazole.

for chronic urinary tract infections

Before prescribing, please see complete product information on last page of advertisement.

Excellent clinical response in chronic urinary tract infections

A multiclinic, double-blind study* of response to a ten-day course of therapy in 471† patients with chronic urinary tract infections demonstrated the superiority of Bactrim. On the 10th day after initiation of therapy, 91.7% (of 168 patients) showed significant bacteriological response to Bactrim compared with 81.2% (of 144 patients) to trimethoprim and 64.5% (of 155 patients) to sulfamethoxazole. In patients with obstructive complications, 10th day response was 94.8% (of 97 patients) to Bactrim, 72.9% (of 85 patients) to trimethoprim and 58.5% (of 94 patients) to sulfamethoxazole.

Excellent response maintained

Bactrim proved equally impressive in maintaining this bacteriological response. In the above study, after ten-day therapy with Bactrim, 68.4% of patients with chronic urinary tract infections maintained response for up to 42 consecutive days, compared with 59.7% with trimethoprim and 44.4% with sulfamethoxazole. In patients with obstruction, 70.8% of those on Bactrim maintained response for up to 42 consecutive days, compared
with 49.4% on trimethoprim and 38.8% on su
methoxazole The figures are particularly rema
able in cases with urinary obstruction—cases
regarded as being notoriously difficult to treat

To date, low incidence of significant side effects

Although Bactrim demonstrated impressive cl
results, it is important to note that the inciden
clinically significant adverse effects was low, m
nausea and/or vomiting, rash, leukopenia, SG
increase and creatinine increase.

Bactrim should be given with caution to patie
with impaired renal or hepatic function, possi
folate deficiency and to those with severe alle
bronchial asthma. Adequate fluid intake must
maintained. Complete blood counts, urinalyse
careful microscopic examination, and renal fu
tion tests should be performed during therapy

Currently, the increasing frequency of resista
organisms is a limitation of the usefulness of
all antibacterial agents, especially in the treat
of chronic and recurrent urinary tract infectio

Usual adult dosage: two tablets every twelve h
for 10 to 14 days; no loading dose required.

Before prescribing, please consult complete product information on facing page.

te Product Information:

tion: Bactrim is a synthetic antibacterial combination prod-
ailable in scored light-green tablets, each containing 80 mg
oprim and 400 mg sulfamethoxazole.

oprim is 2,4-diamino-5-(3,4,5-trimethoxybenzyl) pyrimidine.
/hite to light-yellow, odorless, bitter compound with a molec-
ight of 290.3.

ethoxazole is N^1-(5-methyl-3-isoxazolyl)sulfanilamide. It is
ost white in color, odorless, tasteless compound with a mo-
weight of 253.28.

Microbiology: Sulfamethoxazole inhibits bacterial synthesis
drofolic acid by competing with *para*-aminobenzoic acid.
oprim blocks the production of tetrahydrofolic acid from di-
lic acid by binding to and reversibly inhibiting the required
, dihydrofolate reductase. Thus, Bactrim blocks two con-
e steps in the biosynthesis of nucleic acids and proteins
al to many bacteria.

studies have shown that bacterial resistance develops more
with Bactrim than with trimethoprim or sulfamethoxazole

serial dilution tests have shown that the spectrum of anti-
al activity of Bactrim includes the common urinary tract
ns with the exception of *Pseudomonas aeruginosa*. The fol-
organisms are usually susceptible: *Escherichia coli, Kleb-
nterobacter, Proteus mirabilis* and indole-positive proteus
.

Representative Minimum Inhibitory Concentration Values for Bactrim-Susceptible Organisms
(MIC—mcg/ml)

ia	Trimeth-oprim alone	Sulfameth-oxazole alone	TMP/SMX (1:20) TMP	 SMX
ichia	0.05—1.5	1.0 —245	0.05—0.5	0.95— 9.5
s spp. positive s	0.5 —5.0	7.35 —300	0.05—1.5	0.95—28.5
lis	0.5 —1.5	7.35 — 30	0.05—0.15	0.95— 2.85
lla- bacter	0.15—5.0	0.735—245	0.05—1.5	0.95—28.5

Pharmacology: Bactrim is rapidly absorbed following oral
stration. The blood levels of trimethoprim and sulfamethoxa-
e similar to those achieved when each component is given
Peak blood levels for the individual components occur one
hours after oral administration. The half-lives of sulfameth-
and trimethoprim, 10 and 16 hours respectively, are rela-
ne same regardless of whether these compounds are admin-
as individual components or as Bactrim. Detectable
s of trimethoprim and sulfamethoxazole are present in the
4 hours after drug administration. Free sulfamethoxazole
nethoprim blood levels are proportionately dose-dependent.
eated administration, the steady-state ratio of trimethoprim
methoxazole levels in the blood is about 1:20.

ethoxazole exists in the blood as free, conjugated and pro-
und forms; trimethoprim is present as free, protein-bound
tabolized forms. The free forms are considered to be the
utically active forms. Approximately 44 percent of trimeth-
nd 70 percent of sulfamethoxazole are protein-bound in the
The presence of 10 mg percent sulfamethoxazole in plasma
ses the protein binding of trimethoprim to an insignificant
trimethoprim does not influence the protein binding of
ethoxazole.

on of Bactrim is chiefly by the kidneys through both glomer-
ration and tubular secretion. Urine concentrations of both
ethoxazole and trimethoprim are considerably higher than
concentrations in the blood. When administered together
actrim, neither sulfamethoxazole nor trimethoprim affects
nary excretion pattern of the other.

ons: Chronic urinary tract infections (primarily pyelonephri-
elitis and cystitis) due to susceptible organisms (usually
Klebsiella-Enterobacter, Proteus mirabilis, and, less fre-
, indole-positive proteus species).

***nt note:* Currently, the increasing frequency of resistant organ-
a limitation of the usefulness of all antibacterial agents, espe-
the treatment of chronic and recurrent urinary tract infections.**

ndications: Hypersensitivity to trimethoprim or sulfonamides.
ncy and during the nursing period (see Reproduction
).

gs: Deaths associated with the administration of sulfonamides
een reported from hypersensitivity reactions, agranulocyto-
astic anemia and other blood dyscrasias. Experience with
oprim alone is much more limited, but it has been reported
fere with hematopoiesis in occasional patients. In elderly
s concurrently receiving certain diuretics, primarily thia-
an increased incidence of thrombopenia with purpura has
ported.

The presence of clinical signs such as sore throat, fever, pallor, purpura or jaundice may be early indications of serious blood disorders. Complete blood counts should be done frequently in patients receiving Bactrim. If a significant reduction in the count of any formed blood element is noted, Bactrim should be discontinued.

At the present time, there is insufficient clinical information on the use of Bactrim in infants and children under 12 years of age to recommend its use.

Precautions: Bactrim should be given with caution to patients with impaired renal or hepatic function, to those with possible folate deficiency and to those with severe allergy or bronchial asthma. In glucose-6-phosphate dehydrogenase-deficient individuals, hemolysis may occur. This reaction is frequently dose-related. Adequate fluid intake must be maintained in order to prevent crystalluria and stone formation. Urinalyses with careful microscopic examination and renal function tests should be performed during therapy, particularly for those patients with impaired renal function.

Adverse Reactions: For completeness, all major reactions to sulfonamides and to trimethoprim are included below, even though they may not have been reported with Bactrim.

Blood dyscrasias: Agranulocytosis, aplastic anemia, megaloblastic anemia, thrombopenia, leukopenia, hemolytic anemia, purpura, hypoprothrombinemia and methemoglobinemia.

Allergic reactions: Erythema multiforme, Stevens-Johnson syndrome, generalized skin eruptions, epidermal necrolysis, urticaria, serum sickness, pruritus, exfoliative dermatitis, anaphylactoid reactions, periorbital edema, conjunctival and scleral injection, photosensitization, arthralgia and allergic myocarditis.

Gastrointestinal reactions: Glossitis, stomatitis, nausea, emesis, abdominal pains, hepatitis, diarrhea and pancreatitis.

C.N.S. reactions: Headache, peripheral neuritis, mental depression, convulsions, ataxia, hallucinations, tinnitus, vertigo, insomnia, apathy, fatigue, muscle weakness and nervousness.

Miscellaneous reactions: Drug fever, chills, and toxic nephrosis with oliguria and anuria. Periarteritis nodosa and L. E. phenomenon have occurred.

The sulfonamides bear certain chemical similarities to some goitrogens, diuretics (acetazolamide and the thiazides) and oral hypoglycemic agents. Goiter production, diuresis and hypoglycemia have occurred rarely in patients receiving sulfonamides. Cross-sensitivity may exist with these agents. Rats appear to be especially susceptible to the goitrogenic effects of sulfonamides, and long-term administration has produced thyroid malignancies in the species.

Dosage and Administration: Not recommended for use in children under 12 years of age.

The usual adult dosage is two tablets every 12 hours for 10 to 14 days.

For patients with renal impairment:

Creatinine Clearance (ml/min)	Recommended Dosage Regimen
Above 30	Usual standard regimen
15-30	2 tablets every 24 hours
Below 15	Use not recommended

How Supplied: Tablets, containing 80 mg trimethoprim and 400 mg sulfamethoxazole—bottles of 100 and 500; Tel-E-Dose® packages of 1000; Prescription Paks of 40, available singly and in trays of 10. Imprint on tablets: ROCHE 50.

Reproduction Studies: In rats, doses of 533 mg/kg sulfamethoxazole or 200 mg/kg trimethoprim produced teratological effects manifested mainly as cleft palates. The highest dose which did not cause cleft palates in rats was 512 mg/kg sulfamethoxazole or 192 mg/kg trimethoprim when administered separately. In two studies in rats, no teratology was observed when 512 mg/kg of sulfamethoxazole was used in combination with 128 mg/kg of trimethoprim. However, in one study, cleft palates were observed in one litter out of 9 when 355 mg/kg of sulfamethoxazole was used in combination with 88 mg/kg of trimethoprim.

In rabbits, trimethoprim administered by intubation from days 8 to 16 of pregnancy at dosages up to 500 mg/kg resulted in higher incidences of dead and resorbed fetuses, particularly at 500 mg/kg. However, there were no significant drug-related teratological effects.

BACTRIM T.M.

Each tablet contains 80 mg trimethoprim and 400 mg sulfamethoxazole.

Recommendations[†] on Combination Live Virus Vaccine

American Academy of Pediatrics

Committee on Infectious Diseases

In the September 15, 1971 *AAP Newsletter* sent to Academy members, the Committee on Infectious Diseases of the American Academy of Pediatrics stated its recommendations on the use of combination live virus vaccines. After a careful review of available data, the committee concluded that:

- "This information indicates that the products are both safe and effective when used as directed."
- The vaccine "...can, therefore, be recommended with the obvious advantages of reduction in the number of injections for any given child and a concomitant decrease in the required visits to a physician's office or clinic."

United States Public Health Servi

Advisory Committee on Immunization Practices

In the April 24, 1971 issue of *Morbi*
and Mortality Weekly Report, the Ad
ory Committee on Immunization P
tices of the United States Public He
Service presented recommendations
the use of combination live virus vacci
The committee stated that:

- "Data indicate that antibody respo
to each component of these combina
vaccines is comparable with antibody
sponse to the individual vaccines gi
separately.
- "There is no evidence that
verse reactions to the combi
products occur more f
quently or are more sev
than known reactions to
individual vaccines (see
tinent ACIP recommen
tions).
- "The obvious convenie
of giving already selec
antigens in combined f
should encourage consid
tion of using these produ
when appropriate."

[†] For complete text of both recommendations see your MSD representative or write to Professional Service Dept., Merck Sharp & Dohme, West Point, Pa. 19486.

M-M-R*

(MEASLES, MUMPS AND RUBELLA VIRUS VACCINE, LIVE | MSD)

Single-dose vials

M-M-R, given in a single injection, fits easily into your routine immunization program for well babies.

Given at age 12 months, M-M-R provides for vaccina-ion early in life against measles, mumps, and rubella.

MSD suggested immunization schedule for well babies

Age	Vaccine(s)
2 months	DPT (diphtheria-pertussis-tetanus) Oral poliomyelitis vaccine (triple)
3 months	DPT[1]
4 months	DPT Oral poliomyelitis vaccine (triple)
6 months	Oral poliomyelitis vaccine (triple)
12 MONTHS	**M-M-R (MEASLES, MUMPS AND RUBELLA VIRUS VACCINE, LIVE, MSD)**

. This vaccination may be given at 3 months, 5 months, or at 6 months, depending on your preference or on the condition of the child.

ince vaccination with a live virus vaccine may depress the results of a tuberculin test for four weeks or longer, the test and he vaccine should not be given during the same office visit.

*Trademark of Merck & Co., Inc.

For a brief summary of prescribing information, please see following page.

M-M-R
(MEASLES, MUMPS AND RUBELL
VIRUS VACCINE, LIVE | MSD)

Single-dose vials

No untoward reactions peculiar to the combination vaccine (M-M-R) have been reported.

Moderate fever (101–102.9 F) occurs occasionally. High fever (over 103 F) occurs less commonly. On rare occasions, children who develop fever may exhibit febrile convulsions. Rash (usually minimal and without generalized distribution) may occur infrequently.

Since clinical experience with measles, mumps, and rubella virus vaccines given individually indicates that very rarely encephalitis and other nervous system reactions have occurred, such reactions may also occur with M-M-R. A cause and effect relationship, however, has not been established.

Excretion of the live attenuated rubella virus from the throat has occurred in the majority of susceptible individuals administered the rubella vaccine. There is no definitive evidence to indicate that such virus is contagious to susceptible persons who are in contact with the vaccinated individuals. Consequently, transmission, while accepted as a theoretical possibility, has not been regarded as a significant risk.

Must not be given to women who are pregnant or who might become pregnant within three months following vaccination.

Contraindications: Pregnancy or possibility of pregnancy within three months following vaccination; infants less than one year old; sensitivity to chicken or duck, chicken or duck eggs or feathers, or neomycin; any febrile respiratory illness or other active febrile infection; active untreated tuberculosis; therapy with ACTH, corticosteroids, irradiation, alkylating agents, or antimetabolites; blood dyscrasias, leukemia, lymphomas of any type, or other malignant neoplasms affecting the bone marrow or lymphatic systems; gamma globulin deficiency, i.e., agammaglobulinemia, hypogammaglobulinemia, and dysgammaglobulinemia.

Precautions: Administer subcutaneously; do not give intravenously. Epinephrine should be available for immediate use should an anaphylactoid reaction occur. Should not be given less than one month before or after immunization with other *live* virus vaccines; vaccination should be deferred for at least six weeks following blood transfusions or administration of more than 0.02 cc immune serum globulin (human) per pound of body weight, or human plasma.

Due caution should be employed in children with a history of febrile convulsions, cerebral injury, or any other condition in which stress due to fever should be avoided. The physician should be alert to the temperature elevation which may occur after vaccination.

Excretion of the live attenuated rubella virus from the throat has occurred in the majority of susceptible individuals administered the rubella vaccine. There is no definitive evidence to indicate that such virus is contagious to susceptible persons who are in contact with the vaccinated individuals. Consequently, transmission, while accepted as a theoretical possibility, has not been regarded as a significant risk.

Attenuated live virus measles and mumps vaccines, given separately, may temporarily depress tuberculin skin sensitivity; therefore, if a tuberculin test is to be done, it should be scheduled before vaccination, to avoid the possibility of a false negative response.

Before reconstitution, refrigerate vaccine at 2–8 C (35.6–46.4 F) and *protect from light*. Use only diluent supplied to reconstitute vaccine. If not used immediately, return reconstituted vaccine to refrigerator at 2–8 C (35.6–46.4 F), and discard after eight hours.

Adverse Reactions: Fever, rash; mild local reacti
such as erythema, induration, tenderness, regio
lymphadenopathy; parotitis; thrombocytopenia
purpura; allergic reactions such as urticaria; arthri
arthralgia, and polyneuritis.

Occasionally, moderate fever (101–102.9 F); less c
monly, high fever (above 103 F); rarely, febrile c
vulsions.

Encephalitis and other nervous system reactions
have occurred very rarely with the individual vacci
may also occur with the combined vaccine.

Transient arthritis, arthralgia, and polyneuritis
features of natural rubella and vary in frequency
severity with age and sex, being greatest in adult
males and least in prepubertal children. Such re
tions have been reported with live attenuated rub
virus vaccines. Symptoms relating to joints (p
swelling, stiffness, etc.) and to peripheral nerves (p
numbness, tingling, etc.) occurring within appr
mately two months after immunization should be c
sidered as possibly vaccine related. Symptoms h
generally been mild and of no more than three d
duration. The incidence in prepubertal children wo
appear to be less than 1% for reactions that wo
interfere with normal activity or necessitate med
attention.

How Supplied: Single-dose vials of lyophilized
cine, containing when reconstituted not less
1,000 $TCID_{50}$ (tissue culture infectious doses)
measles virus vaccine, live, attenuated, 5,000 TCID
mumps virus vaccine, live, and 1,000 $TCID_{50}$ of rub
virus vaccine, live, expressed in terms of the assig
titer of the NIH Reference Measles, Mumps, and
bella Viruses, and approximately 25 mcg neomy
with a disposable syringe containing diluent and fi
with a 25-gauge, ⅝″ needle. Also in boxes of 10 sin
dose vials nested in a pop-out tray with a separate box of 10 diluent-containing syringes.

For more detailed information, consult your MSD representative or see full prescribing information. Merck Sharp & Dohme, Division of Merck & Co., INC., *West Point, Pa. 19486*

WARREN A. HEFFRON, M.D., *Albuquerque, N. M.*

Dr. Sappington's Fever Pills

Special Article

"Old Aunt Sallie Elvins was chilling. Elvins went to town and brought home some new medicine—a box of Sappington's pills. Finding Aunt Sallie in the chimney corner, he gave her the box and went to put up his horse. When he returned and asked her if she had taken any of the pills yet, she replied that she had taken all but two and just couldn't get them down. She is said to have reported a complete cure."[1]

Reports such as this gave impetus to one of Saline County's (Missouri) early contributions to both medicine and business. Dr. John Sappington's pills were more than a patent medicine; they were one of the early uses of quinine in medicine for the treatment of the then prevalent malaria fever.

These pills were developed from the experience of Dr. John Sappington who was born into a family of doctors in Maryland in 1776. When John was nine years old, his family moved to a Tennessee farm near what is now Nashville. As a result, young John had little opportunity for a formal education. He served a five-year medical apprenticeship under his father, as was the custom in those days. He later joined his father in practice.

Only a three-year apprenticeship was required at that time for medical school admission. Even though John had no formal education, he had served the apprenticeship under his father and, in 1814-1815, had attended one term of lectures at the Philadelphia Medical College, Philadelphia, Pa. At that time, two terms were required for graduation, but the degree was not compulsory for practice. Dr. Sappington chose not to get the degree.

At the age of 23, he set up his own practice in Williamson County, Tenn. This practice grew and, in 1817, he was financially able to move his family to Howard County in Missouri, eventually settling in Arrow Rock. Until Dr. George Penn became his partner in 1830, Sappington was the only doctor in Saline County.

For much of his practice, he travelled by horseback to patients as far as 65 miles away. Sometimes, Dr. Sappington would stay for several days at a time to personally care for a patient. He carried his medications in his saddlebag. Much of his pay was in the form of salt, beans, corn, wheat and whiskey.

In addition to being the physician of Saline County, he farmed, was a large landowner and owned a blacksmith shop and the pill manufacturing concern.

John Sappington practiced medicine in an era in which there was groping and searching for the treatments of modern medicine without the present day advances in the academic sciences. The only criterion for a successful treatment was whether or not it worked or whether or not the attending physician felt that any untoward effects of the treatment could be offset by its benefits for his patient. At this time, so many physicians were searching, by experimentation on their patients, for cures.

In his practice, Dr. Sappington was somewhat a nonconformist in comparison to most of the other doctors of his day. There were several basic concepts, particularly of fevers, in which Dr. Sappington differed from his colleagues. Many of these beliefs are outlined in his book, *The Theory and Treatment of Fevers.* In this book, he wrote his reasons for departing from the practices of the old-school physicians in the treatment and care of fever. Also, it contains an outline of his treatment for fevers for the general public.

As one of his differences of opinion, Dr. Sappington disagreed with the general theory that fevers were cause of disease and were usually

---

This paper was written by the author when he was a student at the University of Missouri School of Medicine in 1960 and was the first place winner in that school's first annual essay contest in medical history. This is its first publication. Dr. Heffron spent his boyhood in Marshall. He is now Assistant Professor, Department of Family and Community Medicine and Director of the Family Practice Program, University of New Mexico School of Medicine.

initiated by excitement or irritation. Most doctors treated fevers primarily by attempting to calm the patient. This was done by purgings, blood letting and emetics. Frequently, a combination of these practices was used. Dr. Sappington felt that fever was a symptom of disease, not a cause. This idea conforms to the modern concept.

Dr. Sappington was a strong opponent of the then prevalent practice of bleeding. Some doctors injudiciously bled their patients of as much as 50 oz of blood. Dr. Sappington felt that this was not only a poor practice, but actually was harmful to the patient. He believed that blood carried oxygen and nutrients to the tissues and that the integrity of this system must be maintained, especially when a disease state was involved, so the body could use its maximum forces to fight off the disease.

Many practitioners seemed shocked when the announcement came that in John Sappington's practice, fever could be controlled by the application of cool water to the skin. He felt that the coolness lowered body temperature and replaced needed fluids, as well as being satisfying to the patient.

Perhaps much of the success of Sappington's treatment of fevers was due to the quinine pills he developed and fearlessly administered during the febrile course of malaria fever. These pills were manufactured at Arrow Rock for about ten cents a box and sold for 15 times that amount. The ingredients were as follows:

Sulfate of Quinine 2 pounds
Pulverized extract of liquerice 1.5 lbs.
Pulverized Gum Myrrh .5 pounds
Oil of Sasafras
Aqua Pura
Makes 240 boxes
24 pills per box

Set of surgical instruments in the Arrow Rock Museum. These tools were owned by Dr. Barrow of Chillicothe and are similar to those used by Dr. Sappington.

The earliest method of administration was to put pulverized quinine bark in wine. However he later used quinine sulfates in his pills.

The current medical opinion of the 1830s was to leave the patient alone during the intermittent phases of the temperature. Dr. Sappington observed a marked improvement in patients when he gave quinine during the afebrile stage. In so doing, he departed from medical tradition. Later, his treatment was substantiated by research which proved that the life cycle of the malarial parasite is in its exoerythrocytic phase during the febrile stage and would be more susceptible to treatment. Of course, he did not have benefit of this research and his reasoning was (1) intermittent stages may not be present in the early stage of the disease, while treatment was necessary; (2) in the later stage of malaria, the patient might not have sufficient strength to endure several febrile phases caused by the physician refraining from treatment. For these reasons, he concluded that it was worth treating patients in a manner contrary to general current medical opinion.

Although this practice did not gain immediate recognition, these quinine pills evidently aided many people. Later writings of such prominent physicians as Daniel Drake and Austin Flint seemed to mention similar convictions.

Flint writes as follows:

"It will be difficult to reconcile this practice with preconceived notions, or any known principles of pathology or therapeutics. Nevertheless, the known virtue which the remedy possesses in intermittent fevers has been only empirically established."[2]

As confidence in the pills and demand increased, he set up his own pill manufacturing company to supply the demand on a large scale basis. With some of the money acquired from this concern, Dr. Sappington established a scholarship fund which still provides annual scholarships for students of Saline County.

WASHINGTON

In an effort to reach some hard conclusions in the fuzzy area of the impact of various kinds of health insurance on health care, the federal government is starting a $30 million experiment.

Following are some of the questions that researchers hope to answer:

—Would erasure of all financial barriers cause a surge of demand?

—Do deductibles and co-insurance exert a brake on frivolous or excessive use of physicians and hospitals?

—Do families alter their patterns of physician-hospital utilization depending upon their type of insurance? How is their health affected?

The study, handled by the Office of Economic Opportunity (OEO) in conjunction with the Health, Education and Welfare Department, will cover 2,000 families containing about 7,500 people. It will last up to five years. About 100 families in Dayton, Ohio, will be enlisted shortly. Four other cities eventually will take part. The participants' identities are confidential.

The HEW Department is slated to take over the project next year. Noting the proposals before Congress for national health insurance (NHI) programs, the OEO says, "The federal government will inevitably play a major role in determining the way in which the nation's health insurance plans operate. Unfortunately, current knowledge of health economics is not sufficient to predict the effects of public policies related to health insurance."

Those in the experiment will have to give up existing health insurance policies. New ones will be provided free as far as policy cost is concerned. The coverage will take three basic forms:

(1) No deductible; no co-insurance. Basically unlimited free medical care.

(2) $100 yearly per-person deductible, no co-insurance.

(3) No deductible, 20% co-insurance.

There will be variations on these plans, but all will have a catastrophic provision above a certain amount of out-of-pocket costs determined by some fraction of the yearly family income.

Officials concede that Congress may enact a NHI bill before much meaningful data is accumulated from the experiment. Nevertheless, they say, the information will be valuable and could lead to adjustments in any existing national program.

Benefits will vary in the experimental plans. One will cover all visits to physicians' offices while the patients share hospital costs. Psychiatric care will be limited to 50 outpatient visits annually. Dental care will be confined to children and exclude orthodontic work.

Families of all income levels will be included, up to $25,000 a year. All participants will be interviewed in depth; about one third will receive physical examinations.

The experiment is being conducted under a grant to the Rand Corporation, Santa Monica, Calif.; a subcontract for operational work is held by Mathematica, Inc., of Princeton, N. J.

No one will be surprised if some commonly-held notions aren't exploded when the project is finished. A little-publicized HEW study, for example, indicates that average costs per medical visit are much cheaper with the private practitioner than at a neighborhood health center or a prepaid group practice. The estimated private costs ranged from $6.58 to $10.63 by specialties. In contrast, the cost per visit at 18 well-established neighborhood health centers was $21.16. The prepaid group rate was figured at more than $18.

The report, prepared by the office of the Assistant HEW Secretary for Planning and Evaluation, said that strict comparisons among the three modes of delivery are difficult and subject to interpretation, yet "the order of magnitude different was far greater than had been anticipated."

Taking into account all variables, the report said, "When related to the estimated private practice average cost per visit, the (neighborhood) center physician encounter cost appears to be extreme in nature."

On the surface, though the study group took pains not to put it so bluntly, the report indicated that larger delivery systems might not be as efficient and economical as the solo practitioner.

The report concluded:

"Like any analysis, this study raised questions which others must examine and answer. Unfortunately, the luxury of time to answer these questions is not available. As we move through a period of rapid social and health policy change the need for these answers becomes almost immediate."

medical melange

Notes of interest from Here . . . . and Ther

Dr. Donald M. Spencer, Kansas City, was selected as one of two team doctor for the American track and field team which participated in the World Universit Games in Moscow on August 15-25. Dr. Spencer is chairman of the MSMA A Hoc Committee on Medical Aspects of Sports. The American team is sponsore by the United States Collegiate Sports Council and includes NAIA and NCA athletes.

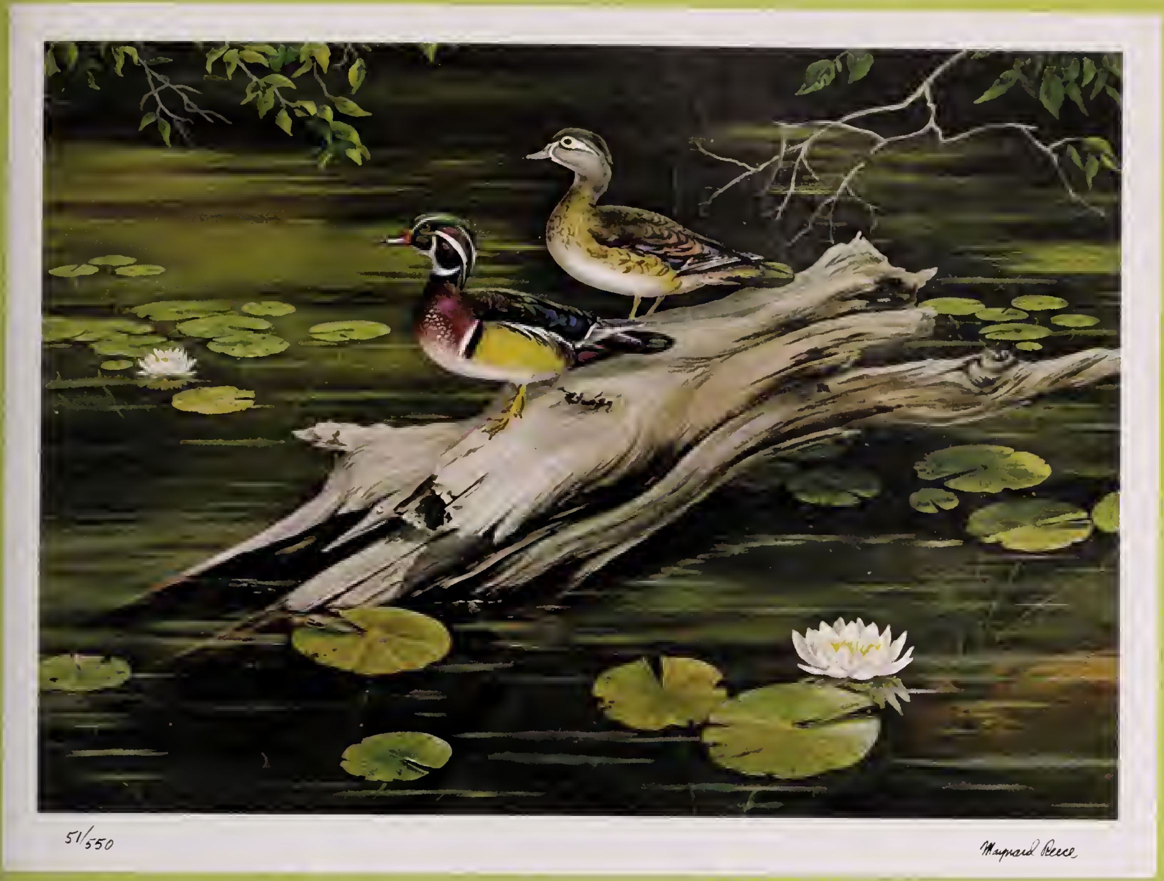
Dr. R. Lee Cooper of Warrensburg, a Vice-President of the MSMA, received a special award at a banquet celebrating the tenth anniversary of the Johnson County Memorial Hospital on August 3. He received a plaque and was cited as a lifelong member of the community who has been a most prominent figure in the medical and civic community. **Mr. Howard Baldwin**, a member of the Board of Trustees, also read a letter from **Gov. Christopher S. Bond** citing Dr. Cooper's contribution to the community. **Dr. A. L. Folkner** was master of ceremonies for the occasion which was attended by more than 200 persons. Dr. Cooper's son, **Dr. Robert L. Cooper II**, and his son-in-law, **Dr. Hugh Hanna**, also practice medicine in Warrensburg.

Dr. Arnold M. Reeve has been appointed health officer of District One of th Missouri Division of Health and assumed his duties on July 23. This announc ment was made by **Dr. Herbert R. Domke**, state director of the Division. D Reeve formerly was Commissioner of Public Health in Iowa.

Dr. F. T. H'Doubler, Past Potentate of Abou Ben Adhem Temple in Springfield, was elected Imperial Marshal of the Shrine of North America at the 99th Imperial Council Session of the international organization in July. The 900,000-member fraternal and philanthropic organization is observing its 101st year and marking the 51st year of operating Shriners Hospitals for Crippled Children. Free medical treatment is given at the hospitals to children under 15 without regard to race or creed. Dr. H'Doubler is in practice in Springfield with his brother, **Dr. Charles E. H'Doubler.**

Dr. Albert L. Carlin, who has practiced medicine in Stanberry since 1952, wa honored before hundreds of persons attending that community's 42nd annua July 4th celebration. He received a plaque as an award of appreciation from th citizens of Stanberry for his outstanding and dedicated service.

Dr. Donald R. Patterson of Joplin was named Green Country Chapter chairman of the 1973 Multiple Sclerosis Fund Drive held in the Joplin area in August.



y these beautiful wood ducks in your home or office

"It's a thrilling sight to see the handsome drake wood duck standing quietly on a gnarled log with his mate. Because of the wood ducks' preference for secluded timber areas near or in the water, they enjoy quiet, shaded ponds. These spots are ideal for the fragrant water lily. The lily pads floating on the clear water seem suspended in midair. Overhanging boughs add to the privacy of this dark hideaway. Wood ducks are adept at swift flight in heavy timber, darting and twisting with ease through a heavy tangle of trees."

The only FIVE TIME winner of the Federal Duck Stamp design competition.

DUCKS UNLIMITED Artist of the Year—1973.

A summary of AMA, medical & health news

American Medical Association / 535 North Dearborn Street / Chicago, Illinois 60610 / Phone (312) 527-1500 / TWX 910-221-0300

The concept of an NHI plan relating benefits to income was suggested by the Brookings Institution, Washington, D. C. In a report, the Institution said, "The type of proposal that seems best adapted to meeting all three criteria of equity, protection and efficiency is a national health plan with income-related benefits." One of the major features of the AMA's Medicredit proposal is the income tie-in, which is not considered in the Kennedy-Griffiths NHI bill. A catastrophic program based on tax credits which would concentrate tax benefits on those for whom health care expenses pose the most serious problem was also suggested in the report. For copies of the report, *Setting National Priorities*, $3.95 each, write to Brookings Institution, 1775 Massachusetts Ave., Washington, D. C. 20036.

Costs per visit to private practitioners are lower than those to neighborhood health centers or prepaid group practices, reports an HEW study. The cost per visit at the 18 health centers studied was $21.16. OEO supported centers reflected a cost of $23.68 and those supported under the Public Health Service Act a cost of $18.60, while prepaid group rates averaged more than $18. Costs per visit to private physicians in the four primary care specialties ranged from $6.58 to $10.63.

A $25,000 contract from HEW has been granted to the AMA for the preparation of a report on professional health provider participation in the Early and Periodic Screening, Diagnosis and Treatment Program for children under Medicaid. The AMA's Committee on Health Care of the Poor will sponsor national, state and local meetings to develop solutions to EPSDT problems.

An updated version of the *JCAH Accreditation Manual for Hospitals* is available. It contains three new sections of standards, new survey eligibility criteria and other standards changes that will become effective in January, 1974. All changes made since the 1970 edition of the *Manual* are incorporated in the new soft-cover edition. For copies, $3.50 each and $3.00 each for six or more, write to Publications Coordinator, JCAH Headquarters, 875 N. Michigan Ave., Chicago, Ill. 60611.

A $30-million project to determine the impact of NHI on medical care cost and availability will be conducted by the Office of Economic Opportunity. Initially, 150 families in Dayton, Ohio, will be enrolled in three different health plans to determine how out-of-pocket payments influence the amount of care they seek. Next year, the program will be enlarged to include about 600 families in Dayton and will be extended to include 2,300 families in four cities within two years.

After expressing dissatisfaction with their closed-panel Kaiser Foundation health care plan, several Teamsters locals in the Los Angeles area adopted a private-physician, fee-for-service plan developed by the Los Angeles County Medical Association. It provides comprehensive medical care and hospitalization for 10,000 union members and their dependents. Plan members choose their own physicians and hospitals, who maintain their freedom to practice privately and bill for services in the usual way. Bills are submitted to the Los Angeles County Health Services Corp., a nonprofit subsidiary of LACMA.

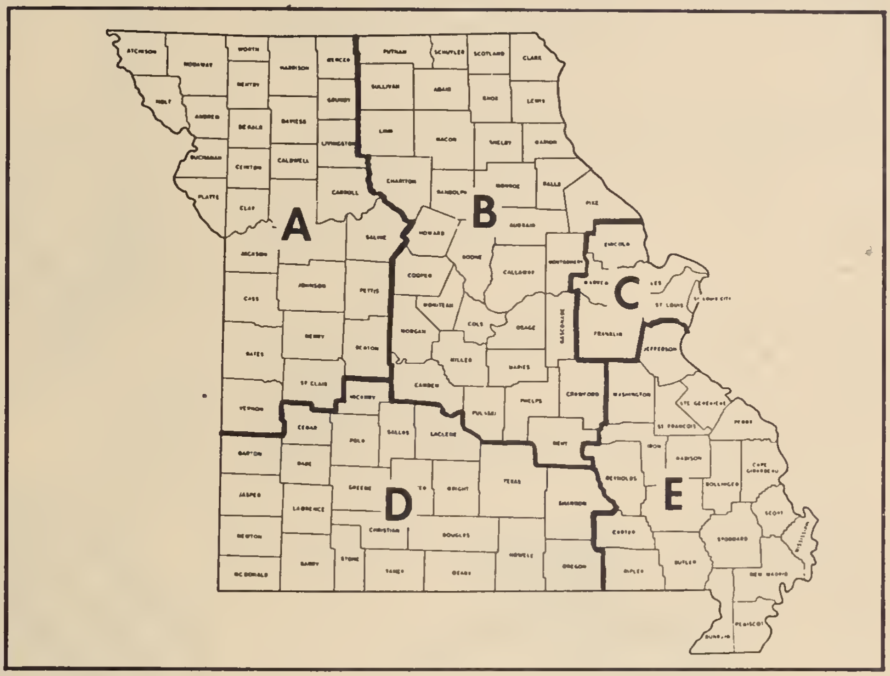
Current Procedural Terminology is now available on microfiche and magnetic computer tapes and in book form. *CPT* on microfiche, designed for use in microreaders, costs $2. Two sets of magnetic computer tapes are being offered. The first, containing codes and procedural descriptions which correspond with those in the book, costs $625. The second, costing $385, contains descriptions suitable for computer billing. The book version is available for $5. To order the book (OP-41), microfiche (OP-41A), or magnetic computer tapes (OP-41B and OP-41C), write to Order Dept., AMA Headquarters.

Five M.D.'s have been named to the 17-member CLC Health Industry Advisory Committee. Physicians on the committee are Ernest B. Howard, M.D., the AMA's executive vice president; Earl W. Brian, M.D., secretary, California Health and Welfare Agency; Leonard W. Cronkhite, Jr., M.D., executive vice president, Children's Hospital Medical Center, Boston; Paul M. Ellwood, Jr., M.D., executive director, American Rehabilitation Foundation, and Kenneth W. Woodward, M.D., executive director, Rochester (N. Y.) Health Network.

MSMA NEWS ROUND-UP

SEPTEMBER, 1973

CF proposed as PSRO in state!



Proposed Missouri PSRO's

Five areas in Missouri which closely coincide with present Health Care Foundation of Missouri Peer Review Regions were proposed as PSRO areas at a District 7 HEW meeting Aug. 27. Each area would be a PSRO while the HCF would become an administrative agency for all the areas. See story for slight revisions in Region alignment.

proposal which would estab- the Health Care Foundation Missouri as the "umbrella" O in Missouri and desig- the HCF's current five Review Regions as PSRO s received wide support at rict VII HEW meeting in erson City.

lector W. Benoit, Jr., M.D., ansas City, chairman of the lth Care Foundation, capsul- the Foundation's recommen- ons as follows:

1. That the five PSRO s as defined by the Health Foundation of Missouri, and ch represent what the li- ed practicing physicians nselves regard as the most vi- medical service areas in Mis- i, be so designated for the e of Missouri; and that it is specific intent that each O within these areas be so gnated, be administratively ed to each other and the Pro- onal Standards Review ncil (PSRC) through the lth Care Foundation of Mis- i by establishing a Missouri essional Standards Adminis- ve Organization (PSAO).

2. That the Health Care dation of Missouri, with its blished provider relation- s, and its regionalized administrative review anism be designated as the Professional Stan- s Administrative Organization (PSAO) for ouri.

3. To further demonstrate the Health Care dation's sensitivity to the problems involved stablishing the necessary PSRO structures, HCF is willing to accept alternatively, if the etary of HEW designates, full statewide respon- ity of all PSRO performance by becoming the contractor with HEW for the State of Missouri and implementing the intent of PL 92-603."

Dr. Benoit stated the HCF not only recognizes the need for a decentralized review structure that localizes review activities and responsibilities, but also recognizes the absolute need for a statewide coordinating and administrative organization that will complement and assist in the development of each PSRO as it relates to all health care interests within its area and the state.

"Since it appears to be the intent of PL 92-603

Continued on Next Page

PSRO's must be designated by Jan. 1, 1974

Continued from Previous Page

to establish one review organization in each geographically-defined medical service area and Missouri is able to accommodate five such areas," explained Dr. Benoit, "it becomes immediately apparent to all concerned that as a result of the legislation which is an attempt to reduce medical costs, it is possible the problems will be multiplied and the costs increased if each PSRO area attempts to develop its own independent and unrelated administrative mechanism."

By establishing the HCF as the Missouri Professional Standards Administrative Organization, said Dr. Benoit, the effectiveness and efficiency of the review work done in each PSRO area is vastly enhanced by eliminating duplicative organizational and administrative functions of each of the five areas. Also, centralizing the areas into one PSAO system would provide maximum utilization of resources within an integrated local and statewide framework.

Dr. Benoit added that the PSAO would become the primary communicator between each PSRO and the Missouri PSRC, as well as other governmental and intermediary interests.

The HCF proposal included minor changes in the makeup of current HCF Peer Review Regions. The changes transfer Linn County from Area A to Area B; Maries, Pulaski, Phelps, Dent and Crawford Counties would transfer from Area D to Area B; Carter County would move from Area D to Area E and Jefferson County would shift from Area C to Area E.

Those organizations on hand at the Regional HEW meeting to testify in favor of the HCF proposal included the Missouri State Medical Association, Missouri Association of Osteopathic Physicians and Surgeons, Southeast Missouri Foundation for Medical Care, representatives from each HCF Peer Review Region and the Missouri Podiatry Association.

Each spokesman from the various HCF Regions requested that his Region be designated as a PSRO area. The spokesmen also supported the HCF as a statewide coordinating agency.

John I. Matthews, M.D., secretary of the Missouri State Medical Association, told HEW o cials that the MSMA House of Delegates in 1 directed the Council to implement a mechanism peer review throughout the state. Acting conjoin with the Missouri Osteopathic Association, Health Care Foundation of Missouri was establis and "is the only recognized statewide peer rev organization in Missouri."

Dr. Matthews added that just last March House of Delegates adopted the following reso tion:

"That endorsement be given to the Health C Foundation of Missouri in its efforts to become responsible agency for PSRO activities in Miss ri."

PSRO Conference scheduled

A PSRO Regional Conference, sponsored by the AMA, will be held Sept. 28-29 in Chicago. The program will not be finalized until the latest possible date so that new developments in PSRO can be included.

The program is expected to include "How To" workshops on many aspects of PSRO's.

For further information, contact Martin G. Dale, Peer Review Activities, AMA, 535 N. Dearborn St., Chicago, Ill. 60610.

"The proposal by the HCF," said Dr. Matthe "appears to fulfill in every respect the PSRO a designation guidelines developed by the Departm of HEW."

Presenting testimony for the HCF Regi were Allen D. Smith, Kansas City, Region A; R ert E. Bregant, M.D., Jefferson City, Regional Richard V. Bradley, M.D., St. Louis, Region M. D. Bonebrake, M.D., Springfield, Region and Edwin K. Burford, M.D., Cape Girardeau, gion E and the Southeast Missouri Foundation Medical Care.

'M.D. Day' at Mizzou set Oct. 12 - 13

October 12 and 13 have been designated for the 14th annual "M.D. Day" activities at the University of Missouri-Columbia.

A scientific session on Friday, Oct. 12, is designed to bring recent medical knowledge to practicing physicians in the fields of pediatrics, obstetrics-gynecology, gastroenterology, and rheumatoid arthritis. The faculty for the morning and afternoon sessions has been selected from specialists at both the University of Nebraska and UMC medical schools.

Reservations for M.D. Day are being handled through the Office of Continuing Education for the Health Professions, University of Missouri Medical Center.

M. Pinson Neal, M.D. noted professor, dies at 85

M. Pinson Neal, M.D., Professor Emeritus Pathology at the University of Missouri-Colum School of Medicine, died Aug. 19 at the age of 85

A noted teacher and medical author, Dr. N was an active member in the Missouri State Me cal Association and served as Vice President 1957-58.

A Dr. M. Pinson Neal Memorial Fund has be established at the University of Missouri Medi Center.

MSMA Council to meet

The Council of the Missouri State Medi Association will meet Sept. 29-30 at the R mada Inn in Columbia.

Just what do you get for your AMA dues?

You get a package of personal and professional services and benefits you've probably never been fully aware of.

You get insurance programs at a cost considerably lower than those purchased on an individual basis. A $250,000 Excess Major Medical Policy. Group Life. Disability Income Insurance. Professional Liability Insurance (in co-sponsorship with your state society.) Then there's the AMA Members Retirement Fund.

You get a comprehensive medical library to help you do your research. An editing service for your articles. Information and reports on medical and health subjects from any AMA department.

You get publications to keep you abreast of medical and health developments. *JAMA*. *American Medical News*. And *Prism*, the new socioeconomic journal.

You get the Physician's Placement Service to help you find a place to practice or locate an associate. And if you're a resident winding up your training, there's a special workshop to help prepare you for setting up your practice.

All these are just a few of a broad spectrum of benefits and services you get for your dues. But even more important, you get a strong and effective national spokesman to represent you, your interests and your views.

Join us.
We can do much more together.

f Drugs

nsurance rates and hospital
es are only two factors in health care costs. The cost of drugs—both prescription and nonprescription—is another.

And when it comes to drug costs, the nation's pharmacists *are concerned*. Through their national professional society, the American Pharmaceutical Association, pharmacists are advising the public to use nonprescription medication cautiously and conservatively, and to seek the advice of their pharmacist before selecting or purchasing such drugs.

Outdated Laws

The pharmacist also is aware that when it comes to prescription drugs, often he has an even greater opportunity to reduce the cost to the patient—with no sacrifice in the quality of the medication dispensed. But in many states, outdated and antiquated laws prevent the pharmacist from engaging in drug product selection. "Drug product selection" simply means that the pharmacist functions in the patient's interest by consciously choosing, from the multiple brands available, a low-cost quality brand of the specific drug to be dispensed in response to the physician's prescription order.

Much *misinformation* has been purposely spread by those who stand to gain financially by maintaining high drug costs to the public. An endless stream of propaganda has emanated from the drug industry in an effort to persuade the medical profession that these so-called anti-substitution laws should be retained. And as long as these laws are retained, the drug industry will continue its current marketing practices which contribute unnecessarily to high drug costs to patients. These practices also are inviting government agencies to expand their restrictive controls on physicians and pharmacists.

APhA Efforts

As pharmacists, we are concerned about health care costs. We hope that every physician shares our concern on this vital issue, and will give his personal support to the constructive efforts APhA has undertaken in the interest of all patients.

(For a complete discussion of drug product selection, you are invited to request a free copy of the "White Paper on the Pharmacist's Role in Product Selection" from: American Pharmaceutical Association, 2215 Constitution Avenue, N.W., Washington, D.C. 20037.)

d Prescription Prices?

ubstitution advocates are
ting to the consumer, and par-
y the consumer activist, that
d prescription prices could
egalization of substitution.
e seen absolutely no evidence
fy this claim. To the contrary,
nce in Alberta, Canada, where
ution is authorized, suggests the opposite.

Many pharmacists understandably are concerned about the cost of maintaining multiple stocks of similar products. While there is no doubt that inventory costs rise when additional brands are stocked, it would be interesting to know how much they rise, and how many pharmacists actually stock *all* brands—of, say, ampicillin or tetracycline—or how long they keep "slow moving" products on their shelves before they are returned for credit. To ask that the industry eliminate multiple sources is to ask competitors to stop competing.

Drug Substitution—A License for the Unethical

Anti-substitution repeal would favor "corner cutting" pharmacists and manufacturers. For them, free substitution would be not a right, but a license. As an aftermath, it is quite likely that the confidence of both physicians and patients in the profession of Pharmacy would be eroded, as revelations about the unconscionable behavior of an undisciplined few were magnified in the press or in professional circles.

Summary

In short, what the American Pharmaceutical Association advocates as a broad-spectrum panacea looks to us to be not only a minority view (advocacy of substitution is by no means a uniform policy in Pharmacy), but also an extraordinarily costly and ineffective remedy, whose side effects are odious. We believe (1) that an impressive majority of pharmacists prefer to work with Medicine and with industry, for the consumer, and for the general good, (2) that they seek the privilege to substitute when the patient might gain and when the patient's doctor agrees, and (3) that they seek to work for the resolution of genuine grievances openly and professionally.

(For amplification of PMA views, please write for our booklet, "The Medications Physicians Prescribe: Who Shall Determine the Source?" It is available from: Pharmaceutical Manufacturers Association, 1155 Fifteenth Street, N.W., Washington, D.C. 20005.)

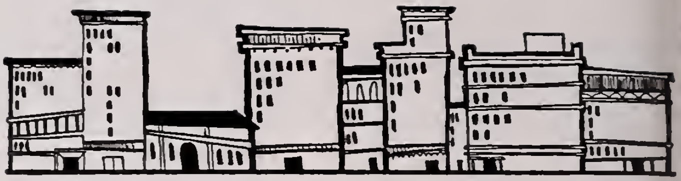
From the Medical Schools

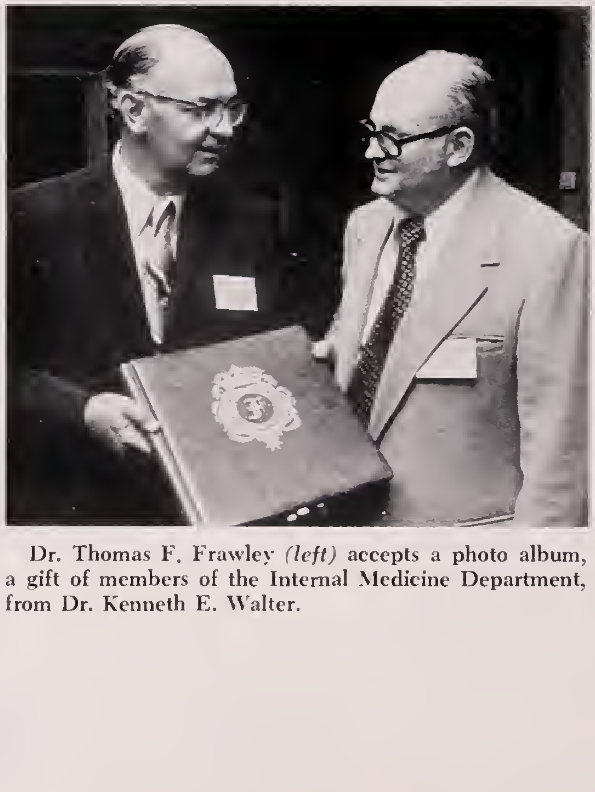


ST. LOUIS UNIVERSITY

Recognition Night for *Dr. Thomas F. Frawley,* professor and chairman of the Department of Internal Medicine at the St. Louis University School of Medicine, was sponsored by full-time members of his department on July 12 at a dinner at the Bath and Tennis Club. Dr. Frawley, a camera enthusiast, was the recipient of a photo album.

Dr. Kenneth E. Walter, associate professor of internal medicine and director of the Cardiac Catheterization Laboratory at the St. Louis Veterans Administration Hospitals, was chairman of the arrangements committee. He presented the album which will be used for photos taken at the dinner.

Rev. Edward J. Drummond, S.J., vice-president for the Medical Center, delivered the invocation at the dinner. *Dr. Robert H. Felix,* dean, School of Medicine, was the keynote banquet speaker. *Dr. George E. Thoma,* assistant vice-president for the Medical Center, and *Dr. Richard J. Dames,* assistant dean, both of whom are members of the Internal Medicine Department, were among the 70 physicians and wives who attended.



Dr. Thomas F. Frawley *(left)* accepts a photo album, a gift of members of the Internal Medicine Department, from Dr. Kenneth E. Walter.

Dr. Frawley, who served as chairman of the Department of Internal Medicine for ten years, had requested to leave that post on Sept. 1, 1973 to devote full time to teaching, research, patients and writing. He will continue to serve as professor of internal medicine and head of the Section of Endocrinology. Dr. Frawley also will play a key role in the planning and development of a special Diagnostic and Treatment Center at the St. Louis Veterans Administration Hospital. This Center will be especially supportive to studies on endocrine and metabolic problems relating to alcoholism, drug abuse and aging. The St. Louis Veterans Administration Hospital is affiliated with St. Louis University.

Richard L. Stensrud, director of the St. Louis University Hospitals, announced two administrative promotions July 1.

Ronald W. Green, who has served as assistant director at the University Hospitals since July 1, 1972, has been named associate director. Green had been administrative assistant from June of 1971 to July of 1972. He is an instructor in Hospital and Health Care in the University's Graduate School.

Stanley J. Kantanie assumed Green's former post as assistant director of the St. Louis University Hospitals. He has been administrative assistant for ancillary services since June of 1972.

The St. Louis University Hospitals Auxiliary, which pledged $100,000 to the University Hospitals four years ago, went over the top when the group recently presented Richard L. Stensrud, director, St. Louis University Hospitals, with a check for $35,000. This brought total contributions for the four-year period to $128,000.

The Auxiliary's gift can be applied to the University's Danforth Challenge grant of $20 million. The University has accepted the challenge to earn the grant by matching it with like amounts of private gifts over the next five years.

NIVERSITY OF MISSOURI-COLUMBIA

Approximately 85 new interns and residents ined the Medical Center and VA Hospital staff n July 1. Added to the more than 100 physicians lready on duty, they comprise the house staff f the two affiliated hospitals.

These doctors are taking specialty training in 1 medical fields under the direction of the nior faculty members. The specialties range om anesthesiology to urology. In addition, the edical Center has 15 postdoctoral fellows in ecial research training.

A significant increase is noted this year in the umber of residents in Family Practice (six first-ear and two second-year residents) following national trend toward interest in the "family octor." The new doctors receive training in the amily Medical Care Center here as well as in e hospital.

Another upward trend shows in the increase interns and residents in Pediatrics, although e overall increase in the number of house staff n generally be attributed to the opening of ore beds at the Veterans Administration Hostal. All teaching and training programs there e under the supervision of the faculty of the hool of Medicine.

In the Department of Medicine, a new subvision has been added this year to provide aining in treatment of pulmonary diseases. r. *Kaye Kilburn* is the new chief of the Dision, having come to Missouri from Duke Unirsity. The two residents who will train with m are coming from the East. However, most the new residents are from the midsection of e nation.

Eighteen Missouri medical graduates of 1973 e staying here for their internships. Also, a ge number of graduates who have been away r internships and military service returned this ar to their Alma Mater.

A $240,000 grant from the State Office of Votional Rehabilitation provides for staffing the cHaney Rehabilitation Center after completion construction here.

The building, which is adjacent to the Medical nter on the east and connected to the hospital by an underground passageway, is currently being enlarged to accommodate about 600 inpatients and outpatients a month. The new area will provide treatment facilities for physical therapy, occupational therapy, hearing and aural rehabilitation, prosthetics and orthotics and vocational rehabilitation. The six-story addition is expected to be completed in February, 1974.

Dr. Charles R. Peterson, new chairman of the Department of Physical Medicine and Rehabilitation, has arrived in Columbia and has assumed his new responsibilities. Granting of the funds will allow him to proceed in recruiting new faculty members and others.

WASHINGTON UNIVERSITY

Thomas B. Ferguson, M.D., professor of clinical cardiothoracic surgery, has been elected by the part-time faculty of Washington University School of Medicine as its representative to the Executive Faculty, the Medical School's governing body. Dr. Ferguson will serve as a voting member for a one-year term.

Dr. Ferguson

Dr. Ferguson came to Barnes Hospital as assistant resident in surgery in 1953. From 1954 to 1956, he was a fellow in thoracic surgery at Washington University School of Medicine. He was appointed instructor in thoracic surgery in 1956, assistant professor in 1958, assistant clinical professor in 1964 and associate clinical professor in 1969. On July 1, he became professor of clinical surgery in the Division of Cardiothoracic Surgery.

A past president of the Barnes and Allied Hospital Society and member of the Regional Advisory Committee, Bi-State Regional Medical Program, Dr. Ferguson is on the staffs of Barnes and Affiliated Hospitals, Deaconess Hospital and St. Luke's Hospital. He is consultant to Cochran Veterans Administration Hospital and the Crippled Children's Programs of Southern Illinois and Missouri.

Chorioangioma of the Placenta

Case Report

Chorioangioma is a relatively rare tumor that may arise from the chorionic tissue of the placenta. The exact cause of this tumor is unknown. It has been suggested that it arises from the focal proliferation of undifferentiated angioblastic chorionic mesenchyme of the villi or of the cord.[1] The reported incidence varies from 1% to one in 50,000.[1-9] The reason for this wide discrepancy probably lies in the great variation in the size of the tumor and, also, the care with which they are looked for during examination of apparently normal placentas. Small intraplacental tumors are often overlooked during gross placental examinations. Most of the literature on chorioangioma emphasizes a high incidence of associated maternal and fetal complications.

Case Report

The patient, a 37-year-old white woman, gravida 7, para 6, was admitted to the Kansas City General Hospital on Sept. 22, 1971 with a history of amenorrhea of unknown duration. She complained of progressive abdominal distension, anorexia, backache, abdominal pain and dyspnea of four-days duration. Her previous pregnancies and deliveries were normal.

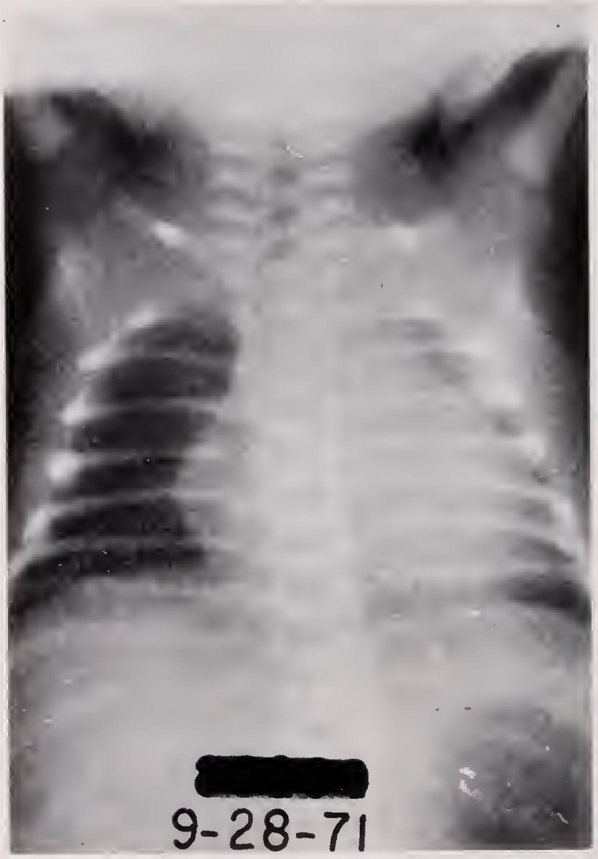
An examination revealed her pulse rate to be 110 per minute; respiratory rate, 24 per minute; and blood pressure, 130/80 mm Hg. The heart and lungs were found to be within normal limits. The abdomen was markedly distended and tense. Fetal parts were not palpable. The fetal heart rate was 140 beats per minute. The lower extremities exhibited 2+ pitting edema. Pelvic examination revealed the cervix to be uneffaced and 1 cm dilated.

A flat plate roentgenogram of the abdomen demonstrated a single fetus of approximately 30-weeks gestation in vertex presentation. An amniogram revealed contrast media in the fetal intestines, and there were no radiologically detectable anomalies. Symptoms of respiratory distress and abdominal pain were relieved by repeated amniocentesis, withdrawing 1,570 ml of clear amniotic fluid on Sept. 23, 1971 and 1,500 ml of additional amniotic fluid on Sept. 25, 1971. An analysis of amniotic fluid showed albumin to be 160 mg% and 84 mg% on the first and second occasions, respectively. The lab-

The authors report a case of chorioangioma associated with acute hydramnios, fetal cardiomegaly, anoxia, anemia and hypoproteinemia. The pathogenesis of hydramnios and fetal complications associated with chorioangiomata are discussed. Dr. Sumathy is a Fellow in Obstetrics and Gynecology, Dr. Grimes is a Resident in Obstetrics and Gynecology and Dr. Miller is Chairman of the Department of Obstetrics and Gynecology at the Kansas City General Hospital and Medical Center. Dr. Miller also is Clinical Professor at the University of Missouri-Kansas City School of Medicine.

oratory investigations were unremarkable. The blood group was O Rh positive.

On Sept. 28, 1971, the patient went into spontaneous labor. After an uneventful ten-hour labor, she was delivered of a 1,927 gm female infant with an apgar score of four at one minute and six at five minutes. The blood loss during the third stage of labor was 540 ml.



[redacted]

Fig. 1 Chest roentgenogram of the infant showing enlarged heart and hazy lung fields. The intraarterial catheter is seen in the aorta.

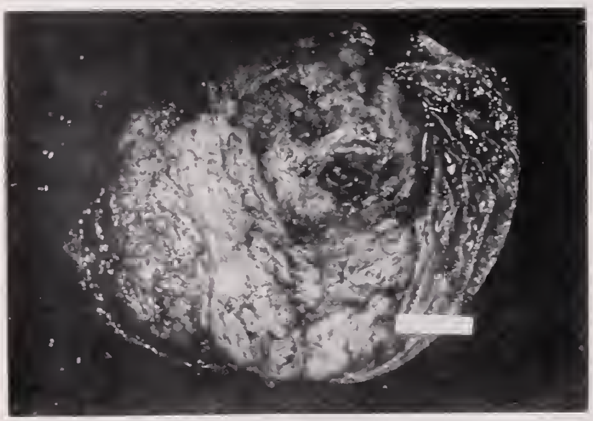


Fig. 3 Maternal surface of the placenta showing the tumor mass with areas of hemorrhage.

The infant was in shock at birth with aortic pressure of 32 cm of water. The hemoglobin was 7 gm 100 ml and platelets were increased. The total serum protein was 3.9 gm/100 ml; albumin, 2.04 gm/100 ml; and total globulin, 1.86 gm/100 ml. A roentgenologic examination of the chest revealed a mildly enlarged heart and evidences of hyaline membrane disease (Fig. 1). The infant was resuscitated and transfused with packed cells.

The placenta weighed 1,250 gm and measured 27 cm x 20 cm x 8 cm. The umbilical cord was centrally inserted and had three vessels. A large circumscribed, globular, firm mass of about 10 cm diameter was seen protruding from the fetal and maternal surface (Figs. 2 & 3). It was in direct contact with the insertion site of the umbilical cord. The cut section revealed a large hemorrhagic, lobulated mass occupying the entire depth of the placenta. The rest of the placenta appeared pale and anemic (Fig. 4). Microscopic examination revealed the presence of multiple, thin-walled, vascular spaces lined by a single layer of endothelium and a small amount of supporting connective tissue (Fig. 5). The tumor

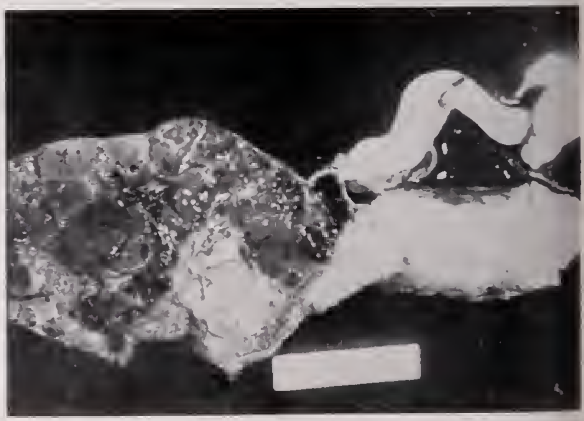

Fig. 4. Cut section of the placenta revealing the close proximity of the lobulated tumor to the insertion of the umbilical cord.

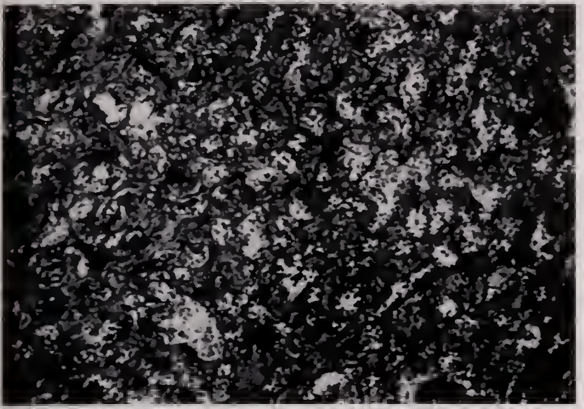

Fig. 5 High-power photomicrograph of chorioangioma showing the vascular spaces lined by endothelial cells and red blood cells in the spaces.

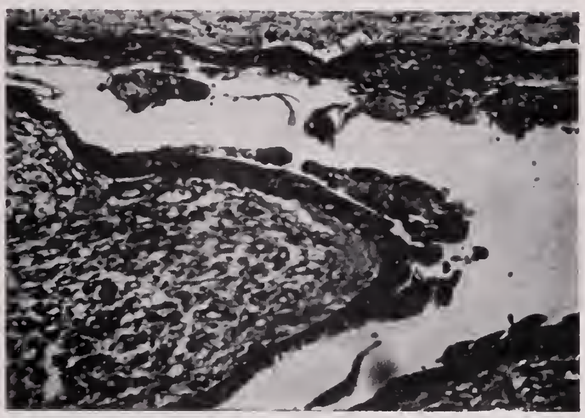

Fig. 6 High-power photomicrograph of chorioangioma showing the vascular spaces and trophoblastic cell layer covering a lobule.

lobules were covered with a trophoblastic cell layer (Fig. 6). In other areas, evidences of infarction and necrosis were seen. There were numerous syncytial knots in the adjacent placental tissue. The umbilical cord appeared normal.

DISCUSSION

The exact nature of chorioangioma is not settled. Some consider it to be a hemartoma, whereas others feel that it is a neoplasm.[2,6] Increased association of fetal congenital malformations support the view that it is probably a vascular malformation.[10–12] The size of the tumor may vary from 2 mm to 22 cm.[6] The largest reported tumor weighed 78 gm.[13] It may be found in various locations, including the fetal or maternal surface of the placenta, the fetal membranes, or may be attached to the umbilical cord.

The majority of reported cases are asymptomatic, but the larger tumors are often associated with symptoms. The most common associated complication is hydramnios. It has been reported that 18% to 35% of all cases have hydramnios.[5, 11, 13–15] The tumors associated with this complication are either larger than 5 cm or they are multiple in nature.[1] The exact mechanism of production of excessive amniotic fluid in chorioangioma is not clearly understood. Klaften[4] considers the situation of the tumor close to the cord insertion to be important in causing possible mechanical obstruction to the blood flow in the cord and, thereby, producing increased transudation of fluid into the amniotic sac. Wallenburg's analysis of cases does not support this view.[1] Kotz and Kaufman[16] state that the large vascular surface of the tumor that bulges over the fetal surface of the placenta may account for increased transudation of fluid.

There are other reports that contradict this view, wherein the tumors are simply situated over the maternal surface of the placenta but, nevertheless, are associated with hydramnios.[10, 17] McInroy and Kelsey[15] believe that bypassing of fetal blood through the hemangioma results in increased waste products in the fetal urine that, in turn, increases the osmotic pressure of amniotic fluid causing hydramnios. Wallenburg[1] suggests that arteriovenous shunts in the larger hemangioma may result in fetal congestive cardiac failure and water imbalance that may be a possible etiological factor in excessive amniotic fluid production. In the present case, the site and the size of the tumor and the fetal cardiac enlargement support some of the above views.

The presence of arteriovenous shunt in large hemangioma is said to place a burden on the fetal heart by increasing the cardiac output. This results in cardiomegaly with or without congestive cardiac failure.[1, 10, 12, 18, 19] It has been suggested that during the circulation of fetal blood through the network of chorioangioma, the red cells may be injured and subsequently destroyed, causing anemia in the fetus.[1, 17, 20, 21] The incidence of intrauterine death in association with large chorioangiomas is reported to be high. Marked cord compression by the tumor,[22] shunting of fetal blood through the tumor with subsequent anoxia[2] and congestive cardiac failure are presumed to be responsible for this high fetal wastage.[2, 20, 23]

Interestingly, the presented case did reflect evidences of intrauterine anoxia, anemia, hypoproteinemia and cardiomegaly. Another complication that may be seen in the infant is throm-

Rational Approach to the Treatment of Insulin-Dependent Diabetes Mellitus

The purpose of this paper is to present a rational approach to the management of insulin-dependent diabetes mellitus. Since the unique problems involved in treating the child with diabetes were reviewed recently in Missouri Medicine by Jackson and Guthrie,[1] this paper will focus on the treatment of diabetes in the older adolescent and adult patient.

The four major factors which regularly act to influence the blood glucose level of an insulin-dependent diabetic are (1) insulin administration, (2) food intake, (3) exercise and (4) emotional status. Other factors which may assume importance include infections and the use of certain drugs. The insulin and food taken by cooperative patients can be quantitated quite accurately, whereas exercise is less easily measured and the effect of various emotional states is almost impossible to quantitate. Because all four factors cannot be controlled at all times, some diabetics have wide swings in blood glucose despite meticulous efforts to balance injected insulin and exercise against food intake. Such individuals are said to be "brittle" or "unstable" diabetics, and many times must be allowed to have some hyperglycemia, and, even, glycosuria to avoid frequent hypoglycemic episodes. Other patients seem to be easily controlled, possibly because they are still able to secrete some endogenous insulin.

This article presents an approach to the management of insulin-dependent diabetes which is based on the principle of balancing the blood glucose lowering effect of insulin and exercise against the rising blood glucose brought about by the ingestion of food or by hepatic glucose production. A therapeutic program providing a high level of control is recommended as the best means of helping the diabetic to be a happy, otherwise healthy and productive member of society. Dr. James is Assistant Professor, Department of Medicine, University of Missouri School of Medicine.

Ideally, the diabetic should have neither hypoglycemia nor hyperglycemia. Even though this may be unattainable in some patients, every effort should be made to control the diabetes as well as possible. The following approach to the management of insulin-dependent diabetes is based on the principle of balancing the blood glucose lowering effects of insulin and exercise against the rising blood glucose brought about by the ingestion of food or by hepatic glucose production.

Diet

The diabetic's caloric intake should be such that he maintains ideal weight. Hopefully, it also will satisfy the appetite, restriction being necessary only to avoid or treat obesity. In prescribing a diabetic diet, several methods may be used to estimate the caloric requirements: (1) previous daily caloric intake if it is known, (2) a dietary history or (3) 15 calories per pound of ideal weight. This initial level should then be adjusted up or down as needed to attain and maintain ideal weight and to satisfy the appetite.

The diabetic diet should consist of well balanced proportions of carbohydrate (40%-50%), fat (30%-40%) and protein (about 20%). There is no good evidence that carbohydrate restriction as such has any beneficial effect upon the diabetic receiving adequate insulin therapy.

The diabetic's diet should be divided into six feedings in the form of three meals and three snacks, the latter being given between the meals and at bedtime. The snacks are necessary to prevent hypoglycemic episodes several hours after a meal at a time when no food is being absorbed and metabolized, but when the injected insulin is still having a blood glucose lowering effect. The following distribution of caloric intake is one which is commonly used: 2,1,2,1,2,1/9.

The carbohydrate in the diet should be in the form of starches, with simple sugars such as sucrose being kept to a minimum. Since injected insulin is absorbed from subcutaneous or intramuscular sites over a period of hours, it goes into the blood stream slowly and cannot provide the rapid rises in insulin needed to metabolize the high levels of glucose produced by rapid digestion and absorption of simple sugars. Thus, fruit, which contains a high proportion of simple sugars, should be limited to no more than two exchanges at any one feeding and should not be used alone as a snack. Starch, on the other hand, is digested to simple sugars and absorbed over a period of one to two hours. Therefore, the slowly absorbed exogenous insulin is available at the time when the products of starch digestion are in the blood stream and need to be metabolized.

Although alcohol is metabolized primarily as fat and can be calculated into the diet as such, its consumption should be kept to a minimum because it is usually consumed in beverages which contain variable but often large amounts of sugars and other food substances. Excessive alcohol intake also may result in failure to follow the treatment regimen and lead to the development of either hypoglycemia or ketoacidosis.

It is well to keep the ratio of polyunsaturated to saturated fats in the diet as high as possible. However, unless some form of hyperlipoproteinemia can be demonstrated, fat and cholesterol or carbohydrate need not be restricted.

Vitamin supplements are unnecessary if the diabetic consumes a well balanced diet of 1,000 calories or more.

The diet in general should be made up of those foods which the diabetic usually eats because he is more likely to follow it if he is satisfied. Changes in the size of meals or snacks or both may be made to improve the level of diabetic control. However, if the diabetic is satisfied with his diet and does not want it changed, alterations in insulin doses are the preferred approach to achieving better control since they take little effort and do not interfere with established eating habits.

Insulin

A rational approach to the administration of insulin must take into consideration the duration of action of the various insulin preparations as well as an appreciation of insulin secretion in the nondiabetic individual. Normal people secrete an increased amount of insulin after each feeding and small amounts in the fasting state, the latter being necessary, among other actions, to metabolize glucose produced by the liver. Although it is impossible to prescribe insulin in such a way that the action of the normal pancreas is perfectly simulated, there are compelling reasons why the physician should make an effort in this direction.

TABLE 1

ONSET AND DURATION OF ACTION OF INSULIN PREPARATIONS

Insulin	*Onset (Hrs. After injection)*	*Duration (Hrs. After injection)*
Fast acting		
Regular (crystalline)	½	6
Semilente	2	8
Intermediate acting		
Globin	3	12
NPH (Isophane)	4	16
Lente	4	16
Long acting		
Protamine zinc	8	36+
Ultralente	8	36+

Insulin preparations can be divided into three general types: (1) fast acting, (2) intermediate acting and (3) long acting. The various preparations and their onset and duration of action are shown in Table 1. It should be emphasized that these periods of action are only rough guidelines and that, in reality, the duration of effect varies with the size of the dose and probably with many other factors.

Regular insulin is the most commonly used, fast acting form. It can be mixed in any proportion in the same syringe with globin or NPH insulin and with lente in a ratio not exceeding unity. Semilente insulin is occasionally used in combination with lente. Globin and NPH are the intermediate acting insulins most commonly used at the University Medical Center, although lente is sometimes used. The long acting insulins probably should not be used since quantities sufficient to cover the diabetic's need during the day when he is eating often produce severe noctural hypoglycemia.

The initial total 24-hour dose of insulin can only be estimated since the exact requirement must be determined empirically. If the diabetic already takes insulin, his *current daily dose* can be used as a starting estimate. This quantity may be increased or decreased on the basis of his past level of diabetic control. When the patient has not been taking insulin, *¼ unit of insulin* *per pound of ideal weight* may be used as the initial total daily dose. These starting estimates usually prevent ketosis without causing hypoglycemia.

Multiple daily doses of a fast acting insulin or various combinations of the fast and intermediate acting insulins may be used in an effort to simulate the pattern of insulin secretion by the normal pancreas. The author has found that use of regular insulin alone or in combination with NPH, globin, or sometimes lente, usually provides adequate coverage throughout the 24-hour period. The following distribution provides a good starting approximation:

AM: ⅔ of the total daily dose
  Regular: ⅓ of the AM dose
  NPH (or Globin): ⅔ of the AM dose
PM: ⅓ of the total daily dose
  Regular: ½ of the PM dose
  NPH (or Globin): ½ of the PM dose

These two doses should be given 30 minutes before breakfast and the evening meal, respectively. The AM regular insulin acts quickly to cover breakfast and the later mid-morning snack and continues to have an effect until about noon. It is responsible for hypoglycemic episodes between breakfast and the noon meal and is important in determining the level of glycosuria before noon. The AM NPH becomes effective before noon, covers the noon meal and afternoon snack, is responsible for hypoglycemia during the afternoon and determines the degree of glycosuria before the evening meal. The PM regular insulin combines with the morning NPH to cover the evening meal and the bedtime snack. It determines the bedtime urinary glucose and is responsible for hypoglycemic episodes between the evening meal and about midnight. The PM NPH covers the diabetic's insulin need during the sleeping hours, is responsible for hypoglycemia during this period and determines the early morning level of glycosuria.

The distributions are only starting approximations. The diabetic is asked to keep a record of the time at which any hypoglycemic episodes occur as well as the results of urinary glucose determinations (usually performed by the two drop Clinitest method) done four times daily before meals and at bedtime. Based upon the times at which glycosuria or hypoglycemia or both occur, if at all, each of the four insulin doses (AM regular, AM NPH, PM regular and PM NPH) may be left unaltered or adjusted independently of each other in an effort to attain a finer level of diabetic control.

In some cases, such as during the last trimester of pregnancy when optimal diabetic control is essential, four doses of regular insulin given approximately 30 minutes before meals and at midnight offer an excellent distribution for administering this drug. The following distribution has been found to be a good starting approximation:

Before breakfast: 35% of the total daily dose
Before noon: 25% of the total daily dose
Before supper: 30% of the total daily dose
At midnight: 10% of the total daily dose

As with the other distributions, alterations can be made in these four doses to attain a better level of control. This type of distribution also will work quite well for the nonpregnant insulin dependent diabetic. For obvious reasons, however, most patients prefer to take no more than two injections daily.

Changes of no more than one to four units at a time in any one dose, depending on the size of the total daily dose, are usually appropriate. Unless severe hypoglycemia or ketosis develops, adjustments should not be made more often than about every three days. This allows a pattern of glucose response to develop to any particular combination of insulin dosages.

Attainment of the finest level of diabetic control is best accomplished by making adjustments in the diet and insulin with the patient at home and carrying on his usual activities. This often can be accomplished via the telephone, thereby reducing the need for numerous return visits.

Under ordinary circumstances, the "sliding scale" method is not an advisable approach to the administration of insulin and, in this author's opinion, should not be used. Occasionally, the diabetic's control may be so poor that the amount of insulin to be given needs to be determined by the current levels of glucose and ketones in the blood or urine. This may occur, for example, during an episode of ketoacidosis or some other illness which has an adverse effect on diabetes. In such situations, the patient's clinical status as well as his level of glycemia and ketonemia (or glycosuria and ketonuria) become important. For this reason, the "sliding scale" order as usually written may not be appropriate. Under these circumstances, the patient should be evaluated clinically each time insulin is to be administered and a dose based on all aspects of his condition ordered.

EXERCISE

Exercise, independently of insulin action, increases glucose uptake by muscle and, therefore, acts to lower blood glucose. As a result, it may produce hypoglycemia in the diabetic taking insulin. To prevent this, extra food containing starch or protein in the form of one or two bread, meat or milk exchanges should be taken in addition to the usual diet before increased physical activity. Alternatively, the insulin dose covering the period of increased activity may be reduced. Exercise is thought to be particularly good for diabetics, but it will provide maximum benefit and cause the least disturbance to glucose homeostasis when taken regularly on a daily basis.

Emotional Status

Since the patient's emotional status often has a profound influence on his level of diabetic control, every effort should be made to help him establish a mature emotional state as free from anxiety as possible.

Summary

The methods outlined above are only *guidelines* for treating the insulin dependent diabetic. Each patient's therapeutic regimen must be individualized. The alterations which are made should coincide as closely as possible with his desires, life style and tolerance for such a program. The ultimate goal is a happy, otherwise healthy, productive member of society who lives a normal life span which is hopefully free of the acute and chronic complications of his disease. A program providing a high level of diabetic control provides the best means of reaching this goal.

Chorioangioma of the Placenta

(Continued from page 649)

bocytopenia. Froehlich[24] has reported two infants of chorioangioma cases with thrombocytopenia and petechiae that disappeared in a few days. It has been suggested that the platelets probably get sequestered within the chorioangioma causing their depletion. Once the infant is separated from the tumor, this defect spontaneously is corrected. Other reported fetal anomalies are skin hemangiomas, single unbilical artery and various other congenital malformations.[11, 14, 24–27] A female preponderance in the infants of chorioangioma cases has been observed by Asodourian and Taylor.[14] Prematurity, which is commonly associated with the lesion, is primarily attributed to the associated hydramnios.

Volvulus of the Stomach

Case Report

GASTRIC VOLVULUS is a rare condition characterized by abnormal rotation of the stomach which may or may not be symptomatic. The circulation of the stomach is sometimes impaired, but not always. A recent case was encountered at Baptist Memorial Hospital which prompted us to review the literature on this rare condition.

CASE REPORT

A 60-year-old white woman was admitted at Baptist Memorial Hospital on Feb. 25, 1972 with severe abdominal pain which started about 36 hours prior to admission. The pain was associated with vomiting, which occurred every 15 to 30 minutes. The first emesis was noted about three hours after a heavy meal. She denied any biliary vomitus or hematemesis.

She had been subject to milder and less frequent attacks of similar pain in the past and had a known hiatal hernia. She had been hospitalized on Jan. 7, 1972 with similar episode. Gastric outlet obstruction was suspected and an upper gastrointestinal (GI) series roentgenogram showed "upside down stomach" with antrum situated high on the left side and the fundus below on the right side (Fig. 1).

Physical examination on that admission in January revealed marked epigastric tenderness and some distension without any palpable masses. A nasogastric tube was passed without difficulty, and the patient improved with conservative treatment. Her pain disappeared the following day and the nasogastric tube was removed.

During her hospitalization in February, 1972, hiatus hernia repair was recommended. At operation on March 1, 1972, a sliding hernia was found with

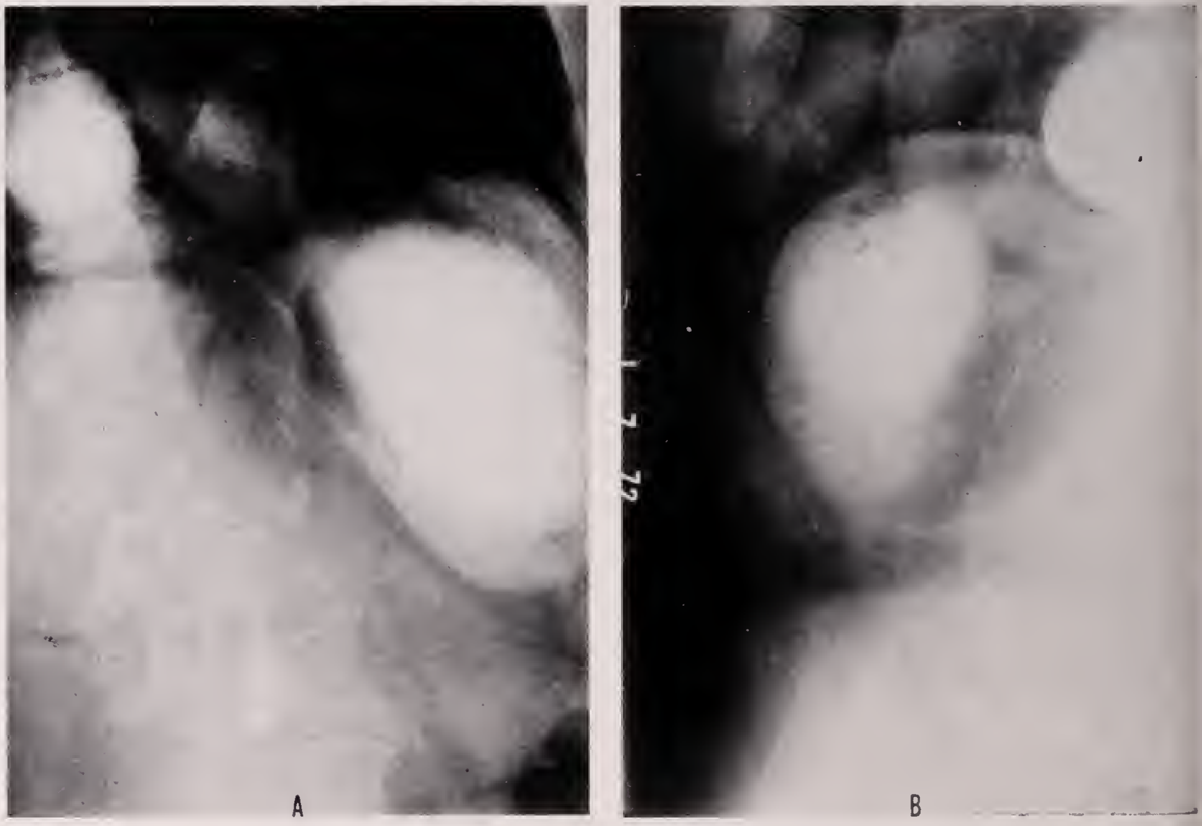

Fig. 1 (A) UGI series showing "upside down stomach" with antrum lying high on the left side and the fundus below on the right side (Mesentero-axial volvulus). (B) Lateral view.

the antrum lying in the mediastinum. The pylorus and duodenum were found lying in the left upper quadrant of the abdominal cavity anterior to the fundus. The esophageal hiatus was about 12 cm x 5 cm and the hernia could be reduced easily. Crural repair of the hernia was carried out. Tube gastrostomy was performed for postoperative decompression and fixation of the anterior gastric wall. The postoperative course was uneventful except for mild pleural effusion that subsided. A postoperative upper GI series roentgenogram showed delayed emptying and retention of food, perhaps related to atony (Fig. 2). Nine months after her operation she was asymptomatic.

DISCUSSION

The term volvulus is derived from the latin word "volvere," meaning "to twist," and is defined as abnormal rotation. Historically, the first case of volvulus of the stomach was reported by Berti in 1866 on an autopsy specimen.[1] Berg, in 1897, was the first to operate successfully on a patient with this rare condition. Payr was able to collect 22 case reports by 1909. In 1920, Roosevelt demonstrated a chronic recurrent volvulus radiologically. Recently, Wastel and Ellis[2] have reviewed a total of 206 cases and added eight from their own experience in their report.

AGE AND SEX INCIDENCE

Gastric volvulus can occur at any age, but peak incidence was found to be in patients between the ages of 45 and 75. The condition is especially rare in children.[3] The sex incidence is almost equal, being 46% in men and 54% in women.[2]

CLASSIFICATION

No single classification is satisfactory since several factors are involved. The following classifications were proposed by Von Harberer (1912) and quoted by Singleton.[4]

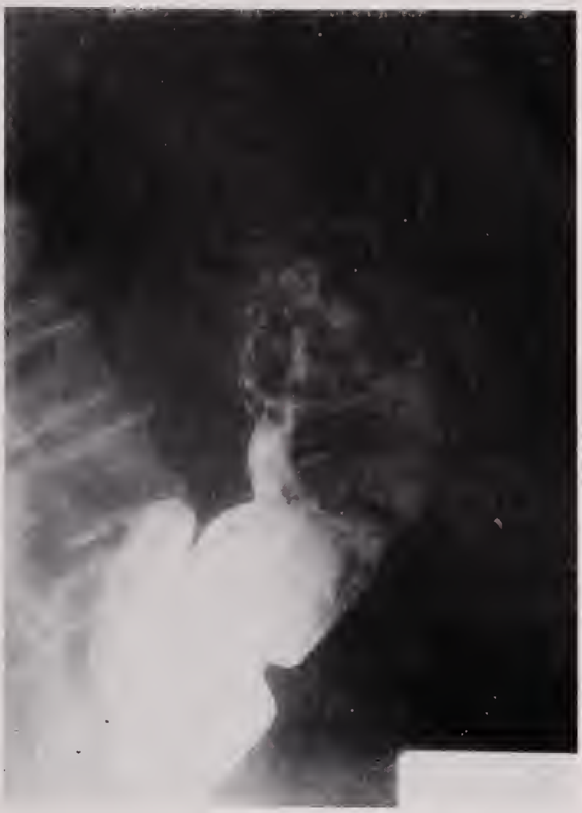

Fig. 2 Postoperative atonic and distended stomach with delayed emptying.

1. **Type**

a. *Organo-axial* (OAV) (Fig. 3). Rotation of the stomach occurs around the longitudinal axis or cardiopyloric line. The rotation is usually from right to left, but it may occur in the re-

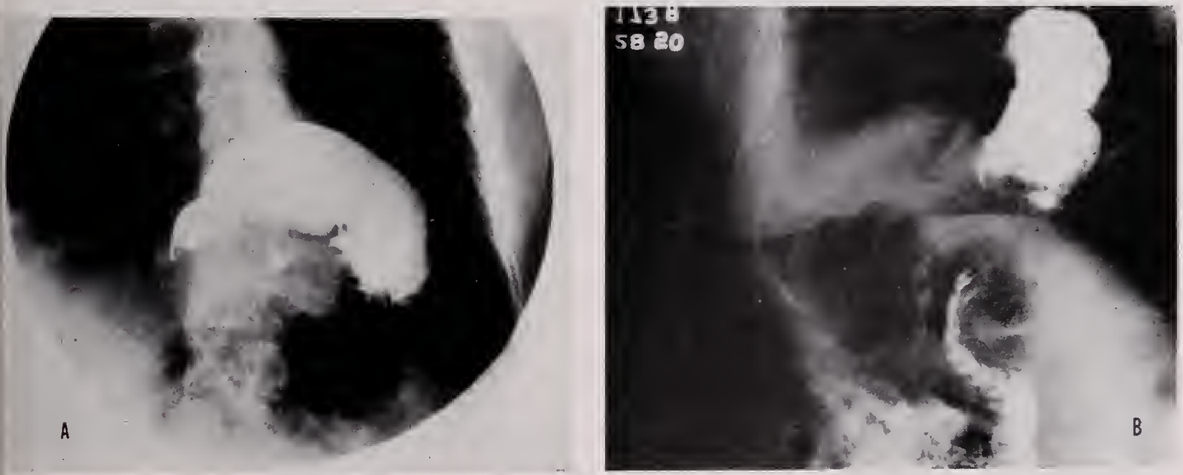

Fig. 3 (A) Organo-axial volvulus. The greater curvature is lying superiorly while the lesser curvature has rotated anteriorly around cardiopyloric-axis to come to lie inferiorly. (B) Lateral view.

Less than 250 case reports of volvulus of the stomach have been reported in the world literature. With this report of a recent case, the authors describe two types of this rare entity, organo-axial and mesentero-axial. They state that early surgical intervention should reduce mortality in acute cases. Dr. Chughtai was Chief Resident in Surgery at Menorah Medical Center at the time this paper was written. He is now a Resident in Cardiothoracic Surgery at St. Vincent Charity Hospital in Cleveland, Ohio. Dr. Wiebe is Clinical Assistant Professor of Surgery at the University of Missouri School of Medicine and Clinical Instructor of Surgury at the University of Kansas School of Medicine.

verse direction. Both of these forms are true volvulus and may produce complete obstruction. The entire body of the stomach may be involved in the twisting process, producing "wrung out rug" appearance[5] (Fig. 4).

b. *Mesentero-axial* (MAV) (Fig. 1). Rotation of the stomach occurs around the transverse axis from the lesser to the greater curvatures or sagittal plane. This happens only when the pyloric fixation is lost, allowing the pylorus and antrum to "double up" (Fig. 4). The right colon may be pulled sufficiently to cause angulation and obstruction of the colon. Less commonly, the splenic fixation may be deficient, resulting in rotation of the proximal greater curvature distally to the right subhepatic space. This type of volvulus usually is chronic or intermittent and is encountered more often than the organo-axial rotation.

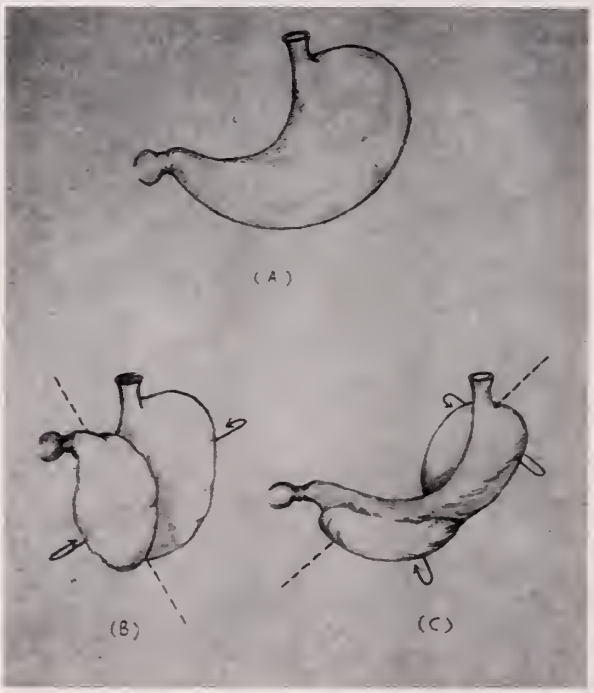

Fig. 4 (A) Normal stomach. (B) Mesentero-axial volvulus (MAV). (C) Organo-axial volvulus (OAV).

c. *Mixed.* Mesentero-axial rotation can predispose the stomach to further twisting in organo-axial rotation.

2. Extent

a. *Total.* The greater curvature comes to lie superiorly between the liver and diaphragm while the posterior wall of the stomach faced anteriorly.

b. *Partial.* The rotation is limited to the one segment of the stomach, usually the pyloric portion.

3. **Direction.** Anterior rotation is much more common than the posterior as the transverse colon comes to lie in front of the stomach in OAV while the pylorus passes in front of the stomach in MAV. For posterior rotation to occur, the transverse colon must pass behind the stomach, elongating or tearing the meso-colon. In 39 cases of OAV studied, only eight cases of posterior rotation were found.[2]

4. **Severity.** The acute form presents as an upper abdominal catastrophe resulting from obstruction or strangulation. The chronic form may be asymptomatic or present with recurrent or persistent symptoms that can be confused with gastric ulcer or hiatus hernia. Acute volvulus carries a much graver prognosis as 20 of 36 patients with MAV (56%) and 31 of 73 patients with OAV (42%) died.[2] These figures include the older literature and, undoubtedly, the mortality has improved in the recent years.

5. **Etiology**

a. *Secondary.* Volvulus can be related to demonstrable intraabdominal disease which can be intra- or extragastric in origin. The most common causes are hiatal hernia, eventration of the diaphragm, benign or malignant tumors of the stomach, paragastric adhesions, chronic gastric ulcers or, rarely, chronic duodenal ulcers. Splenomegaly, distended colon with gas and phrenic nerve injury have been implicated as the cause in some reported cases. Isolated instances or acute gastric volvulus after pneumonectomy for bronchogenic carcinoma,[6] bilateral pulmonary lower lobectomy for bronchiectasis,[7] and peri-stomal hernia following colostomy[8] have been reported. Bockus estimated that about 20% of total 237 cases have some form of diaphragmatic abnormality. Thirty-eight of 60 cases of MAV (63%) and 90 of 122 cases of OAV (74%) are reported to be of secondary variety.[2]

b. *Idiopathic.* In about 35% of cases, no associated disease or abnormalities are noted. Relaxation of the ligamentous support of the stomach is essential for the development of the gastric volvulus and may be congenital in most instances. A pronounced degree of gastroptosis has been observed in such cases due to weakness of the gastrohepatic, gastrocolic or gastrosplenic ligaments. Experimentally, it is impossible to twist the stomach with intact ligaments. Acute dilatation of the stomach, trauma, intractable vomiting and increased intra-abdominal pressure, such as seen in pregnancy, are some of the precipitating factors. The degree of twisting is variable but the average is 180 degrees.

Clinical Features

Acute gastric volvulus is characterized by sudden and severe epigastric pain with vomiting and ineffectual retching.

Abdominal distension and tenderness may be associated with a shock-like appearance. The Borchardt-Lenormont triad (1904) has been considered pathognomonic of the diagnosis, as follows:

1. Unsuccessful attempt to vomit.
2. Circumscribed epigastric pain.
3. Inability to insert nasogastric tube into the stomach.

History of ingestion of a heavy meal prior to the onset may be available frequently. The small amount of vomitus is free of bile and fecal material as a rule. The stomach is able to tolerate torsion of marked degree because of its excellent blood supply, but vessels occasionally can be occluded, resulting eventually in necrosis and death. The diagnosis is seldom made before operation or autopsy.

The differential diagnosis in atypical cases should include any intraabdominal emergency, particularly in cases of perforated ulcer, acute pancreatitis, strangulated bowel obstruction or mesenteric vascular thrombosis.

Plain x-rays of the abdomen in upright position may help in the diagnosis if the left diaphragm is elevated or may show a diaphragmatic herniation. The presence of two or more fluid levels in a distended abdomen is suggestive of the diagnosis. Upper GI series x-rays are confirmatory. The lower esophagus may be distended and can be mistaken for volvulus of the cecum or colon.[9] Barium enema x-rays may be required to exclude this possibility. The stomach may be inverted with the greater curvature above the level of the lesser curvature. The cardia and pylorus may lie at the same level. The mucosal folds may show torsion or twisting. An hourglass stomach may be associated with this condition. In chronic volvulus, the abnormal placement of the stomach will be obvious. A cascade or "cup and spill" form of the fundus must be differentiated from the volvulus.[10] One fluid level is seen in the cascade stomach while two are often seen in volvulus. The greater curvature is uppermost only in volvulus, and it forms a convex border continuous with the duodenum. The cardia has a low position in the volvulus due to rotation, whereas it is normal in position in the cascade stomach.

Treatment

Acute gastric volvulus is a surgical emergency and immediate exploration is recommended. Although reported mortality in patients treated surgically is 40%, those not operated on have invariably died. In secondary cases, treatment is directed to the primary cause after reduction of the volvulus. This may entail hiatus herniorraphy, repair of eventration of the diaphragm and partial gastrectomy with a Bilroth I or II procedure. In idiopathic cases at laparotomy, detorsion of the stomach may be possible after only decompression with needle and suction. Some form of gastric fixation has to be added if the patient's condition permits. Anterior gastropexy is an easy procedure that implies fixation of the stomach to parietal peritoneum and replacing the colon in its proper position.[11] The site of needle aspiration can be utilized to fashion a gastrostomy. Tube gastrostomy is helpful in postoperative decompression and early supplementation of oral intake. This also will obviate the need for gastropexy and is favored by Guernsey and Connolley.[12]

Maingot[1] considers suturing the entire gastrocolic and gastrosplenic ligaments to the anterior parietal peritoneum as the simplest, safest and most satisfactory method of gastropexy. He claims superior results by this method as compared to conventional gastropexy when the stomach itself is sutured.

Opolzer's operation of fundo-antral gastropexy has been performed when it is difficult to untwist the stomach and implies creation of a stoma between fundus and antrum lying side by side. This procedure is not recommended since the risk of strangulation persists and the obstruction is not bypassed.

Summary

Volvulus of the stomach is a rare entity with less than 250 cases reported in the world litera-

LAWRENCE KAHN, M.D., ***St. Louis***

Washington University Pediatric Nurse Practitioner Training Program

Development and Experience

An ever increasing number of physicians recognize the Pediatric Nurse Practitioner (PNP) as a registered nurse who has acquired the skills through special training to provide a significant amount of pediatric care. The PNP delivers these services in conjunction with and under the supervision of a physician. Since the institution of the first program at the University of Colorado[1] in 1965, more than 35 courses of training have become operational with classes ranging in size from as few as three students to as many as 32.[2] Programs vary from those providing training on a half-time basis for a 16-week period to those offering training on a full-time basis for as long as one year. Guidelines have been established by the American Academy of Pediatrics and the American Nurses' Association[3] suggesting minimal requirements for the training of such personnel. As yet, however, there is insufficient substantial evidence to indicate curriculum standardization.

With the rapid increase in the number of institutions offering training for the PNP, there has been considerable interest in the structure of those programs which have had some operational experience. Moreover, interest has been generated among physicians and agencies who may be the future employers of these personnel. Therefore, this report was prepared in response to the many requests for information relating to the development and experience of the Pediatric Nurse Practitioner Training Program (PNPTP) at the Washington University School of Medicine.

Development

After a planning period of about six months, the PNPTP became operational in September of 1968 with a class of three registered nurses. It was among the first of those organized on a full-time basis. The size of the class has increased each year to the present complement of 11 students (Table 1). Funding for the first and second classes was made possible by grants from the W. K. Kellogg Foundation and the Metropolitan Life Insurance Company. It is now supported by tuition. A pediatrician provides half-time services as the program director. A recent PNP graduate assists in curriculum development, student counseling, teaching and supervision. Members of the Department of Pediatrics and other faculty specialists in such fields as orthopedics, gynecology and otorhinolaryngology contribute significantly to the teaching. Additionally, several organizations in the St. Louis area provide staff and facilities for special instruction (Table 2).

Recruitment and Selection

Virtually no active recruitment has been necessary to enlist students. The first class included nurses with B.S. degrees from within the medical center who expressed interest in the program as it was being developed. The second class was composed of nurses whose homes were in the St. Louis area and who had heard of the program by word-of-mouth. For the third and

“Antiacid” action for ulcer patients…

one of the many things you need in an anticholinergic.

Pro-Banthīne is provided in several different dosage forms and combinations which will meet virtually any clinical need. It is just as versatile in filling patient needs, among which are:

"Antiacid" action—Pro-Banthīne® (propantheline bromide) reduces gastric secretory volume and resting total and free acid.

"Sustained" action—Pro-Banthīne P.A.® (propantheline bromide) contains 30 mg. of the drug in the form of sustained-release or timed-release beads; on ingestion about half of the drug is released within an hour and the remainder continuously as earlier increments are metabolized.

High-level anticholinergic activity is maintained all day and all night in most patients with only two tablets every eight hours.

"Analgesic" action—Pro-Banthīne helps to control the acid-spasm-pain complex.

A **"diagnostic tool"**—Pro-Banthīne may be used parenterally to immobilize the duodenum for more revealing roentgenographic appraisal through hypotonic duodenography.

Pro-Banthīne is considered adjunctive in total peptic ulcer therapy that may include diet, conventional antacids, bed rest, and other supportive measures.

Vigorous anticholinergic action — Pro-Banthīne® Vials, 30 mg., are for intramuscular or intravenous use when prompt and vigorous anticholinergic action is required.

Mild anticholinergic action—Pro-Banthīne® Half Strength, 7.5-mg. tablets, for more exact adjustment of maintenance dosage in mild to moderate gastrointestinal disorders.

Indications: Pro-Banthīne is effective as adjunctive therapy in the treatment of peptic ulcer. Dosage must be adjusted to the individual.

Contraindications: Glaucoma, obstructive disease of the gastrointestinal tract, obstructive uropathy, intestinal atony, toxic megacolon, hiatal hernia associated with reflux esophagitis, or unstable cardiovascular adjustment in acute hemorrhage.

Warnings: Patients with severe cardiac disease should be given this medication with caution.

Fever and possibly heat stroke may occur due to anhidrosis.

In theory a curare-like action may occur, with loss of voluntary muscle control. For such patients prompt and continuing artificial respiration should be applied until the drug effect has been exhausted.

Diarrhea in an ileostomy patient may indicate obstruction, and this possibility should be considered before administering Pro-Banthīne.

Precautions: Since varying degrees of urinary hesitancy may be evidenced by elderly males with prostatic hypertrophy, such patients should be advised to micturate at the time of taking the medication.

Overdosage should be avoided in patients severely ill with ulcerative colitis.

Adverse Reactions: Varying degrees of drying of salivary secretions may occur as well as mydriasis and blurred vision. In addition the following adverse reactions have been reported: nervousness, drowsiness, dizziness, insomnia, headache, loss of the sense of taste, nausea, vomiting, constipation, impotence and allergic dermatitis.

Dosage and Administration: The recommended daily dosage for adult oral therapy is one 15-mg. tablet with meals and two at bedtime. Subsequent adjustment to the patient's requirements and tolerance must be made.

Pro-Banthīne P.A.—Each tablet of Pro-Banthīne P.A. (propantheline bromide) contains 30 mg. of the drug in the form of sustained-release or timed-release beads; on ingestion about half of the drug is released within an hour and the remainder continuously as earlier increments are metabolized. Thus the result is even, high-level anticholinergic activity maintained all day and all night in most patients with only two tablets daily. Some patients may require one tablet every eight hours.

The contraindications and precautions applicable to Pro-Banthīne 15 mg. should be observed.

How Supplied: Pro-Banthīne is supplied as tablets of 15 and 7.5 mg., as prolonged-acting tablets of 30 mg. and, for parenteral use, as serum-type vials of 30 mg.

fourth classes as well, no active recruitment was necessary since awareness of the program locally had resulted in widespread interest. Between Sept. 1, 1971 and July 1, 1972, there were 145 unsolicited inquiries about the program, a third of which were from the St. Louis area and the remainder from the rest of the U. S. and abroad.

A description of the 38 nurses who completed applications for the current (1972-1973) program is presented in Table 3. Among these were ten women who have been active in nursing for more than ten years and one nurse who had had extensive nursing experience in the past but who had become inactive in nursing during the past five years. Four members of the present class were selected from this group. Moreover, two members of the preceding class of eight PNP's were women who had not engaged in nursing for six and 19 years, respectively. All of these women have indicated that the PNPTP represented a challenge in a new and interesting area of nursing which is sufficiently stimulating to warrant either the modification of established career patterns or the return to active professional status from voluntary retirement. The implications of these views are obvious when one considers the large number of nurses in this country who are not engaged in any professional activity.

Selection of students has been made on the basis of several factors. These have included R.N. certification from a training program recognized by the National League of Nursing, experience and interest in pediatrics, a desire to enter a new field, past academic accomplishment, and an interview suggesting the candidate's potential capacity to formulate independent judgment relative to health care. No formal testing was conducted. A degree of Bachelor of Science in nursing was preferred but not required; 14 of the 27 applicants admitted to the program have a B.S. degree.

CURRICULUM

The curriculum extends over eight months and requires the full-time involvement of the student.[*] A didactic period of four months in-

---

[*] A description of the PNPTP curriculum may be obtained by writing to the author at the address appearing at the end of this article.

The Pediatric Nurse Practitioner Training Program at Washington University School of Medicine is one of the first programs to become operational in the United States and is the first program to be developed in Missouri. The author prepared this comprehensive report in response to requests for information concerning the successful development and experience of the program, which is now in its fourth year. Information includes selected characteristics of the students and the services they can provide for the pediatric population. A description of the curriculum is available upon request. Dr. Kahn is from the Division of Health Care Research and Department of Pediatrics at Washington University. This program was supported initially by grants from the W. K. Kellogg Foundation and the Metropolitan Life Insurance Company.

cludes 256 hours of formal lectures, seminars, case presentations and demonstrations accompanied by approximately an equal amount of time spent in closely supervised clinical experience. The trainee works with outpatients in both general and specialty areas, in the offices of private pediatricians and on the wards. Work in well-baby and maternal and infant care clinics are included. Heavy emphasis is placed on history taking and the physical examination (including the use of the ophthalmoscope, otoscope and stethoscope). The common problems of general pediatric practice are presented, including the child's psycho-social development.

The second four-month period is a practicum period during which the trainee may select three from among several areas of pediatric activity. For example, the student may choose to spend periods of five or six weeks in the following settings: a neonatology unit, the office of a private pediatrician, the outpatient department of St. Louis Children's Hospital or St. Louis County Hospital, well-baby or maternal and infant care clinics, neighborhood health centers or chronic disease clinics at St. Louis Children's Hospital.

Beginning in 1971, nurses entering the program with the sponsorship of an existing or future employer have been given the option of taking the practicum at the place of future employment. This allows a trainee to reduce the time of unemployment to four months and permits a lower tuition as well. Five of 16 trainees have exercised this option.

We believe this full-time program has two basic advantages over those which provide on-the-job or part-time training. First, the future PNP may be called upon to deliver pediatric services in a wide variety of settings requiring a broad range of knowledge and skills such as are included in the four-month didactic training period. The four month practicum provides the supervised experience which the trainee frequently requires for the development of maturity and confidence in practice. The practicum is of particular value to the nurse who is not a sponsored trainee and who may be employed in areas where close pediatric supervision is not available. Second, the PNP must acquire a new image of himself or herself as a health professional, functioning as an *associate* to the physician rather than in the former role as an *assistant* or even as an *aide* merely carrying out the physician's direct instructions or orders.

The term, *associate,* as applied here, indicates a nurse who has attained through educational background the competence to assume direct responsibilities for patient care. This includes independent decision making within specific guidelines as established by the physician with whom the nurse works. Such associates are accountable and assume responsibility for their actions.

The *assistant* represents an individual whose training enables her to perform certain tasks with relation to pediatric patients which are directly controlled and directed by the physician. Such actions do not require independent decision making and the assistant is not required to assume direct responsibility for her actions. The assistant carries out delegated tasks only.

An *aide* is an individual who has relatively little training other than that required to carry out specifically defined tasks which are relatively unskilled in nature. The aide works under the direction of either the physician or the associate or assistant.

In addition to the previously indicated description and guidelines relating to PNP's, the American Academy of Pediatrics and the American Nurses' Association have clearly defined the role and training required of Pediatric Assistants and Pediatric Aides.[3]

Role and Competency

Following completion of the course, the PNP can do the following:

1. Take a complete pediatric history and record it properly, organize the information for

problem solving and report the history properly.

2. Do a complete physical examination, including the use of a stethoscope, ophthalmoscope and otoscope. The PNP should be able to record the findings and evaluate them in terms of whether or not a significant abnormality is present and be able to report these findings accurately.

3. Evaluate the developmental status of an infant or child.

4. Provide complete well-baby and well-child care.

5. Recognize and manage specific minor problems of infants and children which do not require the attention of the physician. These include simple feeding problems of infants, variations of normal patterns of behavior and minor difficulties due to mild self limiting illnesses such as the common cold.

6. Counsel parents of children with chronic illness.

7. Recognize when patient's problems are beyond his or her capabilities and refer such patients to the physician.

8. Carry out a predetermined immunization program.

9. Provide anticipatory guidance for child rearing.

10. Identify health resources in the community.

11. Carry out home or hospital nursery visits to assess the status of the patient and report the findings to the physician.

The PNP does not do the following:

1. Make a specific diagnosis.

2. Prescribe medication which requires a prescription.

3. Function as an independent practitioner without the association of a physician.

Putting it another way, the PNP cannot and does not practice medicine. The PNP's skills represent extended nursing activities, and competence in the performance of these activities is at least equal and often superior to that of the physician. The PNP does not act as the substitute for the physician but, rather, relieves the physician of those tasks which more closely relate to nursing.

Employment

A PNP can function effectively wherever ambulatory pediatric services are provided. Examples include the offices of private pediatricians, neighborhood health centers, pediatric outpatient departments and emergency rooms, pediatric specialty clinics, well-baby clinics and other public health facilities as well as the practices of family physicians in urban and rural areas.

At the time of this writing, the third group of our program's trainees had completed the program. Two graduates are in transit to new homes and have not yet had the opportunity to seek employment. With the exception of the family physician's office, the others are employed in one of the settings described above.

Economic Aspects

The usual starting yearly salary in the metropolitan St. Louis area has been $10,000. Whether the PNP represents a financial reward or deficit to the individual pediatrician employer will depend on how the practice is organized after a PNP is added to the staff. Yankauer *et al*[4] have indicated that the pediatrician may reduce the burden of too large a practice by reassigning services the PNP can deliver. This allows the pediatrician to work at a more measured pace and in a more satisfying fashion but one which may result in some lowering of income. Conversely, the physician may elect to increase the practice by shifting to the PNP some of the tasks he had previously provided with consequent increased capacity to assume additional medical functions. This physician will work at the same level of intensity as before but with modification of the kinds of work performed and with net increase in income. Obviously, the pediatrician may elect to reorganize the new practice into a form which lies somewhere between these two examples.

Acceptance of the PNP

The scope of this paper does not permit a detailed review of various studies describing the acceptance of the PNP by patients and physicians. However, there is mounting evidence[4–9] that the PNP can function successfully in the role for which he or she was trained and is being accepted as a member of the pediatric health care team. Mothers are pleased with the services provided by the PNP's and physicians who have worked with PNP's consider them a most valuable addition to their practice.

Within organized medicine, there has been strong support for allied health personnel in delivering medical care, particularly in relation to the primary care physician, such as the pediatrician, internist or family physician. This has been especially true of the American Academy of Pediatrics.[3] The American Medical Association also has supported the concept of the physician delegating tasks to physician support personnel.[10] Likewise, the committee appointed by the Secretary of Health, Education and Welfare, a committee representing medicine, nursing and public health, has strongly recommended the extension of the role of the nurse into areas of primary care.[11]

Legal Issues

Major concerns about the professional functions of PNPs involve legal issues. Is the PNP entitled under law as a registered nurse to provide those various services described above? Is the PNP truly engaged in the practice of nursing or is he or she practicing medicine? Who is responsible legally for the action of the PNP?

These questions become crucial as more nurses assume increased responsibilities in pediatrics and in other fields of health care. The opinion held here is that all services described for the PNP are encompassed by nursing certification. Further, with the exception of formal history taking and the physical examination, virtually none of the skills of the PNP are really new to nursing. Nurses have been delivering these kinds of health services via instruction by a physician employer or generated from long experience. The PNPTP organizes the teaching of these skills in a proper and structured fashion and, by certification, encourages professional as well as public recognition of such trained nurses. The nurse is an established and licensed member of the health profession. With the medical profession recognizing the propriety of the services she provides, there would seem to be little reason to question the legality of his or her activities. The PNP shoulders responsibility for his or her performance as does any R.N. carrying out instructions under the supervision and direction of a physician. These actions also are the responsibility of the physician who has directed that they be performed.

Cost of the Training Program

Based on costs of faculty time, equipment and supplies, the cost of training a PNP is approximately $4,000 per student; the tuition of $1,760 for the eight-month program falls far short of that. This figure compares to estimates by Yankauer's group[12] who have suggested an institutional cost of $1,756 per PNP for a part-time program involving considerably less time. While the cost of training may seem high, the cost benefit also is rather large. In a relatively short time and for a relatively smaller expenditure, it is possible to expand the ability of a nurse to provide care for children who ordinarily would require the costlier skills of a physician whose training is more complex and more expensive.

Evaluation

Assessment of the trainee's performance is based on the observations of the instructors and preceptors who consider the trainee's fund of knowledge, skills, clinical judgment, initiative, sense of responsibility and attitudes toward patients, supervisors and colleagues. Neither oral nor written examinations are given. This follows the procedure used in evaluating house officers and others engaged in postgraduate training programs at this institution.

Weekly group meetings are held with the program director, and individual interviews relating to the student's progress are held at the midpoint and end of the didactic period and the practicum. Other interviews are held whenever desired by the trainee or program director.

Other Considerations

After three years, the pediatric faculty as well as the nursing community has maintained a high level of interest in the PNPTP. Certain factors can be identified which have had influence on the warm reception which the program has enjoyed. Not the least of these is the enthusiasm and interest of the trainees themselves. With suggestions and helpful criticisms, they have been the strongest influence in the creation of a steadily evolving, rather than a static, curriculum.

Consideration should be given to the process of organization and operation of this program within the Medical School. Among the more gratifying experiences attendant to the institution of the PNPTP at Washington University School of Medicine has been the singular lack of serious difficulty in the inauguration of the program. It has been warmly received by the faculty of the Department of Pediatrics, including many full-time members as well as many of those in private practice. The fact that the Department of Pediatrics, as well as the other involved faculty personnel, endorse the philosophy of the program contributes to its successful operation. As expected, there were obstacles. It was necessary to assure occasional individuals in various administrative roles that the PNP is an important member of the pediatric health care team. Some pediatricians expressed disinterest or concern which was not changed by discussion, and such individuals did not participate. However, skepticism and disapproval were at a relatively low level and are becoming less and less evident. It is to be reemphasized that only people who believe in the program have been participants.

SUMMARY

The PNPTP of Washington University School of Medicine is in the fourth year of operation. Experience has indicated that the PNPTP is well received by the enrollees who have found it a means to extend the role of the registered nurse in ways which are more appropriate to their capabilities. The design of the program is presented and various factors which are involved in the development and continued administration of such a program are described.

Volvulus of the Stomach

(Continued from page 657)

ture. Two types of volvulus, organo-axial and mesentero-axial, have been described. Prompt radiological examination will establish the diagnosis when the clinical symptoms are not characteristic. Early surgical intervention should reduce mortality in acute cases.

The 14th National Conference on Physicians, Schools and Communities will be held at the LaSalle Hotel in Chicago on October 4-5. Theme of this year's meeting is "Improving the Quality of Life: The Impact of Schools." The meeting will provide a forum for medical societies to exchange ideas and activities related to the health of school-aged children and youth.

Radiologic Problem Case

THIS 54-YEAR-OLD WHITE WOMAN was admitted to the hospital for evaluation of gastrointestinal complaints which were of a chronic nature. Over the years, the patient's condition had been diagnosed as "spastic colitis." The problem appeared to oscillate between diarrhea and constipation with protracted periods of obstipation. In the past weeks, the patient stated that the diarrhea had worsened and was associated with cramping pain as well as tenderness in the right lower quadrant.

Past History: The patient had had the usual childhood diseases. A tonsillectomy was performed at three years of age. She had a total hysterectomy for uterus prolapse in 1947. A tumor diagnosed as fibrocystic disease was excised from the left breast in 1942.

Family History: The patient's mother is alive but has had similar colon complaints, which also were diagnosed as a *spastic colon*. The patient is a chronic smoker (three to four packs of cigarettes per day for approximately 30 years).

Physical Examination: The patient's height is 5 feet 8 inches and she weighs 175 lb. Her temperature was 98 F; pulse, 72/min; respirations, 20/min; and blood pressure, 120/70.

The patient was in no acute distress in spite of complaints. There was exquisite tenderness centered about the right lower quadrant. A small scar was seen on the left breast. The hysterectomy had been accomplished by the vaginal approach.

Laboratory Data: Normal SMA 12. Normal prothrombin time. The red blood cell and white blood cell counts were normal. The sodium, chlorides and CO_2 were within normal limits with potassium at the lower limits of normal 3.8 (normal 3.9-4.8). The EKG was normal.

A barium enema was performed on May 13, 1972 (Fig. 1). The colon was negative except for the ileocecal valve region. Here a somewhat rigid radiolucent defect was demonstrated along the medial aspect of the ascending colon. Barium was forced into the ileum in the presence of marked pain and discomfort. The ileum was seen to traverse the lower border of the radiolucent mass suggesting an eccentric positioned lumen of the small bowel at the ileocecal valve lips.

The lack of complete filling of the terminal ileum and the inability of the patient to cooperate satisfactorily for this examination demanded further roentgen exploration. This was accomplished by the small intestinal route, which was supplemented with fluoroscopy and spot films. The oral barium study was done on May 20, 1972. Spot films over the ileocolic region reconfirmed the barium enema observations (Fig. 2). The prominent and persistent defect involving the medial aspect of the colon at the ileocecal valve lips and the eccentric channel of the lumen between the valves raised a warrantable suspicion of organic disease at this point. In addition, the distal ileal loop appeared slightly dilated and ineffective in emptying barium into the colon, although the peristaltic activity appeared quite vigorous.

The inferior and superior borders of the valves were unalterable and were rounded or convex at the junction of valve and colon wall medially.

The above findings favored carcinoma as an explanation for the clinical and roentgen observations.

Discussion: In the majority of cases, the cecum will manifest roentgen changes which are characteristic of specific pathology. Occasionally, an atypical observation is encountered which renders the diagnosis difficult if not impossible.

This is due to the fact that a roentgen obser-

The authors of this series of articles presenting unusual radiologic problem cases are from the Department of Radiology, Menorah Medical Center, where Dr. Rubin is Chairman. They were assisted in this case by Frank Mantz, M.D., Pathologist.

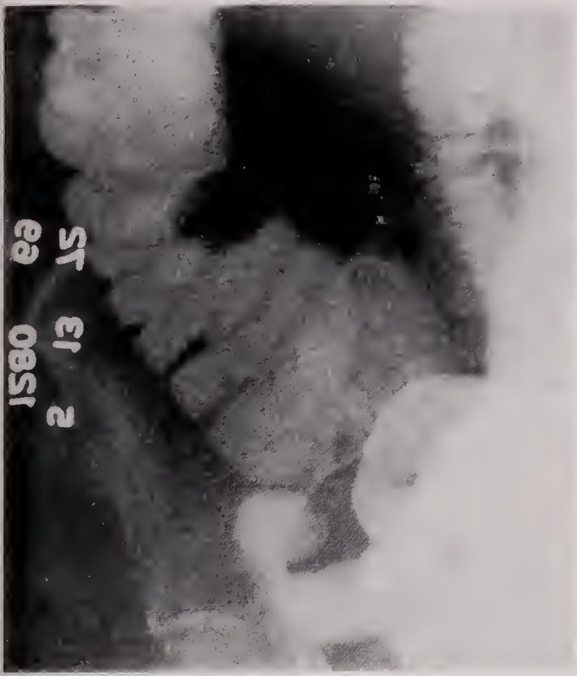

Fig. 1 The ileocecal area is viewed on a posterior projection of a barium enema study. The prominent radiolucency of the valve lips and the downward slope of frenulum (the channel between upper and lower valve) are eccentric and curvilinear rather than straight and beak-like.

vation, such as filling defects, attempts to define a mass or space-taking lesion in radiological terms, although pathology may be simulated by physiological and morphological variations of the organs in question. When this situation arises and the differential diagnosis between disease and an altered anatomical state exists, all the conventional radiographic studies may not resolve the problem.

In the main, the barium enema is the preferred method for studying the ileocecal valve and terminal ileum. Inability to cause barium to reflex through the ileocecal valve is not indicative of disease but, rather, denotes a competent valve (Fig. 2). If one is suspicious of disease in this region, an oral study is necessary to study the ileum and ileocecal valve from above. The variations in the appearance of the ileocecal valve are myriad so that position, shape and thickness of the valve can challenge the most experienced radiologist.[1] Thus, one may be called upon to use every technique that can be mustered to aid in deriving a specific diagnosis. There have been occasions in our experience when a most suggestive tumefaction of the valve lips has turned out to be normal valves at

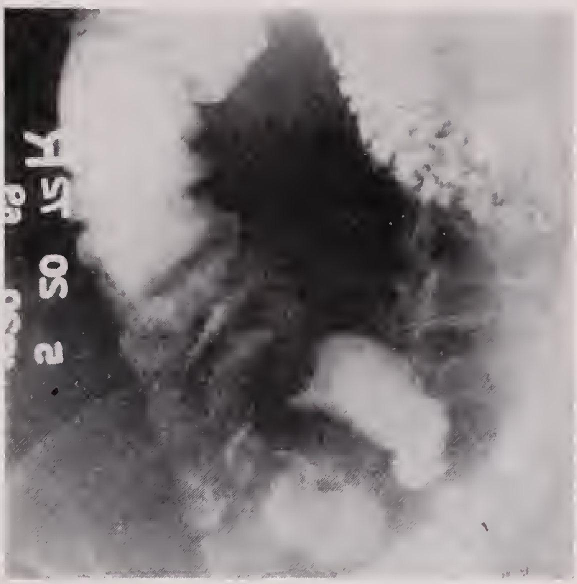

Fig. 2 Interval studies made one week following the barium enema revealed the indurated radiolucency which was not effaceable. The small segment of terminal ileum entering the colon appeared distended and the lips were not centrally positioned. The lumen of the valve area is convex downward.

the time of surgery. Antegrade and retrograde prolapse of the ileocolonic mucosa adds further to the distortion of this opening and often masquerades as a neoplasm. The hypertrophy[2] of the valve lips has been described and concern for the asymmetrical channel between the upper and lower valve lips has been considered as an important sign (Fig. 1) that favors a carcinomatous lesion about the valve.

Lipoma of the submucous type may lie beneath the valves and cause ulceration and intussusception of the ileum into the colon. It was our feeling that the induration of the lesion favored a carcinoma, particularly since the lumen was eccentric and the defect could not be obliterated regardless of the method of examination.[3]

Radiological Diagnosis: Carcinoma of valve lip.

Differential Diagnosis: 1. Hypertrophy of valve. 2. Lipoma of valve. 3. Idiopathic inflammatory process involving valve lips.

Pathology

Gross: A doughnut-shaped, rounded mass of tissue said to represent an amputated ileocecal valve was received in the fresh state. It measured 4 cm x 3.5 cm in greatest diameter and does not exceed 1.5 cm in thickness. The lumen of the valve was eccentrically located on the epithelial surface. Its greatest diameter was 1 cm x 1 cm. It was completely patent, although it appeared slightly constricted. The opposite or excisional aspect consisted of adipose tissue. The lumen of the valve was 1.5 cm in length. Cross sectioning showed adipose tissue. Also received was an elongate finger of yellow fat, which was 6 cm x 1 cm x 0.8 cm. It was felt to represent the appendix epiploica. The specimen submitted from the incidental appendectomy showed a normal appendix.

Microscopic: The ileocecal valve showed some irregular interstitial hemorrhage on the colonic mucous membrane. The lumen is lined at least in part with ileal type mucous membrane within which there is a large Peyer's patch. Located in the submucosa is a diffuse mass of multilobular adipose tissue lying for the most part beneath the muscularis mucosa and extending in a narrow strand.

Pathology Diagnosis: Submucosal lipomatosis of the ileocecal valve.

Man in space, now fait accompli, re-emphasizes the importance of Uro-Phosphate therapy. Research into the effect of space travel on the astronaut reveals that weightlessness causes loss of bone calcium. As the bones are required to bear less and less of the weight of the body they lose calcium, increasing the calcium content of the urine. When physical activity is reduced, the acidity of the urine should be adjusted to keep increased calcium in solution . . . . a prophylaxis to prevent kidney or bladder calculi.

Uro-Phosphate®

NOW A SUGAR-COATED TABLET

Each tablet contains: METHENAMINE, *300 mg.;* SODIUM ACID PHOSPHATE, *500 mg.*

Uro-Phosphate gives comfort and protection when inactivity causes discomfort in the urinary function. It keeps calcium in solution, preventing calculi; it maintains clear, acid, sterile urine; it encourages complete voiding and lessens frequency when residual urine is present.

Uro-Phosphate contains sodium acid phosphate, a natural urinary acidifier. This component is fortified with methenamine which is inert until it reaches the acid urinary bladder. In this environment it releases a mild antiseptic keeping the urine sterile.

Uro-Phosphate is safe for continuous use. There are no contra-indications other than acidosis. It can be given in sufficient amount to keep the urine clear, acid and sterile. A heavy sugar coating protects its potency.

Dosage:

For protection of the inactive patient 1 or 2 tablets every 4 to 6 hours is usually sufficient to keep the urine clear, acid and sterile.

2 tablets on retiring will keep residual urine acid and sterile, contributing to comfort and rest.

A clinical supply will be sent to physicians and hospitals on request.

THE mudranes®

All Mudranes are bronchodilator-mucolytic in action, and are indicated for symptomatic relief of bronchial asthma, emphysema, bronchiectasis and chronic bronchitis. **MUDRANE tablets** contain 195 mg. potassium iodide; 130 mg. aminophylline; 21 mg. phenobarbital (Warning: may be habit-forming); 16 mg. ephedrine HCl. **Dosage** is one tablet with full glass of water, 3 or 4 times a day. **Precautions** are those for aminophylline-phenobarbital-ephedrine combinations. **Iodide side-effects:** May cause nausea. Very long use may cause goiter. Discontinue if symptoms of iodism develop. **Iodide contraindications:** Tuberculosis; pregnancy (to protect the fetus against possible depression of thyroid activity). **MUDRANE-2 tablets** contain 195 mg. potassium iodide; 130 mg. aminophylline. **Dosage** is one tablet with full glass of water, 3 or 4 times a day. **Precautions** are those for aminophylline. **Iodide side-effects and contraindications are listed above. MUDRANE GG tablets** contain 100 mg. glyceryl guaiacolate; 130 mg. aminophylline; 21 mg. phenobarbital (Warning: may be habit-forming); 16 mg. ephedrine HCl. **Dosage** is one tablet with full glass of water, 3 or 4 times a day. **Precautions** are those for aminophylline-phenobarbital-ephedrine combinations. **MUDRANE GG-2 tablets** contain 100 mg. glyceryl guaiacolate; 130 mg. aminophylline. **Dosage** is one tablet with full glass of water, 3 or 4 times a day. **Precautions:** Those for aminophylline. **MUDRANE GG Elixir.** Each teaspoonful (5 cc) contains 26 mg. glyceryl guaiacolate; 20 mg. theophylline; 5.4 mg. phenobarbital (Warning: may be habit-forming); 4 mg. ephedrine HCl. **Dosage:** Children, 1 cc for each 10 lbs. of body weight; one teaspoonful (5 cc) for a 50 lb. child. Dose may be repeated 3 or 4 times a day. Adult, one tablespoonful, 4 times daily. All doses should be followed with ½ to full glass of water. **Precautions:** See those listed above for Mudrane GG tablets.

MUDRANE—original formula
First choice

MUDRANE-2
When ephedrine is too exciting
or is contraindicated

MUDRANE GG
During pregnancy or when K.I. is
contraindicated or not tolerated

MUDRANE GG-2
A counterpart for Mudrane-2

MUDRANE GG ELIXIR
For pediatric use
or where liquids are preferred

Clinical specimens
available to physicians.

President's Message

Following each Session of the Missouri General Assembly, we physicians wonder "what have they done" in Jefferson City that affects our practice of medicine.

The recently adjourned 77th General Assembly DID pass legislation affecting medicine. I hasten to add, however, that the new laws must be regarded as favorable. Fortunately, all of the legislation opposed by the MSMA during the last Session failed to gain approval, with the exception of the Blue Cross-Blue Shield regulatory bill.

E. A. Stricker, M.D.

Nine new laws which passed the Legislature and have been signed by the Governor could have a direct effect on Missouri physicians. At a glance, these measures are:

- Relieve physicians of liability for actions taken by medical review, hospital review or other review committees of which they are members, if the actions were taken without malice and after efforts to establish the facts.
- Remove smallpox from the list of *mandatory* immunizations required for public school pupils.
- Establish a Medical Examiner System in Greene and Clay Counties and provide other counties with the option to adopt the system.
- Provide for licensing and regulation of ambulances, drivers and attendants by the Division of Health. This bill contains a "Good Samaritan" clause and a provision for "Mobile Emergency Medical Technicians" who may perform certain emergency services "at the scene of an accident, in an ambulance or at the emergency room of a licensed hospital."
- Allow qualified embalmers to enucleate eyes which have been donated by the deceased.
- Require pharmacists or a physician to place the exact name and dosage of a prescribed drug on every container label, unless otherwise directed by the physician.
- Establish a Bureau of Home Health Care Services for the Aged and Chronically Ill within the State Division of Health.
- Provide that no physician, allied personnel or hospital is required to treat or admit any woman for the purpose of abortion if such treatment is against the policy of the hospital or against the religious, moral or ethical principles of the medical personnel.
- Require licensing of hearing aid dealers. Those persons 18-years-old or younger must see a physician before a fitting.

The MSMA Legislative Committee and its chairman, John I. Matthews, M.D., are to be congratulated for guiding the passage of favorable bills while successfully derailing several anti-medicine measures during the recent Session. But it is time to look ahead, not behind.

With the advent of annual sessions of the General Assembly, the burdens placed on the Legislative Committee and Staff have increased significantly. To continue an effective legislative program, more MSMA members must become involved!

Assess the importance of legislation in regard to your profession. If you can offer much-needed, local contact with your State Senator or Representative on medically-related bills, contact John I. Matthews, Chairman, Legislative Committee, in care of MSMA Headquarters.

Remember, the second session of the 77th General Assembly convenes on Jan. 9, 1974.

Integument!

Our skin—the human integument—covers us, defines us, protects us. But skin is subject to cuts, burns, abrasions. And infections. Neosporin Ointment fights infection by providing broad antibacterial action against susceptible skin invaders. It contains antibiotics that are rarely used systemically, reducing the risk of sensitization.

INDICATIONS: *Therapeutically*, used as an adjunct to appropriate systemic therapy for topical infections, primary or secondary, due to susceptible organisms, as in: • infected burns, skin grafts, surgical incisions, otitis externa • primary pyodermas (impetigo, ecthyma, sycosis vulgaris, paronychia) • secondarily infected dermatoses (eczema, herpes, and seborrheic dermatitis) • traumatic lesions, inflamed or suppurating as a result of bacterial infection.

Prophylactically, the ointment may be used to prevent bacterial contamination in burns, skin grafts, incisions, and other clean lesions. For abrasions, minor cuts and wounds accidentally incurred, its use may prevent the development of infection and permit wound healing.

CONTRAINDICATIONS: Not for use in the external ear canal if the eardrum is perforated. This product is contraindicated in those individuals who have shown hypersensitivity to any of the components.

PRECAUTION: As with other antibiotic preparations, prolonged use may result in overgrowth of nonsusceptible organisms and/or fungi. Appropriate measures should be taken if this occurs. Articles in the current medical literature indicate an increase in the prevalence of persons allergic to neomycin. The possibility of such a reaction should be borne in mind.

Complete literature available on request from Professional Services Dept. PML.

NEOSPORIN® Ointment

Woman's Auxiliary

50th Anniversary

★ TEL-E-MEMBER

You will recall that in the June issue of Missouri Medicine, I discussed the inspiring new *Five Point Tel-Star Program* which the Woman's Auxiliary initiated this year in an effort to increase our service opportunities.

★TEL-E-MEMBER is the first point on that star. It relates to increasing our *membership,* a subject we take very seriously. It is so important that we gain the interest and memberships of many doctors' wives who have yet to join the Auxiliary. We believe that we can all work together in membership by offering the AMA slogan, "Join us! We can do much more together!"

We believe that in membership, the single, most effective tool is verbal communication on a one-to-one basis. The *fact* is that our goal is for every qualified physician to be a member of the AMA and his wife to be a member of the AMA Auxiliary. The *problem* is that many in these eligible groups are not members now. We want them to be aware of (1) our existence, (2) what we do to make a better way of life for everyone and (3) our attitude—we want and need them as members.

Mrs. Charles R. Willman
President

The MSMA Auxiliary is now striving for a strong Membership Committee in each county medical society auxiliary. The membership committees should have a membership chairman and co-chairman, hospitality chairman, program chairman, telephone chairman, project or program development chairman and treasurer. You can see how the responsibilities of each chairman will relate to contacting prospective members; making them feel welcome by extending the hand of friendship and fellowship; capturing their interest via informative and worthwhile programs; and gaining the advantage of their talents, ideas and participation in developing constructive, meaningful projects based on the health needs of the individual communities.

One of the most invigorating and exciting aspects of the MSMA Woman's Auxiliary and the AMA Auxiliary is that our programs are not static and each county auxiliary can be responsive to the particular health needs in its community. Our county auxiliaries can literally "come alive" with vision, imagination, planning, enthusiasm and action.

We do need help in getting this important message to physicians' wives who are not members now. With the new members we expect to gain, each of our county groups can be of greater service to the MSMA and the communities in which we live.

"Whatever you can do, or dream you can, begin it. Boldness has genius, power and magic in it."—Goethe.

EDITORIAL

ART AND SCIENCE IN MEDICINE

The art of medicine may have been stressed unduly in the past and is still emphasized by many older physicians with a nostalgic yearning for its past contributions. "A science teaches to know, and an art to do." (Jevons)

There is obvious tense drama in the famous impressive painting by Sir Luke Fildes showing the physician sitting beside the sick child and observing its every breath most carefully and anxiously, as diphtheria take its toll. Inherent too, however, is the deep frustration in just sitting there and being able to do so little; in that sense, it is a sad and maybe too dramatic depiction of the helplessness of the physician. The lesson is crystal clear, art itself is just not enough!

At the opposite pole is the totally objective approach—giving the calculated dose of antitoxin without any special tender loving concern for the sick child and anxious parents; but the child recovers. Does that mean that science is triumphant and the art of medicine is passé? Are the intangible emotional imponderables no longer important in medical care? Cannot the antitoxin be given with prayerful compassion too? The fact is that the art of medicine, although not so easily measurable and quantitative, statistical and "reportable," is still important and may be more so now than ever before. Man needs sympathetic understanding; the toll of lack of sympathy is great and can lead to callous, impersonal, and even harmful "care."

The difficulty arises out of the present tendency—a growing one—of contrasting art and science in medicine as if they were antagonistic. In truth, it should not be art versus science in medicine but rather art and science—in parallel, in symbiosis, both together affecting the cure of the body and the soul and achieving balanced health with permanent homeostasis and adjusted happiness.

Let us foster the art of medicine and promote its science too, together; there is a desirable proper balance between them for the best of medical care. One does not belittle the other, and there is no need to denigrate one for the sake of the other. Both can make an important contribution. Both are needed, much needed, to help troubled humanity in this troubled world.

With impersonal government and hospital controls of medical care ever increasing, it is only the physician who can properly balance the art and the science of medicine; he will be increasingly important in obtaining the best complete medical care for the patient.

New York State Journal of Medicine
July 15, 1973

LETTERS to the Editor

Joseph V. Finnegan, M.D., Editor
Missouri Medicine

Dear Dr. Finnegan:

Public Law 92-603 provides the Department of Health, Education and Welfare (HEW) with the mandate to administer those portions of the law that pertain to Professional Standards Review Organizations (PSRO).

The Office of Professional Standards Review has been established in the Office of the Assistant Secretary for Health to direct and coordinate all Departmental PSRO-related activities. Its Director is William I. Bauer, M.D. In carrying out these responsibilities, Dr. Bauer and his staff will be working with the National Professional Standards Review Council and with State and local organizations which are involved in establishing and implementing professional standards review mechanisms. In addition, many other HEW personnel will be assisting in this work, including staff of the Medicare and Medicaid programs.

During the coming months, the Office of Professional Standards Review, in collaboration with the HEW Regional Offices and involved agencies, will develop a variety of informational and technical material which will guide and facilitate the eventual selection, designation and operation of PSROs throughout the Nation. As a part of the process, interested individuals and organizations will be asked to contribute to the development of material regarding PSRO regulations, norms, criteria and related items. This material will be made widely available to organizations which may elect to apply for PSRO designation, as well as to other groups and individuals whose interests and activities relate to current and future PSRO concerns.

Requests for further information and other communications regarding PSRO and related peer review issues should be addressed to:

William I. Bauer, M.D.
Director, Office of Professional
Standards Review
Department of Health, Education,
and Welfare
Washington, D. C. 20201

I invite your assistance and participation in this important new, nationwide effort.

Sincerely yours,
Charles C. Edwards, M.D.
Assistant Secretary for Health
Department of Health, Education
and Welfare

Charles C. Edwards, M.D.
Assistant Secretary for Health
Department of Health, Education and Welfare
Office of the Secretary
Washington, D. C. 20201

Dear Dr. Edwards:

Dr. Joseph V. Finnegan, editor of MISSOURI MEDICINE, has asked me to respond to your letter under the date of May 7, which was addressed to him as editor.

Your letter will be published in our "Letters to the Editor" section of MISSOURI MEDICINE in an attempt to secure further cooperation from our members in the efforts to implement the PSRO law.

I am sure you realize that this will be a trying time for the Medical Profession. Fortunately in Missouri, the Missouri State Medical Association and the Missouri Association of Osteopathic Physicans and Surgeons joined together in 1970 to create a nonprofit corporation, separate and distinct from both state organizations, known as the Health Care Foundation of Missouri. This Foundation has been implementing for almost three years now its goals of doing true peer review throughout the state of Missouri in an effort to elevate the quality of medical care; to identify abuses and educational needs throughout the health care delivery system, both as relates to providers, consumers and carriers; and to control the cost of medical care.

Needless to say, in Missouri as well as other parts of the country, there has been considerable dissention on the part of many physicians as to the validness of this effort, and particularly to the validity of attempting to implement the PSRO law. Fortunately, these people are in the minority—but a significant minority, I might add.

We in Missouri feel very strongly, and both the State Medical and State Osteopathic organizations have gone on record as endorsing, that the Health Care Foundation is the organization we would like to see conduct and monitor the PSRO in Missouri. The Health Care Foundation of Missouri is regionalized, with local peer review being done in each of the regions. We currently have over 250 actively practicing physicians working at this effort in various parts of the state. We are very strongly dedicated to the proposition that in order for statewide peer review organizations to function, there has to be a central umbrella organization to monitor the activities of all the PSROs within the state, to coordinate their efforts, to act as an appeal body, to help identify and implement the educational needs as they are discovered, to establish and maintain proper computer facilities for the ongoing peer review activities and to be in a position to represent all of the physicians in Missouri in negotiating appropriate contracts with the Secretary of HEW in carrying out the law.

It is quite apparent to all of us who have spent a great deal of time in developing this activity that peer review and PSRO organizations can never survive and be successful without the cooperation of the Medical Profession. It should be equally apparent that the best way to get this cooperation will be to find out from doctors in various parts of the country what in their estimate will work best in their area, and be prepared to accept such structured organizations with possible revisions in order to gain that cooperation.

Sincerely yours,
Hector W. Benoit, Jr., M.D., Chairman
The Health Care Foundation of Missouri

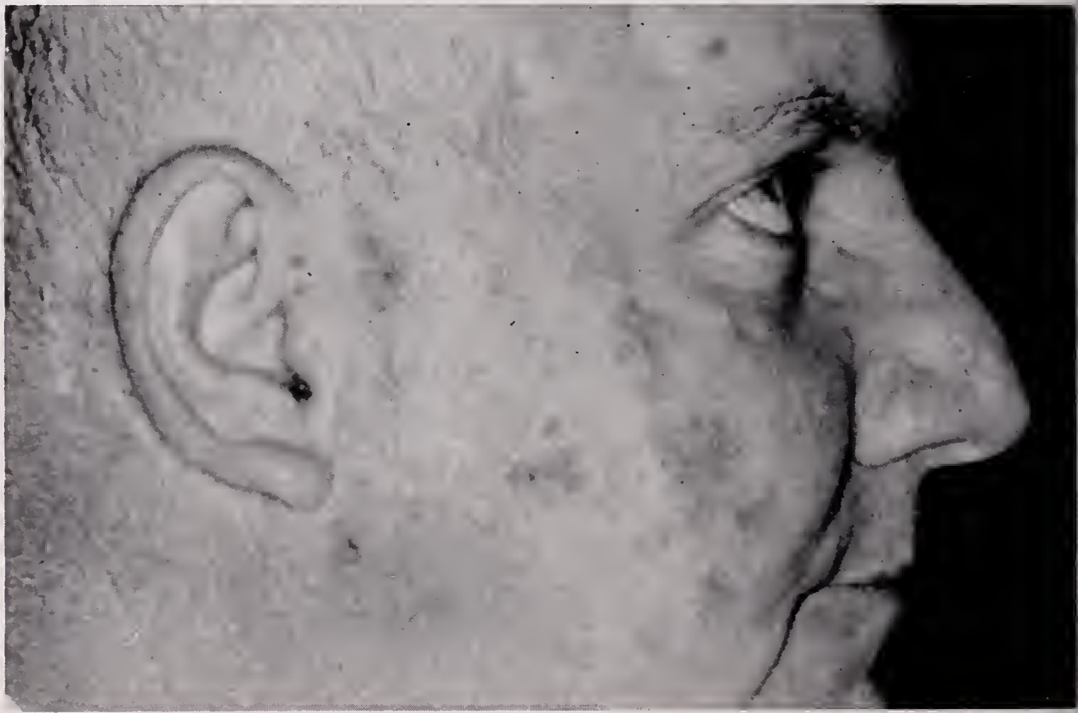
What's on your patient's face...

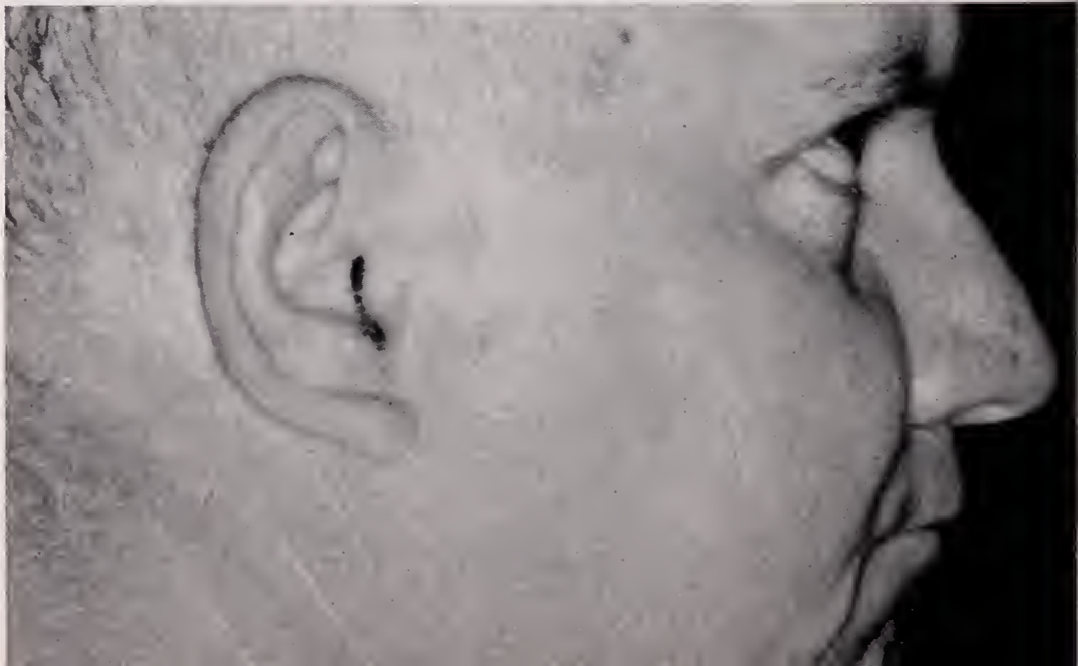
may be more important than his chief complaint

Patient P.T.* seen on 3/29/67 shows typical lesions of moderately severe keratoses. Note residual scarring on ridge of nose from previous cryosurgical and electrosurgical procedures.



Patient P.T.* seen on 6/12/67, seven weeks after discontinuation of 5% FU cream. Reaction has subsided. Residual scarring not seen except that due to prior surgery. Inflammation has cleared and face is clear of keratotic lesions.

*Data on file, Hoffmann - La Roche Inc., Nutley, N.J



he lesions on his face
re solar/actinic–
-called "senile" keratoses...
nd they may be premalignant.

lar, actinic or senile keratoses

se lesions may be called by several names, but they
lly can be identified by the following characteris-
The typical lesion is flat or slightly elevated, of a
vnish or reddish color, papular, dry, rough, adherent
sharply defined. They commonly occur as multiple
ns, chiefly on the exposed portions of the skin.

quence of therapy–
ectivity of response

r several days of therapy with Efudex® (fluorouracil),
hema may begin to appear in the area of the lesions;
reaction usually reaches its height of unsightliness
discomfort within two weeks, declining after dis-
inuation of therapy. This reaction occurs in affected
. Since the response is so predictable, lesions that
t respond should be biopsied.

ceptable results

tment with Efudex provides highly favorable cos-
c results. Incidence of scarring is low. This is par-
arly important with multiple facial lesions. Efudex
ld be applied with care near the eyes, nose and mouth.

Before prescribing, please consult complete product information, a summary of which follows:

Indications: Multiple actinic or solar keratoses.

Contraindications: Patients with known hypersensitivity to any of its components.

Warnings: If occlusive dressing used, may increase inflammatory reactions in adjacent normal skin. Avoid prolonged exposure to ultraviolet rays. Safe use in pregnancy not established.

Precautions: If applied with fingers, wash hands immediately. Apply with care near eyes, nose and mouth. Lesions failing to respond or recurring should be biopsied.

Adverse Reactions: Local—pain, pruritus, hyperpigmentation and burning at application site most frequent; also dermatitis, scarring, soreness and tenderness. Also reported—insomnia, stomatitis, suppuration, scaling, swelling, irritability, medicinal taste, photosensitivity, lacrimation, leukocytosis, thrombocytopenia, toxic granulation and eosinophilia.

Dosage and Administration: Apply sufficient quantity to cover lesion twice daily with nonmetal applicator or suitable glove. Usual duration of therapy is 2 to 4 weeks.

How Supplied: Solution, 10-ml drop dispensers—containing 2% or 5% fluorouracil on a weight/weight basis, compounded with propylene glycol, tris(hydroxymethyl)-aminomethane, hydroxypropyl cellulose, parabens (methyl and propyl) and disodium edetate.

Cream, 25-Gm tubes—containing 5% fluorouracil in a vanishing cream base consisting of white petrolatum, stearyl alcohol, propylene glycol, polysorbate 60 and parabens (methyl and propyl).

PRESCRIBING INFORMATION

Antiminth (pyrantel pamoate) Oral Suspension

Actions. Antiminth (pyrantel pamoate) has demonstrated anthelmintic activity against *Enterobius vermicularis* (pinworm) and *Ascaris lumbricoides* (roundworm). The anthelmintic action is probably due to the neuromuscular blocking property of the drug.

Antiminth is partially absorbed after an oral dose. Plasma levels of unchanged drug are low. Peak levels (0.05-0.13μg/ml.) are reached in 1-3 hours. Quantities greater than 50% of administered drug are excreted in feces as the unchanged form, whereas only 7% or less of the dose is found in urine as the unchanged form of the drug and its metabolites.

Indications. For the treatment of ascariasis (roundworm infection) and enterobiasis (pinworm infection).

Warnings. *Usage in Pregnancy:* Reproduction studies have been performed in animals and there was no evidence of propensity for harm to the fetus. The relevance to the human is not known.

There is no experience in pregnant women who have received this drug.

Precautions. Minor transient elevations of SGOT have occurred in a small percentage of patients. Therefore, this drug should be used with caution in patients with pre-existing liver dysfunction.

Adverse Reactions. The most frequently encountered adverse reactions are related to the gastrointestinal system.

Gastrointestinal and hepatic reactions: anorexia, nausea, vomiting, gastralgia, abdominal cramps, diarrhea and tenesmus, transient elevation of SGOT.

CNS reactions: headache, dizziness, drowsiness, and insomnia. Skin reactions: rashes.

Dosage and Administration. *Children and Adults:* Antiminth Oral Suspension (50 mg. of pyrantel base/ml.) should be administered in a single dose of 11 mg. of pyrantel base per kg. of body weight (or 5 mg./lb.); maximum total dose 1 gram. This corresponds to a simplified dosage regimen of 1 cc. of Antiminth per 10 lb. of body weight. (One teaspoonful = 5 cc.)

Antiminth (pyrantel pamoate) Oral Suspension may be administered without regard to ingestion of food or time of day; and purging is not necessary prior to, during, or after therapy. It may be taken with milk or fruit juices. Because of limited data on repeated doses, no recommendations can be made.

How Supplied. Antiminth is available as a pleasant tasting caramel-flavored suspension which contains the equivalent of 50 mg. pyrantel base per ml., supplied in 60 cc. bottles.

Antivert®
(meclizine HCl)
for vertigo*

...and then on to Venice

ndicated in the management of nausea,
niting and dizziness associated with mo-
ı sickness.

ound useful in the management of verti-
ssociated with diseases affecting the ves-
ılar system.

vailable as Antivert® (12.5 mg. meclizine
l) blue and white scored tablets and also
ntivert®/25 (25 mg. meclizine HCl) yel-
and white scored tablets.

NDICATIONS. Based on a review of this drug by
ne National Academy of Sciences-National Research
ouncil and/or other information, FDA has classified
ne indications as follows:
Effective: Management of nausea and vomiting and
izziness associated with motion sickness.
Possibly Effective: Management of vertigo asso-
iated with diseases affecting the vestibular system.
Final classification of the less than effective indica-
ons requires further investigation.

CONTRAINDICATIONS. Administration of Antivert during pregnancy or to women who may become pregnant is contraindicated in view of the teratogenic effect of the drug in rats.

The administration of meclizine to pregnant rats during the 12th-15th day of gestation has produced cleft palate in the offspring. Limited studies using doses of over 100 mg./kg./day in rabbits and 10 mg./kg./day in pigs and monkeys did not show cleft palate. Congeners of meclizine have caused cleft palate in species other than the rat.

Meclizine HCl is contraindicated in individuals who have shown a previous hypersensitivity to it.

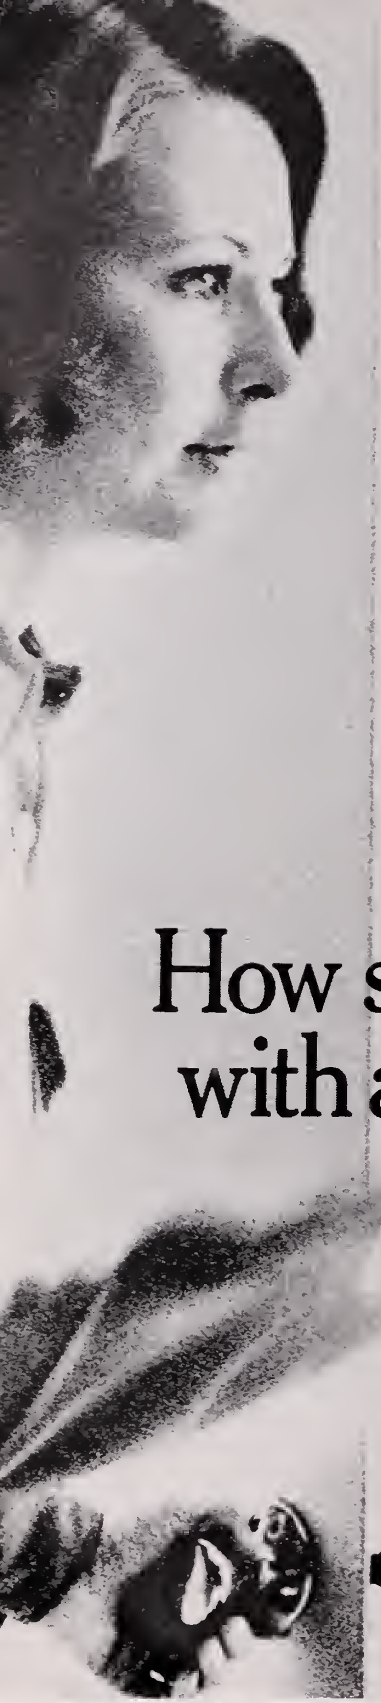
WARNINGS. Since drowsiness may, on occasion, occur with use of this drug, patients should be warned of this possibility and cautioned against driving a car or operating dangerous machinery.

Usage in Children: Clinical studies establishing safety and effectiveness in children have not been done; therefore, usage is not recommended in the pediatric age group.

Usage in Pregnancy: See "Contraindications."

ADVERSE REACTIONS. Drowsiness, dry mouth and, on rare occasions, blurred vision have been reported.

ROERIG Pfizer
A division of Pfizer Pharmaceuticals
New York, New York [illegible]



Success in preventing recurrence of urinary tract infection usually depends on success in treating the initial infection. And that in turn is closely linked to factors of proper drug, proper dosage, and *proper length of therapy*. Much of the effectiveness of an antibacterial agent used to treat an acute nonobstructed urinary tract infection depends, in fact, upon proper length of therapy. As you know, it is potentially hazardous for a patient to discontinue her medication too soon; on the other hand, overtreatment has no advantage and may even cause adverse reactions.

Total therapy: 14 days

Some recent studies suggest that therapy in acute nonobstructed urinary tract infections should be continued for 10 to 14 days even if patients become asympton in 2 or 3 days, as they often d After inadequate treatment, course, survival of bacteria c cause a quick recurrence of infection.

The problem of persua a patient to complete the full course of therapy remains di cult. Perhaps agreeing on th for a follow-up examination a end of medication may be th most effective way of convin a less than enthusiastic patie to continue therapy even afte becomes asymptomatic.

As a urinary antibacter Gantrisin (sulfisoxazole) Ro offers your patient importan vantages, some of which ma increase patient cooperation

High urinary and plasma le

Therapeutic urinary and plas concentrations are usually

How soon will she drop in with a recurrent cystitis...

Before prescribing, please consult complete product information, a summary of which follows:
Indications: Nonobstructed urinary tract infections (mainly cystitis, pyelitis, pyelonephritis) due to susceptible organisms.
IMPORTANT NOTE: *In vitro* sensitivity tests not always reliable; must be coordinated with bacteriological and clinical response. Add aminobenzoic acid to follow-up culture media. Increasing frequency of resistant organisms limits usefulness of antibacterial agents, especially in chronic and recurrent urinary infections. Maximum safe total sulfonamide blood level, 20 mg/100 ml; measure levels as variations may occur.
Contraindications: Hypersensitivity to sulfonamides; infants less than 2 months of age; pregnancy at term and during the nursing period.
Warnings: Safety in pregnancy not established. Do not use for Group A beta-hemolytic streptococcal infections, as sequelae (rheumatic fever, glomerulonephritis) are not prevented. Deaths reported from hypersensitivity reactions, agranulocytosis, aplastic anemia and other blood dyscrasias. Sore throat, fever, pallor, p or jaundice may be early indicatior serious blood disorders. CBC and u with careful microscopic examinat should be performed frequently.
Precautions: Use cautiously in pat with impaired renal or hepatic fun severe allergy or bronchial asthma ysis, frequently dose-related, may in glucose-6-phosphate dehydroge deficient patients. Maintain adequ intake to prevent crystalluria and s formation.

miting. Gantrisin may usu-
given safely, even for pro-
d periods, in the treatment
onic or recurrent nonob-
ed cystitis, pyelitis or
ephritis due to *E. coli* and
susceptible organisms.
(See Important Note in sum-
of product information.)

Complete blood counts and urinalyses, with microscopic examination, should be performed frequently.

High solubility

Gantrisin is one of the most soluble of all sulfonamides, with both free and acetylated forms highly soluble in the commonly encountered urinary pH range of 5.5 to 6.5. Urine levels have been detected in 60 minutes; therapeutic levels are usually reached in 2 to 3 hours. About 90% of a single dose is excreted in 24 to 48 hours. As with all sulfonamides, adequate fluid intake must be maintained.

Economy

Average cost of therapy is still only about 6½¢ per tablet.

AMA Lists Record Number of Continuing Education Courses

A total of 2,441 courses for continuing education of physicians will be offered by 697 institutions and organizations in the year beginning on September 1, the American Medical Association reported in a special supplement to the August 13 issue of its *Journal.*

This figure compares to 2,082 courses listed in the academic year ending August 31.

Institutions and organizations sponsoring courses to help physicians keep abreast of developments in medicine are located in 48 states and the District of Columbia.

Compiled by the staff of the AMA's Department of Continuing Medical Education, the supplement is the 19th annual listing of courses.

The list of courses is published as a service to all physicians who are interested in maintaining their competence and skill through the medium of formal courses and other organized activities in continuing medical education, says C. H. William Ruhe, M.D., the AMA's Director of Medical Education.

The number of physicians recognizing the value of regular, formal study has been increasing steadily and participation in the listed courses continues to grow, Dr. Ruhe points out.

A major factor in continuing medical education of physicians is the AMA's Physician's Recognition Award, presented to physicians who successfully complete specified study programs. Some 11,000 physicians qualified for the Award in 1972, bringing to more than 40,000 the total who have met the standards under this program.

Increased utilization of the AMA Award as a nationwide base for an acceptable level of continuing medical education has occurred, Dr. Ruhe says. The AMA now receives an increasing number of inquiries about the Award from physicians with medical staff responsibilities in hospitals. These inquiries ask the AMA to verify that a physician applying for hospital privileges has a currently valid Award, or how the Award can be used as a convenient way of validating participation by all medical staff members in a personal program of continuing education.

The *Journal* supplement lists courses that are sponsored by organizations accredited for continuing education by the AMA's Council on Medical Education. Every institution and organization known to offer such courses was contacted individually and offered the opportunity to list its courses.

(Continued on page 682)

Pinworm therapy is often a family affair

Contraindications: History of hypersensitivity to thiabendazole.
Warnings: If hypersensitivity reactions occur, drug should be discontinued immediately and not resumed. Rarely, erythema multiforme has been associated with thiabendazole therapy; in severe cases (Stevens-Johnson syndrome), fatalities have occurred. Because CNS side effects may occur quite frequently, activities requiring mental alertness should be avoided. Safe use in pregnancy or lactation has not been established.
Precautions: Ideally, supportive therapy is indicated for anemic, dehydrated, or malnourished patients prior to initiation of anthelmintic therapy. In presence of hepatic or renal dysfunction, patients should be carefully monitored.
Adverse Reactions: Most frequently encountered are anor nausea, vomiting, and dizziness. Less frequently, diarrhe epigastric distress, pruritus, weariness, drowsiness, giddi and headache have occurred. Rarely, tinnitus, hyperirritab numbness, abnormal sensation in eyes, blurring of vision, xanthopsia; hypotension, collapse; enuresis; transient ris cephalin flocculation and SGOT; perianal rash, cholestasis parenchymal liver damage; hyperglycemia; transient leuk malodor of the urine, crystalluria, hematuria; appearance Ascaris in the mouth and nose. INDICATION | DOSAGE SCHEDULE

MINTEZOL® (Thiabendazole, MSD) has demonstrated effectiveness against a broad spectrum of nematode infections. Dosages are weight related. For your convenience, the information in the weight-dose chart below is included in the full prescribing information and in the 1973 edition of PDR.
The recommended maximum daily dose of MINTEZOL is 3 g (6 tablets).
MINTEZOL should be given after meals if possible. Dietary restriction, complementary medications, and cleansing enemas are not needed.
The usual dosage schedule for all conditions is two doses per day. The size of the dose is determined by the patient's weight.

Weight-dose chart:

WEIGHT (lb)	EACH DOSE (g)	TABLETS
25	0.25	½
50	0.5	1
75	0.75	1½
100	1.0	2
125	1.25	2½
150 & over	1.5	3

The regimen for each indication follows:

INDICATION	REGIMEN	COMMENTS
Pinworm disease	Two doses per day for 1 day. Repeat in 7 days. This regimen is designed to reduce the risk of reinfection.	If this is not practical, give 2 doses per day for 2 successive days.
Threadworm,* large roundworm,* hookworm,* and whipworm* disease	Two doses per day for 2 successive days.	A single dose of 20 mg/lb or 50 mg/kg may be employed as an alternative schedule, but a higher incidence of side effects should be expected.
Creeping eruption	Two doses per day for 2 successive days.	If active lesions are still present 2 days after completion of therapy, a second course is recommended.
Symptoms of trichinosis* during the invasive phase of the disease	Two doses per day for 2 to 4 successive days according to the response of the patient.	The optimal dosage for the treatment of trichinosis has not been established.

*Clinical experience with thiabendazole for treatment of each of these conditions in children weighing less than 30 lb has been limited.

Carlos J. Deleste, M.D., 2639 Miami, St. Louis, has become a member of St. Louis Medical Society. Dr. Deleste is a native of the Philippines, received his preliminary education at the University of Santo Tomas and his M.D. degree at the University of Santo Tomas in 1967. He specializes in general practice.

Anthony E. Fathman, M.D., 777 S. New Ballas Rd., St. Louis, has become a member of St. Louis County Medical Society. Dr. Fathman is a native of Louisiana, Mo., received his preliminary education at Grinnell College and his M.D. degree at Washington University in 1964. He specializes in urology.

James A. Ferrendelli, M.D., 660 S. Euclid, St. Louis, has become a member of St. Louis Medical Society. Dr. Ferrendelli is a native of Trinidad, Colo., received his preliminary education at the University of Colorado and his M.D. degree at the University of Colorado in 1962. He specializes in neurology.

David L. Gearhart, M.D., 615 S. New Ballas Rd., St. Louis, has become a member of St. Louis Medical Society. Dr. Gearhart is a native of Phoenix, Ariz., received his preliminary education at Wesleyan University and his M.D. degree at St. Louis University in 1971. He specializes in obstetrics and gynecology.

Alfred Gilgore, D.O., 825 Euclid, Kansas City, has become a member of Jackson County Medical Society. Dr. Gilgore is a native of Philadelphia, Pa., received his preliminary education at Temple University and his D.O. degree at Kansas City College in 1967. He specializes in general practice.

Louis A. Gilula, M.D., 17 Sona La., St. Louis, has become a member of St. Louis Medical Society. Dr. Gilula is a native of Lubbock, Tex., received his preliminary education at Southern Illinois University and his M.D. degree at the University of Illinois in 1967. He specializes in radiology.

Robert L. Givler, M.D., Meyer Blvd. at Prospect, Kansas City, has become a member of Jackson County Medical Society. Dr. Givler is a native of Mason City, Ia., received his preliminary education at the University of Iowa and his M.D. degree at State University of Iowa in 1956. He specializes in pathology.

Rengasamy Gowdamarajan, M.D., 825 Euclid, Kansas City, has become a member of Jackson County Medical Society. Dr. Gowdamarajan is a native of Sivakasi, India, received his preliminary education at American College and his M.D. degree at the University of Madras in 1961. He specializes in pediatric cardiology.

Richard E. Hillman, M.D., 500 S. Kingshighway, St. Louis, has become a member of St. Louis Medical Society. Dr. Hillman is a native of Pawtucket, R. I., received his preliminary education at A. B. Brown University and his M.D. degree at Yale University in 1965. He specializes in pediatrics.

Simon Horenstein; M.D., 1221 Grand, St. Louis, has become a member of St. Louis Medical Society. Dr. Horenstein is a native of Providence, R. I., received his preliminary education at the University of Illinois and his M.D. degree at the University of Illinois in 1948. He specializes in neurology.

John D. Hunkeler, M.D., 2929 Baltimore, Kansas City, has become a member of Jackson County Medical Society. Dr. Hunkeler is a native of Kansas City, received his preliminary education at Harvard College and his M.D. degree at the University of Kansas in 1967. He specializes in ophthalmology.

Stephen A. Kamenetzky, M.D., 7450 Delmar, St. Louis, has become a member of St. Louis Medical Society. Dr. Kamenetzky is a native of St. Louis, received his preliminary education at Washington University and his M.D. degree at Washington University in 1970. He specializes in ophthalmology.

Donald L. Kaminski, M.D., 1325 S. Grand, St. Louis, has become a member of St. Louis Medical Society. Dr. Kaminski is a native of Elba, Neb., received his preliminary education at Creighton University and his M.D. degree at Creighton University in 1966. He specializes in general surgery.

Kavous Khodadoust, M.D., 1606 Grattan, St. Louis, has become a member of St. Louis Medical Society. Dr. Khodadoust is a native of Iran, received his preliminary education at Alliorz and his M.D. degree at Tehran University in 1965. He specializes in pathology.

Ira J. Kodner, M.D., 216 S. Kingshighway, St. Louis, has become a member of St. Louis Medical Society. Dr. Kodner is a native of Kentucky, received his preliminary education at Washington University and his M.D. degree at Washington University in 1967. He specializes in general surgery.

MacDonald B. Logie, M.D., 100 N. Euclid, St. Louis, has become a member of St. Louis Medical Society. Dr. Logie is a native of St. Louis, received his preliminary education at Northwestern University and his M.D. degree at Northwestern University in 1967. He specializes in radiology.

Robert G. McConnell, M.D., 1465 S. Grand, St. Louis, has become a member of St. Louis Medical Society. Dr. McConnell is a native of Tacoma, Wash., received his preliminary education at Washington State University and his M.D. degree at Marquette University in 1967. He specializes in orthopedic surgery.

W. Kendall McNabney, M.D., 24th and Cherry, Kansas City, has become a member of Jackson County Medical Society. Dr. McNabney is a native of Coffeyville, Kan., received his preliminary education at the University of Kansas and his M.D. degree at the University of Kansas in 1962. He specializes in surgery.

Jose Manes, M.D., 1325 S. Grand, St. Louis, has become a member of St. Louis Medical Society. Dr. Manes is a native of Spain, received his preliminary education at Centro Politecnico and his M.D. degree at Valencia in 1967. He specializes in pathology.

Bill L. Martz, M.D., 2220 Holmes, Kansas City, has become a member of Jackson County Medical Society. Dr. Martz is a native of Anderson, Ind., received his preliminary education at DePauw University and his M.D. degree at Indiana University in 1945. He specializes in internal medicine.

P. Louis Medler, M.D., 11115 New Halls Ferry, Florissant, has become a member of St. Louis County Medical Society. Dr. Medler is a native of St. Louis, received his preliminary education at St. Louis University and his M.D. degree at the University of Missouri in 1967. He specializes in dermatology.

Kenneth L. Milstead, Jr., M.D., 1325 S. Grand, St. Louis, has become a member of St. Louis Medical Society. Dr. Milstead is a native of Evanston, Ill., received his preliminary education at George Washington University and his M.D. degree at Georgetown University in 1964. He specializes in anesthesiology.

F. Shah Naheed, M.D., 1035 Bellevue, St. Louis, has become a member of St. Louis Medical Society. Dr. Naheed is a native of Rangoon, Burma, received his preliminary education at Fatima, Jinnah and his M.D. degree at Fatima, Jinnah in 1964. He specializes in ophthalmology.

Michael Orgel, M.D., 100 N. Euclid, St. Louis, has become a member of St. Louis Medical Society. Dr. Orgel is a native of St. Louis, received his preliminary education at Washington University and his M.D. degree at St. Louis University in 1965. He specializes in internal medicine.

Ebello T. Pasia, M.D., Christian Hospital N. W., Florissant, has become a member of St. Louis County Medical Society. Dr. Pasia is a native of the Philippines, received his preliminary education at Far Eastern University and his M.D. degree at Far Eastern University. He specializes in general surgery.

Douglas S. Patton, M.D., 1325 S. Grand, St. Louis, has become a member of St. Louis Medical Society. Dr. Patton is a native of Oakland, Calif., received his preliminary education at Stanford University and his M.D. degree at St. Louis University in 1966. He specializes in surgery and plastic surgery.

Antonio R. Penilla, M.D., 1035 Bellevue, St. Louis, has become a member of St. Louis Medical Society. Dr. Penilla is a native of the Philippines, received his preliminary education at the University of Santo Tomas and his M.D. degree at the University of Santo Tomas in 1967. He specializes in internal medicine.

Vernon Jerome Peterson, M.D., 807 Stadium, Columbia, has become a member of Boone County Medical Society. Dr. Peterson is a native of Shelby Co., Ia., received his preliminary education at Denver University and his M.D. degree at Loma Linda University in 1968. He specializes in radiology.

Granville J. Phillips, Jr., M.D., 3411 Sirisu Ave., El Paso, Tex., has become a member of St. Louis Medical Society. Dr. Phillips is a native of Oxnard, Calif., received his preliminary education at Washington University and his M.D. degree at the University of Missouri in 1973. He specializes in obstetrics and gynecology.

Gregory B. Politi, M.D., P.O. Box 975, Columbia, has become a member of Boone County Medical Society. Dr. Politi is a native of Peekskill, N. Y., received his preliminary education at the University of Vermont and his M.D. degree at the University of Vermont in 1967. He specializes in anesthesiology.

A. Razek, M.D., 500 S. Kingshighway, St. Louis, has become a member of St. Louis Medical Society. Dr. Razek is a native of Cairo, Egypt, received his preliminary education at Nokraski and his M.D. degree at Cairo University in 1963. He specializes in pediatrics.

Dhanalakshmi Rengachary, M.D., 825 Euclid, Kansas City, has become a member of Jackson County Medical Society. Dr. Rengachary is a native of India, received his preliminary education at Holy Cross College and his M.D. degree at Madras in 1962. He specializes in obstetrics and gynecology.

Marco Rizzo, M.D., 1325 S. Grand, St. Louis, has become a member of St. Louis Medical Society. Dr. Rizzo is a native of Rome, Italy, received his preliminary education at Auellaneda College and his M.D. degree at Buenos Aires University in 1967. He specializes in plastic surgery.

George Roush, Jr., M.D., 800 N. Lindbergh, St. Louis, has become a member of St. Louis Medical Society. Dr. Roush is a native of Fort Wayne, Ind., received his preliminary education at the University of Wisconsin and his M.D. degree at Washington University in 1951. He specializes in occupational medicine and internal medicine.

Romeo Inarda Santos, M.D., Dunklin County Memorial Hospital, Kennett, has become a member of Dunklin County Medical Society. Dr. Santos is a native of the Philippines, received his preliminary education at the University of the East and his M.D. degree at Manila Central University in 1963. He specializes in psychiatry.

Dipak Kumar Sengupta, M.D., 1755 S. Grand, St. Louis, has become a member of St. Louis Medical Society. Dr. Sengupta is a native of India, received his preliminary education at Calcutta University and his M.D. degree at Nilratan Sircar in 1959. He specializes in general surgery.

Chaisiri Sethabutra, M.D., 3820 Itaska, St. Louis, has become a member of St. Louis Medical Society. Dr. Sethabutra is a native of Bangkok, Thailand, received his preliminary education at Chulalongkorn University and his M.D. degree at Siriraj Hospital in 1970. He specializes in general surgery.

David L. Stronsky, M.D., 6420 Clayton Rd., St. Louis, has become a member of St. Louis Medical Society. Dr. Stronsky is a native of Lorain, Ohio, received his preliminary education at the University of Notre Dame and his M.D. degree at St. Louis University in 1968. He specializes in orthopedic surgery.

Martin A. Swerdlow, M.D., 24th and Cherry, Kansas City, has become a member of Jackson County Medical Society. Dr. Swerdlow is a native of Chicago, Ill., received his preliminary education at the University of Illinois and his M.D. degree at the University of Illinois in 1947. He specializes in pathology.

Ronald P. Turgeon, M.D., 6420 Clayton Rd., St. Louis, has become a member of St. Louis Medical Society. Dr. Turgeon is a native of Dover, N. H., received his preliminary education at Assumption College and his M.D. degree at St. Louis University in 1962. He specializes in pathology.

Emil C. Umali, M.D., 808 Pagsonm, St. Louis, has become a member of St. Louis Medical Society. Dr. Umali is a native of the Philippines, received his preliminary education at the University of Santo Tomas and his M.D. degree at the University of Santo Tomas in 1959. He specializes in general surgery.

Orestes S. Valdes, M.D., Olive Blvd. at Woodsmill, Chesterfield, has become a member of St. Louis Medical Society. Dr. Valdes is a native of Cuba, received his preliminary education at Instituto De St. Clara and his M.D. degree at the University of Havana in 1954. He specializes in pediatrics.

Teodoro C. Vargas, M.D., P.O. Box 683, Manchester, has become a member of St. Louis Medical Society. Dr. Vargas is a native of the Philippines, received his preliminary education at Far Eastern University and his M.D. degree at Far Eastern University in 1964. He specializes in surgery.

Angela A. Villanueva, M.D., 1755 S. Grand, St. Louis, has become a member of St. Louis Medical Society. Dr. Villanueva is a native of the Philippines, received her preliminary education at the University of the Philippines and her M.D., degree at the University of the Philippines in 1964. She specializes in pathology.

Alberto B. Viloria, M.D., 2425 N. Broadway, St. Louis, has become a member of St. Louis

Medical Society. Dr. Viloria is a native of the Philippines, received his preliminary education at Northern Christian College and his M.D. degree at Far Eastern University in 1965. He specializes in surgery.

Shuh-min Wu, M.D., 425 E. 63rd, Kansas City, has become a member of Jackson County Medical Society. Dr. Wu is a native of Taiwan, received his preliminary education at Kaoshing and his M.D. degree at Kaoshing in 1966. He specializes in internal medicine.

Fred R. Zivnuska, M.D., 510 S. Kingshighway, St. Louis, has become a member of St. Louis Medical Society. Dr. Zivnuska is a native of Milwaukee, Wis., received his preliminary education at Marquette University and his M.D. degree at the University of Wisconsin in 1970. He specializes in radiation therapy.

CLASSIFIED ADS

LARGE KANSAS CITY INDUSTRIAL ORGANIZATION—Has opening for physician with interest, training or experience in Occupational Medicine. Will be responsible for administration of plant medical program. Excellent working conditions and liberal benefits, including insurance, furnished car, etc. Send resume and salary requirements to P.O. Box 7982, Kansas City, Missouri 64129. An equal opportunity employer.

PHYSICIAN—For general outpatient duty. All hours available. Salary negotiable. Fringe benefits. Contact Carl Reis, Administrator, 1755 S. Grand, St. Louis, Mo. (314) PR-1-0500.

OUTSTANDING PRACTICE AVAILABLE IN SOUTH ST. LOUIS—Stable practice of deceased South St. Louis physician affords excellent professional and financial opportunity. Surgical and general practice with heavy concentration on industrial accounts. Economical and efficient office available with excellent equipment. Space could accommodate partners, if desired. Estate will consider either cash sale or installment basis. Call (314) 843-4998 or (314) 353-4466.

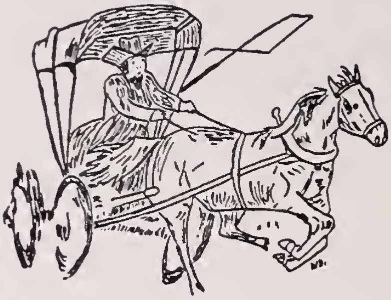
LEO H. POLLOCK, M.D.

Missouri Medicine in Review



FORTY YEARS AGO

"For centuries and ages, the main or only defenses against diseases were prayers, magic, incantations, sacrifices and taboos. Gods, devils and witches were associated with illness and death. Depressing as these beliefs may be, some of the notions concerning illness which were prevalent in the 16th and 17th centuries, great centuries of renaissance and of intellectual curiosity as they were, are appalling.

"Medicine was interpreted during those centuries according to Galen and the humoral theory of disease and to the Arabians and astrology. And, neither the humoral theory nor the astrology bore relation to the facts.

"When William Harvey described the circulation of the blood, one of the medical leaders of his day said that if Harvey's dissections did not agree with Galen's teachings, then the nature and structure of man had changed since Galen's day, as it could not be admitted that Galen had erred.

"Jenner's teaching in regard to inoculation for small pox was so at variance with all the teaching and knowledge of the day that it encountered violent opposition from all sides and was branded as paradoxical, useless, false, impossible, absurd and harmful. Vaccination has freed childhood today from what was its greatest menace prior to Jenner's discovery."

Flashing into the public consciousness with the dramatic suddenness of a major catastrophe early in August, an epidemic of encephalitis appeared in St. Louis County, particularly in that part adjacent to the city of St. Louis. Within less than a month, 302 cases had been reported, with the death rate varying from about 10% in the city to 15% in the county. This is all the more remarkable since no unusual prevalence of encephalitis had been reported elsewhere in the United States, and its existence was unsuspected in this vicinity until a large number of cases developed.

TWENTY-FIVE YEARS AGO

It is interesting in any discussion of shock to remember that "shock" is not a new word. Henri Francois LeDran used this word in 1743. He described the capillaries "to be choked up" in shock; he knew about "sludge." And, best of all, he left documentary proof of his observation. Capillary constriction which preceded "sludge" was observed in 1733 by Stephan Hales, an English minister.

Herbert L. Mantz, M.D., Kansas City, was installed as president of the National Tuberculosis Association on June 18 at the closing session of the Association's annual session in New York. —C. Edgar Virden, M.D., Kansas City, was chosen as chairman of the board of chancellors of the American College of Radiology.

Robert Elman, M.D., St. Louis, was one of nine physicians who left on July 1 for Poland and Finland to establish the first medical training mission under the sponsorship of the Unitarian Service Committee, the United Nations World Health Organization and the Department of State. The group will remain there until August 10.

On July 8, the city of Nevada voted approval of a bond issue of $225,000 for an addition to the Nevada Hospital by a vote of 1,479 for and 274 against.

E. D. Urban, M.D., Sikeston, was elected chairman of the staff executive committee of the Missouri Delta Community Hospital in Sikeston at a meeting on June 10. Other officers elected were Drs. Samuel P. Martin of East Prairie, vice-chairman; S. M. Sarno of Morehouse, secretary; and E. J. Nienstedt of Sikeston, Treasurer.

TEN YEARS AGO

In 1962, motorists raced down the nation's highways to a new death record which for the first time exceeded 40,000 fatalities, according to a report by Travelers Insurance Company. Young drivers had the worst performance record of any age group. Drivers less than 25 years of age comprise only about 15% of all licensed drivers in the United States, yet they were involved in approximately 29% of all fatal accidents. In 1961, this age group was involved in 27.3% of all highway deaths. Not since 1941, when 39,969 persons lost their lives, has the traffic fatality record been so high.

Among members of the 13-member advisory board named by Proctor W. Carter to assist in administering the new Kerr-Mills Law are Dr. Stanley S. Peterson, Springfield, and Dr. Avery P. Rowlette, Moberly. Mr. T. R. O'Brien was named an ex officio member.

Mario Garza Gonzalez, M.D. was recently elected president of the staff of Johnson County Hospital in Warrensburg. R. E. Cooper, M.D., was elected vice-president.

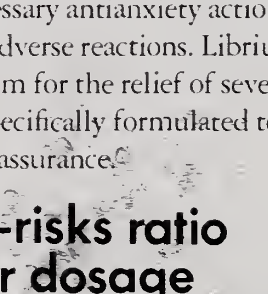
How strong must a tranquilizer be for severe anxiety?

As strong as Librium® 25 mg (chlordiazepoxide HCl)

The achievement of desired therapeutic results is often a function of the dosage *strength* as well as the drug's intrinsic action. Thus, when anxiety is *severe,* the 25-mg strength of Librium frequently provides the necessary antianxiety action with a minimum of unwanted adverse reactions. Librium 25 mg is a convenient dosage form for the relief of severe, incapacitating anxiety, specifically formulated to supplement your counsel and reassurance.

Benefits-to-risks ratio permits higher dosage



For over 13 years, Librium has been recognized for its excellent benefits-to-risks ratio, an asset in the *higher* dosage ranges as in more common clinical applications. Thus, the frequency of dosage with Librium 25 mg can be flexibly adjusted to the needs and response of the individual patient, up to 100 mg daily if required. Total daily dosage for the elderly and debilitated should not exceed 20 mg. When severe anxiety has been reduced, Librium dosage should be correspondingly reduced or discontinued entirely.

basic support in severe anxiety
Librium® 25 mg
(chlordiazepoxide HCl)
1 capsule t.i.d./q.i.d.

ROCHE

Roche Laboratories
Division of Hoffmann-La Roche Inc
Nutley, N J 07110

Before prescribing, please consu plete product information, a summar which follows:

Indications: Relief of anxiety and occurring alone or accompanying variou states.

Contraindications: Patients with hypersensitivity to the drug.

Warnings: Caution patients abou combined effects with alcohol and other depressants. As with all CNS-acting dru patients against hazardous occupations complete mental alertness (*e.g.*, operati ery, driving). Though physical and psyc dependence have rarely been reported c mended doses, use caution in administe addiction-prone individuals or those w increase dosage; withdrawal symptoms convulsions), following discontinuatio drug and similar to those seen with bar have been reported. Use of any drug in lactation, or in women of childbearing a that its potential benefits be weighed against i possible hazards.

Precautions: In the elderly and debilita and in children over six, limit to smallest effe tive dosage (initially 10 mg or less per day) to preclude ataxia or oversedation, increasing gr ally as needed and tolerated. Not recommend in children under six. Though generally not r ommended, if combination therapy with othe psychotropics seems indicated, carefully consi individual pharmacologic effects, particularly use of potentiating drugs such as MAO inhib and phenothiazines. Observe usual precautio presence of impaired renal or hepatic functio Paradoxical reactions (*e.g.*, excitement, stimul and acute rage) have been reported in psychia patients and hyperactive aggressive children. Employ usual precautions in treatment of an states with evidence of impending depression suicidal tendencies may be present and protec measures necessary. Variable effects on blood coagulation have been reported very rarely i patients receiving the drug and oral anticoagu lants; causal relationship has not been establi clinically.

Adverse Reactions: Drowsiness, ataxia confusion may occur, especially in the elderly debilitated. These are reversible in most insta by proper dosage adjustment, but are also occ sionally observed at the lower dosage ranges. few instances syncope has been reported. Also countered are isolated instances of skin erupt edema, minor menstrual irregularities, nause constipation, extrapyramidal symptoms, incr and decreased libido—all infrequent and gene controlled with dosage reduction; changes in patterns (low-voltage fast activity) may appea during and after treatment; blood dyscrasias (cluding agranulocytosis), jaundice and hepati dysfunction have been reported occasionally, ing periodic blood counts and liver function t advisable during protracted therapy.

Supplied: Librium® Capsules containi 5 mg, 10 mg or 25 mg chlordiazepoxide HCl Libritabs® Tablets containing 5 mg, 10 mg or 25 mg chlordiazepoxide.

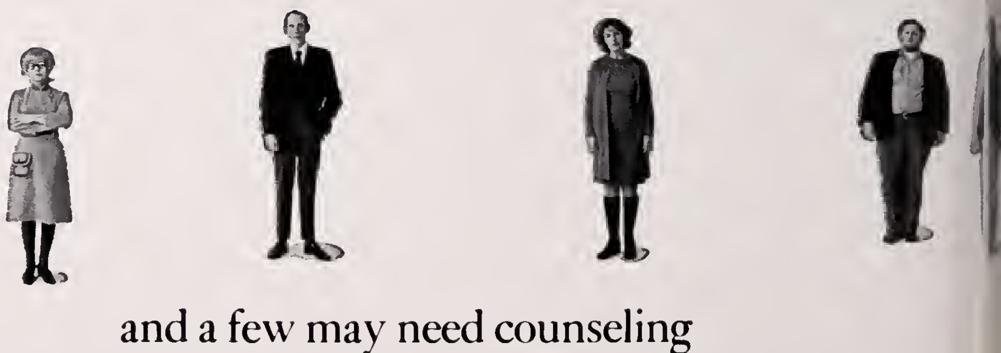
116th MSMA Annual Session
April 4-7, 1974 Kansas City

Everybody experiences psychic tension.

Most people can handle this tension.

Some people develop excessive psychic tension and need your counse



and a few may need counseling
and the psychotropic action of Valium® (diazepam).

Before deciding to make Valium
epam) part of your treatment
check on whether or not the
nt is presently taking drugs
if so, what his response has
. Along with the medical and
l history, this information can
you determine initial dosage,
ossibility of side effects and
ltimate prospects of success
lure.
While Valium can be a most
ul adjunct to your counseling,
uld be prescribed only as long
cessive psychic tension per-
and should be discontinued
you decide it has accom-
ed its therapeutic task. In
al, when dosage guidelines
llowed, Valium is well
ted (see Dosage). For con-
nce it is available in 2-mg, 5-mg
o-mg tablets.
rowsiness, fatigue and ataxia
been the most commonly re-
d side effects.
ntil response is determined,
nts receiving Valium should
utioned against engaging in
dous occupations requiring
lete mental alertness, such
ving or operating machinery.

ROCHE
Roche Laboratories
Division of Hoffmann-La Roche Inc.
Nutley, N.J. 07110

Before prescribing, please consult complete product information, a summary of which follows:

Indications: Tension and anxiety states; somatic complaints which are concomitants of emotional factors; psychoneurotic states manifested by tension, anxiety, apprehension, fatigue, depressive symptoms or agitation; symptomatic relief of acute agitation, tremor, delirium tremens and hallucinosis due to acute alcohol withdrawal; adjunctively in skeletal muscle spasm due to reflex spasm to local pathology, spasticity caused by upper motor neuron disorders, athetosis, stiff-man syndrome, convulsive disorders (not for sole therapy).

Contraindicated: Known hypersensitivity to the drug. Children under 6 months of age. Acute narrow angle glaucoma; may be used in patients with open angle glaucoma who are receiving appropriate therapy.

Warnings: Not of value in psychotic patients. Caution against hazardous occupations requiring complete mental alertness. When used adjunctively in convulsive disorders, possibility of increase in frequency and/or severity of grand mal seizures may require increased dosage of standard anticonvulsant medication; abrupt withdrawal may be associated with temporary increase in frequency and/or severity of seizures. Advise against simultaneous ingestion of alcohol and other CNS depressants. Withdrawal symptoms (similar to those with barbiturates and alcohol) have occurred following abrupt discontinuance (convulsions, tremor, abdominal and muscle cramps, vomiting and sweating). Keep addiction-prone individuals under careful surveillance because of their predisposition to habituation and dependence. In pregnancy, lactation or women of childbearing age, weigh potential benefit against possible hazard.

Precautions: If combined with other psychotropics or anticonvulsants, consider carefully pharmacology of agents employed; drugs such as phenothiazines, narcotics, barbiturates, MAO inhibitors and other antidepressants may potentiate its action. Usual precautions indicated in patients severely depressed, or with latent depression, or with suicidal tendencies. Observe usual precautions in impaired renal or hepatic function. Limit dosage to smallest effective amount in elderly and debilitated to preclude ataxia or oversedation.

Side Effects: Drowsiness, confusion, diplopia, hypotension, changes in libido, nausea, fatigue, depression, dysarthria, jaundice, skin rash, ataxia, constipation, headache, incontinence, changes in salivation, slurred speech, tremor, vertigo, urinary retention, blurred vision. Paradoxical reactions such as acute hyperexcited states, anxiety, hallucinations, increased muscle spasticity, insomnia, rage, sleep disturbances, stimulation have been reported; should these occur, discontinue drug. Isolated reports of neutropenia, jaundice; periodic blood counts and liver function tests advisable during long-term therapy.

Dosage: Individualize for maximum beneficial effect. *Adults:* Tension, anxiety and psychoneurotic states, 2 to 10 mg b.i.d. to q.i.d.; alcoholism, 10 mg t.i.d. or q.i.d. in first 24 hours, then 5 mg t.i.d. or q.i.d. as needed; adjunctively in skeletal muscle spasm, 2 to 10 mg t.i.d. or q.i.d.; adjunctively in convulsive disorders, 2 to 10 mg b.i.d. to q.i.d. *Geriatric or debilitated patients:* 2 to 2½ mg, 1 or 2 times daily initially, increasing as needed and tolerated. (See Precautions.) *Children:* 1 to 2½ mg t.i.d. or q.i.d. initially, increasing as needed and tolerated (not for use under 6 months).

Supplied: Valium® (diazepam) Tablets, 2 mg, 5 mg and 10 mg; bottles of 100 and 500. All strengths also available in Tel-E-Dose® packages of 1000.

acute arthritic inflammation...heat that freezes

In acute rheumatoid arthritis consider Tandearil. The anti-inflammatory action of Tandearil quickly helps reduce heat, pain, swelling, and stiffness. Results are usually seen in 3 or 4 days. Try it for a week when the symptoms defy aspirin control.

Remember that Tandearil is not a simple analgesic. It should not be used on patients responding to routine therapy. Before using, please read the prescribing information. It's summarized below.

Tandearil® helps take the heat off
oxyphenbutazone NF

Geigy

Tablets of 100 mg.
mportant Note: This drug is not a simple
analgesic. Do not administer casually. Care-
ully evaluate patients before starting treat-
ment and keep them under close supervision.
Obtain a detailed history, and complete phys-
cal and laboratory examination (complete
hemogram, urinalysis, etc.) before prescribing
and at frequent intervals thereafter. Carefully
elect patients, avoiding those responsive to
outine measures, contraindicated patients
or those who cannot be observed frequently.
Warn patients not to exceed recommended
dosage. Short-term relief of severe symptoms
with the smallest possible dosage is the goal
of therapy. Dosage should be taken with meals
or a full glass of milk. Patients should discon-
inue the drug and report immediately any sign
of: fever, sore throat, oral lesions (symptoms
of blood dyscrasia); dyspepsia, epigastric
ain, symptoms of anemia, black or tarry
tools or other evidence of intestinal ulcera-
ion or hemorrhage, skin reactions, significant
weight gain or edema. A one-week trial period
s adequate. Discontinue in the absence of a
avorable response. Restrict treatment periods
o one week in patients over sixty.
ndications: Acute gouty arthritis, rheumatoid
rthritis, rheumatoid spondylitis.
ontraindications: Children 14 years or less;
enile patients; history or symptoms of G.I.
nflammation or ulceration including severe,
ecurrent or persistent dyspepsia; history or
resence of drug allergy; blood dyscrasias;
enal, hepatic or cardiac dysfunction; hyper-
ension; thyroid disease; systemic edema;
tomatitis and salivary gland enlargement due
o the drug; polymyalgia rheumatica and tem-
oral arteritis; patients receiving other potent
hemotherapeutic agents, or long-term anti-
oagulant therapy.
arnings: Age, weight, dosage, duration of
herapy, existence of concomitant diseases,
nd concurrent potent chemotherapy affect in-
idence of toxic reactions. Carefully instruct
nd observe the individual patient, especially
he aging (forty years and over) who have
ncreased susceptibility to the toxicity of the
rug. Use lowest effective dosage. Weigh
nitially unpredictable benefits against po-
tential risk of severe, even fatal, reactions. The disease condition itself is unaltered by the drug. Use with caution in first trimester of pregnancy and in nursing mothers. Drug may appear in cord blood and breast milk. Serious, even fatal, blood dyscrasias, including aplastic anemia, may occur suddenly despite regular hemograms, and may become manifest days or weeks after cessation of drug. Any significant change in total white count, relative decrease in granulocytes, appearance of immature forms, or fall in hematocrit should signal immediate cessation of therapy and complete hematologic investigation. Unexplained bleeding involving CNS, adrenals, and G.I. tract has occurred. The drug may potentiate action of insulin, sulfonylurea, and sulfonamide-type agents. Carefully observe patients taking these agents. Nontoxic and toxic goiters and myxedema have been reported (the drug reduces iodine uptake by the thyroid). Blurred vision can be a significant toxic symptom worthy of a complete ophthalmological examination. Swelling of ankles or face in patients under sixty may be prevented by reducing dosage. If edema occurs in patients over sixty, discontinue drug.
Precautions: The following should be accomplished at regular intervals: Careful detailed history for disease being treated and detection of earliest signs of adverse reactions; complete physical examination including check of patient's weight; complete weekly (especially for the aging) or an every two week blood check; pertinent laboratory studies. Caution patients about participating in activity requiring alertness and coordination, as driving a car, etc. Cases of leukemia have been reported in patients with a history of short- and long-term therapy. The majority of these patients were over forty. Remember that arthritic-type pains can be the presenting symptom of leukemia.
Adverse Reactions: This is a potent drug; its misuse can lead to serious results. Review detailed information before beginning therapy. Ulcerative esophagitis, acute and reactivated gastric and duodenal ulcer with perforation and hemorrhage, ulceration and perforation of large bowel, occult G.I. bleeding with anemia, gastritis, epigastric pain, hematemesis, dyspepsia, nausea, vomiting and diarrhea, abdominal distention, agranulocytosis, aplastic anemia, hemolytic anemia, anemia due to blood loss including occult G.I. bleeding, thrombocytopenia, pancytopenia, leukemia, leukopenia, bone marrow depression, sodium and chloride retention, water retention and edema, plasma dilution, respiratory alkalosis, metabolic acidosis, fatal and nonfatal hepatitis (cholestasis may or may not be prominent), petechiae, purpura without thrombocytopenia, toxic pruritus, erythema nodosum, erythema multiforme, Stevens-Johnson syndrome, Lyell's syndrome (toxic necrotizing epidermolysis), exfoliative dermatitis, serum sickness, hypersensitivity angiitis (polyarteritis), anaphylactic shock, urticaria, arthralgia, fever, rashes (all allergic reactions require prompt and permanent withdrawal of the drug), proteinuria, hematuria, oliguria, anuria, renal failure with azotemia, glomerulonephritis, acute tubular necrosis, nephrotic syndrome, bilateral renal cortical necrosis, renal stones, ureteral obstruction with uric acid crystals due to uricosuric action of drug, impaired renal function, cardiac decompensation, hypertension, pericarditis, diffuse interstitial myocarditis with muscle necrosis, perivascular granulomata, aggravation of temporal arteritis in patients with polymyalgia rheumatica, optic neuritis, blurred vision, retinal hemorrhage, toxic amblyopia, retinal detachment, hearing loss, hyperglycemia, thyroid hyperplasia, toxic goiter, association of hyperthyroidism and hypothyroidism (causal relationship not established), agitation, confusional states, lethargy; CNS reactions associated with overdosage, including convulsions, euphoria, psychosis, depression, headaches, hallucinations, giddiness, vertigo, coma, hyperventilation, insomnia; ulcerative stomatitis, salivary gland enlargement.
(B)98-146-800-F (10/71)

TA 9041

More than sleep

your choice of sleep medication is wisely based on more than sleep-inducing potential

sleep with relative safety

Chronic tolerance studies have confirmed the relative safety of D (flurazepam HCl); no depression of cardiac or respiratory f was noted in patients administered recommended or highe for as long as 90 consecutive nights.

In most instances when adverse reactions were reported, they were mild, infrequent and sel quired discontinuance of therapy. Morning "hang-over" with Dalmane has been relatively infrequen ness, drowsiness, lightheadedness and the like have been the side effects noted most frequently, particularly in the elderly and debilitated. (An initial dose of Dalmane 15 mg should be prescribed for these patients.)

sleep for 7 to 8 hou without need to repeat dosage

No slee cation has been as rigorously evaluated in the sleep research laboratory as Dalmane. Insomnia given one 30-mg capsule of Dalmane at bedtime, on average: fell asleep within 17 minutes, had fewe time awakenings, spent less time awake after sleep onset, and slept for 7 to 8 hours with no need t dosage during the night.

ep with
nsistency

Dalmane has been shown to be consistently effective even during consecutive nights of administration, with no need to increase dosage.

mane (flurazepam HCl) is a distinctive sleep medication—a
iazepine specifically indicated for insomnia. It is not a bar-
or methaqualone, nor is it related chemically to any other
e hypnotic.

en your evaluation of insomnia indicates the need for a sleep
tion, consider Dalmane—a single entity nonnarcotic, non-
ate agent proved effective and relatively safe for relief of
ia.

DALMANE®
(flurazepam HCl)

When restful sleep is indicated

One 30-mg capsule *h.s.*—usual adult dosage
(15 mg may suffice in some patients).
One 15-mg capsule *h.s.*—initial dosage for elderly or debilitated patients.

Before prescribing Dalmane (flurazepam HCl), please consult Complete Product Information, a summary of which follows:

Indications: Effective in all types of insomnia characterized by difficulty in falling asleep, frequent nocturnal awakenings and/or early morning awakening, in patients with recurring insomnia or poor sleeping habits, and in acute or chronic medical situations requiring restful sleep. Since insomnia is often transient and intermittent, prolonged administration is generally not necessary or recommended.

Contraindications: Known hypersensitivity to flurazepam HCl.

Warnings: Caution patients about possible combined effects with alcohol and other CNS depressants. Caution against hazardous occupations requiring complete mental alertness (*e.g.*, operating machinery, driving). Use in women who are or may become pregnant only when potential benefits have been weighed against possible hazards. Not recommended for use in persons under 15 years of age. Though physical and psychological dependence have not been reported on recommended doses, use caution in administering to addiction-prone individuals or those who might increase dosage.

Precautions: In elderly and debilitated, initial dosage should be limited to 15 mg to preclude oversedation, dizziness and/or ataxia. If combined with other drugs having hypnotic or CNS-depressant effects, consider potential additive effects. Employ usual precautions in patients who are severely depressed, or with latent depression or suicidal tendencies. Periodic blood counts and liver and kidney function tests are advised during repeated therapy. Observe usual precautions in presence of impaired renal or hepatic function.

Adverse Reactions: Dizziness, drowsiness, lightheadedness, staggering, ataxia and falling have occurred, particularly in elderly or debilitated patients. Severe sedation, lethargy, disorientation and coma, probably indicative of drug intolerance or overdosage, have been reported. Also reported were headache, heartburn, upset stomach, nausea, vomiting, diarrhea, constipation, GI pain, nervousness, talkativeness, apprehension, irritability, weakness, palpitations, chest pains, body and joint pains and GU complaints. There have also been rare occurrences of sweating, flushes, difficulty in focusing, blurred vision, burning eyes, faintness, hypotension, shortness of breath, pruritus, skin rash, dry mouth, bitter taste, excessive salivation, anorexia, euphoria, depression, slurred speech, confusion, restlessness, hallucinations, and elevated SGOT, SGPT, total and direct bilirubins and alkaline phosphatase. Paradoxical reactions, *e.g.*, excitement, stimulation and hyperactivity, have also been reported in rare instances.

Dosage: Individualize for maximum beneficial effect. *Adults:* 30 mg usual dosage, 15 mg may suffice in some patients. *Elderly or debilitated patients:* 15 mg initially until response is determined.

Supplied: Capsules containing 15 mg or 30 mg flurazepam HCl.

Shortcomings of Pro-Substituti Argument

The fact remains that it is
sary for the prescriber to know
the change is being contemplat
and to be in a position to conse
demur. Without that opportunit
unilateral decision of the pharm
made in the absence of clinical
edge of the patient, could expo
to needless risks, and in additi
jeopardize the relationship bet
the professions of Pharmacy a
Medicine. In my view, there is
in the pro-substitution argume
offsets these risks.

The Issue of Drug Knowledge

Substitution advocates cl
that the primary justification f
changing the rules is the desire
better utilize pharmacists' kno
about drugs. Yet the pharmaci
task to keep current on the enti
field of drug therapy, to some c
puts him at a disadvantage. Mo

action to hold down the cost
cal care."

Drugs

surance rates and hospital
s are only two factors in health care costs. The cost of drugs—both prescription and nonprescription—is another.

And when it comes to drug costs, the nation's pharmacists *are concerned*. Through their national professional society, the American Pharmaceutical Association, pharmacists are advising the public to use nonprescription medication cautiously and conservatively, and to seek the advice of their pharmacist before selecting or purchasing such drugs.

Outdated Laws

The pharmacist also is aware that when it comes to prescription drugs, often he has an even greater opportunity to reduce the cost to the patient—with no sacrifice in the quality of the medication dispensed. But in many states, outdated and antiquated laws prevent the pharmacist from engaging in drug product selection. "Drug product selection" simply means that the pharmacist functions in the patient's interest by consciously choosing, from the multiple brands available, a low-cost quality brand of the specific drug to be dispensed in response to the physician's prescription order.

Much *misinformation* has been purposely spread by those who stand to gain financially by maintaining high drug costs to the public. An endless stream of propaganda has emanated from the drug industry in an effort to persuade the medical profession that these so-called anti-substitution laws should be retained. And as long as these laws are retained, the drug industry will continue its current marketing practices which contribute unnecessarily to high drug costs to patients. These practices also are inviting government agencies to expand their restrictive controls on physicians and pharmacists.

APhA Efforts

As pharmacists, we are concerned about health care costs. We hope that every physician shares our concern on this vital issue, and will give his personal support to the constructive efforts APhA has undertaken in the interest of all patients.

(For a complete discussion of drug product selection, you are invited to request a free copy of the "White Paper on the Pharmacist's Role in Product Selection" from: American Pharmaceutical Association, 2215 Constitution Avenue, N.W., Washington, D.C. 20037.)

ctice. Moreover, the physi-
hoice of a specific brand is
n his knowledge of the pa-
medical history and current
on, and his experiences with
icular manufacturer's
t.
me substitution proponents
gued that the dispensing of a
ption is a simple two-party
tion between the pharmacist
patient, and that a substitut-
rmacist may avoid even a
al breach of contract by simply
g the patient that he is making
stitution. I would judge that
rts would be sympathetic
a pharmacist who substituted
physician approval and who
ok a legal defense that seeks
the patient responsible for
rmacist's actions.

Prescription Prices?

bstitution advocates are
ing to the consumer, and par-
the consumer activist, that
prescription prices could
galization of substitution.
seen absolutely no evidence
y this claim. To the contrary,
nce in Alberta, Canada, where
tion is authorized, suggests the opposite.

Many pharmacists understandably are concerned about the cost of maintaining multiple stocks of similar products. While there is no doubt that inventory costs rise when additional brands are stocked, it would be interesting to know how much they rise, and how many pharmacists actually stock *all* brands—of, say, ampicillin or tetracycline—or how long they keep "slow moving" products on their shelves before they are returned for credit. To ask that the industry eliminate multiple sources is to ask competitors to stop competing.

Drug Substitution—A License for the Unethical

Anti-substitution repeal would favor "corner cutting" pharmacists and manufacturers. For them, free substitution would be not a right, but a license. As an aftermath, it is quite likely that the confidence of both physicians and patients in the profession of Pharmacy would be eroded, as revelations about the unconscionable behavior of an undisciplined few were magnified in the press or in professional circles.

Summary

In short, what the American Pharmaceutical Association advocates as a broad-spectrum panacea looks to us to be not only a minority view (advocacy of substitution is by no means a uniform policy in Pharmacy), but also an extraordinarily costly and ineffective remedy, whose side effects are odious. We believe (1) that an impressive majority of pharmacists prefer to work with Medicine and with industry, for the consumer, and for the general good, (2) that they seek the privilege to substitute when the patient might gain and when the patient's doctor agrees, and (3) that they seek to work for the resolution of genuine grievances openly and professionally.

(For amplification of PMA views, please write for our booklet, "The Medications Physicians Prescribe: Who Shall Determine the Source?" It is available from: Pharmaceutical Manufacturers Association, 1155 Fifteenth Street, N.W., Washington, D.C. 20005.)

ROCHE announces new BACTRIM™

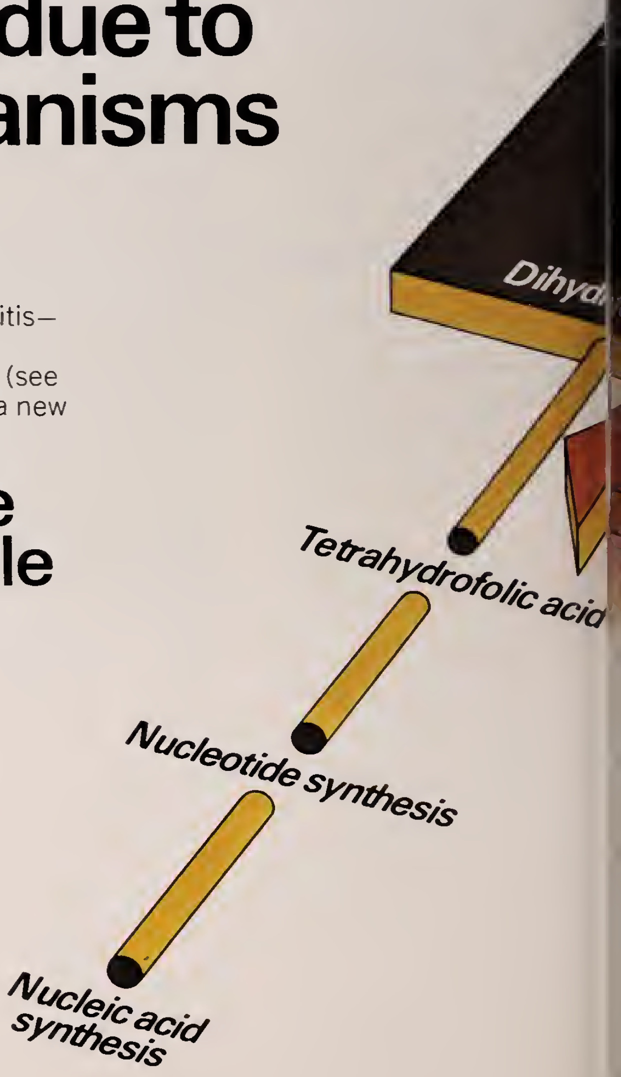
Each tablet contains 80 mg trimethoprim and 400 mg sulfamethoxazole.

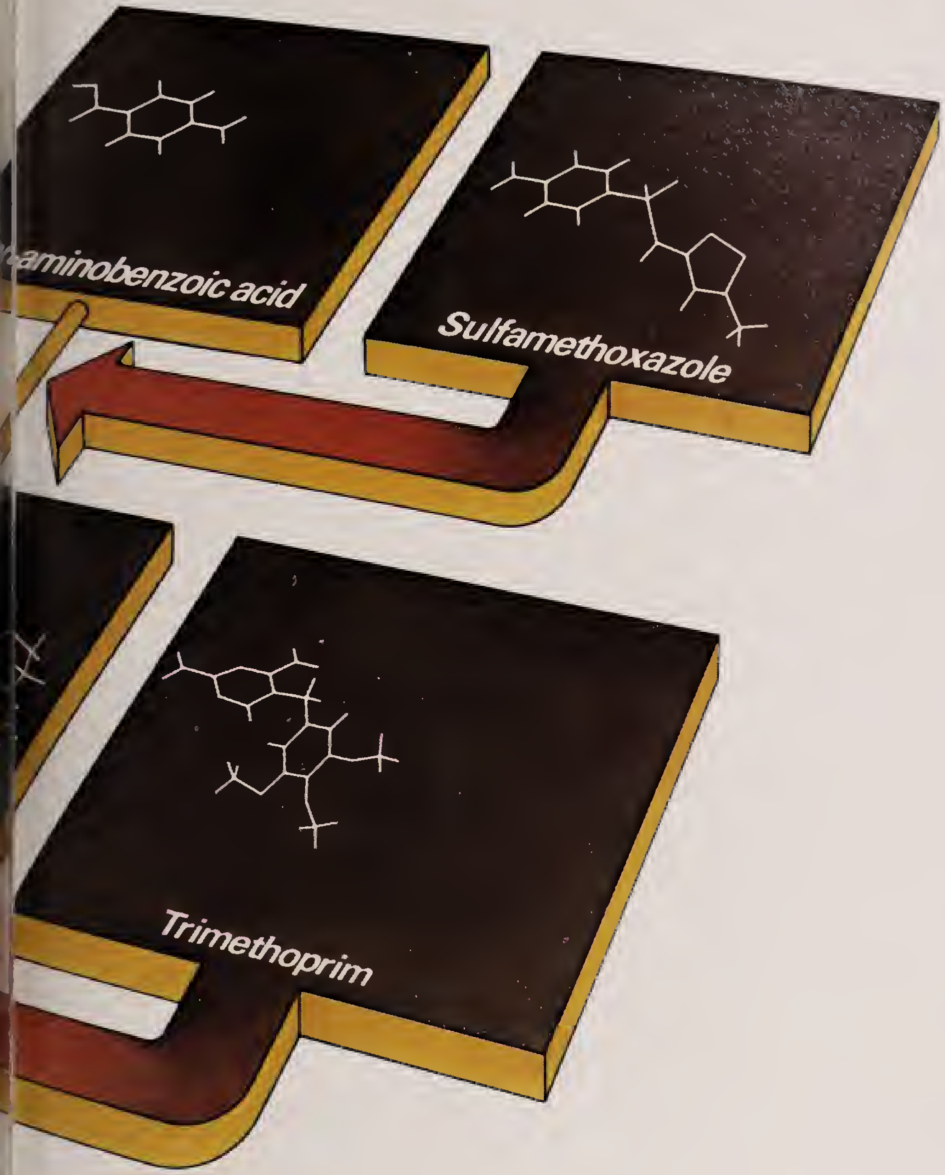
a new type of antibacterial for a two-pronged attack against chronic urinary tract infections due to susceptible organisms

Bactrim is highly effective in the treatment of these infections—primarily pyelonephritis, pyelitis and cystitis—when due to susceptible organisms. This efficacy is related to the unique mode of action against bacteria (see illustration), an action that, in effect, makes Bactrim a new type of antibacterial.

Bactrim interrupts the life cycle of susceptible bacteria

Unique mode of action interrupts the life cycle at two important points, thereby impeding the production of nucleic acids and proteins essential to these bacteria. These consecutive interruptions occur because sulfamethoxazole and trimethoprim resemble naturally existing substrates. By competitive replacement of these substrates, they inhibit further synthesis.





aminobenzoic acid
Sulfamethoxazole
Trimethoprim

ROCHE

new BACTRIM™

Each tablet contains 80 mg trimethoprim and 400 mg sulfamethoxazole.

for chronic urinary tract infections

Before prescribing, please see complete product information on last page of advertisement.

Excellent clinical response in chronic urinary tract infections even with obstructive complications

A multiclinic, double-blind study* of response to a ten-day course of therapy in 471[†] patients with chronic urinary tract infections demonstrated the superiority of Bactrim. On the 10th day after initiation of therapy, 91.7% (of 168 patients) showed significant bacteriological response to Bactrim, compared with 81.2% (of 144 patients) to trimethoprim and 64.5% (of 155 patients) to sulfamethoxazole. More than half of these patients had obstructive complications.

Excellent response maintained

Bactrim proved equally impressive in maintaining this bacteriological response. In the above study, after a ten-day course of therapy with Bactrim, 68.4% of patients with chronic urinary tract infections *maintained* response for up to 42 consecutive days, compared with 59.7% with trimethoprim and 44.4% with sulfamethoxazole. These results are particularly noteworthy considering the number of patients with obstructive complications—cases regarded as being notoriously difficult to treat.

Prescribing considerations

Clinical Limitations: Currently, the increasing fr quency of resistant organisms is a limitation of usefulness of all antibacterial agents, especially in the treatment of chronic and recurrent urinar tract infections. Not recommended for children under twelve.

Contraindications: Hypersensitivity to trimethop or sulfonamides. Pregnancy and during the nur ing period.

Warnings and Precautions: Both sulfamethoxaz and trimethoprim have been reported to interfe with hematopoiesis. Complete blood counts sho be done frequently. If a significant reduction in count of any formed blood element is noted, Bac should be discontinued. Bactrim should be give with caution to patients with impaired renal or hepatic function, possible folate deficiency, sev allergy or bronchial asthma. Maintain adequate fluid intake. Urinalyses with careful microscopic examination and renal function tests should be performed during therapy, particularly for those patients with impaired renal function.

Adverse Effects: Among the most common side effects are nausea, vomiting, rash, leukopenia a elevations in SGOT and creatinine.

Usual adult dosage: two tablets every twelve h for 10 to 14 days; no loading dose required.

---

for chronic urinary tract infections

ROCHE

Roche Laboratories
Division of Hoffmann-La Roche Inc
Nutley N J 07110

Product Information:

on: Bactrim is a synthetic antibacterial combination prod-
able in scored light-green tablets, each containing 80 mg
prim and 400 mg sulfamethoxazole.

prim is 2,4-diamino-5-(3,4,5-trimethoxybenzyl) pyrimidine.
ite to light-yellow, odorless, bitter compound with a molec-
ht of 290.3.

hoxazole is N^1-(5-methyl-3-isoxazolyl) sulfanilamide. It is
t white in color, odorless, tasteless compound with a mo-
eight of 253.28.

icrobiology: Sulfamethoxazole inhibits bacterial synthesis
ofolic acid by competing with *para*-aminobenzoic acid.
prim blocks the production of tetrahydrofolic acid from di-
acid by binding to and reversibly inhibiting the required
dihydrofolate reductase. Thus, Bactrim blocks two con-
steps in the biosynthesis of nucleic acids and proteins
to many bacteria.

udies have shown that bacterial resistance develops more
th Bactrim than with trimethoprim or sulfamethoxazole

erial dilution tests have shown that the spectrum of anti-
activity of Bactrim includes the common urinary tract
s with the exception of *Pseudomonas aeruginosa*. The fol-
ganisms are usually susceptible: *Escherichia coli, Kleb-
erobacter, Proteus mirabilis* and indole-positive proteus

epresentative Minimum Inhibitory Concentration Values for Bactrim-Susceptible Organisms

harmacology: Bactrim is rapidly absorbed following oral
ation. The blood levels of trimethoprim and sulfamethoxa-
imilar to those achieved when each component is given
k blood levels for the individual components occur one
urs after oral administration. The half-lives of sulfameth-
d trimethoprim, 10 and 16 hours respectively, are rela-
same regardless of whether these compounds are admin-
s individual components or as Bactrim. Detectable
f trimethoprim and sulfamethoxazole are present in the
hours after drug administration. Free sulfamethoxazole
thoprim blood levels are proportionately dose-dependent.
ed administration, the steady-state ratio of trimethoprim
thoxazole levels in the blood is about 1:20.

oxazole exists in the blood as free, conjugated and pro-
forms; trimethoprim is present as free, protein-bound
olized forms. The free forms are considered to be the
cally active forms. Approximately 44 percent of trimeth-
70 percent of sulfamethoxazole are protein-bound in the
presence of 10 mg percent sulfamethoxazole in plasma
the protein binding of trimethoprim to an insignificant
imethoprim does not influence the protein binding of
oxazole.

of Bactrim is chiefly by the kidneys through both glomer-
ion and tubular secretion. Urine concentrations of both
oxazole and trimethoprim are considerably higher than
ncentrations in the blood. When administered together
rim, neither sulfamethoxazole nor trimethoprim affects
excretion pattern of the other.

: Chronic urinary tract infections (primarily pyelonephri-
s and cystitis) due to susceptible organisms (usually
ebsiella-Enterobacter, Proteus mirabilis, and, less fre-
dole-positive proteus species).

**ote: Currently, the increasing frequency of resistant organ-
mitation of the usefulness of all antibacterial agents, espe-
treatment of chronic and recurrent urinary tract infections.**

ations: Hypersensitivity to trimethoprim or sulfonamides.
y and during the nursing period (see Reproduction
)

eaths associated with the administration of sulfonamides
reported from hypersensitivity reactions, agranulocyto-
c anemia and other blood dyscrasias. Experience with
im alone is much more limited, but it has been reported
with hematopoiesis in occasional patients. In elderly
oncurrently receiving certain diuretics, primarily thia-
ncreased incidence of thrombopenia with purpura has
ted.

The presence of clinical signs such as sore throat, fever, pallor, purpura or jaundice may be early indications of serious blood disorders. Complete blood counts should be done frequently in patients receiving Bactrim. If a significant reduction in the count of any formed blood element is noted, Bactrim should be discontinued.

At the present time, there is insufficient clinical information on the use of Bactrim in infants and children under 12 years of age to recommend its use.

Precautions: Bactrim should be given with caution to patients with impaired renal or hepatic function, to those with possible folate deficiency and to those with severe allergy or bronchial asthma. In glucose-6-phosphate dehydrogenase-deficient individuals, hemolysis may occur. This reaction is frequently dose-related. Adequate fluid intake must be maintained in order to prevent crystalluria and stone formation. Urinalyses with careful microscopic examination and renal function tests should be performed during therapy, particularly for those patients with impaired renal function.

Adverse Reactions: For completeness, all major reactions to sulfonamides and to trimethoprim are included below, even though they may not have been reported with Bactrim.

Blood dyscrasias: Agranulocytosis, aplastic anemia, megaloblastic anemia, thrombopenia, leukopenia, hemolytic anemia, purpura, hypoprothrombinemia and methemoglobinemia.

Allergic reactions: Erythema multiforme, Stevens-Johnson syndrome, generalized skin eruptions, epidermal necrolysis, urticaria, serum sickness, pruritus, exfoliative dermatitis, anaphylactoid reactions, periorbital edema, conjunctival and scleral injection, photosensitization, arthralgia and allergic myocarditis.

Gastrointestinal reactions: Glossitis, stomatitis, nausea, emesis, abdominal pains, hepatitis, diarrhea and pancreatitis.

C.N.S. reactions: Headache, peripheral neuritis, mental depression, convulsions, ataxia, hallucinations, tinnitus, vertigo, insomnia, apathy, fatigue, muscle weakness and nervousness.

Miscellaneous reactions: Drug fever, chills, and toxic nephrosis with oliguria and anuria. Periarteritis nodosa and L. E. phenomenon have occurred.

The sulfonamides bear certain chemical similarities to some goitrogens, diuretics (acetazolamide and the thiazides) and oral hypoglycemic agents. Goiter production, diuresis and hypoglycemia have occurred rarely in patients receiving sulfonamides. Cross-sensitivity may exist with these agents. Rats appear to be especially susceptible to the goitrogenic effects of sulfonamides, and long-term administration has produced thyroid malignancies in the species.

Dosage and Administration: Not recommended for use in children under 12 years of age.

The usual adult dosage is two tablets every 12 hours for 10 to 14 days.

For patients with renal impairment:

Creatinine Clearance (ml/min)	Recommended Dosage Regimen
Above 30	Usual standard regimen
15-30	2 tablets every 24 hours
Below 15	Use not recommended

How Supplied: Tablets, containing 80 mg trimethoprim and 400 mg sulfamethoxazole—bottles of 100 and 500; Tel-E-Dose® packages of 1000; Prescription Paks of 40, available singly and in trays of 10. Imprint on tablets: ROCHE 50.

Reproduction Studies: In rats, doses of 533 mg/kg sulfamethoxazole or 200 mg/kg trimethoprim produced teratological effects manifested mainly as cleft palates. The highest dose which did not cause cleft palates in rats was 512 mg/kg sulfamethoxazole or 192 mg/kg trimethoprim when administered separately. In two studies in rats, no teratology was observed when 512 mg/kg of sulfamethoxazole was used in combination with 128 mg/kg of trimethoprim. However, in one study, cleft palates were observed in one litter out of 9 when 355 mg/kg of sulfamethoxazole was used in combination with 88 mg/kg of trimethoprim.

In rabbits, trimethoprim administered by intubation from days 8 to 16 of pregnancy at dosages up to 500 mg/kg resulted in higher incidences of dead and resorbed fetuses, particularly at 500 mg/kg. However, there were no significant drug-related teratological effects.

BACTRIM T.M.

Each tablet contains 80 mg trimethoprim and 400 mg sulfamethoxazole.

Information for Contributors

Articles are accepted for publication on condition that they are contributed solely to this journal. Material appearing in Missouri Medicine is protected by copyright. Permission will be granted on request for reproduction in reputable publications provided proper credit is given and author gives permission.

Manuscripts should be typewritten, double spaced, and the original with one carbon copy submitted. Retain another carbon copy for proofreading. Used manuscripts are not returned. School and hospital appointments of the author should accompany the manuscript. It is desirable that a synopsis-abstract of approximately 135 words accompany the manuscript. References should be arranged at the end of the article in the order in which the references are cited in the text. The reference should give name of author, title of article, name of periodical, volume number, initial page number and year. Authors are responsible for reference accuracy.

Illustrations should be glossy prints or drawings in India ink on white paper. They should not be mounted and name of author and figure number should be penciled lightly on the backs. Legends should appear on a separate sheet. Colored illustrations will be used when suitable if author assumes the actual cost.

Legal difficulties may arise from unauthorized use of names, initials or photographs in which individuals can be identified. Permission should be secured from patient or legal guardian and signed duplicate or photostat submitted with such photographs or identification. The Editor and Editorial Board assume no responsibility for the opinions and claims expressed in articles contributed by authors. If citation of an institution related to the article is made, approval of the chief of service should be given in a letter accompanying the article.

Reprint order blanks will accompany proof, which will be sent to authors prior to publication.

All material other than scientific should be received prior to the first of the month preceding month of publication.

Please give notice of change of address at least one month in advance of the change, giving old and new addresses.

Health Planning in Missouri

By

ROBERT W. KELLEY, M.D., *St. Louis*

Chairman, Governor's Advisory Council for Comprehensive Health Planning

---

The following is a transcript of the address which Dr. Kelley delivered at the annual meeting of the Missouri Chapter, American College of Surgeons on June 1, 1973. The Editors believe that this message delivered to surgeons is applicable and of interest to all Missouri physicians. Dr. Kelley, who is Assistant Professor of Clinical Medicine at the Washington University School of Medicine, is a Vice-President of the Missouri State Medical Association and a Delegate to the American Medical Association. He also is a member of the Governing Board of ARCH.

First, an explanation is due as to how an internist gains a place on the program of this distinguished Chapter meeting of the American College of Surgeons. I admit that the mechanism is a little on the sneaky side, but it evolved from my associations with health planning. My entry into health planning was casual and largely involuntary. My continued presence is due partly to a sense of responsibility to my professional peers, but more so to the satisfaction I gain from participating in an experiment which I believe will bear fruit and eventually result in better health care for all the citizens of our state. As physicians, we are trained from entry into the medical system to advance the art and the science of the profession. As a profession, we are too often pictured as primarily interested in securing a good living. As an individual, I see no wrong in working hard and enjoying the fruits of my labors. I do feel, as do the vast majority of my fellow physicians, that I have a responsibility based upon any talents I possess to make my community and my environment a better place in which to live.

I shall not burden you with a detailed history of health planning nor shall I quote from extensive sources of the growing literature on health care and the delivery of health services. I prefer to give a brief résumé of health planning in this country and particularly in Missouri, with special reference to Comprehensive Health Planning. It would then be my aim to suggest how each of you as an individual and your collective organization can participate in the process of planning.

Physicians have always planned how they may best utilize their time and resources in caring for their patients. Collectively, they have planned as professional and scientific societies. It is a most unusual organization that does no have a long-range planning committee. Health planning has preoccupied private and public agencies, foundations, philanthropic societies, public and private hospitals, medical school and lawmakers at the federal, state and loca levels since the founding of the country. Public health departments have contributed their share of planning. Critics from the right, the cente and the left have dissected the health system and submitted their plans for modifying or replacing our pluralistic system for the delivery of health services. These multiple approache to health planning have been largely independent and uncoordinated. The usual approach has been paternalistic, i.e., "We have analyzed your problem, evaluated alternatives and now present you with a 'plan.'" In general, planning has been for people and not with people.

The 1946 Hospital Survey and Construction Act (Hill-Burton), which provided federa funding for hospital construction, required participating states to qualify by preparing plans

This represented a beginning for coordinated egional planning. Federal funding for services o the mentally retarded became available in 963. Out of the report of the DeBakey Com- nission calling for an attack on cancer, heart disease and stroke came the Regional Medical Programs (Public Law 89-239). Shortly there- fter, Public Law 89-749, which was the first of the Partnership in Health Laws, set up the Com- rehensive Health Planning Program. The Com- rehensive Health Planning ultimate goal, as de- ned by the Congress, is "to promote and as- ure the highest level of health attainable for very person in an environment which contrib- tes positively to healthful individual and fam- y living." The struggle to reach this goal is o be directed by a partnership between and mong providers and consumers drawn from oth private and governmental sections of our ociety. At all levels of planning, the majority artner will be the consumer (not less than 1%). The minimum function of Comprehen- ve Health Planning is to review and comment n federally specified categories of health pro- rams. The maximum effort is to achieve the ltimate goal set up by the Congress.

It is an oversimplification to describe Region- Medical Programs as professionally oriented nd Comprehensive Health Planning as con- umer oriented. The generalization, however, oes point up one difference in the two pro- rams. As these two programs developed in Mis- uri, a working partnership emerged, and it is y personal evaluation that the phasing-out of e Regional Medical Programs is unfortunate d places an additional burden on CHP, which ust partially fill the void. CHP, by definition d by direction, has a planning function. It ay develop the need for specific programs and ek others to implement those programs, but it es not have the responsibility, the capabilities the staff to operate or direct programs.

In Missouri, by direction of the Governor, PH was placed in the Department of Commu- ty Affairs. The State Advisory Council, ap- ointed by the Governor, serves without com- nsation or stated term. Current legislative and ecutive proposals (if implemented) could ace CPH in another executive department and ve the Council statutory authority. The State lvisory Council, as presently constituted, has members, 51% being consumers of health rvices. The issues the Council deals with in- ude accessibility to health services, health care sts, programs, man power, facilities, human ecology and environmental quality. Current problems under examination include public health, mental health, home health care, ambulatory care, emergency medical services, acute care, convalescent care and occupational safety and health.

Comprehensive Health Planning is charged by law with the responsibility of implementing the regionalization of health services and prevention of disease and injury through environmental protection. It is the keystone in the partnership between federal authorities, state government and local citizens. It is required by law to review and evaluate the plans for hospitals, neighborhood health centers and other medical facilities. It must review portions of the health care plans of the Division of Health, Division of Mental Health and the three Regional Medical Programs operating in Missouri. Also, it must review all Department of Health, Education and Welfare health care funds going to individual and local communities in Missouri. This all adds up to a considerable responsibility and would not be workable without the area planning agencies which now serve 85% of the population of Missouri. The Council has set complete coverage of the state by area agencies as a major priority. Completion of this task is dependent on the availability of federal, state and local funding. Of equal importance is the development of local interest, enthusiasm and demand for comprehensive health planning.

The provider-consumer partnership concept has been described. Basic to effective planning is the acceptance of the philosophy that local communities or contiguous geographical areas are best able to identify their health care needs and to plan for meeting those needs. A truly viable area CHP agency should be able to develop plans that recognize the needs of all segments of the community, coordinate the thinking and expertise of dedicated providers and consumers and offer the ideal setting for discussion, debate and compromise.

In a cursory fashion, I have attempted to develop the ideal operation of Comprehensive Health Planning. You have all had the opportunity as participators, spectators or daily newspaper readers to surmise that all does not go smoothly for health planning. It is difficult to bring together a group of doctors, present a problem of health for discussion and expect to get a ready consensus. Multiply such difficulty many times when you form a council from the "establishment," the representatives of the disadvantaged, the institutional directors, the lawmakers, the housewives, the erudite, the self-educated, the disgruntled and the complacent. Now you have a real mix of people bringing to the council and planning table their individual prejudices, self-interests and well-established parochial viewpoints. The resulting strife, time-consuming debate and frequent preoccupation with trivia are enough to make one wish for the benevolent health dictator. That, however, is not our way, and it is a real experience to discover how well people of good will can sit down, reason together and eventually arrive at acceptable, workable compromises. The yield from CHP has been small and the cost has been significant, but the progress in organizing and getting under way bodes well for the future. Increasing numbers of consumers and providers have become involved. The success of CHP will be based largely on people involvement.

What then is your role in health planning? Is this something to be avoided or discouraged? As physicians, does your 70-hour week permit you to consider involvement? Is your academic position so demanding or specialized that you can contribute nothing toward planning for the delivery of general health services? Are you "turned off" by the idea of sitting down as a professional with poorly informed consumers? We cannot be all things to all men, but I have a conviction that the physician has a stake in health planning, whether he be a solo practitioner, a member of a group, a salaried private or public employee, a medical educator or a nonpracticing administrator. If it is not already the largest single industry in this country, the health industry will soon take that position. What role do you want our profession to play in the services the health industry will deliver? Do you want a part in the planning or would you prefer a passive role and be planned for? I detect a degree of disinterest that borders on apathy amongst a considerable segment of our profession who, at best, can offer only predictions of failure and the futility of current planning efforts. Others from a position of complacency point out that we now have the best health system in the world and we should keep what we have. I believe our overall system is better than that of any other country, but I am sure that we will not keep that system unless we continually seek to improve it and make certain that its superior advantages are available to everyone. Comprehensive Health Planning, based on a partnership of consumers and providers working together at a community level, is a most effective mechanism in the preservation of our pluralistic system for the delivery of health care.

How then can the individual physician or society of physicians, e.g., The American College of Surgeons, gain entry into health planning? The Congressional Partnership in Health Act gave to each state the task of organizing a state agency. This state agency then encouraged the development of the area agencies which became the primary planners. The state and area agencies have advisory or governing boards which organize task forces to develop plans for attacking special health care problems. These task forces have a membership composed of council o board people plus knowledgeable interested providers and consumers from the community a large. The real action in health planning i within these task forces.

As an example, the State Advisory Counci had an early task force concerned with statewide accessibility to health services. This task force found that a major problem in rural and urban Missouri was the lack of adequate, coordinated, emergency health services. A secondary task force was then organized to develop a State Plan for Emergency Health Care Services This was accomplished and the State Plan wa presented to each of the area agencies for its review, comment and possible implementation. A each step in this process, the advice, expertise and professional talents of the practicing surgeon were essential. Members of your state chapter and of your national staff were actively involved in the development of a coordinated State Plan and with its continued study at the area agency level. In the current and coming year, there will be special attention directed to the development of outpatient services which can improve the delivery of health care and, a the same time, reduce the overall cost. In particular, a task force will be formed to study home health care. Study also will be undertaken of outpatient mechanisms to reduce the rapidly rising costs for inhospital care. This would involve an overall study of ambulatory health care. Of particular concern to you would be the increasing interest in outpatient surgical service and the so-called surgi-centers. Task forces involved in these studies will require the cooperation of private and governmental third-part payors who traditionally accepted responsibilit for inhospital services only.

You will certainly want to know what you state and area agencies are doing and how you may participate in the planning process. It is no ecessary that your participation be ever posi-ive. In most instances, constructive criticism is eeded to cool hasty enthusiasms of those not irectly involved in providing health care. hen you are asked to become a member of a HP Council or Task Force, don't decline the pportunity until you are certain that you have othing to contribute or until you have put the nger on one of your colleagues who is ideally ited for the particular duty. It is not necessary r you to wait to be asked to participate—Vol-nteer! Contact your state or area agency, indi-te your particular interest in the health care eld, ask what has been done and what is planned and request that you be placed on a task force or be allowed to testify before a task force which involves your interest. If you do not obtain action or a satisfactory response, contact a professional peer on the state or area council to intercede for you.

A last concern. Encourage your young members to become involved in this health-planning business. They are the ones whose future will be most affected by the changing world of health care. They are the ones with the time, the talents and the greatest incentives to insure that medicine progresses and health care continually improves.

WASHINGTON

Legislation providing federal aid for establishment of a limited number of experimental Health Maintenance Organizations (HMO's) bills advanced in Congress. The House bill was much smaller in scale (five years, $240 million, compared to $805 million) than one passed by the Senate.

In a report on the HMO bill, the House Commerce Committee discussed HMOs and their possible future role in health delivery. No specific number limitation was set in the House bill, but "it is anticipated that the limit of authorizations to $240 million and the reality of the budget and appropriation process will provide an effective ceiling on the number of HMOs which could be established. . . . Generally, however, the committee would anticipate that this legislation would be used to bring to the operating stage approximately 100 new HMOs."

The report stressed a five-year cut off. "All federal assistance to all assisted HMOs will be completed by the end of five years for which authority is given. Thus, there will be no need to extend or renew this legislation in order to meet outstanding commitments."

After a discussion of "many arguments in favor of HMOs," the report said that the committee "is concerned about the fact that HMOs (prepaid group practice, contract practice, etc.) have not grown more rapidly than has been the case." The committee said it hoped that the HMO program would clarify many problem areas, including such basic questions as "will federal assistance to HMOs work?" Other matters of concern were listed such as whether federally-aided HMOs will be able to survive without federal help; how well will such organizations serve the poor, chronically ill and aged; how will they work in ghettoes, rural areas; what about consumer acceptability, quality of services, etc.

Noting that an HMO operates under an income limit (the premiums paid), the committee said one fear is that "it would be possible for an HMO to respond to this limit by discouraging the utilization of its services. For example, the committee is concerned with the possibility that elective surgery, such as cateract extractio in elderly people, might be delayed in situatio where an HMO is experiencing higher than pected utilization. These practices are to be d couraged."

Cautioning against allowing an HMO to ha a monopoly anywhere, the Committee said:

"The heterogeneity of the HMOs envision by the committee is the key characteristic of t HMO program authorized by this legislation a deserves particular comment.

"In preparing the legislation, the committ has attempted not to describe exhaustively or detail a single 'proper' system for the delive of health services. The legislation defines de able qualities or any system for health care livery and offers to support any HMO whi includes these qualities. However, it may structured or organized in detail. *Thus, the H program sponsored by this legislation would represent a single monolithic or federally-co trolled health system, but a series of additio to our existing pluralistic system.*"

The Committee said that one reason there few HMO-type programs operating now "is t high cost of planning, development and init operations. It has been estimated that the gro practice model requires as many as 30,000 rollees before the plan breaks even with as mu premium income as expenses. Planning costs this type of HMO can go up to a half mill dollars. Operating deficits until the break-ev point can amount to $2-$3 million."

Unlike the Senate bill, the House legislat does not preempt state laws that restrict forn tion of HMOs. The reason given by the Ho Commerce Committee was "the rapid cha already underway in state legislation design to remove these barriers . . . (with) . . . appr imately 20 states have already adopted legi tion specifically authorizing HMOs."

Retirement Savings Restriction

The outlook in Congress for a new restrict on retirement savings of professional serv corporations and a companion liberalization the Keogh plan for the self-employed was clou

Opposition to the limitation on the professional service corporations was reported strong in the House, though the Senate was expected to approve it.

The Senate Finance Committee said in its report on the bill that "it is contended that the present law in the retirement plan area creates an artificial incentive for the incorporation of businesses which more traditionally, and perhaps more appropriately, have been conducted in unncorporated form."

The committee restricted the amount an incorporated professional could save for retirement purposes and receive federal income tax deferred on to $7,500 a year and not more than 15% of income. The Keogh plan was liberalized to the ame levels.

Noting that in recent years all states have dopted special incorporation laws which allow professional corporations, the committee said hese "have been used increasingly by groups f professional persons, primarily to obtain the more favorable tax treatment for pensions genrally available to corporate employes." The Inernal Revenue Service's adamant opposition to hese corporations and refusal to recognize them in the so-called Kintner regulations was rejected by the courts until "the service has now acquiesced and generally recognized these proessional corporations as corporations for income ax purposes."

The committee said "the formation of profesional corporations, a practice which has proferated enormously in recent years, has had he effect of circumventing the limitations which Congress intended to impose on deductible conributions by persons who are essentially, in most respects, self-employed."

Explaining why it didn't impose any limit on regular corporation tax deferrals for high-salaried xecutives, the committee said that in corporate lans a "much larger percentage of the contriutions and benefits go to the 'rank and file' emloyes." This "financial drag effect tends to imose practical restrictions. . . ."

VA Bill Into Law

Legislation signed into law by President Nixon extends Veterans Administration medical care to ertain dependents, assures peacetime veterans he right to VA medical care and streamline VA ules on health care delivery. Outpatient medical are for nonservice connected conditions is auhorized when it would avoid the need for hositalization.

The law, effective September 1:

- Extends eligibility for medical care to the wife or child of a person who has a total and permanent disability, resulting from a service-connected condition, and to the widow or child of a person who has died of a service-connected condition. Care will be provided in a manner similar to that in which medical care is furnished by the Armed Forces under the so-called "CHAMPUS program" to dependents and survivors of active duty and retired personnel.
- Removes the requirement for wartime service as a condition of eligibility for VA medical care.
- Liberalizes rules on providing VA outpatient or ambulatory care any veteran who is now eligible for VA hospitalization can be treated as an outpatient as necessary to preclude the need for hospital admission.
- Authorizes direct admission to nursing homes, at VA expense, of veterans requiring nursing home care for service-connected disabilities as stated by a VA physician.
- Specifically authorizes VA outpatient care for all disabilities for veterans with service-connected disabilities rated 80% or more disabling.
- Provides for the National Academy of Sciences to study the staffing of the VA hospitals and report on this subject.
- Extends VA mental health service to the families of veterans when it is related to the mental health or rehabilitation of an eligible veteran.

CLINICAL CONSIDERATIONS:

Description VALISONE products contain betamethasone valerate (9-fluoro-11_{β}, 17, 21-trihydroxy-16_{β}-methylpregna-1,4-diene-3,20-dione 17-valerate). Each gram of VALISONE Cream 0.1% contains 1.2 mg. betamethasone valerate (equivalent to 1.0 mg. betamethasone) in a soft, white, hydrophilic cream of water, mineral oil, petrolatum, polyethylene glycol 1000 monocetyl ether, cetostearyl alcohol, monobasic sodium phosphate, and phosphoric acid; 4-chloro-m-cresol is present as a preservative. Each gram of VALISONE Ointment 0.1% contains 1.2 mg. betamethasone valerate (equivalent to 1.0 mg. betamethasone) in an ointment base of liquid and white petrolatum, and hydrogenated lanolin. VALISONE Cream and Ointment contain no parabens.

Indications VALISONE Cream and Ointment are indicated for the relief of the inflammatory manifestations of corticosteroid-responsive dermatoses.

Contraindications VALISONE Cream and Ointment are contraindicated in vaccinia and varicella. Topical steroids are contraindicated in those patients with a history of hypersensitivity to any of the components of the preparation.

Precautions If irritation develops with the use of VALISONE Cream or Ointment, treatment should be discontinued and appropriate therapy instituted. In the presence of an infection, the use of an appropriate antifungal or antibacterial agent should be instituted. If a favorable response does not occur promptly, the corticosteroid should be discontinued until the infection has been adequately controlled. If extensive areas are treated or if the occlusive technique is used, the possibility exists of increased systemic absorption of the corticosteroid and suitable precautions should be taken. Although topical steroids have not been reported to have an adverse effect on pregnancy, the safety of their use in pregnant females has not been absolutely established. Therefore, they should not be used extensively in pregnant patients, in large amounts, or for prolonged periods of time. VALISONE Cream and Ointment are not for ophthalmic use.

Adverse Reactions The following local adverse reactions have been reported with topical corticosteroids: burning, itching, irritation, dryness, folliculitis, hypertrichosis, acneform eruptions, and hypopigmentation. The following may occur more frequently with occlusive dressings than without such therapy: maceration of the skin, secondary infection, skin atrophy, striae, and miliaria.

Dosage and Administration Apply a thin film of VALISONE Cream or Ointment to the affected skin areas one to three times a day. Clinical studies of VALISONE have indicated that dosage only once or twice a day is often feasible and effective. AUGUST 1972

SLR-439

in Brief

A summary of AMA, medical & health news

American Medical Association / 535 North Dearborn Street / Chicago, Illinois 60610 / Phone (312) 527-1500 / TWX 910-221-0300

Reports from recent AMA meetings are available on individual audio cassettes. The meetings are the 4th National Congress on Medical Ethics, the National Medicolegal Symposium, the 26th National Conference on Rural Health, and the 7th National Congress on the Socioeconomics of Health Care. Each cassette is $3 for AMA members and medical societies and $5 for others. Write to Department of Radio, TV & Motion Pictures, AMA Headquarters.

Immunization of preschool children is the object of a stepped-up program of the Center for Disease Control. The program will begin in October and is designed to motivate parents to check the immunization status of their children through family physicians and public health clinics. The goal is to immunize 90% of the estimated susceptible children against measles, rubella, polio, diphtheria, tetanus, and pertussis by October, 1976. Aiding the CDC in its effort are the AMA, the American Academy of Pediatrics, American Academy of Family Physicians, American Osteopathic Association, National Medical Association, City and County Health Officers Association, National Center for Voluntary Action and pharmaceutical firms.

Descriptions of more than 1,200 drugs will be contained in the second edition of the AMA's compendium of prescription drugs, *AMA Drug Evaluations*. The AMA's Department of Drugs has prepared the new volume with the advice of more than 300 consultants. It is being published under contract with Publishing Sciences Group, Inc. The cost is $16.50 for AMA members and students and $22 for nonmembers and institutions. Special prices are available for state medical societies wishing to distribute the book free or to sell copies to their members. Direct orders and inquiries to Publishing Sciences Group, Inc., 411 Massachusetts Ave., Action, Mass. 01720.

A 9% increase in the number of physicians registered with AMA's Physician Placement Service was noted in its 1972 statistical report. A total of 4,534 physicians sought locations. The PPS also processed 3,174 applications offering practice opportunities. The report showed an imbalance in supply and demand in the specialty of general or family practice, with 762 opportunities listed and only 303 physicians seeking placement. For copies write Physician Placement Service, AMA Headquarters.

Serving as a clearinghouse, AMA's Legal Research Department is requesting state medical associations to forward all available information on professional liability and professional liability insurance. The material will be assembled and distributed to all state medical associations. Mail information or direct inquiries to Legal Research Department, AMA Headquarters.

A comparative report of sources of AMF-ERF funds for the periods Jan. 1-June 30, 1972 and 1973 shows an overall increase in contributions from $750,774 to $825,474. However, funds donated by some sources were less during the first six month of 1973 than in 1972. Physicians' contributions totaled $174,472 in 1972 and $164,134 in 1973. Funds received from foundations declined from $71,300 in 1972 to $56,050 in 1973. The Woman's Auxiliary to the AMA was the largest contributor in both periods. It has donated $538,182 to AMA-ERF so far this year.

Leading causes of death in the U. S. will be examined in a five-part television series, scheduled to be aired this fall over the Public Broadcasting Service. The programs will be on cancer, heart disease, genetic defects, pulmonary disease and trauma. Among consultants serving on a 23-member medical advisory board will be Irvine H. Page, M.D., chairman of AMA's Advisory Committee on Medical Science, and John S. Farquhar, Jr., M.D., a member of AMA's Committee on Community Emergency Services.

Physicians will be surveyed by the AMA to determine the frequency of therapeutic use of cocaine. In a statement by the AMA's Council on Mental Health and its Committee on Alcoholism and Drug Dependence, the groups said they will also issue a single statement combining information that could be helpful in preventing the misuse of barbiturates.

MSMA NEWS ROUND-UP

OCTOBER, 1973

October designated Immunization Month

)ctober is Immunization Action Month!

n an effort to reverse the alarming trend of eining immunization levels among preschool children against polio, measles, rubella, tet- s, pertussis and diptheria, the Missouri State ical Association is supporting several national nizations cosponsoring Immunization Action th.

mmunization levels have been decreasing in souri and the U.S. over the past few years. Na- al surveys indicate that approximately 5 mil- of the nearly 14 million children aged 1 to 4 unprotected against one or more of the dis- s listed above.

)ne of the most profound declines in immuni- on rates has been for polio. In 1964, the U.S. nunization Survey found that **88 percent** of dren 1 to 4 had received three or more doses olio vaccine. By 1972, this had dropped to **62 cent.**

The National Center for Disease Control is the dinating agency. The AMA, national pediatrics family practice groups, pharmaceutical firms a host of public and private health agencies e joined to carry out a two-phased program increasing immunity levels among preschool dren.

The first phase will initiate a system of im- nization audit within the public and private lth sector with emphasis on preschool children. ail men from drug companies will visit physi- ns and furnish the physicians with audit forms o on the files of preschool children.

The second phase will be a mass campaign to parents to check their childrens' immunization us with their private physician or the public lth clinic and take appropriate steps to have r children immunized when indicated.

Phase two will require mass publicity on the ional, state and local levels. The Center for ease Control will handle the national scene le the Missouri Division of Health will oversee state campaign. It is hoped that private physi- ns in each area will lend as much support as sible to the effort on the local front.

The objective of Immunization Action Month is

MMPAC adds new members to Board

John N. Martin, M.D.
MMPAC Chairman

Several changes in the Rules and Regulations governing the Missouri Medical Political Action Committee were adopted at the summer MMPAC Board meeting in Jefferson City.

The Chairman of the Council of the Missouri State Medical Association and a representative of the Woman's Auxiliary were named ex-officio members of the MMPAC Board, increasing Board membership from 23 to 25. Besides these two, the Board is composed of two members (at least one to be a physician) from each of the 10 MSMA Council Districts and the following ex-officio members: President, President-Elect and Executive Secretary of MSMA.

Another Rules change transferred the MMPAC treasurer from an appointive position by the Chairman to an elective position by the entire Board. Also, membership definitions were changed to allow for broader representation by physicians and friends of medicine.

John N. Martin, M.D., of St. Joseph, who was elected MMPAC Chairman in April, said plans to increase the educational functions of MMPAC are currently being formulated.

Birth, Fertility Rates Fall

The National Center for Health Statistics says the 1972 birth and fertility rates fell to the lowest levels ever in the U.S. The birth rate was 15.6 per 1,000 population and the fertility rate was 73.4 births per 1,000 women in the child-bearing range, 15-44 years old. The infant mortality rate also was down, to 18.2 per 1,000 live births, the lowest ever. Babies born in 1972 also can expect to live longer: 71.2 years. In comparison, American life expectancy in 1900 was only 49.2 years.

MSMA, AMA membership surpass 1972 totals

Membership in the Missouri State Medical Association is nearing the 4,500 mark, according to figures as of Aug. 31.

The final MSMA membership figure will not be known until the end of the year due to new members, transfers and those who drop out. The MSMA had 4,428 members as of December 31, 1972.

Missouri has already surpassed its 1972 paid membership total in the American Medical Association. On December 31, 1972, Missouri had 3,202 paid members of the AMA. However, as of September 15, 1973, the AMA had already received dues from 3,215 Missouri physicians. There are also 350 Missouri physicians who are AMA members, but exempt from dues.

Medical heliport built

A heliport has been constructed adjacent to the Washington University Medical Center, at the corner of Newstead and Clayton Avenues in St. Louis.

The heliport is paved, lighted and available for receiving patients on a 24-hour basis. A fully equipped ambulance is available to transport patients to the various Medical Center institutions.

FAA coordinates for the heliport are Latitude 38 degrees, 38 minutes, 03 seconds north; Longitude 90 degrees, 15 minutes, 24 seconds west; Elevation 414 feet. The Medical Center can be alerted for use of the heliport by calling (314) 367-6400, station 686.

Family Practice figures up

Family practice, a new medical specialty which came into being less than five years ago, is beginning to show tangible results in terms of producing more family doctors, according to a recent survey.

A total of 413 family physicians have graduated from approved family practice residency programs, the survey conducted by the Education Division of the American Academy of Family Physicians shows. Following behind are 1,771 family practice residents in training programs across the country, an increase of 756 over last year.

Of the 1,771 residents, 756 are in the first year of training. There are 653 second-year residents, and 354 entering their third year. The survey also shows that 86 percent of the available first-year positions are filled.

News in Brief

Pan American Doctor's Club

The Medical Society of the Pan American D tor's Club will hold its Annual Meeting, Februa 20-24, 1974, in Huasch, Hidalgo, Mexico.

C. A. McBurney, M.D., of Slater, is Presid of the Club. Hugh A. Hanna, M.D., of Warrensbu is Program Chairman, and T. Reed Maxson, W rensburg, is Secretary-Treasurer. Further inf mation may be obtained by contacting Dr. Maxs

Barnes named Trauma Center

Barnes Hospital will be formally designated a Regional Trauma Center under the program the Division of Emergency Medical Service, Illin Department of Public Health, in ceremonies O ber 11.

Missouri Governor Christopher Bond and Illin Governor Daniel Walker will be guests at the a.m. ceremony at the East Pavilion Building Lob

Family Planning Council

The Missouri Family Planning Health Cou will hold its second Annual Meeting, October at the Hearnes Multipurpose Building in Colum

The Council is concerned with the developm and coordination of family planning services in 106 Missouri counties outside of the Kansas C and St. Louis metropolitan areas.

Melvin M. Schwartz, M.D., of St. Louis Cou is the MSMA representative on the Counc Board of Directors.

Sports Medicine Meeting

The Central States Chapter of the Ameri College of Sports Medicine will hold its ann meeting Dec. 8, 1973, at the University of Kan campus, Lawrence, Kansas.

The Central States Chapter included Misso Kansas, Arkansas and Oklahoma. Further in mation on the one-day meeting may be obtai from Ben R. Londeree, secretary-treasurer, C ACSM, Department of Health and Physical Edu tion, University of Missouri-Columbia, 20 R well Gymnasium, Columbia, Mo. 65201.

Immunization

Continued from Page 1

to immunize a minimum of 90 percent of the e mated susceptible preschool children.

MSMA members are urged to info their office personnel of the upcoming ca paign because if the promotion is a succe many, many patients will be calling for audit of their childrens' immunization cords.

medical melange

Notes of interest from Here . . . . and There

Dr. Bonita J. Peterson, Kansas City, has been appointed as the new medical examiner for Jackson County by County Executive George W. Lehr. Under the county's new charter government, Dr. Peterson became the first woman department head. Her appointment became effective on September 1. Dr. Peterson has served as associate pathologist at Columbia Hospital for Women in Washington, D. C., at the Greater Baltimore Medical Center in Baltimore, Md. in 1964-1967 and at Trinity Lutheran Hospital in Kansas City from 1967 to the present time.

Dr. Joseph A. Zimmerman of Kennett, who has served ten years as chairman
the Governor's Council on Mental Retardation and other Developmental Disa-
lities, was cited for his "compassion, conviction and competence" in helping
e handicapped at a testimonial dinner in his honor at Holiday Inn in Cape
irardeau in August. The dinner was a highlight of the Council's two-day con-
rence. Dr. Zimmerman, who served as chairman in a volunteer capacity, re-
gned for personal reasons.

More than 200 friends attended an open house in Osceola on September 8 to honor **Dr. Ruth Seevers,** who celebrated her 90th birthday on September 6. The event was sponsored by the Business and Professional Women's Club of Osceola. Dr. Seevers also was named "Woman of the Year" by the Club. Since 1881, there has been a Dr. Seevers in Osceola. "Dr. Ruth" has served Osceola patients for the past 67 years.

Dr. Henry E. Oppenheimer, Clayton, attended the International Diabetes
ederation meeting in Brussels, Belgium on July 15-20.—**Dr. Paul A. Brenner**
as honored by the Owensville Lions Club in August in appreciation of his many
ears of service to the citizens of Owensville. Dr. Brenner, who has practiced
edicine in Owensville for 35 years, received the Lions' annual Community
rvice Award.

Dr. Pat A. Barelli, Kansas City, was elected secretary of the American Rhinologic Society at its 19th Annual Meeting held at Crown Center Hotel in Kansas City on August 11.—**Dr. Norman A. Ginsberg,** Kansas City, was presented the Society's Golden Head Mirror Award for Meritorious Sharing in the Service of Rhinology.

Dr. H. Richard McFarland, Kansas City, attended the VIII International
ongress of EEG and Clinical Neurophysiology in Marseille, France on Septem-
r 1-7 and the X Congreso International Neurologia in Barcelona, Spain on
ptember 8-15. He presented a paper at each meeting.

Recommendations[†] on Combination Live Virus Vaccine

American Academy of Pediatrics

Committee on Infectious Diseases

In the September 15, 1971 *AAP Newsletter* sent to Academy members, the Committee on Infectious Diseases of the American Academy of Pediatrics stated its recommendations on the use of combination live virus vaccines. After a careful review of available data, the committee concluded that:

- "This information indicates that the products are both safe and effective when used as directed."
- The vaccine "...can, therefore, be recommended with the obvious advantages of reduction in the number of injections for any given child and a concomitant decrease in the required visits to a physician's office or clinic."

United States Public Health Servi

Advisory Committee on Immunization Practices

In the April 24, 1971 issue of *Morbi*
and Mortality Weekly Report, the Ad
ory Committee on Immunization Pr
tices of the United States Public Hea
Service presented recommendations
the use of combination live virus vacci
The committee stated that:

- "Data indicate that antibody respo
to each component of these combinat
vaccines is comparable with antibody
sponse to the individual vaccines gi
separately.

- "There is no evidence that
verse reactions to the combi
products occur more f
quently or are more sev
than known reactions to
individual vaccines (see
tinent ACIP recommen
tions).
- "The obvious convenie
of giving already selec
antigens in combined f
should encourage consid
tion of using these prod
when appropriate."

[†] For complete text of both recommendations see your MSD representative or write to Professional Service Dept., Merck Sharp & Dohme, West Point, Pa. 19486.

M-M-R*

(MEASLES, MUMPS AND RUBELLA VIRUS VACCINE, LIVE | MSD)

Single-dose vials

I-M-R, given in a single injection, fits easily into our routine immunization program for well babies.

iven at age 12 months, M-M-R provides for vaccination early in life against measles, mumps, and rubella.

MSD suggested immunization schedule for well babies

Age	Vaccine(s)
2 months	DPT (diphtheria-pertussis-tetanus) Oral poliomyelitis vaccine (triple)
3 months	DPT[1]
4 months	DPT Oral poliomyelitis vaccine (triple)
6 months	Oral poliomyelitis vaccine (triple)
12 MONTHS	**M-M-R (MEASLES, MUMPS AND RUBELLA VIRUS VACCINE, LIVE, MSD)**

his vaccination may be given at 3 months, 5 months, or at 6 months, depending on your preference or on the condition of the child.

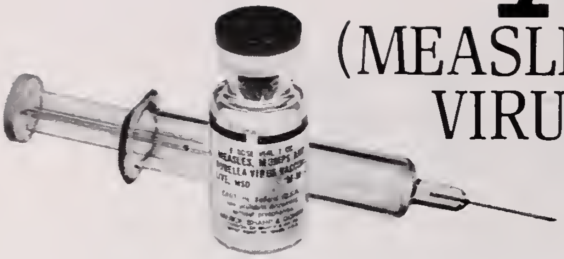
ce vaccination with a live virus vaccine may depress the results of a tuberculin test for four weeks or longer, the test and vaccine should not be given during the same office visit.

*Trademark of Merck & Co., Inc.

For a brief summary of prescribing information, please see following page.

M-M-R
(MEASLES, MUMPS AND RUBELL
VIRUS VACCINE, LIVE | MSD)

Single-dose vials



No untoward reactions peculiar to the combination vaccine (M-M-R) have been reported.

Moderate fever (101–102.9 F) occurs occasionally. High fever (over 103 F) occurs less commonly. On rare occasions, children who develop fever may exhibit febrile convulsions. Rash (usually minimal and without generalized distribution) may occur infrequently.

Since clinical experience with measles, mumps, and rubella virus vaccines given individually indicates that very rarely encephalitis and other nervous system reactions have occurred, such reactions may also occur with M-M-R. A cause and effect relationship, however, has not been established.

Excretion of the live attenuated rubella virus from the throat has occurred in the majority of susceptible individuals administered the rubella vaccine. There is no definitive evidence to indicate that such virus is contagious to susceptible persons who are in contact with the vaccinated individuals. Consequently, transmission, while accepted as a theoretical possibility, has not been regarded as a significant risk.

Must not be given to women who are pregnant or who might become pregnant within three months following vaccination.

Contraindications: Pregnancy or possibility of pregnancy within three months following vaccination; infants less than one year old; sensitivity to chicken or duck, chicken or duck eggs or feathers, or neomycin; any febrile respiratory illness or other active febrile infection; active untreated tuberculosis; therapy with ACTH, corticosteroids, irradiation, alkylating agents, or antimetabolites; blood dyscrasias, leukemia, lymphomas of any type, or other malignant neoplasms affecting the bone marrow or lymphatic systems; gamma globulin deficiency, i.e., agammaglobulinemia, hypogammaglobulinemia, and dysgammaglobulinemia.

Precautions: Administer subcutaneously; do not give intravenously. Epinephrine should be available for immediate use should an anaphylactoid reaction occur. Should not be given less than one month before or after immunization with other *live* virus vaccines; vaccination should be deferred for at least six weeks following blood transfusions or administration of more than 0.02 cc immune serum globulin (human) per pound of body weight, or human plasma.

Due caution should be employed in children with a history of febrile convulsions, cerebral injury, or any other condition in which stress due to fever should be avoided. The physician should be alert to the temperature elevation which may occur after vaccination.

Excretion of the live attenuated rubella virus from the throat has occurred in the majority of susceptible individuals administered the rubella vaccine. There is no definitive evidence to indicate that such virus is contagious to susceptible persons who are in contact with the vaccinated individuals. Consequently, transmission, while accepted as a theoretical possibility, has not been regarded as a significant risk.

Attenuated live virus measles and mumps vaccines, given separately, may temporarily depress tuberculin skin sensitivity; therefore, if a tuberculin test is to be done, it should be scheduled before vaccination, to avoid the possibility of a false negative response.

Before reconstitution, refrigerate vaccine at 2–8 C (35.6–46.4 F) and *protect from light*. Use only diluent supplied to reconstitute vaccine. If not used immediately, return reconstituted vaccine to refrigerator at 2–8 C (35.6–46.4 F), and discard after eight hours.

Adverse Reactions: Fever, rash; mild local reacti such as erythema, induration, tenderness, regi lymphadenopathy; parotitis; thrombocytopenia purpura; allergic reactions such as urticaria; arthr arthralgia, and polyneuritis.

Occasionally, moderate fever (101–102.9 F); less c monly, high fever (above 103 F); rarely, febrile vulsions.

Encephalitis and other nervous system reactions have occurred very rarely with the individual vacc may also occur with the combined vaccine.

Transient arthritis, arthralgia, and polyneuritis features of natural rubella and vary in frequency severity with age and sex, being greatest in adul males and least in prepubertal children. Such r tions have been reported with live attenuated rub virus vaccines. Symptoms relating to joints (p swelling, stiffness, etc.) and to peripheral nerves (p numbness, tingling, etc.) occurring within appr mately two months after immunization should be sidered as possibly vaccine related. Symptoms h generally been mild and of no more than three d duration. The incidence in prepubertal children w appear to be less than 1% for reactions that w interfere with normal activity or necessitate med attention.

How Supplied: Single-dose vials of lyophilized cine, containing when reconstituted not less t 1,000 $TCID_{50}$ (tissue culture infectious doses) measles virus vaccine, live, attenuated, 5,000 TCID mumps virus vaccine, live, and 1,000 $TCID_{50}$ of rub virus vaccine, live, expressed in terms of the assig titer of the NIH Reference Measles, Mumps, and bella Viruses, and approximately 25 mcg neom with a disposable syringe containing diluent and fi with a 25-gauge, 5/8″ needle. Also in boxes of 10 sin dose vials nested in a pop-out tray with a separate box of 10 diluent-containing syringes.

Must vasodilators
nd therapy for
ther diseases
ome into
onflict?

ot if the vasodilator is

ASODILAN®

(SOXSUPRINE HCl)

e compatible vasodilator…
o treatment conflicts reported

cerebral or peripheral vascular disease patient often has xisting disease[1] which calls for another drug along with his odilator. It may be a hypoglycemic, miotic, antihypertensive, etic, anticoagulant, corticosteroid, or coronary vasodilator.

odilan is not incompatible with any of these drugs—no treatment flict has been reported. And, unlike other vasodilators, Vasodilan not been reported to affect carbohydrate metabolism, liver tion, or intraocular pressure—or to complicate treatment of etes, hypertension, peptic ulcer, glaucoma, or liver disease.

ct, there are no known contraindications to the use of Vasodilan commended oral doses, other than that it should not be given e presence of frank arterial bleeding or immediately postpartum.

rtler, M. M., et al.: Geriatrics *25*:134-148 (May) 1970.

Indications: Based on a review of this drug by the National Academy of Sciences-National Research Council and/or other information, the FDA has classified the indications as follows:

Possibly Effective:

1. For the relief of symptoms associated with cerebral vascular insufficiency.
2. In peripheral vascular disease of arteriosclerosis obliterans, thromboangiitis obliterans (Buerger's Disease) and Raynaud's disease.
3. Threatened abortion.

Final classification of the less-than-effective indications requires further investigation.

Composition: Vasodilan tablets, isoxsuprine HCl, 10 mg. and 20 mg.

Dosage and Administration: 10 to 20 mg. three or four times daily.

Contraindications and Cautions: There are no known contraindications to oral use when administered in recommended doses. Should not be given immediately postpartum or in the presence of arterial bleeding.

Adverse Reactions: On rare occasions, oral administration of the drug has been associated in time with the occurrence of severe rash. When rash appears, the drug should be discontinued. Occasional overdosage effects such as transient palpitation or dizziness are usually controlled by reducing the dose.

Supplied: Tablets, 10 mg.—bottles of 100, 1000, 5000 and Unit Dose; 20 mg.—bottles of 100, 500 and Unit Dose.

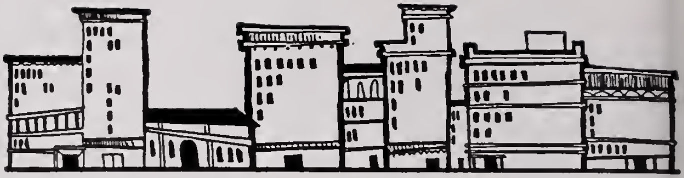
Mead Johnson LABORATORIES

From the Medical Schools



WASHINGTON UNIVERSITY

The Department of Health, Education and Welfare has awarded $347,871 to Washington University School of Medicine to develop and operate a residency program in primary care for internists and pediatricians.

The purpose of the four-year contract is to develop a model graduate training program in primary care utilizing a multispecialty approach to the delivery of family health services. The school must conduct a postdoctoral program that would qualify trainees to take board examinations for certification as internists or pediatricians.

"In our new training program for internists and pediatricians we plan to provide a select group of residents with a realistic view of medical practice," said *Gerald Perkoff*, M.D., professor of medicine and preventive medicine and director of the Division of Health Care Research.

Some of the ambulatory care training will be provided in the Medical Care Group, a prepaid group practice which is under the auspices of the division of Health Care Research.

At least 13 residents will take part in the program during the contract period. Planning of the program as well as initial recruitment of trainees will occur during the first year. Eventually the school plans to have five trainees in medicine and three in pediatrics in a two-year program.

The award was made under the Comprehensive Health Manpower Training Act of 1971 by the Bureau of Health Resources Development of the Health Resources Administration. Similar HEW contracts have been awarded to Boston City Hospital and Stanford University Medical Center.

Washington University Medical Center provided more than $6.3 million in free patient care last year.

Samuel B. Guze, M.D., president of the Medical Center, made the announcement on September 11 at the annual meeting of the Center's board of directors.

The president also mentioned that 54% of all new outpatient visits in the Greater St. Louis area were in this Medical Center, with City Hospitals receiving 17%; St. Louis University hospitals, 12%; St. Louis County Hospital, 7%; and all others, 10%.

Institutions comprising the Medical Center are Barnes Hospital, Barnard Free Skin and Cancer Hospital, the Central Institute for the Deaf, the Jewish Hospital of St. Louis, St. Louis Children's Hospital and Washington University, including its School of Medicine, the Irene Walter Johnson Institute of Rehabilitation, the Mallinckrodt Institute of Radiology, Renard Hospital and the David P. Wohl Jr. Memorial Hospital and Clinics.

Raymond E. Rowland, chairman of the Barnes Hospital board of trustees, was reelected chairman of the Medical Center board of directors. Also reelected were vice-chairman, Henry N. McCluney, vice-president, Anheuser-Busch, Inc. and on the board of Central Institute for the Deaf; secretary, *Norfleet H. Rand*, vice-chairman and treasurer of the board of Interco, Inc., and chairman of the Barnard Hospital Board; and treasurer, *Joseph F. Ruwitch*, president, Renard Linoleum and Rug Co. and on the board of the Jewish Hospital.

Dr. Guze also mentioned that last year's cost of operations was $113 million (up from $86.2 million in 1971), including $63.4 million in salaries for the 8,487 employees. Capital improvements accounted for $15.5 million, and $17.2 was spent for research.

UNIVERSITY OF MISSOURI-COLUMBIA

Environmental pulmonary diseases—respiratory ailments associated with industrial occupations—are of special interest to *Dr. Kaye H. Kilburn*, new chief of the Pulmonary Division at the UMC Medical Center and Columbia Veterans' Administration Hospital.

"Missouri has a large number of dust-making occupations, among them sandblasting in St. Louis, cotton-raising in Southeast Missouri, mining in Rolla and Joplin, brick-making in Central Missouri and several others. I hope to establish a liaison with the Missouri State Board of Health as I did with the board in North Carolina so we can work together to reduce the respiratory hazards peculiar to these occupations," Dr. Kilburn said.

Dr. Kilburn's dual responsibility to the Medi-
l Center and Veterans' Hospital is part of an
erall sharing agreement between the two in-
itutions. While the majority of intensive res-
ratory care for patients of both hospitals will
done in the Veterans' Hospital, Dr. Kilburn
d his staff will also supervise a pulmonary
ation at the Medical Center and laboratory
cilities there and carry out a teaching program
r UMC physicians and students between the
o hospitals.

Dr. Kilburn is the first chief of the newly-
eated pulmonary (chest) division of the De-
rtment of Medicine. His staff includes *Dr.*
aniel Hurst, assistant professor of medicine,
rmerly of Duke University; *Dr. Arnold Hud-*
n, pulmonary fellow from Duke University,
r. Ricardo Cordon, pulmonary fellow from the
Hospital in Baltimore, Md., as clinician in-
stigators and research scientists; *Dr. Charles*
illiams, assistant professor of medicine and as-
ciate professor of agricultural chemistry, a
ochemist from the University of Wisconsin;
. Sharon Northup, a research associate bio-
emist from UMC; *Wayland McKenzie,* re-
rch associate from Duke University, who is
charge of the animal model exposure labora-
y; and *Patricia Adshead,* research assistant
cializing in tissue culture.

Dr. Kilburn plans to implement a number of
ovative patient care, educational and research
grams. A 20-bed pulmonary unit located at
Veterans' Hospital, accessible to both VA
l Medical Center patients, includes a ten-bed
piratory intensive care unit equipped with
cial monitoring equipment. He encourages
rses who are interested in working in lung
dicine and especially intensive care to contact
n.

r. Brent M. Parker has joined the Division
Cardiology at the University Medical Center.
rmerly associated with Washington Univer-
's medical school in St. Louis, Dr. Parker
l serve as chief of clinical cardiology and pro-
sor of medicine. He will assume responsibil-
s for the medical students' elective program
ardiology and will direct some of the testing
cedures for patients with heart ailments.

ane Brinton, R.N., who has been assistant to
ring Dean Ruby Potter at the School of Nurs-
, University of Missouri-Columbia, has been
ointed Interim Dean of the nursing school.
s Brinton will serve until the appointment of
ermanent dean. The School of Nursing, here-
ore under the administration of the School of
dicine, has recently been established as an autonomous unit on the Columbia campus of the University.

ST. LOUIS UNIVERSITY

Dr. Paul A. Young has been named chairman of the Department of Anatomy at the St. Louis University School of Medicine.

Dr. Young

A member of the medical faculty since 1957, Dr. Young is professor of anatomy and associate professor of neuroanatomy in neurology. He has served as Acting Chairman of the Department since 1969. He holds a B.S. and M.S. degree in Anatomy earned at St. Louis University in 1947 and 1953. He earned the Ph.D. degree in Anatomy at the University of Buffalo. He teaches Neuroanatomy and Gross Anatomy at the School of Medicine and also is actively engaged in research in which he utilizes the electronmicroscope.

He is the author of more than 40 publications on various subjects related to the brain, including the pathology of nutritional disorders, and the anatomic basis for function. Dr. Young was the recipient of the Gibson Anatomical Society honor award in 1957.

Dr. Maurice Green, professor and director of the St. Louis University School of Medicine's Institute for Molecular Virology, and his son, Michael Green, attended the meeting of the NATO Advanced Study Institute in Monte Carlo on September 3-9. Dr. Green was invited to present a paper. His son, the only undergraduate student attending the meeting, was awarded a stipend from NATO Advanced Study Institute. He is a junior at the University of Wisconsin and spends his summers working in the Institute for Molecular Virology laboratories. Dr. Green earned the M.S. and Ph.D. degrees in biochemistry at the University of Wisconsin.

St. Louis University Medical Alumni celebrating reunions are invited to attend the annual Dean's reception in Glennon Hall on October 25 from 4 AM to 6 PM during Founders Week. A scientific program will be held from 10 AM to 12-noon on October 26. The annual reunion dinner will be held at the Stadium Club with a cocktail party beginning at 6:30 PM and a dinner at 8 PM on October 27. An all alumni reunion will be held in the Sesquicentennial Room of the Busch Memorial Center beginning at 7 PM.

AMA Sponsors National Conference on Alcohol Abuse

Physicians from throughout the nation wi participate in an American Medical Associatior sponsored conference on medical complication of alcohol abuse on October 11-12 at the Wasl ington Hilton Hotel in Washington, D. C.

The two-day conference will be directed t physicians on diagnosis, management, treatmen rehabilitation and community resources for th alcoholic person.

"We hope to interest many more physicians i the problems of alcohol abuse," said Herbe Raskin, M.D. of Southfield, Mich., chairman (the AMA's Committee on Alcoholism and Dru Dependence.

The conference will be cosponsored by th Veterans Administration, the National Institut on Alcohol Abuse and Alcoholism and the N tional Council on Alcoholism. The program is be ing coordinated by William M. Lukash, M.D White House physician.

Physicians attending the conference will r ceive 13 hours of continuing education credi toward the AMA Physician's Recognition Awar program and 13 hours of elective credits in th continuing education program of the America Academy of Family Practice.

Conference speakers will cover such topics how to diagnose alcoholism, how to identify th potential alcoholic early, current approaches t treatment, biochemical features of alcohol i man, direct poisonous effects of alcohol, cause (death in alcoholics and management of acu medical emergency in alcohol abuse.

Further information on the conference is avai able from the Department of Mental Healtl American Medical Association, 535 N. Dearbo St., Chicago, Ill., 60610.

Change the AMA!

Maybe you're one of those doctors at odds with some AMA policies. Your question is: how do you change them?

First, consider who sets those policies. In a real sense, it is you. You elect the delegates to your state association. They in turn elect the delegates who will represent your views in the AMA House.

As an active, involved member, you can influence policy by making your views known to your delegates, both national and state. It is your democratic right—and responsibility.

Write your delegates, call them, see them. If they aren't responsive, tell them they'll be hearing from you at election time.

You can also go directly to the top and express your views before the AMA House's Reference Committees at either of the two annual conventions.

But it's up to you. If you have strong convictions about something that should be changed, you can be heard.

Join us. We are only what the doctors of this country want us to be. Find out more about the AMA. Send for the pamphlet, "The AMA and the American Doctor: Sharing a Common Goal." Write: Dept. DW, at the address below.

JOIN US.
WE CAN DO MUCH MORE TOGETHER.

What's New in Loxoscelism?

LOXOSCELISM is the medical disorder caused by nvenomation during the bite of the brown ecluse spider, Loxosceles reclusa. Prior to 1957, vhen the disease first was defined in the medical iterature, these necrotic spider bites often were onsidered to be severe infections, and antibi- tics were the usual treatment. Approximately decade was spent refining the correct clinical escription and assembling anecdotal reports bout the prognosis using corticosteroid therapy.

In the past two years, laboratory research has lucidated several basic aspects of loxoscelism in an and animals, leading to more explicit clini- al analysis and, currently, to a thorough re- valuation of therapy.[1, 2]

ROGRESS IN IMMUNOLOGY

Millikan and Berger[2] from our department ave devised a specific in vitro test for the diag- osis of loxoscelism. The test exposes the fresh mphocytes of the patient to minute doses of oxosceles venom, in vitro, with radioactive ymidine present. Only if the patient has pre- ously been envenomated will the lymphocytes ansform to distinctive blast forms and, in doing , incorporate thymidine proportionally into eir nucleoprotein. The test is quantified by the mount of radioactive counts from the washed mphocytes. The test is sensitive and highly curate, but it is applicable only to the con- lescent case. The result is that many mild own spider bites, which were formerly not agnosable, now can be recognized. The only ay to distinguish clinically among most types mild insect or arachnid bites is by lymphocyte nsformation studies. Because we know that all recluse spider bites are not necrotic, we must devise proper staging of cases and reevaluate both conservative and vigorous therapy.

From studies with rabbits, we have learned that natural immunization is the result of repeated small doses of venom. Active immune protection against the venom seems probable in humans. Passive immunity conferred by a traditional antivenin seems possible, but it has not been achieved in our early attempts. People whose work exposes them repeatedly to Loxosceles may benefit from preventive immunization.

PROGRESS IN PATHOPHYSIOLOGY

In the rabbit, the important cellular events in the skin after envenomation have been studied with the electron microscope. The cause of the necrosis in necrotic arachnidism is endothelial

This timely article reports research progress on loxoscelism and includes the ongoing reevaluation of treatment for the milder bites. The information relating to childhood loxoscelism cases has not been published previously. The author predicts that in view of recent research, medical progress in the next three years will probably include immunization, a better means for recognizing severe systemic loxoscelism earlier and a better specific mode of early treatment. Dr. Anderson is Professor and Chairman, Division of Dermatology, University of Missouri-Columbia School of Medicine.

damage beginning as early as three hours after injection of venom. This injury is followed by thrombocytopenia, lowering of fibrinogen levels and prolongation of clotting time as thrombi occlude the small vessels. Apparently, damage to the blood vessels directly by the venom activates the clotting cascade which interacts with local tissue mediators of inflammation to give the characteristic clinical progression of necrotic arachnidism. In the rabbit, heparin will not prevent the thrombotic reaction. Neither aminocaproic acid nor corticosteroids modify the early disease in the rabbit, so severe is the original injury to the blood vessels. Larger amounts of venom do not produce a sustained coagulopathy in rabbits. In humans, heparin does appear to protect against disseminated intravascular coagulation, which is an important complication.

PROGRESS IN CHEMISTRY OF THE VENOM

Campbell and Barrett at the University of Missouri have shown that Loxosceles venom is composed of about eight separable proteins, most of which are enzymes.[3,4] One principle enzyme is hyaluronidase or the classic "spreading factor." The important necrotizing factors which actually attack the endothelium in humans are not enzymes, but the mechanism of their action isn't known. Recognition of the specific necrotizing protein may prove important in devising simple and effectively early treatment.

PROGRESS IN CLINICAL MEDICINE

In children, case reports of loxoscelism presented only alarmingly severe or fatal reactions. A more careful collection of all childhood loxoscelism cases during the summer of 1972 indicated a benign prognosis is more usual. The youngest child in my series was four, the oldest 14; 16 children were evaluated. Particular attention was given to platelet counts and cell-free serum hemoglobin levels. No important hematologic disorders or other defects were found, and all the children recovered without any disability. I have had no personal experience with loxoscelism in children under two years old. Aside from close observation, no special therapy or unusual procedures are indicated for loxoscelism in children.

Discovery of these neglected, insignificant brown recluse spider bites is an important result of the diagnostic lymphocyte transformation test. When we were unable to diagnose with certainty any cases of loxoscelism other than the most severe, then vigorous therapy was indicated routinely and the prognosis was always poor. Now we are aware that many, even most, bites are mild, resolve spontaneously and leave no scar. Even small necrotic bites may be left safely untreated. I would prescribe large doses of corticosteroids only to treat severe or large bites and for those patients with systemic effects as shown by generalized cutaneous purpura, extreme leukocytosis, thrombocytopenia, headache, fever, malaise, or any evidence of early disseminated intravascular coagulation (DIC). In the case of suspected or impending DIC, immediate hospitalization and the early use of heparin is our present policy.

Accurate clinical staging of spider bites has not been devised and agreed upon as yet. The following preliminary guidelines are used in our department:

Generally, the rate of progression and the size of the painful indurated area are used for basic staging. If a recluse spider bite evolves slowly to an indurated firm plaque in 12 to 24 hours and becomes stable and if the plaque at 48 hours is 6 cm or less without necrosis, then complications will be few and treatment may consist of analgesics and a tetanus toxoid booster. Corticosteroids are not needed. If the plaque progresses very quickly (four to 12 hours) or if the solid area exceeds 10 cm with necrosis, I would wish for my own spider bite to be treated with 80 mg of triamcinolone suspension infiltrated, 20 mg in each quadrant about the bite, although this line of treatment clearly is not effective for loxoscelism in the rabbit. Support for this method of local steroid treatment is based solely on clinical experience with humans and is open for review as to efficacy. For severe systemic loxoscelism, I favor 100 mg of triamcinolone orally given daily with close observation, which will include blood counts and urinalysis to detect any coagulopathy or nephropathy. Again, the justification for this treatment is our clinical experience. Pain around the bite and the severe malaise, especially the headache and the generalized purpura, are benefitted by systemic steroids, without much doubt. The more important question is whether systemic steroids will reduce the area of necrosis, minimize tissue injury or hasten healing in humans. These questions must be answered by further elucidation of the biochemistry of necrotic arachnidism and a detailed description of the coagulopathy because valid clinical comparison of therapy in humans is not possible.

PROGRESS IN ENTOMOLOGY

A foremost national expert on Loxosceles is the

Stroke Prevention by Recognition and Treatment of Extracranial Carotid Disease

Case Reports

A CEREBRAL INFARCTION can produce a catastrophic stroke with paralysis, coma and death. As early as 1823, the association of extracranial vascular disease and cerebral dysfunction was reported in the medical literature.[1] In 1954, Eastcott *et al* reported a successful carotid reconstruction for transient cerebral ischemia.[2] Eighteen years later and despite numerous reports, it cannot be said that the literature contains clear guidelines as to the selection of patients for arteriography or satisfactory conclusions with regard to their interpretation.[3] The dilemma of patient selection is quite unfortunate since Fields found that 74% of the patients with cerebral vascular insufficiency had surgically accessible lesions.[4] Arterial stenosis due to atherosclerosis is particularly frequent at the origin of the internal carotid arteries.[5]

The following case reports are presented to illustrate the necessity of developing the proper criteria for selection of patients for arteriography and interpretation of their results.

CASE REPORTS

Case #1. (Fig. 1) An 88-year-old woman had severe disabling dizziness for two years, with a recent blackout spell. Her carotid pulses were palpable bilaterally and there was a bruit over the right carotid artery. An aortic arch study with cerebral angiography showed significant atherosclerotic disease with 50% to 60% narrowing of the right carotid bifurcation. A right carotid endarterectomy was performed and, at operation, a thick calcified plaque was found containing a large amount of necrotic and amorphous atheromatous material causing approximately 80% stenosis. Within a few hours after the operation, the dizziness had completely disappeared. The patient continues to do well without any residual or recurrent symptoms.

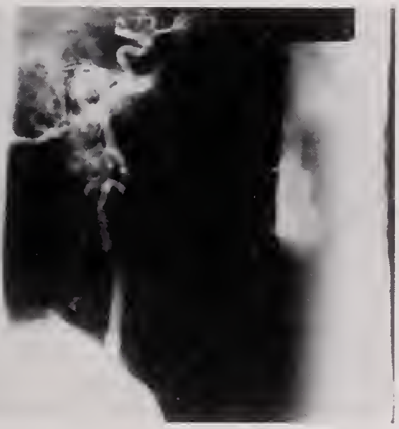

Fig. 1 An 88-year-old woman with disabling diziness showing 50% to 60% narrowing at right carotid bifurcation.

Comment

This case shows that advanced age, as such, is no contraindication to operation. It also shows that the soft necrotic atheromatous material at the site of disease usually cannot be identified on the arteriogram. Stenosis in the range of 60% to 95%, such as in this case, is usually associated with a bruit, while stenosis above or below that range may fail to develop one.

Case #2. (Fig. 2) A 66-year-old man had a blackout spell while driving his car and, conse-

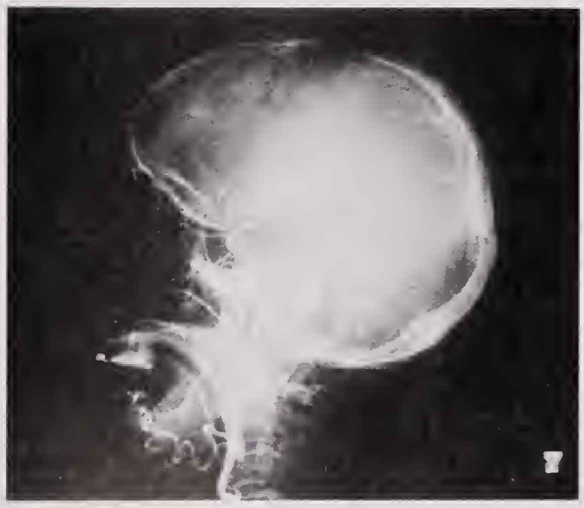

Fig. 2 A 66-year-old man with blackout spell showing 99% obstruction of left internal carotid.

The stroke has assumed national prominence today as a leading killer and a source of government expenditure. Basic diagnosis and elimination of nonlocalizing diagnostic tests can do much to simplify the stroke problem and prevent unnecessary deaths. The authors present six case reports to illustrate the necessity of developing the proper criteria for selection of patients for arteriography and interpretation of their results. Drs. Sauer and Dr. Elkadi are in the private practice of cardiac-vascular and thoracic surgery. Dr. Bailey is in the private practice of thoracic surgery.

quently, hit a tree and sustained head and chest injuries. He recovered within a few days with only minimal residual weakness of his right side. The patient had palpable carotid pulses bilaterally and there was a bruit over the right carotid artery; no bruit was present on the left side. An aortic arch study with cerebral angiography showed more than 99% obstruction of the left internal carotid artery and 80% to 90% stenosis of the right carotid artery. Left carotid endarterectomy was performed and, at operation, a heavily calcified plaque was found which, at its distal end, completely occluded the lumen. Excellent back flow followed removal of the plaque. Within the following 48 hours, the patient noticed progressive improvement of his right side and his general mental condition. Later in the postoperative period, the patient started noticing transient numbness and tingling of his left side, indicating progressive obstruction of the right carotid artery. Subsequently, an endarterectomy was done on the right with complete recovery of all symptoms.

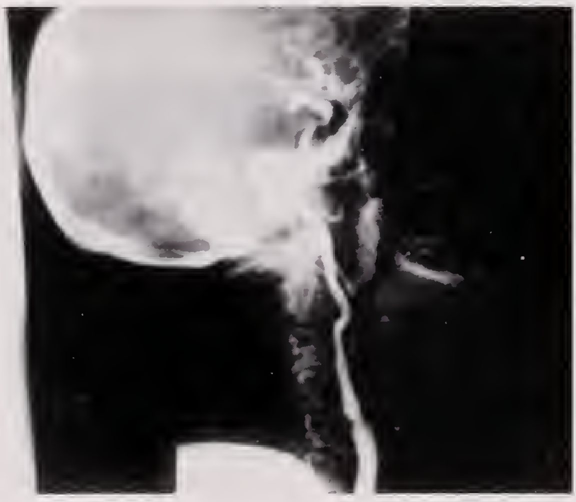

Fig. 3 A 67-year-old man with impending stroke showing a shallow, smooth plaque causing 15% stenosis of the right carotid bifurcation and a 70% to 80% stenosis at the cavernous sinus.

Comment

This case shows that the more severe stenosis had no bruit while the less severe one did. It also points to the need for correction of bilateral lesions despite the presence of collateral circulation.

Case #3. (Fig. 3) A 67-year-old man was admitted with impending stroke with left hemiparesis and numbness of the left face. The patient had been having transient attacks of similar symptoms lasting for a few minutes for more than one year. On the night of admission, the attacks became more frequent and the last attack did not subside. He had good carotid pulses without bruits. An aortic arch study with cerebral angiography revealed a shallow smooth plaque causing about 15% stenosis of the right carotid bifurcation and another 70% to 80% stenosis of the intracranial portion of the right internal carotid artery at the cavernous sinus. A right carotid endarterectomy was performed and, at operation, an ulcerated atheromatous plaque was found containing two shallow ulcers with rough, irregular bases. Within a few hours after endarterectomy, the patient had significant improvement of his left hemiparesis, which completely subsided within 48 hours. The numbness of the left side of his face showed considerable improvement, although there is still a minimal residual numbness in a small part of the left face which is continuously decreasing.

Comment

This case shows that the smooth appearance of the atheromatous plaque on the arteriogram does not rule out the presence of plaque ulceration with thrombus formation and repeated thromboembolism. The rapid onset of improvement indicates that at least part of it was due to immediate improvement of blood flow and perfusion pressure which was needed to overcome the distal stenosis of the same vessel.

Case #4. (Fig. 4) A 69-year-old woman had progressive severe numbness of both feet for three weeks and no other neurologic symptoms. She had good carotid pulses without bruits. Other physical findings were normal. An aortic arch study with carotid arteriograms showed minimal atherosclerotic change with slight narrowing of both internal carotid arteries at their origin, being more prominent on the right. A right carotid endarterectomy was performed and, at operation, a thick tubular calcified atheromatous plaque was found with several rough areas and calcium deposits on the inside. There were, however, no definite ulcerations. The plaque caused approximately 20% stenosis of the arterial lumen. Within less than 24 hours after the endarterectomy, the

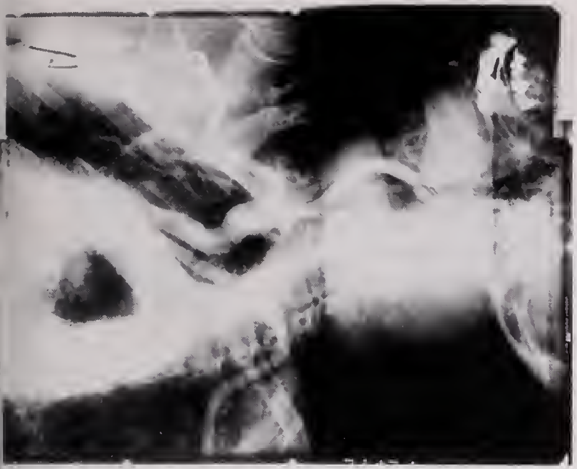

Fig. 4 A 69-year-old woman with progressive numb-ness of both feet showing slight narrowing of both in-ernal carotid arteries.

umbness of the feet had completely disappeared. he patient continues to do well without any residual r recurrent symptoms.

omment

This case illustrates that apparent mild arterio-raphic changes do not rule out the presence of clinically significant lesion. The same applies to he absence of carotid bruits.

Case #5. (Fig. 5) A 63-year-old man had dizzy pells associated with a tendency to fall to the left de for three weeks. The physical findings were nor-al. The carotid pulses were palpable bilaterally ithout bruits. An aortic arch study with cerebral ngiography showed a plaque at the origin of the ght internal carotid artery with apparent ulcera-on, causing only minimal stenosis. A right carotid ndarterectomy was performed and, at operation, n ulcerated plaque was found at the origin of the ternal carotid artery which caused approximately % stenosis of the arterial lumen. The pressure was easured in the common and internal carotid ar-ries, as well as in the flow rate in the internal rotid artery before and after the endarterectomy. efore the endarterectomy, the systolic pressure was 4 in the common carotid and 80 in the internal rotid, that is a 14 mm of mercury gradient across e stenosis. In other words, there was a 15% de-ease of pressure in the internal carotid artery. The w rate of the internal carotid artery was 210 cc ean flow and 310 cc peak flow. After the endar-rectomy, there was no pressure gradient between e common and the internal carotid arteries. The w rate in the internal carotid artery increased to 0 cc mean flow and 560 cc peak flow.

Within a few hours after the operation, the patient ticed improvement of his dizziness which com-etely disappeared during the second postoperative day. The patient continues to do well without any residual or recurrent symptoms.

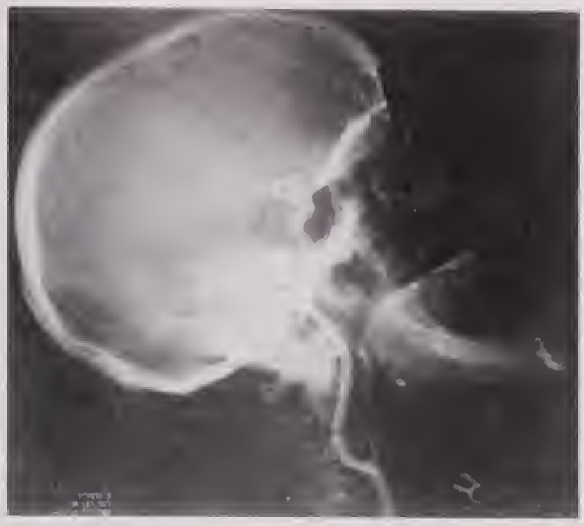

Fig. 5 A 63-year-old man with dizzy spells and a tendency to fall to the left showing an apparent ulcerated plaque causing only minimal stenosis of right internal carotid artery.

Comment

This case documents the immediate considerable increase of flow after removal of shallow plaques causing only mild or minimal stenosis. A 15% increase of pressure was followed by approximately 100% increase of flow rate.

Case #6. (Fig. 6) A 64-year-old woman had an onset of transient cerebral ischemia with memory loss on September 25. She underwent neurological evaluation elsewhere and refused diagnostic tests. Subsequently, she improved until October 12, when she had a massive stroke with unconciousness and right hemiplegia. Since then, she has had some improvement but is unable to talk and continues to have paralysis on the right side. On October 30, she developed gangrenous changes in her right foot. Physical examination revealed equal carotid pulsations and no bruits. Dorsalis pedes and posterior tibial pulses were absent in the right foot with gangrenous changes present. An aortic arch study showed normal vertebrals and a normal right internal carotid artery. The left internal carotid artery had 40% occlusion at its origin. A subsequent liver biopsy (needle) revealed a metastatic adenocarcinoma, probably of gastrointestinal origin. The patient was transported home with no further therapy recommended.

Comment

In retrospect, this patient's prognosis was grave because of the widespread malignancy. Concentrating on the neurologic changes alone, how-

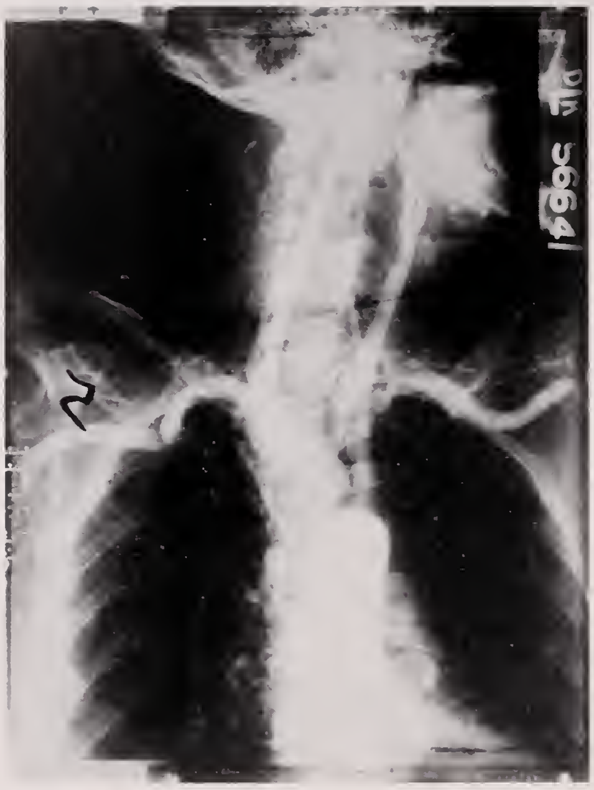

Fig. 6 A 64-year-old woman with transient ischemia followed by a massive stroke with hemiplegia on the right side showing 40% occlusion of the left internal carotid artery.

ever, one wonders whether correction of the left carotid lesion could have prevented her cerebral infarction.

Results

The results of our own patients' experiences indicate that the patients with transient ischemic attacks and without a history of a stroke, whether it is chronic, acute or incipient, are the best candidates for corrective carotid surgery. Out of a total of 55 patients on whom we performed endarterectomies, 37 had only transient ischemic attacks without a history of stroke. This group of patients had no mortality and no morbidity. Fourteen endarterectomies were performed in patients with a history of a chronic stroke. In this group, two died due to causes related to cerebrovascular disease and one died due to an unrelated cause, a massive recurrent myocardial infarction two weeks following the endarterectomy. A small group of four patients with acute or incipient stroke were operated on and one died due to progressive deterioration of his acute stroke. All the surviving patients of all three groups improved following the endarterectomy. In eight patients (approximately 15%), improvement was only partial, requiring treatment with drugs for further control of residual symptoms. In the remaining 85%, the improvement was complete or satisfactory and did not warrant drug therapy.

Discussion

In a busy medical practice, diagnosis and possible corrective surgery for extracranial carotid disease (E.C.D.) is often denied the patient for several reasons. Dizziness, a common symptom of generalized cerebral ischemia, is often attributed to such entities as inner ear trouble or cerebral arteriosclerosis. These unfortunate patients are treated with meclizine hydrochloride-niacin (Antivert), diphenylhydantoin (Dilantin), nicotinic acid preparations and other so-called vasodilators. Another group of patients present with a transient cerebral ischemic attack, the so-called light stroke. These patients usually are advised to take it easy and the event is soon forgotten. Unfortunately, the bruit has become the hallmark of ECD to many physicians, and the absence of a bruit eliminates consideration of the ECD.

The patient referred to a specialist for evaluation for cerebral ischemia in many cases is put through a battery of diagnostic tests that may include electroencephalography, Doppler examination, dermothermography, computer bruit analysis, ophthalmodynamometry and others. These tests do not delineate the pathology, are costly and prolong hospitalization.

Indications for aortography to evaluate peripheral and cardiac disease are now fairly clear. Yet the reluctance to perform cerebral angiograph even today is evidenced by the number of the so-called noninvasive techniques. Some still consider cerebral angiography to be a great risk t the elderly person with arteriosclerosis, and carotid disease may remain undiagnosed.[4] With refinement in technique, cerebral angiography is no done under local anesthesia at a low mortality.[6,] The joint study of extracranial arterial occlusio reported more than 4,000 studies with a mortality rate of .5%.[8] At St. John's Hospital and Leste E. Cox Medical Center, there was no mortality i more than 330 consecutive aortic arch studies. Angiography is the only manner in which lesion may be identified and localized. Without identification and localization, a proper form of therapy cannot be contemplated.

Wood states that more than 50% narrowing o the vascular lumen by plaque formation is neces

A DOUBLE-DUTY DIURETIC

Trademark

DYAZIDE®

Each capsule contains 50 mg. of Dyrenium® (brand of triamterene)
and 25 mg. of hydrochlorothiazide.

GETS THE WATER OUT IN EDEMA

BRINGS DOWN BLOOD PRESSURE IN HYPERTENSION*

SPARES POTASSIUM IN BOTH

Before prescribing, see complete prescribing information in SK&F literature or *PDR.*

*Indications: Edema associated with congestive heart failure, cirrhosis of the liver, the nephrotic syndrome; steroid-induced and idiopathic edema; edema resistant to other diuretic therapy. Also, mild to moderate hypertension.

Contraindications: Pre-existing elevated serum potassium. Hypersensitivity to either component. Continued use in progressive renal or hepatic dysfunction or developing hyperkalemia.

Warnings: **Do not use dietary potassium supplements or potassium salts unless hypokalemia develops or dietary potassium intake is markedly impaired.** Enteric-coated potassium salts may cause small bowel stenosis with or without ulceration. Hyperkalemia (> 5.4 mEq/L) has been reported in 4% of patients under 60 years, in 12% of patients over 60 years, and in less than 8% of patients overall. Rarely, cases have been associated with cardiac irregularities. **Accordingly, check serum potassium during therapy, particularly in patients with suspected or confirmed renal insufficiency (e.g., elderly or diabetics). If hyperkalemia develops, substitute a thiazide alone. If spironolactone is used concomitantly with 'Dyazide', check serum potassium frequently**—both can cause potassium retention and sometimes hyperkalemia. Two deaths have been reported in patients on such combined therapy (in one, recommended dosage was exceeded; in the other, serum electrolytes were not properly monitored). Observe patients on 'Dyazide' regularly for possible blood dyscrasias, liver damage or other idiosyncratic reactions. Blood dyscrasias have been reported in patients receiving Dyrenium (triamterene, SK&F). Rarely, leukopenia, thrombocytopenia, agranulocytosis, and aplastic anemia have been reported with the thiazides. Watch for signs of impending coma in acutely ill cirrhotics. Thiazides are reported to cross the placental barrier and appear in breast milk. This may result in fetal or neonatal hyperbilirubinemia, thrombocytopenia, altered carbohydrate metabolism and possibly other adverse reactions that have occurred in the adult. When used during pregnancy or in women who might bear children, weigh potential benefits against possible hazards to fetus.

Precautions: Do periodic serum electrolyte and BUN determinations. Do periodic hematologic studies in cirrhotics with splenomegaly. Antihypertensive effects may be enhanced in postsympathectomy patients. The following may occur: hyperuricemia and gout, reversible nitrogen retention, decreasing alkali reserve with possible metabolic acidosis, hyperglycemia and glycosuria (diabetic insulin requirements may be altered), digitalis intoxication (in hypokalemia). Use cautiously in surgical patients. Concomitant use with antihypertensive agents may result in an additive hypotensive effect.

Adverse Reactions: Muscle cramps, weakness, dizziness, headache, dry mouth; anaphylaxis; rash, urticaria, photosensitivity, purpura, other dermatological conditions; nausea and vomiting (may indicate electrolyte imbalance), diarrhea, constipation, other gastrointestinal disturbances. Rarely, necrotizing vasculitis, paresthesias, icterus, pancreatitis, and xanthopsia have occurred with thiazides alone.

Supplied: Bottles of 100 capsules.

Actions—Ovulen and Demulen act to prevent ovulation by inhibiting the output of gonadotropins from the pituitary gland. Ovulen and Demulen depress the output of both the follicle-stimulating hormone (FSH) and the luteinizing hormone (LH).

Special note—Oral contraceptives have been marketed in the United States since 1960. Reported pregnancy rates vary from product to product. The effectiveness of the sequential products appears to be somewhat lower than that of the combination products. Both types provide almost completely effective contraception.

An increased risk of thromboembolic disease associated with the use of hormonal contraceptives has now been shown in studies conducted in both Great Britain and the United States. Other risks, such as those of elevated blood pressure, liver disease and reduced tolerance to carbohydrates, have not been quantitated with precision.

Long-term administration of both natural and synthetic estrogens in subprimate animal species in multiples of the human dose increases the frequency of some animal carcinomas. These data cannot be transposed directly to man. The possible carcinogenicity due to the estrogens can be neither affirmed nor refuted at this time. Close clinical surveillance of all women taking oral contraceptives must be continued.

Indication—Ovulen and Demulen are indicated for oral contraception.

Contraindications—Patients with thrombophlebitis, thromboembolic disorders, cerebral apoplexy or a past history of these conditions, markedly impaired liver function, known or suspected carcinoma of the breast, known or suspected estrogen-dependent neoplasia and undiagnosed abnormal genital bleeding.

Warnings—The physician should be alert to the earliest manifestations of thrombotic disorders (thrombophlebitis, cerebrovascular disorders, pulmonary embolism and retinal thrombosis). Should any of these occur or be suspected the drug should be discontinued immediately.

Retrospective studies of morbidity and mortality conducted in Great Britain and studies of morbidity in the United States have shown a statistically significant association between thrombophlebitis, pulmonary embolism, and cerebral thrombosis and embolism and the use of oral contraceptives. There have been three principal studies in Britain[1-3] leading to this conclusion, and one[4] in the United States. The estimate of the relative risk of thromboembolism in the study by Vessey and Doll[3] was about sevenfold, while Sartwell and associates[4] in the United States found a relative risk of 4.4, meaning that the users are several times as likely to undergo thromboembolic disease without evident cause as nonusers. The American study also indicated that the risk did not persist after discontinuation of administration and that it was not enhanced by long-continued administration. The American study was not designed to evaluate a difference between products. However, the study suggested that there might be an increased risk of thromboembolic disease in users of sequential products. This risk cannot be quantitated, and further studies to confirm this finding are desirable.

Discontinue medication pending examination if there is sudden partial or complete loss of vision, or if there is a sudden onset of proptosis, diplopia or migraine. If examination reveals papilledema or retinal vascular lesions medication should be withdrawn.

Since the safety of Ovulen and Demulen in pregnancy has not been demonstrated, it is recommended that for any patient who has missed two consecutive periods pregnancy should be ruled out before continuing the contraceptive regimen. If the patient has not adhered to the prescribed schedule the possibility of pregnancy should be considered at the time of the first missed period.

A small fraction of the hormonal agents in oral contraceptives has been identified in the milk of mothers receiving these drugs. The long-range effect to the nursing infant cannot be determined at this time.

Precautions—The pretreatment and periodic physical examinations should include special reference to the breasts and pelvic organs, including a Papanicolaou smear since estrogens have been known to produce tumors, some of them malignant, in five species of subprimate animals. Endocrine and possibly liver function tests may be affected by treatment with Ovulen or Demulen. Therefore, if such tests are abnormal in a patient taking Ovulen or Demulen, it is recommended that they be repeated after the drug has been withdrawn for two months. Under the influence of progestogen-estrogen preparations preexisting uterine fibromyomas may increase in size. Because these agents may cause some degree of fluid retention, conditions which might be influenced by this factor, such as epilepsy, migraine, asthma, cardiac or renal dysfunction, require careful observation. In breakthrough bleeding, and in all cases of irregular bleeding per vaginam, nonfunctional causes should be borne in mind. In undiagnosed bleeding per vaginam adequate diagnostic measures are indicated. Patients with a history of psychic depression should be carefully observed and the drug discontinued if the depression recurs to a serious degree. Any possible influence of prolonged Ovulen or Demulen therapy on pituitary, ovarian, adrenal, hepatic or uterine function awaits further study. A decrease in glucose tolerance has been observed in a significant percentage of patients on oral contraceptives. The mechanism of this decrease is obscure. For this reason, diabetic patients should be carefully observed while receiving Ovulen or Demulen therapy. The age of the patient constitutes no absolute limiting factor, although treatment with Ovulen or Demulen may mask the onset of the climacteric. The pathologist should be advised of Ovulen or Demulen therapy when relevant specimens are submitted. Susceptible women may experience an increase in blood pressure following administration of contraceptive steroids.

Adverse reactions observed in patients receiving oral contraceptives—A statistically significant association has been demonstrated between use of oral contraceptives and the following serious adverse reactions: thrombophlebitis, pulmonary embolism and cerebral thrombosis.

Although available evidence is suggestive of an association, such a relationship has been neither confirmed nor refuted for the following serious adverse reactions: neuro-ocular lesions, e.g., retinal thrombosis and optic neuritis.

The following adverse reactions are known to occur in patients receiving oral contraceptives: nausea, vomiting, gastrointestinal symptoms (such as abdominal cramps and bloating), breakthrough bleeding, spotting, change in menstrual flow, amenorrhea during and after treatment, edema, chloasma or melasma, breast changes (tenderness, enlargement and secretion), change in weight (increase or decrease), changes in cervical erosion and cervical secretions, suppression of lactation when given immediately post partum, cholestatic jaundice, migraine, rash (allergic), rise in blood pressure in susceptible individuals and mental depression.

Although the following adverse reactions have been reported in users of oral contraceptives, an association has been neither confirmed nor refuted: anovulation post treatment, premenstrual-like syndrome, changes in libido, changes in appetite, cystitis-like syndrome, headache, nervousness, dizziness, fatigue, backache, hirsutism, loss of scalp hair, erythema multiforme, erythema nodosum, hemorrhagic eruption and itching.

The following laboratory results may be altered by the use of oral contraceptives: hepatic function: increased sulfobromophthalein retention and other tests; coagulation tests: increase in prothrombin, Factors VII, VIII, IX and X; thyroid function: increase in PBI and butanol extractable protein bound iodine, and decrease in T^3 uptake values; metyrapone test and pregnanediol determination.

Enovid-E® **Now available in the 21-pill schedule in refillable Compack® and three-cycle Triopak™**

Each tablet contains: norethynodrel 2.5 mg./mestranol 0.1 mg.

Actions—Enovid-E acts to prevent ovulation by inhibiting the output of gonadotropins from the pituitary gland. Enovid-E depresses the output of both the follicle-stimulating hormone (FSH) and the luteinizing hormone (LH).

Indication—Enovid-E is indicated for oral contraception.

The *Special Note, Contraindications, Warnings, Precautions* and *Adverse Reactions* listed above for Ovulen and Demulen are applicable to Enovid-E and should be observed when prescribing Enovid-E.

Enovid-E®
brand of norethynodrel with mestranol

SEARLE Product of **Searle Laboratories**
Division of G. D. Searle & Co.

sary before a significant lesion is produced and that, in the average case, 75% narrowing is present before a stroke occurs.[10] Brice *et al* state that 84% to 90% stenosis must be present to be clinically significant.[11] It would seem more realistic to consider the clinical symptoms in relation to the percent occlusion rather than the percent of narrowing necessary to produce symptoms. On the other hand, Crawford *et al* consider lesions producing 30% narrowing of the vessel lumen as significant, and their patients with such lesions are considered for operations.[12] The ulcerated plaque, which may be the source of thrombi formation and subsequent dislodgement to the distal circulation producing transient attacks or frank infarctions, may be visualized as a plaque producing insignificant narrowing.[5] This is another instance in which clinical symptoms must be kept in mind while evaluating arteriographic findings rather than adhering to a percent occlusion.

Mild intracranial disease is an indication rather than a contraindication to surgical therapy when considering ECD.[13] Relief of proximal stenosis to allow greater flow to distal areas is appreciated in aortic stenosis and aortoiliac disease. Flow characteristics are equally applicable when evaluating ECD. Poiseuille's formula, in essence, states that doubling the diameter increases the flow fourfold.[14] Additional factors, such as improved distensibility of the arterial wall and peripheral vasodilating effect of carotid sympathectomy, may account in part for the flow improvement following removal of nonstenotic lesions.[15] It is intriguing and, also, interesting to speculate the number of strokes that may be prevented in marginal cases, based on the above. On the other hand, 100% morbidity may be anticipated with frank cerebral infarction.

Surgical treatment is the only mode of therapy that may effectively increase total cerebral blood flow.[16] It is generally accepted that anticoagulation therapy should be used only if surgical therapy is contraindicated or cannot be undertaken.[17, 18] Anticoagulation as primary therapy is still used by some, but will most likely have a fate similar to that of long-term anticoagulation for coronary artery disease and peripheral vascular disease.[19]

Age alone is not a contraindication to surgery. Carotid revascularization is preventive surgery and is ideally done before significant neurologic loss has occurred. Patients with multifocal lesions and minimal neurologic deficits may often benefit from revascularization.[20]

While many prefer to utilize general anesthesia, we prefer to perform the entire procedure under local anesthesia. Local anesthesia, while not uncomfortable, allows us to monitor the patient constantly during the procedure. An extraluminal shunt is utilized if neurologic changes occur. The patients are usually discharged on the fifth postoperative day. The mortality in a series of 592 patients undergoing carotid endarterectomy was approximately 1% in those patients with transient cerebral ischemia and there were no deaths in those patients with chronic cerebral ischemia and in those patients with asymptomatic bruits.[13] In another series of 100 consecutive cases of carotid endarterectomy, there were no deaths in patients with transient cerebral ischemia and chronic stroke.[21] Once the stenotic or partially occluding lesion is removed, long-term studies indicate that the vessel remains patent for years and restenosis is the exception.[16, 22]

The stroke has assumed national prominence today as a leading killer and, also, a source of government expenditure. Basic diagnosis and elimination of nonlocalizing diagnostic tests can do much to simplify the stroke problem and prevent unnecessary deaths. Angiography should unhesitatingly be offered to the patients with the following:

A) Transient cerebral ischemia.
    1. Focal attacks characterized by occular, speech and motor disturbances.
    2. Generalized ischemia characterized by dizziness, blackout spells, headaches and other nonlocalizing symptoms.
B) Chronic cerebral ischemia. Characterized by memory loss, impaired mentation or overt motor and mental deterioration.
C) Asymptomatic bruit. Experience has shown that 90% have 50% or greater occlusion, and 65% will have transient attacks or a frank stroke within two years.[13]

This article is not intended to precipitate an all-out attack on carotid arteries. Rather, it is hoped that the tendency to utilize various so-called vasodilators and other drugs will be done only after arteriography has ruled out ECD. It also is an attempt to bring angiography and possible corrective surgery to those patients who in the near future may succumb to the morbidity and mortality of a stroke.

SUMMARY

Symptoms of transient cerebral ischemia or chronic cerebral ischemia with or without a bruit justifies cerebral angiography. The sur-

geon must consider symptoms when evaluating narrowing of the internal carotid artery as well as keeping flow characteristics in mind to properly evaluate the arteriogram. Unless contraindicated, surgical therapy is the only effective means of increasing the total cerebral blood flow.

Loxoscelism

(Continued from page 712)

Missouri University professor of entomology, Curtis Wingo.[5] It is possible for such experts to identify spiders from only fragments, which occasionally may assist in accurate diagnosis. Patients are properly more concerned with preventing the bites. Routine use of insecticides does not affect the population of Loxosceles when they are established in the home, in my opinion. Loxosceles is found in almost all older homes, especially when they are warm and moist. Air-conditioning may discourage spiders by reducing humidity. The best device is for humans not to enter suddenly into "spider country" and to carefully shake out or air materials taken from storage. The recluse spider will retreat from well-lighted, noisy, lived-in areas.

Nocturnal hunting by Loxosceles brings this gentle arachnid unintentionally into human contact, often by being trapped in bedding or bathrobes. Most bites occur at night. As of now, there is no known way to prevent such chance encounters. Several of our patients have retreated to dry, new, air-conditioned housing where brown recluse spiders haven't been found as yet. Other species of poisonous Loxosceles have been identified in Arizona and California, and bites are reported from New York. However, North American necrotic arachnidism as a medical problem is limited to the southern half of the Missouri-Ohio-Mississippi River basin. Other important studies of Loxosceles and loxoscelism are ongoing at Oklahoma State University and at the University of Arkansas Medical School. Considering recent progress, we may forecast important medical progress in the next three years, probably including immunization, a better means for recognizing severe systemic loxoscelism earlier and a better specific mode of early treatment.

Communication With Patients: A Parameter in Evaluating Nurse Practitioners

A Study

RECENT DEVELOPMENTS in the delivery of pediatric ambulatory health care have included utilization of specially trained nurses in primary patient care.[1, 2] Various studies concerning these pediatric nurse associates or pediatric nurse practitioners (PNP) have measured such parameters as their acceptance by the physician (M.D.) and the consumer[3] and their academic knowledge and expertise at physical assessment,[4] as well as the economic advantage in employing them.[5]

Another important parameter in health care delivery is the effectiveness of the communication between the health professional and the consumer.[6] Communication is important not only because of its psychological significance, but because it influences compliance with the prescribed course of therapy.

This report describes an exploration of the adequacy of PNP-consumer communication in a pediatric ambulatory clinic.

METHOD

Parents of children in the study filled out a questionnaire which requested demographic information as well as an account of the health professional-consumer interaction. This interaction was measured by questions covering (1) identification of the examiner; (2) satisfaction of the parent; (3) understanding of the diagnosis; (4) identification and importance of a return appointment; and (5) understanding the treatment and instructions given. This information was completed immediately following the examination.

Questionnaires were completed by the parents of 113 children representing 106 families attending an emergency room follow-up clinic that is staffed by three PNP's and a second-year pediatric resident, a woman, for the course of this study. Completed questionnaires were compared to the written medical records of the visit as to identity of the health professional, diagnosis, instructions, treatment and return appointment. Questions pertaining to diagnosis, instructions and treatment which required a write-in answer were graded on a scale of 0 (no agreement) to 3 (full agreement). All comparisons were made by the senior author (SJR).

RESULTS

Both groups of patients—the group treated by the PNPs and the group treated by the physician (M.D.)—were comparable in age of patients, maternal age and size of family. Furthermore, regularity of medical care also was comparable in both groups of patients.

Table 1 shows the results of health professional-consumer interaction. As it can be seen, M.D.s were correctly identified by 83% (39/47) of the consumers and PNPs by 74% (49/66). This difference was not statistically significant at $p > 0.05$. Seventy-five per cent (35/47) of the M.D.-treated group and 79% (52/66) of the PNP-treated group were satisfied with the care given. Ninety-four per cent (44/47, 62/66) of both groups felt that they understood what the examiner said was wrong with their child. Eighty-seven percent (41/47) of the M.D. group and 95% (63/66) of the PNP group said that all their questions were answered. These results in-

TABLE 1

COMMUNICATION: ADEQUATE SATISFACTION AND/OR KNOWLEDGE

	MD (N=47)		*PNP (N=66)*		*P*
Identity	39	83	49	74	>.05
Satisfaction					
General	75	75	52	79	>.05
Understanding	44	94	62	94	>.05
Questions answered	41	87	63	95	>.05
Return appointment	37	79	58	88	>.05
Diagnosis	35	74	55	83	>.05
Medications	37	79	55	83	>.05
Instructions	45	96	56	85	>.05

Communication with patients is a significant parameter in the care of patients and should be used in assessing the effectiveness of new health professional such as pediatric nurse practitioners. In this study, two comparable groups were examined—one by the pediatric nurse practitioners and the other by physicians. The authors conclude that pediatric nurse practitioners are able to communicate with patients on a level comparable to that of physicians. This paper was originally presented at the 12th Annual Meeting of the Ambulatory Pediatric Association. Dr. Richards is a Fellow in Community Pediatrics and Dr. deCastro is Associate Professor of Pediatrics & Community Medicine, St. Louis University School of Medicine.

dicate no significant difference at $p > 0.05$ in the satisfaction expressed by the two groups.

Seventy-nine per cent (37/47) of the physician group and 88% (58/66) of the nurse practitioner group correctly identified the return appointment. (Statistically insignificant at $p > 0.05$, 72% of both groups felt that the return appointment was important.)

On a scale of 0-3, 74% (35/47) of the physician group and 83% (55/66) of the nurse practitioner group showed a good understanding of the diagnosis (2-3 on the scale). Similar results were found in regard to the medications and instructions given. Seventy-nine per cent (37/47) of the physician group and 83% (55/66) of the nurse practitioner group comprehended the type of medications prescribed and how to take them. Ninety-six per cent (45/47) of the physician group and 85% (56/66) of the nurse practitioner group indicated that they understood instructions given. The above results all show no significant difference at $p > 0.05$.

Comments

Numerous recent studies have measured not only the knowledge and efficiency of pediatric nurse practitioners[3, 4] but, also, the economic advantages of employing them.[5] However, communication between these new health professionals and the patient has not been properly assessed.

Communication between health professionals and the consumer is a major factor in well-baby care and general health supervision of children.[6] Communication is one of the primary proposed roles for pediatric nurse practitioners. The present study gives evidence that pediatric nurse practitioners are able to communicate with patients on a comparable level with physicians. Thus, they can be effective assistants to the busy physician.

The National Center for Disease Control says cases of syphilis, which have risen for four consecutive years, may be leveling off. The CDC said 2,076 cases of primary and secondary syphilis were reported during June, or 0.3% fewer than in the same month a year ago. In the first three months of 1973, syphilis cases increased by 4.7%, but in the April-June period, the rise was only 0.5%.

Papillary Muscle Rupture Due to External Cardiac Massage

Case Report

The authors report a case of right ventricular papillary muscle rupture. According to the literature, the most common cause of rupture in 11 reported cases was found to be trauma (seven cases). This case represents iatrogenic, traumatic rupture of a right ventricular papillary muscle during external cardiac massage. No evidence of recent myocardial infarction or endocarditis was found. The pathologic anatomy of the patient's heart is suggested as a contributing factor to the rupture. Dr. Meyers is a Resident and Dr. Rogers is Assistant Professor, Department of Pathology, University of Missouri-Columbia School of Medicine.

External cardiac massage is a widely used procedure in the therapy of cardiac arrest. However, a variety of complications secondary to cardiac massage have been reported.[1-3] Our review of the literature failed to reveal any reports of papillary muscle rupture due to cardiac massage. The following case report describes rupture of a right ventricular papillary muscle due to cardiac massage.

Case Report

An 84-year-old man was admitted to the University of Missouri-Columbia Medical Center on Aug. 11, 1972 with a one-week history of confusion progressing to obtundation, shortness of breath and a cough productive of yellow sputum. The family related that the patient had suffered a "heart attack" in 1947. The patient took a daily "water pill" because of swelling of his feet.

Initial physical examination revealed a blood pressure of 96/72, labored respirations of 40/minute and an irregular pulse rate of approximately 120/minute. The patient appeared dehydrated, but the estimated central venous pressure was 16 cm of water with marked jugular venous distention. There was positive hepatojugular reflux. Scattered rhonchi were present throughout the lungs. The heart sounds were distant with no murmurs or gallops being heard. The liver was palpated to 8 cm below the right costal margin. The patient was semicomatose, but no localizing neurologic signs were present.

The white blood cell count was 17,000/cu mm with 97% neutrophils. The hemoglobin level was 16.7 gm/100 ml. The serum chloride value was 86 mEq/liter; serum potassium, 4.4 mEq/liter; and serum sodium, 127 mEq/liter. The blood urea nitrogen (BUN) was 84 mg/100 ml. Arterial blood gases with the patient breathing room air showed a pH of 7.5, a PO_2 of 21 and a PCO_2 of 32. PA and lateral chest x-ray showed cardiomegaly, pleural effusions and discoid atelectasis on the right. Pericardial calcification and effusion were thought to be present as well. An electrocardiogram was interpreted as showing atrial fibrillation, low voltage in limb leads, premature ventricular contractions and a probable, old, inferior myocardial infarction.

The above laboratory studies were obtained immediately after admission, and the patient was taken to the Radiology Department for the x-rays mentioned above. Shortly after the completion of the films and while being moved off the radiology examination table, he experienced a cardiorespiratory arrest. Resuscitation was initiated and was continued for approximately 45 minutes until spontaneous pulse and respiratory efforts were obtained. External cardiac massage was carried out during the resuscitation as well as the placement of an endotracheal tube for assisted ventilation. Isoproterenol was given intravenously for blood pressure maintenance. While being transported from the Radiology Department to the Medical Intensive Care Unit, he suffered a second cardiopulmonary arrest. An attempt was made to tap his pericardial space because of the possibility of pericardial effusion with cardiac tamponade. No fluid was obtained. The patient's pupils were dilated and fixed at that point, and no further resuscitative attempts were deemed warranted. He was pronounced dead four and one-half hours after admission.

Autopsy Findings

About 300 cc of clear, straw-colored fluid was present in each pleural cavity. Three recent rib fractures (the third rib bilaterally and the fourth rib on the right) with local pleural hemorrhage were present. Histologic examination of the lungs revealed multiple, recent bone marrow emboli.

The heart was massively enlarged and weighed 1,000 gm. There was biventricular hypertrophy and dilatation. A 6 cm x 10 cm calcified aneurysm was present in the anterolateral wall of the left ventricle (Fig. 1). The left anterior descending coronary artery was occluded by a well-organized and recanalized thrombus. The left circumflex and right coronary arteries were approximately 80% narrowed by atherosclerotic plaques. No recent thrombi were present.

When the right atrium was opened, the body of a papillary muscle could be seen in the right ventricle in the orifice of the tricuspid valve. The chorda of the muscle was twisted around the chordae of the posterior valve leaflet. Upon opening the right ventricle, the ruptured papillary muscle was found to have arisen from the posteroseptal wall (Fig. 2). The tricuspid valve circumference was 15 cm. The left and right ventricular walls averaged 17 mm and 8 mm in thickness, respectively.

Sections taken from the ventricular wall at the point of rupture, from representative portions of the remainder of the heart and from the avulsed papillary muscle were stained with H&E, PTAH and Masson's Trichrome for histologic study. Histologically, the surfaces of rupture were coated with a recently formed fibrin cap. Multiple sections from the right and left ventricles failed to reveal any evidence of recent myocardial infarction. Also, no evidence of infarction was present on step sections of the ruptured papillary muscle. No foci of endocarditis were present.

Discussion

Papillary muscle rupture is becoming more frequently recognized in the recent literature with more than 125 cases now having been reported.[4-6] The great majority of these cases have occurred in the left ventricle and were generally caused by myocardial infarction. Right ventricular papillary muscle rupture is distinctly more unusual. We reviewed the literature and found 11 cases of isolated right ventricular papillary muscle rupture.[7-15] Seven of these cases were due to trauma.[7, 8, 10, 11, 13-15] The victims of traumatic rupture tended to be young adults, and the trauma was usually of a severe nature such as a head-on automobile collision. Three cases have been reported due to endocarditis.[9] Only one report of a case due to myocardial infarct has been published.[12] Our case represents the 12th case of right ventricular papillary muscle rupture to be reported. However, to our knowledge, it is the first case in which rupture following external cardiac massage has been identified in either of the ventricles. This case would qualify as a traumatic rupture which is the most common cause of RV papillary muscle rupture (seven of the 11 previously reported cases).

A spectrum of complications due to external cardiac massage has been described.[1-3, 16] Injuries include rib fracture, hepatic laceration, ventricular rupture, bone marrow emboli and others.

Treatment of Acute Leukemia: Important Role of the Central Nervous System

Case Reports

Recent clinical studies involving the sustained administration of multiple antileukemic agents have demonstrated an increasing leukemia-free survival duration in children and young adults.[1–3] Investigators have even stated that prolonged disease-free survival may lead to a possible cure in a significant number of patients.[4, 5] Upwards of 90% of young patients with acute lymphocytic leukemia will achieve an initial hematological remission with combinations of agents such as vincristine and prednisone. However, the problem of the best way to maintain the complete remission remains.[6] It is now clear that many patients will remain in a hematological remission only to relapse or have persistent leukemic infiltrates in extramedullary sites.[7–9] With regard to involvement of extramedullary organs by disease, relapse in the central nervous system (CNS) has become the most important in children.[10] Clinical and laboratory studies indicate that leukemic cells may migrate from the blood into the CNS and vice versa, but that antileukemic agents do not cross from the blood into the CNS to any significant degree.[11–14]

From the above data, it would appear that treatment of childhood leukemia must contain therapy directed at the CNS as well as the bone marrow. Leukemic involvement of the CNS is not always a delayed manifestation and may be present at the initial diagnosis in certain patients. This paper is divided arbitrarily into discussions of early and delayed CNS complications of leukemia, but it will become obvious that these complications can occur at any time in the patient's course. Case studies are used to illustrate the diagnosis and therapy of leukemic involvement of the CNS with particular attention being paid to current therapy directed at the prevention of CNS relapse in children with acute lymphocytic leukemia.

CNS Leukemia—Early

In an analysis of 334 cases of leukemia in 1935, Schwab and Weiss[15] called attention to the fact that 20% of the patients had neurological manifestations excluding retinal lesions, such as hemorrhage. The most frequent clinical sign was cranial nerve palsies. In about three fourths of these patients, the spinal fluid revealed an increased blood cell count, increased protein or increased pressure. In a later paper, Wells and Silver[16] emphasized intracranial hemorrhage as the most frequent neurological complication in their cases of children and adults with acute leukemia. The clinical symptoms observed were seizure, fainting, vomiting, paresis, headache and change in the mental state. Subsequently, Shaw *et al*[17] called attention to the syndrome of meningeal leukemia caused by leukemic infiltration of the arachnoid and with signs and symptoms resulting from increased intracranial pressure. This syndrome occurs most often in the child under therapy and shall be discussed in the following section on delayed involvement of the CNS by leukemia.

In 1959, Fritz *et al*[18] documented the complication of intracranial hemorrhage occurring in patients with acute leukemia who have rapidly rising numbers of leukemic cells in the peripheral blood. Of 100 consecutive patients admitted to the National Cancer Institute in the years 1954-1957, 81 died from a variety of causes. Of these 81, 13 had peripheral white blood cell counts greater than 300,000/cu mm. Importantly, nine (69%) of the 13 patients with a count greater than 300,000/cu mm died of an intracranial hemorrhage within a few days of the observation of a high white cell count. Significantly, only nine (13%) of 68 patients with a peripheral cell count less than 300,000/cu mm died of a hemorrhage in the CNS. Most of the patients with the higher white cell counts had greater than 90% circulating leukemic cells. It is of interest that these patients had significantly higher platelet counts than those patients with peripheral cell counts less than 300,000/cu mm.

The authors present case studies to illustrate the diagnosis and therapy of leukemic involvement of the central nervous system. Particular attention is paid to current therapy directed at the prevention of central nervous system relaps in children with acute lymphocytic leukemia. Dr. Samaha is Assistant Professor of Medicine and Dr. Hakami is Associate Professor of Pediatrics, Division of Hematology-Oncology, University of Missouri Medical Center.

There was no correlation as to type of leukemia, age or sex, but these authors remarked that patients with acute myelogenous leukemia tended to have a more rapid rise in peripheral white cell counts and bled earlier than patients with acute lymphocytic leukemia.

In a subsequent review of a larger group of patients from the National Cancer Institute, Moore *et al*[19] analyzed the relationship of peripheral white cell count to the type of fatal intracranial hemorrhage as outlined in Table 1. Again, the patients with the highest white cell counts had significantly higher platelet counts than those patients with the lowest peripheral cell counts. The patients with the lowest white blood cell counts had uniformly severe thrombocytopenia and died primarily of subarachnoid hemorrhage which, the authors remarked, was an expected complication of prolonged thrombocytopenia. As the white cell count increased above 100,000/cu mm, these patients manifested a 12-fold increase in the number of fatal intracerebral hemorrhage.

Indeed, Freireich *et al*[20] described two distinctive types of histological lesions occurring in those patients with high white cell counts and intracerebral hemorrhage. One lesion was the leukemic nodule consisting of masses of leukemic cells invariably surrounded by fresh hemorrhage; and the second microscopic lesion, termed leukostasis, consisted of dilated, thin-walled intracerebral vessels engorged with leukemic cells. The following sequence of events was suggested: the leukemic cells are locally collected in intracerebral vessels leading to dilatation and eventual destruction of the vessel wall with subsequent nodule formation and bleeding. Phair *et al*[21] suggested that the high number of circulating leukemic cells increased the blood viscosity which, in the presence of hypoxia, cell breakdown products and thrombocytopenia, led to the vascular dilatation and rupture. Most recently, McKee and Collins[22] reported the frequent occurrence of leukostasis in acute leukemia patients who died with white cell counts over 200,000/cu mm. It seems likely that leukostasis in the presence of other factors which cause weakening of the vascular wall results in vessel rupture and hemorrhage.

TABLE 1

PERIPHERAL WBC COUNT AND FATAL CNS HEMORRHAGE[*]

WBC (cu mm)	*Patients*	*Intracerebral Hemorrhage (Patients)*	*Subarachnoid Hemorrhage (Patients)*
Less than 50,000	89	3 (3.4%)	9 (10.1%)
50-100,000	6	2 (33.3%)	0
100-200,000	8	2 (25.0%)	0
200-300,000	5	2 (40.0%)	0
More than 300,000	7	5 (71.4%)	0

[*] Data from Moore *et al.*

Whatever the mechanism, it is clear that patients with acute leukemia and high numbers of circulating leukemic cells are at significant risk of intracranial hemorrhage. The following case studies will serve to illustrate the approach to these patients.

Case Reports

Case # 1. The patient was a 29-year-old white man with a three-week history of a persistent upper respiratory tract infection. He developed ecchymoses and bleeding gums five days prior to admission to the University of Missouri Medical Center.

On admission, he was febrile and in distress, complaining of an increasingly severe headache. On physican examination, he had hemorrhages in the fundi, diffuse lymphadenopathy and an enlarged liver and spleen. His neurological examination was within normal limits.

Laboratory data revealed a white blood cell count of 270,000/cu mm with 93% myeloblasts, a hemoglobin level of 14.3 gm/100 ml; a hematocrit reading, 42%; and a platelet count of 46,000/cu mm. His serum chemical determinations and routine clotting studies were normal. His bone marrow was diffusely replaced by myeloblasts.

During his first three hours after admission, he complained of an intense headache, but he revealed no focal neurological signs. A nontraumatic lumbar puncture showed an increased pressure of 330 mm. Spinal fluid studies revealed normal protein and glucose and a normal white cell count of 2 polys/cu mm. Initially, he received allopurinol, 4 gm of oral hydroxyurea to reduce the white cell count and platelet infusions to improve the thrombocytopenia.

Because of the severity of the headache, plans were made to start cranial irradiation. About six hours after admission, however, the patient became obtundant with signs of a cerebrovascular hemorrhage on the right side. About eight hours after admission, his white cell count had fallen to 154,000/cu mm and his platelet count increased to 75,000/cu mm as a result of initial transfusion therapy. During the following 24 hours, he developed signs of a massive right cerebral hemorrhage and died despite intensive supportive therapy.

At autopsy, the brain contained a large right intracerebral hemorrhage and scattered foci of leukemic cell masses surrounded by hemorrhage.

Case # 2. An 18-year-old white woman was referred to the University of Missouri Medical Center with a four-week history of easy bruising and malaise. Her other symptoms consisted of occasional nausea and intermittent headaches. On physical examination, she had a temperature of 100 F and a pulse rate of 128/min. Her positive findings consisted of small hemorrhages in the fundi, cervical adenopathy and an enlarged spleen. The neurological examination was entirely negative.

Laboratory data revealed a peripheral white blood cell count of 472,000/cu mm with 82% blast cells. The hemoglobin value was 5.5 gm/100 ml, hematocrit reading was 17% and platelet count was 80,000/cu mm. Her serum chemistry values were unremarkable, including a uric acid value of 6.8 mg/100 ml. The bone marrow was diffusely infiltrated with abnormal cells and felt to be consistent with acute lymphocytic leukemia.

She was started on a regimen of high doses of allopurinol to prevent uric acid nephropathy and was given 1 gm of cyclophosphamide intravenously to rapidly reduce the number of circulating leukemic cells. Two days after cyclophosphamide administration, her white blood cell count had fallen to 154,000/cu mm and the platelet count was 42,000/cu mm. She was started on induction therapy with weekly intravenous doses of vincristine and daily doses of prednisone. During the first week, she also had received transfusions of packed red blood cells and platelets. After four courses of vincristine and prednisone therapy, she entered a complete clinical remission.

Following successful induction therapy, the patient received maintenance therapy consisting of daily oral administration of 6-mercaptopurine, weekly oral dose of methotrexate and monthly vincristine and prednisone courses. At the end of the fourth month of maintenance therapy, the patient received "prophylactic" intrathecal methotrexate administration. She had no neurological signs or symptoms and the spinal fluid examination was negative. At present, the patient is still in a complete clinical remission 18 months after induction therapy and has just received a second course of "prophylactic" CNS therapy consisting of irradiation to the skull.

COMMENT

Both of the above patients had strikingly high peripheral leukemic cell counts which placed them at significant risk of intracerebral hemorrhage. Patient # 1, with acute myelocytic leukemia (AML), had a much more rapid progression of symptoms before admission to the hospital than Patient # 2 with acute lymphocytic leukemia (ALL). The rapid progression of disease in patients with AML as opposed to ALL was commented on earlier. The CNS involvement may be insidious as demonstrated in Patient # 1 with severe headaches but no initial neurological findings except for a raised pressure on lumbar puncture. Patient # 2 had intermittent headaches with negative clinical findings, but a lumbar puncture was not done. In both cases, therapy was directed at rapidly reducing the white cell count and raising the platelet count. At the time Patient # 1 developed signs of a cerebrovascular bleed, his clotting studies were normal and his platelet count was 75,000/cu mm, which is above the usual level for bleeding in patients with acute leukemia.[23] These latter findings are consistent with the proposed central role of the increased number of circulating leukemic cells in causing intracerebral hemorrhage. Patient # 2 had an uneventful course following aggressive therapy and went on to enter a complete clinical remission. The important role of "prophylactic" CNS therapy as illustrated in Case # 2 will be discussed in more detail in the next section.

Obviously, we cannot tell if acute reduction of the peripheral leukemic cell masses by drugs prevented intracerebral hemorrhage in Patient # 2 and we are not aware of any prospective studies that speak directly to this issue. However, from the available clinical data, there is no question that patients with acute leukemia and elevated peripheral cell counts are at significant risk of intracerebral hemorrhage. Early referral of patients with acute leukemia to institutions that are prepared to direct therapy not only at the peripheral blood and marrow but, also, at the CNS if necessary, is most desirable.

CNS LEUKEMIA—DELAYED

The complication of intracranial hemorrhage as a result of high levels of circulating leukemic cells can occur at any time in the patient's course. It is more likely to occur at the time of initial diagnosis since the patient under therapy is followed with regular peripheral cell counts and, therefore, a rise in circulating leukemic cells is more apt to be detected early.

As effective drug therapy for acute leukemia became available, physicians began to recognize a clinical syndrome resulting from leukemic infiltration of the meninges.[17] Examination of the CNS in these patients reveals leukemic infiltration of the arachnoid with perivascular extension into deeper structures but without evidence of significant hemorrhage.[19, 24] The syndrome of meningeal leukemia is clinically recognized by nausea and vomiting, headache, lethargy, irritability, convulsions, papilledema and cranial nerve palsies. In young children, widening of skull suture lines may be present. Although these signs and symptoms alert the physician to the possible presence of CNS leukemia, some children will have no obvious clinical manifestations.[25] The most reliable spinal fluid findings are an increased cell count and pressure in the absence of positive bacteriological cultures and gross blood.[25] In the clinicopathological studies of Nies *et al*,[26] it was shown that routine examination of the spinal fluid is not sufficiently sensitive in making the diagnosis of meningeal leukemia. Later, Skeel *et al*[27] described a rapid technique for detecting small numbers of abnormal cells in spinal fluid. They diagnosed meningeal leukemia if the fluid contained 5 or more cells per cu mm and if abnormal cells could be identified. All of the above authors have commented that cytological examination of spinal fluid cells is difficult and is best done by experienced observers.

With subsequent studies, it became obvious that the increasing incidence of delayed central nervous system leukemia in children and adults was related to longer survival and better diagnostic techniques.[10, 28, 29] Of importance, the majority of children who manifested meningeal leukemia were in a hematological remission at the time CNS disease was detected.[10, 28] Further, in one study in which 47 children had routine spinal fluid examinations at the time of diagnosis irrespective of clinical or laboratory findings, 8.5% (four patients) had CNS infiltration by spinal fluid cytology but no clinical signs or symptoms.[30] For each month of survival, the chance of a child developing meningeal leukemia increases at a steady rate of between 2% to 3% per month.[10, 28] Although the issue is not definitely settled, it would appear that the development of meningeal leukemia adversely effects the duration of survival.[10, 17, 28] This latter question should be resolved in the current ongoing studies which, at this time, argue strongly for prophylactic antileukemic therapy directed at the CNS.[4]

We already have remarked that leukemic cells can probably traverse in and out of the CNS while antileukemic drugs do not significantly cross the blood-brain barrier. Earlier studies proved that the instillation of intrathecal methotrexate was a safe and reliable means of treating meningeal leukemia.[31, 32] A few reports of serious adverse reactions to the drug have been traced to preservatives, such as methylhydroxybenzoate and benzyl alcohol, used in the diluent solution.[33] Currently, we dilute the drug in sterile distilled water, which has proved to be a safe diluent. Intrathecal Arabinosyl cytosine has proven effective and has been used in recurrent meningeal leukemia previously treated with intrathecal methotrexate and cranial irradiation.[34] Parenteral and oral administration of dexamethasone has been useful in relieving the acute symptoms of meningeal leukemia, presumably due to reduction of cerebral edema, but it does not eradicate leukemic cells in the cerebrospinal fluid.[35] Lumbar puncture with removal of spinal fluid also may improve symptoms, but instillation of antileukemic drugs is necessary for consistent and persistent relief.[36] Irradiation to the cerebrospinal axis is effective therapy for meningeal leukemia and the combination of irradiation and intrathecal methotrexate may increase the response rate.[37, 38] Of interest, patients who develop systemic resistance of their leukemia to orally administered methotrexate may still respond to intrathecal methotrexate therapy of their CNS leukemia.[36] Sullivan *et al*[37] have presented data which suggest that, after initial therapy of meningeal leukemia, continued regular instillation of intrathecal methotrexate prolongs the duration of the CNS remission.

The introduction of "prophylactic" therapy directed at the CNS was a result of the observation that a high percentage of children were developing meningeal leukemia while in clinical remission and the proposition that leukemic cells may "hide out" in the CNS safe from parenteral therapy only to later reinfiltrate the marrow causing a clinical relapse. Prevention of CNS leukemia also implies control of the visceral and marrow disease since patients who do relapse in the blood are more likely to relapse in the CNS.[37] With the onset of prolonged complete clinical remissions as a result of sustained multiple drug therapy, the issue of CNS relapse became increasingly important, especially since the possibility existed that a number of children might be cured of their disease.[3] The evidence is now clear in children with acute lymphocytic leukemia that treatment of the CNS by irradiation or intrathecal methotrexate or both during the early initial remission period will delay or prevent the occurrence of meningeal leukemia.[39-42] The recent clinical data of Aur *et al*[43] speaks directly to the issue of "prophylactic" CNS therapy and their results are summarized below. Of 110 patients entered into the study, 104 (94%) achieved an initial hematological remission and went on to receive maintenance therapy. After four weeks of complete remission, 94 patients were eligible for randomization to receive 2,400 rads of cobalt-60 craniospinal irradiation and continued therapy or no irradiation and continued therapy. Of the ten who were not randomized, seven had earlier relapsed with CNS leukemia. These investigators reported that "CNS leukemia terminated complete remission in two of 45 children (4.4%) who received 'prophylactic' irradiation and in 27 of 49 (55%) who did not receive irradiation." Hematologic relapse preceded CNS relapse in four of 49 not irradiated and ended remission in seven of 45 who were irradiated. Therefore, 34 of 45 who received "prophylactic" irradiation have remained in complete remission while only 16 of 49 of the non-CNS-irradiated group were still in a complete remission (Table 2).

These authors also found that once CNS leukemia became manifest, the 2,400 rads craniospinal irradiation was not sufficient to prevent further recurrences. The long-term results of this study will be most important and the data thus far suggest that early craniospinal irradiation of children in complete remission from acute lymphocytic leukemia helps to prolong the duration of survival free of disease.[4]

TABLE 2

"PROPHYLACTIC" CNS THERAPY IN ACUTE LEUKEMIA*

	Craniospinal Irradiation	*No Irradiation*
Number of patients	45	49
CNS Leukemia end remission	2	27
Hematologic relapse end remission	7	4
Remain in complete remission	34	16
Median duration of survival up to July, 1972	17 + months	19 + months

* Data from Aur *et al.*

The following selected cases serve to illustrate the recognition and management of meningeal involvement in children with acute lymphocytic leukemia.

CASE REPORTS

Case # 3. A patient was referred to the University of Missouri Medical Center at the age of 7½ years with an illness characterized by intermittent fever, progressive pallor and easy bruising. She had peripheral blood pancytopenia; examination of the marrow aspirate showed uniform infiltration with lymphoblasts. Following four weeks of chemotherapy with vincristine and prednisone, all of her clinical and hematological abnormalities returned to normal. Her remission has been maintained with biweekly oral doses of methotrexate combined with monthly reinforcement therapy with vincristine and one week of oral doses of prednisone. Six months after therapy was begun, she developed headaches, vomiting and a stiff neck. On examination, she had papilledema. Her spinal fluid examination showed 3,200 cu mm abnormal cells and normal protein and sugar. Peripheral blood and bone marrow examinations were within normal limits. With intrathecal injections of methotrexate at a dose of 12 mg per square meter given every second day, all of her symptoms subsided, and her spinal fluid became normal after six doses. In an attempt to prevent further recurrences of meningeal leukemia, she is now receiving monthly intrathecal injections of methotrexate.

Case # 4. This patient had the diagnosis of acute lymphocytic leukemia made at the age of three years. A successful clinical remission was induced with a combination of vincristine and prednisone administered over a period of four weeks. The patient was then maintained in remission with daily 6-mercaptopurine doses. Fifteen months later, he developed relapse of his leukemia. At this time, he was found to have papilledema but no symptoms referable to the CNS. His spinal fluid contained abnormal mononuclear cells in large number, elevated protein and normal sugar. A second remission was achieved with the administration of vincristine and prednisone. Papilledema and spinal fluid changes returned to normal after four intrathecal injections of methotrexate at a dose of 12 mg per square meter. On a regimen of monthly intrathecal injections of methotrexate, he remained asymptomatic for 16 months. However, two months after discontinuation of this regimen, he had another episode of meningeal leukemia which was successfully controlled with four intrathecal injections of methotrexate. With resumption of the monthly prophylactic regimen, he has remained asymptomatic.

Case # 5. Thirteen months after the diagnosis of acute lymphocytic leukemia and while in hematological remission with a maintenance regimen of daily oral doses of 6-mercaptopurine, this 3-year-old boy developed vomiting but had no other evidence of increased intracranial pressure. His spinal fluid contained 960 abnormal mononuclear cells per cubic millimeter, but protein and sugar content were normal. With four intrathecal injections of methotrexate over a period of a week, his symptoms subsided and spinal fluid abnormalities became normal. With monthly intrathecal injections of methotrexate for six months, he remained asymptomatic, but two months after discontinuation of this regimen, he developed another episode of meningeal leukemia manifested by headache, vomiting, papilledema and large numbers of leukemic cells in the spinal fluid. This episode was treated again with four intrathecal injections of methotrexate. With resumption of the monthly regimen, he remained asymptomatic.

COMMENT

When all signs and symptoms of increased intracranial pressure are present, as in Case # 3, meningeal leukemia is easily recognized. Not too infrequently, however, meningeal leukemia in its early stage may be associated with minimal signs and symptoms as was seen in Cases # 4 and # 5. Meningeal involvement should be suspected, and examination of CSF fluid must be made in all patients with acute leukemia with minimal evidence for increased intracranial pressure. The identification of small numbers of the abnormal mononuclear cells in spinal fluid can be made by centrifugation of the fluids, resuspension of the cell pellet in plasma and Wright's staining of the smear made from the pellet. Alternatively, spinal fluid can be passed through Millipore filters and the retained cells are then stained for morphological examination.

The intrathecal injection of methotrexate is effective in rapid control of meningeal involvement of acute leukemia. It is administered at a dose of 12 mg per square meter of body surface at two-to-three day intervals, until there are less than 5 cells per cu mm in the CSF fluid. Failure of response to intrathecal methotrexate is thought to be most likely due to involvement of deeper structures of the brain which are amenable only to radiotherapy. As it was cited earlier, continuation of intrathecal administration of methotrexate every four to six weeks after the first episodes is likely to prevent further recurrences. In Cases # 4 and # 5, cessation of maintenance therapy was soon followed by recurrence of meningeal leukemia.

At the present time, optimum treatment of acute lymphocytic leukemia of childhood involves the sustained use of multiple agent chemotherapy combined with "prophylactic" treatment of the central nervous system early in remission.[44, 45] This long-term and intensive management can be carried out effectively through collaboration of all physicians in the community and centers dealing with malignancies of childhood.

The University of Missouri is a member of a multi-institutional, international cooperative group by which systematic studies directed at chemotherapeutic control of acute leukemia are being conducted. The results of these studies and those of other cooperative groups will be of great interest toward the goal of cure for acute lymphocytic leukemia of childhood.

Papillary Muscle Rupture

(Continued from page 722)

Our case represents several of the more common findings (bone marrow emboli and rib fractures) as well as papillary muscle rupture. The abnormal configuration of the heart due to the large calcified aneurysm would potentiate the mechanical stresses of cardiac massage and, perhaps, contribute to the rupture. As mentioned above, the right ventricle was dilated and the tricuspid valve circumference was 15 cm. The compressive force of external massage at the moment of maximum right ventricular filling might rupture an already elongated papillary muscle.

Your Help Is Needed! Send It Today!

MISSOURI STATE MEDICAL FOUNDATION

113 Madison
Jefferson City, Missouri 65101

Dear Doctor:

"Missouri physicians encouraging and helping Missouri young people to attend medical school."

The above vital words state the purpose and goal of the Missouri State Medical Foundation, which has provided more than 1,010 loans to Missouri medical students since 1960.

The money for these loans has been made available through the generosity and dedication of the practicing physicians of Missouri.

Despite this past and present generosity, however, additional money is still needed to provide all the loans we would like to make to assist students.

You, as a practicing physician in Missouri, can make more funds available by contributing to the Foundation now. Such donations are tax deductible. This is an excellent time to make your 1973 gift since we are near the close of the tax year.

The need for more physicians is still great. We of the Missouri State Medical Association can and must help to fill this need by providing loans to medical students who are residents of our state. I am certain that you would not want the Foundation to turn away any deserving student because of our lack of funds.

Please send your check now. Make it payable to the Missouri State Medical Foundation and mail it to Box 1028, Jefferson City 65101. Today is not too soon.

Sincerely yours,

Byron M. Stuart, M.D.

President

SPONSORED BY THE MISSOURI STATE MEDICAL ASSOCIATION

The Missouri State Medical Foundation is classified by the Internal Revenue Service under Section 509(a)(3). Individuals may deduct up to 50% of their adjusted gross income for contributions made to the MSMF.

President's Message

Why the High Cost of Medical Care?

There has been considerable discussion and criticism of the medical profession over the high cost of medical care. Actually, much of the spiraling costs are due to increase in hospital costs, which have jumped more than 50% since 1960. Physicians' fees account for only 16% of the total medical care dollar.

There certainly is reason for concern. But as Caspar Weinberger, Secretary of HEW, says, "The real culprit is the federal government," which—through its policies of Medicare and Medicaid—has had a major role in causing health care costs to spiral. First, there was a sharp increase in utilization by patients; then, to comply with federal regulations, many hospitals had to increase the number of employees and equipment. There was an increase in minimum wages and an increase in the payroll of hospital personnel (which had been far below par).

E. A. Stricker, M.D.

As medical services have become more sophisticated, they are, naturally, more expensive. With the introduction of recovery rooms, intensive care units, renal dialysis, open heart surgery and many other expensive services, the costs have escalated.

These services save lives and improve health. People have faith in them, hence the wide utilization of hospitals. It is the success of medicine, rather than its failure, that is responsible for the increase in demand and, therefore, the increase in cost.

We physicians have no control of the hospital payroll or cost of food and supplies. But we do have some control of who utilizes the hospital, how long he stays and what services he receives. This is one way that we may slow the spiraling medical care costs and relieve the anxiety of some of the lawmakers, insurance companies and the man who pays the bill.

It is still—or should be—a matter of individual patient need, as determined by the physician's judgment of good and necessary medical care.

"Without your help

. . . I simply would not have made it through medical school!"

(The following letter was received on Oct. 1, 1971 from a physician who, as a student, received financial assistance from the Missouri State Medical Association members who have contributed to the Missouri State Medical Foundation. It is printed with his permission.)

Dear Doctor:

"Thank you very much for your thoughtful letter concerning receipt of my final payment on my medical student loan.

"I can well remember the feeling of destitution associated with being a reasonably good student but lacking funds with which to enroll for the next semester in medical school. Having always been, perhaps, more than adequately endowed with pride, it was a lesson in discipline and humility to go seeking financial assistance. However, the effort brought me in contact with some very nice people who really do a lot to keep one's faith in human nature alive.

"I sincerely appreciate the efforts which you and others put into the Missouri State Medical Foundation and all other student loan funds. You should feel a quiet heroism for the assistance you lend to needy students . . . without your help, I simply would not have made it through medical school."

The Missouri State Medical Foundation—MSMF—was created by the Missouri State Medical Association for the express purpose of giving financial assistance to deserving young Missourians who will be tomorrow's doctors.

Send a Check Today to MSMF!

Woman's Auxiliary

50th Anniversary

Mention the season "Fall" to a member of the MSMA Woman's Auxiliary and she immediately looks forward to our Annual Fall Conference which will be held this year at the Plaza Inn in Kansas City on October 24-25. And, it is with special sincerity, Doctor, that I hope you will not only mention the Fall Conference, but will urge your wife to attend and participate.

Mrs. Charles R. Willman
President

The Fall Conference provides two interesting days of important information, exchange of ideas and fun. In addition to all Auxiliary members, physicians' wives who are not members at this time are invited to attend. The theme this year will be "Ideas to Improve Quality of Life."

On October 24, "Food for the Good Life" will be the subject to be discussed by a panel which will be moderated by Mrs. Gretchen Kraus, National Nutrition Chairman for the Woman's Auxiliary to the AMA. Other members of the panel will be Cindy Sisk, Nutrition Director, Dairy Council of Greater Kansas City; Beverly Crabtree, Ph.D., Associate Dean, School of Home Economics with Extension, University of Missouri; and Charlene Moore, Director of the Bureau of Nutrition Services. Each is outstanding in her field and will help to identify areas in which we, as doctors' wives, can be effective.

On October 25, Dr. George J. Lytton of Kansas City will moderate a panel on the subject of "The Middle Years." A psychiatrist, Dr. Lytton is the husband of the Auxiliary's President-Elect, Mrs. Vivian Lytton. Joining Dr. Lytton as panelists will be Dr. Robert Meneilly, Minister of the Village Church, Prairie Village, Kan.; Hilda Choice Anderson, Vice-President, Preferred Business Service Corporation; and Dr. William T. Griffin, Associate Professor, Department of Obstetrics and Gynecology, University of Missouri-Columbia School of Medicine.

In addition to learning about these health-related subjects, we will be privileged to visit the Nelson Art Gallery in Kansas City.

Our National President, Mrs. Willard Scrivner, has made the following statement:

"The time-honored role of the volunteer will enable us to best serve as leaders in our communities. Each project and program we undertake should not be solely our responsibility if we plan well and are a good catalyst. Our ongoing programs will be fully supported while we measure our efforts in new areas of community INVOLVEMENT."

Another important fall event this year was the Environmental Symposium on September 21 in Kansas City. Mrs. Raymond Hartwig, our Environmental Chairman, made the day outstanding by enlisting so many qualified members of the Environmental Protective Agency to speak to us about ecology.

Back to the Fall Conference, we invite all doctors to accompany their wives to our dinner and will be honored by your attendance.

So . . . come along! Make new friends and renew old acquaintances!

EDITORIALS

M. PINSON NEAL, M.D.
1887-1973

(The following memorial service for M. Pinson Neal, M.D. was delivered on Aug. 21, 1973 in Columbia by ***William D. Mayer, M.D.****, Dean of the School of Medicine, University of Missouri-Columbia. Dr. Neal, Professor Emeritus and former chairman of the Department of Pathology at the University of Missouri School of Medicine, died on Aug. 18, 1973 at Boone County Hospital in Columbia.)*

One of the highest honors of my life was bestowed upon me yesterday by M. Pinson Neal, Jr., distinguished physician and medical administrator, when he asked me if I might share a few words with you today concerning his father, Marcus Pinson Neal, Sr. It is an honor for me in that Dr. Neal, the son, has provided me the opportunity to share with you the feelings of esteem, dignity and integrity which all of us have held and shall always hold for Dr. Neal, the father.

I am not here today to honor Dr. Neal, the father, for those honors have been provided in life by every organization or group with whom Dr. M. Pinson Neal has been associated over a long and truly distinguished career: ranging from a citation from General Pershing for his contributions in World War I through awards by the American Red Cross, the Missouri State Medical Association, the Southern Medical Association, the University of Missouri to the presence of more than 400 former students, colleagues and friends who gathered in Columbia from all over the state and the nation on the occasion of his 84th birthday and the publication of his book entitled, *Genesis, Heritage and Progress of Medical Education at the University of Missouri, 1841-1970.*

I am not here, then, to honor Dr. Neal for that has appropriately and justifiably been done by many. Rather, I am here to try to remind those assembled that it is we who have been honored, each in our own individual ways, by our opportunities to have shared this man, this truly remarkable man, in our own lives.

For I would suggest that all of us have been touched in some small way or large, consciously or subconsciously, knowingly or not, by the truly remarkable force and spirit that was and is represented in each of us by M. Pinson Neal.

Obviously, each of you, as you sit here today, know that of which I speak. For each of you, the form, the nature and the occasions of the impact were different, but I suspect for each of us the benefit is lucidly clear.

For me, personally, it began 12 years ago when as a fledgling pathologist, newly in receipt of my Board certification, I arrived as a young Assistant Professor in the Department of Pathology at the University of Missouri. I had the good fortune to share office space with Dr. Neal, then in his 70s and over four decades my senior. I soon learned that this Professor Emeritus with an active, analytical and penetrating mind, was capable of contributing daily to the growth and development of myself and other young faculty members. In addition, it was a pleasure to attend his lectures to second-year medical students and to listen to the spell-binding oratory which enabled him to get across important messages, not only in health and disease, but concerning the profession and even life itself. I often used to think, "If this is M. Pinson Neal at the three-quarter of a century mark, what must he have been like at half century or quarter century or in the years intervening?"

As I traveled through the state and as I visited with alumni of the School of Medicine, the answer and the magnitude of his impact over those years became clear. Former students would ask, whether it be in St. Louis or Kansas City, Maryville or Cape Girardeau, Hannibal or Joplin, let alone Cleveland, New York, Washington or Los Angeles, "How is Pappy Neal doing?" to be followed quickly by such statements as "I never had a greater teacher," "He made us work hard, but I'm thankful he did," "No one ever had a greater impact on my life than he."

And then I said to myself, "How could one man in a span of over five decades continue to have the ability to excite, to influence and to stimulate?" It remained for the publication of his history of our School of Medicine, written for the most part in his eighth decade of life, to provide some fuller understanding of why so many have been honored for so long by Dr. M. Pinson Neal.

I would like then to close with some of M. Pinson Neal's own words from that monograph.

"Quality should be one's guiding and chief ambition. Quality characterizes a person, as sterling and Stradivarius do silver and a violin. Quality, integrity, ability to profit by training and experience are attributes truly and exclusively personal."

"Respect for one's self, and for all with whom one serves, is a worthwhile virtue."

"Reward: Much more than title, vacation and money should be encompassed. As each day's work is done, be able to say to one's self: 'This day I, too, helped in prevention of disease, helped to supply means of restoring health—yes, possibly helped save someone's life, or at least to prolong it.' "

"The quality of a physician depends not alone upon his training, but also upon his mannerisms, mentality, motivation, character, and human thoughtfulness to patient and his family."

"Medicine is something living, and working with students as was done in small classes with concentrated hours and courses in McAlester Hall days, gave it life, and to them enthusiastic interest."

"To inculcate into students the philosophies and personal principles which are so simple, yet so difficult for some to acquire, has been profitable."

"This historical effort is ended, with a sense of fulfillment and satisfaction—not merely because it ends months of labor in which I often felt alone in a wilderness of records and notes—but also because of the rewarding personal attachments that have been mine with so many fine and stimulating students, faculty associates, practicing colleagues, and hospital affiliations. The contacts over 48 years with all groups have been most stimulating and rewarding."

And finally, Dr. Neal closed his monograph with this sentence, "I close with words of Albert Schweitzer: 'Respect for the Dignity of Man and Reverence for Life.' "

It is this man and his full understanding of the Dignity of Man and the Reverence for Life and the respect for one's self and for all whom one serves, and of the true meaning of the words quality and integrity, who has honored each of us in his unique capacity to make these insights meaningful. We will honor M. Pinson Neal, not by being here today, but by remembering that which he helped us learn about life and death and the nature of man and by remembering our obligation to share what he has shared with us with those who will live after we have departed.

On behalf of the thousands of physicians and the tens of thousands of their patients who knowingly and unknowingly, consciously or subconsciously, have benefited from your presence, we give thanks for the honor you have bestowed upon us, Dr. Marcus Pinson Neal.

THE AMERICAN TRAUMA SOCIETY

(In the following editorial, Dr. Allen Klippel extends an invitation to all physicians in Missouri to become founding members of the American Trauma Society. Dr. Klippel is President of the St. Louis County Medical Society.)

On May 7, 1972 in Philadelphia, a group met to found the American Trauma Society. Most physicians are only too acutely aware of the ravages that make this the catastrophic disease of the young adult and the leading cause of death and disability in that group. However, the need is not only for physicians to understand and be involved but, also, to involve the general public in this effort. The American Trauma Society is following the examples of the American Cancer Society and the American Heart Association for these organizations have done much to develop public support against these diseases. And, let's face it. When we speak of public support, we mean public financial support. Many of the developments in the fight against cancer and heart disease are attributable to research supported by these organizations. Similar results must be obtained for the care of the trauma patient.

Many people have a morbid fear of being afflicted with cancer. Yet, the odds are greater that they will be the victim in an accident. It would seem to be enlightened self-interest that they should support programs against trauma. This is even more true when we consider that this is a disease more common in our children and all the young people of our country. These are the persons who will have to solve the problems of what we euphemistically call "communities." After looking around, it is obvious they need all the physical stamina and good health we can try to protect if they are ever to be able to channel all the divisive forces in our country into a true society with common goals and purpose.

It is not to detract from the great successes of the cancer and heart organizations, but, none the less, most cancer and heart problems occur in the aging segments of the population, in persons who have mostly made their contributions. Trauma strikes down the young adult just when he or she has completed the long expensive years of training and just when society could expect to reap the benefits of this experience.

"Founding Memberships" in the American Trauma Society are still available and any physician who is interested or who has a lay friend who might be interested is asked to contact me and I will be only too happy to send along further information. A meeting to form a Missouri Chapter of the American Trauma Society will be held soon. This is the beginning of a state organization that, it is hoped, will be able to develop public awareness and support in Missouri against the disease of trauma. For too long, trauma has been "the neglected disease of modern society." Hopefully, this neglect will be overcome. The American Trauma Society is one way of achieving this goal.

ALLEN P. KLIPPEL, M.D.
St. Louis County Medical Society Bulletin

Pinworm therapy is often a family affair

Contraindications: History of hypersensitivity to thiabendazole. **Warnings:** If hypersensitivity reactions occur, drug should be discontinued immediately and not resumed. Rarely, erythema multiforme has been associated with thiabendazole therapy; in severe cases (Stevens-Johnson syndrome), fatalities have occurred. Because CNS side effects may occur quite frequently, activities requiring mental alertness should be avoided. Safe use in pregnancy or lactation has not been established. **Precautions:** Ideally, supportive therapy is indicated for anemic, dehydrated, or malnourished patients prior to initiation of anthelmintic therapy. In presence of hepatic or renal dysfunction, patients should be carefully monitored. **Adverse Reactions:** Most frequently encountered are anorex nausea, vomiting, and dizziness. Less frequently, diarrhea, epigastric distress, pruritus, weariness, drowsiness, giddine and headache have occurred. Rarely, tinnitus, hyperirritabili numbness, abnormal sensation in eyes, blurring of vision, xanthopsia; hypotension, collapse; enuresis; transient rise i cephalin flocculation and SGOT; perianal rash, cholestasis a parenchymal liver damage; hyperglycemia; transient leukop malodor of the urine, crystalluria, hematuria; appearance of Ascaris in the mouth and nose. Hypersensitivity reactions

INDICATION | DOSAGE SCHEDULE

MINTEZOL® (Thiabendazole, MSD) has demonstrated effectiveness against a broad spectrum of nematode infections. Dosages are weight related. For your convenience, the information in the weight-dose chart below is included in the full prescribing information and in the 1973 edition of PDR.
The recommended maximum daily dose of MINTEZOL is 3 g (6 tablets).
MINTEZOL should be given after meals if possible. Dietary restriction, complementary medications, and cleansing enemas are not needed.
The usual dosage schedule for all conditions is two doses per day. The size of the dose is determined by the patient's weight.

Weight-dose chart:

WEIGHT (lb)	EACH DOSE (g)	TABLETS
25	0.25	½
50	0.5	1
75	0.75	1½
100	1.0	2
125	1.25	2½
150 & over	1.5	3

The regimen for each indication follows:

INDICATION	REGIMEN	COMMENTS
Pinworm disease	Two doses per day for 1 day. Repeat in 7 days. This regimen is designed to reduce the risk of reinfection.	If this is not practical, give 2 doses per day for 2 successive days.
Threadworm,* large roundworm,* hookworm,* and whipworm* disease	Two doses per day for 2 successive days.	A single dose of 20 mg/lb or 50 mg/kg may be employed as an alternative schedule, but a higher incidence of side effects should be expected.
Creeping eruption	Two doses per day for 2 successive days.	If active lesions are still present 2 days after completion of therapy, a second course is recommended.
Symptoms of trichinosis* during the invasive phase of the disease	Two doses per day for 2 to 4 successive days according to the response of the patient.	The optimal dosage for the treatment of trichinosis has not been established.

*Clinical experience with thiabendazole for treatment of each of these conditions in children weighing less than 30 lb has been limited.

New Members

Thomas T. Crouch, M.D., 208 Medical Plaza, Kansas City, has become a member of Jackson County Medical Society. Dr. Crouch is a native of Valdosta, Ga., received his preliminary education at Colorado College and his M.D. degree at the University of Colorado in 1963. He specializes in nephrology.

Federico N. Florendo, Jr., M.D., 1734 Market, Hannibal, has become a member of Marion-Ralls-Shelby County Medical Society. Dr. Florendo is a native of the Philippines, received his preliminary education at Silliman University and his M.D. degree at the University of the Philippines in 1941. He specializes in pathology.

Howard H. Hamlin, M.D., 4301 Main, Kansas City, has become a member of Jackson County Medical Society. Dr. Hamlin is a native of Lincoln, Neb., received his preliminary education at Northwest Nazarene College and his M.D. degree at the University of Colorado in 1941. He specializes in general surgery.

Kenneth H. Kelley, M.D., 623 Pine Blvd., Poplar Bluff, has become a member of Butler-Wayne-Ripley County Medical Society. Dr. Kelley is a native of Kansas City, received his preliminary education at the University of Missouri and his M.D. degree at the University of Tennessee in 1970. He specializes in pediatrics.

William R. Morgan, M.D., 6700 Troost, Kansas City, has become a member of Jackson County Medical Society. Dr. Morgan is a native of Hawaii, received his preliminary education at the University of Oklahoma and his M.D. degree at the University of Oklahoma in 1958. He specializes in plastic surgery.

A. R. Rao, M.D., 703 W. Main, Fredericktown, has become a member of Mineral Area County Medical Society. Dr. Rao is a native of India and received his M.D. degree at Andhra in 1963. He specializes in internal medicine.

Abbiah N. Reddy, M.D., 623 Pine Blvd., Poplar Bluff, has become a member of Butler-Wayne-Ripley County Medical Society. Dr. Reddy is a native of India, received his preliminary education at Bangalore Medical College and his M.D. degree at Bangalore Medical College in 1963. He specializes in neurology.

Don R. Santschi, M.D., 2220 Holmes, Kansas City, has become a member of Jackson County Medical Society. Dr. Santschi is a native of Kalamazoo, Mich., received his preliminary education at Notre Dame University and his M.D. degree at Loyola University in 1959. He specializes in internal medicine.

Norvin D. Schuman, M.D., Meyer Blvd. at Prospect, Kansas City, has become a member of Jackson County Medical Society. Dr. Schuman is a native of Chillicothe, received his preliminary education at Baker University and his M.D. degree at the University of Kansas in 1957. He specializes in pathology.

Carlton L. Shmock, M.D., 2220 Holmes, Kansas City, has become a member of Jackson County Medical Society. Dr. Shmock is a native of Lakewood, Ohio, received his preliminary education at Indiana University and his M.D. degree at the University of Cincinnati in 1949. He specializes in internal medicine.

IMPROVED ACCIDENT & HEALTH PROGRAMS

The Disability Income Policy sponsored by the Missouri State Medical Association since 1943 has now been made GUARANTEED RENEWABLE and income benefits are available up to $300.00 weekly to members under age 56 subject to acceptance by the Company.

Also, the Major Hospital and Nurse Expense Program offers higher limits with increased Room & Board Benefits.

County Society News

FIRST DISTRICT

COUNCILOR
JOHN N. MARTIN, M.D., ST. JOSEPH

BUCHANAN COUNTY MEDICAL SOCIETY

The annual election meeting of the Buchanan County Medical Society was held in the Empire Room of Hotel Robidoux in St. Joseph on September 5. The meeting followed a dinner.

Dr. William B. O'Connor was chosen as President-Elect and will head the Society in 1975. Dr. Randal W. Weed, now serving as President-Elect, will be President in 1974. He will succeed Dr. Elza Butler.

Other officers elected were Dr. G. Tyson Carpenter, Vice-President; Dr. John T. Rogers, Secretary; and Dr. Robert W. Kieber, Treasurer. Dr. Kieber will be serving his 21st consecutive term in this office.

Dr. Clement C. DuMont was chosen as censor for a three-year term. Dr. Allen I. Herman was named Delegate to the Missouri State Medical Association. Alternate Delegates elected were Drs. R. Philip Acuff, William B. Rost and Donald J. Stallard. Dr. John N. Martin will serve on the Committee on Public Policy. Dr. Carl K. Ness was named to a five-year term on the Board of Trustees and Dr. Butler was elected to the Executive Secretary Committee.

Officers who will lead the Society in 1974 will be installed at the Society's annual meeting in December.

G. TYSON CARPENTER, M.D., *Secretary*

Donnagel-PG

Banana-Flavored Donnagel®-PG

The civilized solution to the age-old problem of diarrhea.

The evolution of Donnagel® PG:

Kaolin and pectin to provide demulcent-detoxicant effects.

Belladonna alkaloids for antispasmodic benefits.

Powdered opium, the therapeutic equivalent of paregoric—without the unpleasant taste—to promote the production of formed stools and lessen the urge.

And a delicious banana flavor good enough for the most discriminating tastes.

All together in the evolutionary discovery that's the best-tasting way yet to treat acute, non-specific diarrheas.

Donnagel®-PG

Donnagel with paregoric equivalent.
Each 30cc. contains:

Kaolin	6.0 g.
Pectin	142.8 mg.
Hyoscyamine sulfate	0.1037 mg.
Atropine sulfate	0.0194 mg.
Hyoscine hydrobromide	0.0065 mg.
Powdered opium, USP (equivalent to paregoric 6 ml.) (warning: may be habit forming)	24.0 mg.
Sodium benzoate (preservative)	60.0 mg.
Alcohol, 5%	

Ⓥ Available on oral prescription or without prescription in compliance with applicable state and local law

Robitussin A-C
Cough Calmers

LEAR
HE
RACT
ITH THE
OBITUSSIN®
INE

The coughing season is here again. Time to rely on the four Robitussins and Cough Calmers to help clear the lower respiratory tract. All contain glyceryl guaiacolate, the efficient expectorant that works systemically to help increase the output of lower respiratory tract fluid. The enhanced flow of less viscid secretions soothes the tracheobronchial mucosa, promotes ciliary action, and makes thick, inspissated mucus less viscid and easier to raise. Available on your prescription or recommendation.

For coughs of colds and "flu"

ROBITUSSIN®

Each 5 cc. contains:
Glyceryl guaiacolate .... 100 mg.
Alcohol, 3.5%

For unproductive allergic coughs

ROBITUSSIN A-C® Ⓒ

Each 5 cc. contains:
Glyceryl guaiacolate .... 100 mg.
Pheniramine maleate .... 7.5 mg.
Codeine phosphate .... 10.0 mg.
(warning: may be habit forming)
Alcohol, 3.5%

Non-narcotic for 6-8 hr. cough control

ROBITUSSIN-DM®

Each 5 cc. contains:
Glyceryl guaiacolate .... 100 mg.
Dextromethorphan hydrobromide .... 15 mg.
Alcohol, 1.4%

Robitussin-DM in solid form for "coughs on the go"

COUGH CALMERS®

Each Cough Calmer contains:
Glyceryl guaiacolate .... 50 mg.
Dextromethorphan hydrobromide .... 7.5 mg.

Relieves cough, clears sinuses and nasal passages—keeps them "drip-dry" but not bone dry

ROBITUSSIN-PE®

Each 5 cc. contains:
Glyceryl guaiacolate .... 100 mg.
Phenylephrine hydrochloride .... 10 mg.
Alcohol, 1.4%

LEO H. POLLOCK, M.D.

Missouri Medicine in Review

FORTY YEARS AGO

The President's Reemployment Agreement is part of a nationwide plan to raise wages, create employment and, thus, increase purchasing power of the people and restore business. The *Journal of the American Medical Association* editorially has clearly defined our relationship in the August 12 and August 19 issues. We quote in part:

"Probably, the most significant of these questions concerns hours of work for physicians and hours of work and salaries of their assistants and attendants. It has been definitely settled that physicians in the discharge of their professional duties are not within the terms of the National Industrial Recovery Act. A physician may work as many hours as he finds expedient and for as small compensation as he is willing to accept, and he will violate no law and no federal policy. The legislation is not intended to interfere with the personal relationship between physician and patient necessary to the best type of medical care. Physicians have never had definite hours of work; they have always been subject to call at any moment for the benefit of their patients. The rights of the sick man are above hours of work or regulations of this character."

TWENTY-FIVE YEARS AGO

The Kansas City Southwest Clinical Society will present its 26th Annual Fall Clinical Conference on Oct. 4-7, 1948. Sixteen distinguished guest speakers representing general medicine and surgery and many of the medical and surgical specialties will take part in the four-day program. Addresses will be made by Rear Admiral H. L. Pugh, Assistant Surgeon General U. S. Navy and Col. William H. Amspacher, Chief of Procurement Branch, U. S. Army.

E. B. Quarles, M.D., St. Louis, has been appointed head of hospital administration for all Veterans Administration Hospitals.—Edwin C. White, M.D., Kansas City, was elected president of the State Board of Medical Examiners at a meeting in Jefferson City on August 15.

The South Central Counties Medical Society met in Cabool on August 20 for dinner at the El Patio Hotel. The following members were present: Drs. J. A. Fuson, Mansfield; R. W. Denney and A. C. Ames, Mountain Groves; Garrett Hogg, Cabool; T. J. Burns, Houston; C. T. Callihan, Willow Springs; E. C. Bohrer, West Plains; and Ned White and Kenneth Coffeld, Springfield.

TEN YEARS AGO

John Mayer, a junior medical student at the University of Missouri, presents "The Mouse Surgeon" in the *Journal* of September, 1963. This is a beautifully written and prize winning story of the life and contributions of Dr. Evarts Ambrose Graham, the illustrious past Professor of Surgery at Washington University School of Medicine.

In the article, he says, "The men who came to Barnes in those early years eventually spread the reputation of the hospital and Evarts Graham throughout the world. Among his initial students were Barney Brooks, late Professor of Surgery at Vanderbilt University of Virginia, and Alton Ochsner, who established the famous Ochsner Clinic in New Orleans. In nearly every medical institution in this country and in numerous ones abroad, a cursory examination of the surgical service usually turns up one of 'Graham's Boys.'

"A humorous example of the far-reaching consequences of this man's influence was initiated when Barney Brooks accepted a professorship in surgery at Vanderbilt. This excellent surgeon, after training under Dr. Graham, turned out many fine surgeons, among whom was Alfred Blalock. Blalock soon became Professor of Surgery at Johns Hopkins and passed on his knowledge to a promising young man by the name of Rollins Hanlon. Dr. Hanlon is now Professor of Surgery at St. Louis University Medical School. The chickens came home to roost—but in the rival school!"

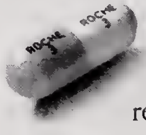
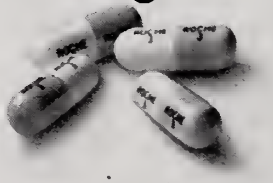
How strong must a tranquilizer be for severe anxiety?

As strong as Librium® 25 mg (chlordiazepoxide HCl)



The achievement of desired therapeutic results is often a function of the dosage *strength* as well as the drug's intrinsic action. Thus, when anxiety is *severe*, the 25-mg strength of Librium frequently provides the necessary antianxiety action with a minimum of unwanted adverse reactions. Librium 25 mg is a convenient dosage form for the relief of severe, incapacitating anxiety, specifically formulated to supplement your counsel and reassurance.

Benefits-to-risks ratio permits higher dosage



For over 13 years, Librium has been recognized for its excellent benefits-to-risks ratio, an asset in the *higher* dosage ranges as in more common clinical applications. Thus, the frequency of dosage with Librium 25 mg can be flexibly adjusted to the needs and response of the individual patient, up to 100 mg daily if required. Total daily dosage for the elderly and debilitated should not exceed 20 mg. When severe anxiety has been reduced, Librium dosage should be correspondingly reduced or discontinued entirely.

basic support in severe anxiety

Librium® 25 mg

(chlordiazepoxide HCl)
1 capsule t.i.d./q.i.d.

which follows:
Indications: Relief of anxie
occurring alone or accompanying
states.
Contraindications: Patient
hypersensitivity to the drug.
Warnings: Caution patient
combined effects with alcohol anc
depressants. As with all CNS-acti
patients against hazardous occupa
complete mental alertness (*e.g.*, o
ery, driving). Though physical a
dependence have rarely been rep
mended doses, use caution in ad
addiction-prone individuals or t
increase dosage; withdrawal sym
convulsions), following disconti
drug and similar to those seen w
have been reported. Use of any
lactation, or in women of childbe
that its potential benefits be weighed against i
possible hazards.
Precautions: In the elderly and debilita
and in children over six, limit to smallest effec
tive dosage (initially 10 mg or less per day) to
preclude ataxia or oversedation, increasing gr
ally as needed and tolerated. Not recommende
in children under six. Though generally not re
ommended, if combination therapy with othe
psychotropics seems indicated, carefully consi
individual pharmacologic effects, particularly
use of potentiating drugs such as MAO inhibi
and phenothiazines. Observe usual precaution
presence of impaired renal or hepatic functio
Paradoxical reactions (*e.g.*, excitement, stimula
and acute rage) have been reported in psychia
patients and hyperactive aggressive children.
Employ usual precautions in treatment of anx
states with evidence of impending depression
suicidal tendencies may be present and protec
measures necessary. Variable effects on blood
coagulation have been reported very rarely i
patients receiving the drug and oral anticoagu
lants; causal relationship has not been establis
clinically.
Adverse Reactions: Drowsiness, ataxia
confusion may occur, especially in the elderly
debilitated. These are reversible in most insta
by proper dosage adjustment, but are also occa
sionally observed at the lower dosage ranges.
few instances syncope has been reported. Also
countered are isolated instances of skin erupti
edema, minor menstrual irregularities, nausea
constipation, extrapyramidal symptoms, incre
and decreased libido—all infrequent and gene
controlled with dosage reduction; changes in
patterns (low-voltage fast activity) may appea
during and after treatment; blood dyscrasias (
cluding agranulocytosis), jaundice and hepati
dysfunction have been reported occasionally,
ing periodic blood counts and liver function t
advisable during protracted therapy.
Supplied: Librium® Capsules containi
5 mg, 10 mg or 25 mg chlordiazepoxide HCl
Libritabs® Tablets containing 5 mg, 10 mg or

ROCHE
Roche Laboratories
Division of Hoffmann-La Roche Inc.
Nutley, N.J. 07110

Before prescribing, please consult complete product information, a summary of which follows:

Indications: Tension and anxiety states; somatic complaints which are concomitants of emotional factors; psychoneurotic states manifested by tension, anxiety, apprehension, fatigue, depressive symptoms or agitation; symptomatic relief of acute agitation, tremor, delirium tremens and hallucinosis due to acute alcohol withdrawal; adjunctively in skeletal muscle spasm due to reflex spasm to local pathology, spasticity caused by upper motor neuron disorders, athetosis, stiff-man syndrome, convulsive disorders (not for sole therapy).

Contraindicated: Known hypersensitivity to the drug. Children under 6 months of age. Acute narrow angle glaucoma; may be used in patients with open angle glaucoma who are receiving appropriate therapy.

Warnings: Not of value in psychotic patients. Caution against hazardous occupations requiring complete mental alertness. When used adjunctively in convulsive disorders, possibility of increase in frequency and/or severity of grand mal seizures may require increased dosage of standard anticonvulsant medication; abrupt withdrawal may be associated with temporary increase in frequency and/or severity of seizures. Advise against simultaneous ingestion of alcohol and other CNS depressants. Withdrawal symptoms (similar to those with barbiturates and alcohol) have occurred following abrupt discontinuance (convulsions, tremor, abdominal and muscle cramps, vomiting and sweating). Keep addiction-prone individuals under careful surveillance because of their predisposition to habituation and dependence. In pregnancy, lactation or women of childbearing age, weigh potential benefit against possible hazard.

Precautions: If combined with other psychotropics or anticonvulsants, consider carefully pharmacology of agents employed; drugs such as phenothiazines, narcotics, barbiturates, MAO inhibitors and other antidepressants may potentiate its action. Usual precautions indicated in patients severely depressed, or with latent depression, or with suicidal tendencies. Observe usual precautions in impaired renal or hepatic function. Limit dosage to smallest effective amount in elderly and debilitated to preclude ataxia or oversedation.

Side Effects: Drowsiness, confusion, diplopia, hypotension, changes in libido, nausea, fatigue, depression, dysarthria, jaundice, skin rash, ataxia, constipation, headache, incontinence, changes in salivation, slurred speech, tremor, vertigo, urinary retention, blurred vision. Paradoxical reactions such as acute hyperexcited states, anxiety, hallucinations, increased muscle spasticity, insomnia, rage, sleep disturbances, stimulation have been reported; should these occur, discontinue drug. Isolated reports of neutropenia, jaundice; periodic blood counts and liver function tests advisable during long-term therapy.

Dosage: Individualize for maximum beneficial effect. *Adults:* Tension, anxiety and psychoneurotic states, 2 to 10 mg b.i.d. to q.i.d.; alcoholism, 10 mg t.i.d. or q.i.d. in first 24 hours, then 5 mg t.i.d. or q.i.d. as needed; adjunctively in skeletal muscle spasm, 2 to 10 mg t.i.d. or q.i.d.; adjunctively in convulsive disorders, 2 to 10 mg b.i.d. to q.i.d. *Geriatric or debilitated patients:* 2 to 2½ mg, 1 or 2 times daily initially, increasing as needed and tolerated. (See Precautions.) *Children:* 1 to 2½ mg t.i.d. or q.i.d. initially, increasing as needed and tolerated (not for use under 6 months).

Supplied: Valium® (diazepam) Tablets, 2 mg, 5 mg and 10 mg; bottles of 100 and 500. All strengths also available in Tel-E-Dose® packages of 1000.

Valium®
(diazepam)

To help you manage excessive psychic tension

Information for Contributors

Articles are accepted for publication on condition that they are contributed solely to this journal. Material appearing in Missouri Medicine is protected by copyright. Permission will be granted on request for reproduction in reputable publications provided proper credit is given and author gives permission.

Manuscripts should be typewritten, double spaced, and the original with one carbon copy submitted. Retain another carbon copy for proofreading. Used manuscripts are not returned. School and hospital appointments of the author should accompany the manuscript. It is desirable that a synopsis-abstract of approximately 135 words accompany the manuscript. References should be arranged at the end of the article in the order in which the references are cited in the text. The reference should give name of author, title of article, name of periodical, volume number, initial page number and year. Authors are responsible for reference accuracy.

Illustrations should be glossy prints or drawings in India ink on white paper. They should not be mounted and name of author and figure number should be penciled lightly on the backs. Legends should appear on a separate sheet. Colored illustrations will be used when suitable if author assumes the actual cost.

Legal difficulties may arise from unauthorized use of names, initials or photographs in which individuals can be identified. Permission should be secured from patient or legal guardian and signed duplicate or photostat submitted with such photographs or identification. The Editor and Editorial Board assume no responsibility for the opinions and claims expressed in articles contributed by authors. If citation of an institution related to the article is made, approval of the chief of service should be given in a letter accompanying the article.

Reprint order blanks will accompany proof, which will be sent to authors prior to publication.

All material other than scientific should be received prior to the first of the month preceding month of publication.

Please give notice of change of address at least one month in advance of the change, giving old and new addresses.

acute arthritic inflammation...heat that freezes

In acute rheumatoid arthritis consider Tandearil. The anti-inflammatory action of Tandearil quickly helps reduce heat, pain, swelling, and stiffness. Results are usually seen in 3 or 4 days. Try it for a week when the symptoms defy aspirin control.

Remember that Tandearil is not a simple analgesic. It should not be used on patients responding to routine therapy. Before using, please read the prescribing information. It's summarized below.

Tandearil® helps take the heat off

oxyphenbutazone NF

Geigy

Tablets of 100 mg.
Important Note: This drug is not a simple analgesic. Do not administer casually. Carefully evaluate patients before starting treatment and keep them under close supervision. Obtain a detailed history, and complete physical and laboratory examination (complete hemogram, urinalysis, etc.) before prescribing and at frequent intervals thereafter. Carefully select patients, avoiding those responsive to routine measures, contraindicated patients or those who cannot be observed frequently. Warn patients not to exceed recommended dosage. Short-term relief of severe symptoms with the smallest possible dosage is the goal of therapy. Dosage should be taken with meals or a full glass of milk. Patients should discontinue the drug and report immediately any sign of: fever, sore throat, oral lesions (symptoms of blood dyscrasia); dyspepsia, epigastric pain, symptoms of anemia, black or tarry stools or other evidence of intestinal ulceration or hemorrhage, skin reactions, significant weight gain or edema. A one-week trial period is adequate. Discontinue in the absence of a favorable response. Restrict treatment periods to one week in patients over sixty.
Indications: Acute gouty arthritis, rheumatoid arthritis, rheumatoid spondylitis.
Contraindications: Children 14 years or less; senile patients; history or symptoms of G.I. inflammation or ulceration including severe, recurrent or persistent dyspepsia; history or presence of drug allergy; blood dyscrasias; renal, hepatic or cardiac dysfunction; hypertension; thyroid disease; systemic edema; stomatitis and salivary gland enlargement due to the drug; polymyalgia rheumatica and temporal arteritis; patients receiving other potent chemotherapeutic agents, or long-term anticoagulant therapy.
Warnings: Age, weight, dosage, duration of therapy, existence of concomitant diseases, and concurrent potent chemotherapy affect incidence of toxic reactions. Carefully instruct and observe the individual patient, especially the aging (forty years and over) who have increased susceptibility to the toxicity of the drug. Use lowest effective dosage. Weigh initially unpredictable benefits against potential risk of severe, even fatal, reactions. The disease condition itself is unaltered by the drug. Use with caution in first trimester of pregnancy and in nursing mothers. Drug may appear in cord blood and breast milk. Serious, even fatal, blood dyscrasias, including aplastic anemia, may occur suddenly despite regular hemograms, and may become manifest days or weeks after cessation of drug. Any significant change in total white count, relative decrease in granulocytes, appearance of immature forms, or fall in hematocrit should signal immediate cessation of therapy and complete hematologic investigation. Unexplained bleeding involving CNS, adrenals, and G.I. tract has occurred. The drug may potentiate action of insulin, sulfonylurea, and sulfonamide-type agents. Carefully observe patients taking these agents. Nontoxic and toxic goiters and myxedema have been reported (the drug reduces iodine uptake by the thyroid). Blurred vision can be a significant toxic symptom worthy of a complete ophthalmological examination. Swelling of ankles or face in patients under sixty may be prevented by reducing dosage. If edema occurs in patients over sixty, discontinue drug.
Precautions: The following should be accomplished at regular intervals: Careful detailed history for disease being treated and detection of earliest signs of adverse reactions; complete physical examination including check of patient's weight; complete weekly (especially for the aging) or an every two week blood check; pertinent laboratory studies. Caution patients about participating in activity requiring alertness and coordination, as driving a car, etc. Cases of leukemia have been reported in patients with a history of short- and long-term therapy. The majority of these patients were over forty. Remember that arthritic-type pains can be the presenting symptom of leukemia.
Adverse Reactions: This is a potent drug; its misuse can lead to serious results. Review detailed information before beginning therapy. Ulcerative esophagitis, acute and reactivated gastric and duodenal ulcer with perforation and hemorrhage, ulceration and perforation of large bowel, occult G.I. bleeding with anemia, gastritis, epigastric pain, hematemesis, dyspepsia, nausea, vomiting and diarrhea, abdominal distention, agranulocytosis, aplastic anemia, hemolytic anemia, anemia due to blood loss including occult G.I. bleeding, thrombocytopenia, pancytopenia, leukemia, leukopenia, bone marrow depression, sodium and chloride retention, water retention and edema, plasma dilution, respiratory alkalosis, metabolic acidosis, fatal and nonfatal hepatitis (cholestasis may or may not be prominent), petechiae, purpura without thrombocytopenia, toxic pruritus, erythema nodosum, erythema multiforme, Stevens-Johnson syndrome, Lyell's syndrome (toxic necrotizing epidermolysis), exfoliative dermatitis, serum sickness, hypersensitivity angiitis (polyarteritis), anaphylactic shock, urticaria, arthralgia, fever, rashes (all allergic reactions require prompt and permanent withdrawal of the drug), proteinuria, hematuria, oliguria, anuria, renal failure with azotemia, glomerulonephritis, acute tubular necrosis, nephrotic syndrome, bilateral renal cortical necrosis, renal stones, ureteral obstruction with uric acid crystals due to uricosuric action of drug, impaired renal function, cardiac decompensation, hypertension, pericarditis, diffuse interstitial myocarditis with muscle necrosis, perivascular granulomata, aggravation of temporal arteritis in patients with polymyalgia rheumatica, optic neuritis, blurred vision, retinal hemorrhage, toxic amblyopia, retinal detachment, hearing loss, hyperglycemia, thyroid hyperplasia, toxic goiter, association of hyperthyroidism and hypothyroidism (causal relationship not established), agitation, confusional states, lethargy; CNS reactions associated with overdosage, including convulsions, euphoria, psychosis, depression, headaches, hallucinations, giddiness, vertigo, coma, hyperventilation, insomnia; ulcerative stomatitis, salivary gland enlargement.
(B)98-146-800-F (10/71)
For complete details, including dosage, please see full prescribing information.

More than sleep

your choice of sleep medication is wisely based on more than sleep-inducing potential

sleep with relative safety

Chronic tolerance studies have confirmed the relative safety of Da (flurazepam HCl); no depression of cardiac or respiratory fu was noted in patients administered recommended or higher for as long as 90 consecutive nights.

In most instances when adverse reactions were reported, they were mild, infrequent and seld quired discontinuance of therapy. Morning "hang-over" with Dalmane has been relatively infrequent ness, drowsiness, lightheadedness and the like have been the side effects noted most frequently, particularly in the elderly and debilitated. (An initial dose of Dalmane 15 mg should be prescribed for these patients.)

sleep for 7 to 8 hou without need to repeat dosage

No sleep cation has been as rigorously evaluated in the sleep research laboratory as Dalmane. Insomnia p given one 30-mg capsule of Dalmane at bedtime, on average: fell asleep within 17 minutes, had fewer time awakenings, spent less time awake after sleep onset, and slept for 7 to 8 hours with no need to dosage during the night.

Before prescribing Dalmane (flurazepam HCl), please consult Complete Product Information, a summary of which follows:

Indications: Effective in all types of insomnia characterized by difficulty in falling asleep, frequent nocturnal awakenings and/or early morning awakening, in patients with recurring insomnia or poor sleeping habits, and in acute or chronic medical situations requiring restful sleep. Since insomnia is often transient and intermittent, prolonged administration is generally not necessary or recommended.

Contraindications: Known hypersensitivity to flurazepam HCl.

Warnings: Caution patients about possible combined effects with alcohol and other CNS depressants. Caution against hazardous occupations requiring complete mental alertness (*e.g.*, operating machinery, driving). Use in women who are or may become pregnant only when potential benefits have been weighed against possible hazards. Not recommended for use in persons under 15 years of age. Though physical and psychological dependence have not been reported on recommended doses, use caution in administering to addiction-prone individuals or those who might increase dosage.

Precautions: In elderly and debilitated, initial dosage should be limited to 15 mg to preclude oversedation, dizziness and/or ataxia. If combined with other drugs having hypnotic or CNS-depressant effects, consider potential additive effects. Employ usual precautions in patients who are severely depressed, or with latent depression or suicidal tendencies. Periodic blood counts and liver and kidney function tests are advised during repeated therapy. Observe usual precautions in presence of impaired renal or hepatic function.

Adverse Reactions: Dizziness, drowsiness, lightheadedness, staggering, ataxia and falling have occurred, particularly in elderly or debilitated patients. Severe sedation, lethargy, disorientation and coma, probably indicative of drug intolerance or overdosage, have been reported. Also reported were headache, heartburn, upset stomach, nausea, vomiting, diarrhea, constipation, GI pain, nervousness, talkativeness, apprehension, irritability, weakness, palpitations, chest pains, body and joint pains and GU complaints. There have also been rare occurrences of sweating, flushes, difficulty in focusing, blurred vision, burning eyes, faintness, hypotension, shortness of breath, pruritus, skin rash, dry mouth, bitter taste, excessive salivation, anorexia, euphoria, depression, slurred speech, confusion, restlessness, hallucinations, and elevated SGOT, SGPT, total and direct bilirubins and alkaline phosphatase. Paradoxical reactions, *e.g.*, excitement, stimulation and hyperactivity, have also been reported in rare instances.

Dosage: Individualize for maximum beneficial effect. *Adults:* 30 mg usual dosage; 15 mg may suffice in some patients. *Elderly or debilitated patients:* 15 mg initially until response is determined.

Supplied: Capsules containing 15 mg or 30 mg flurazepam HCl.

ep with
nsistency

Dalmane has been shown to be consistently effective even during consecutive nights of administration, with no need to increase dosage.

lmane (flurazepam HCl) is a distinctive sleep medication—a
iazepine specifically indicated for insomnia. It is not a bar-
or methaqualone, nor is it related chemically to any other
le hypnotic.

en your evaluation of insomnia indicates the need for a sleep
tion, consider Dalmane—a single entity nonnarcotic, non-
rate agent proved effective and relatively safe for relief of
ia.

DALMANE®
(flurazepam HCl)
When restful sleep is indicated

One 30-mg capsule *h.s.*—usual adult dosage
(15 mg may suffice in some patients)
One 15-mg capsule *h.s.*—initial dosage for elderly or debilitated patients.

t Statement on Antisubstitution Laws and Regulations

The purpose of this statement is irm the support of the participat- rganizations for the laws, regula- and professional traditions which ibit the unauthorized substitution ug products.

Traditionally, physicians, den- and pharmacists have worked eratively to serve the best inter- of patients. Productive coopera- has been achieved through ual respect as well as a common ern for the ideals of public ce. This mutual respect has been cted, in part, by joint support the years for the adoption and cement of laws and regulations ifically prohibiting unauthorized itution and encouraging joint ission and selection of the e of supply of drug products. asic principles of medical, den- d pharmacy practice are thus ed and preserved in the interest tient welfare.

The antisubstitution laws have ostructed enhancement of the ssional status of pharmacy any than they have in and of them- s guaranteed absolute protec- rom unsafe drugs, or freed cians, dentists and pharmacists their responsibilities to patients. ractical matter, however, such and regulations encourage inter- ssional communications regard- rug product selection and assure profession the opportunity to ise fully its expertise in drug , to the advantage of patients.

Physicians and dentists should ged to increase the frequency egularity of their contacts with nacists in selection of quality products, recognizing that economies to patients can be improved through such communication, taking into account the patients' needs. The pharmacist's knowledge of the chemical characteristics of drugs, their mode of action, toxic properties and other characteristics that assist in making drug selection decisions should be utilized to the fullest extent practicable by physicians and dentists in serving their patients.

Since drug product selection entails knowledge derived from clinical experience, the physician's and dentist's roles in product selection remain primary and do not permit delegation of decisions requiring medical and dental judgments. A broader role in therapy will evolve for pharmacists as improved understanding and cooperation among the professions continue to grow.

There has been no evidence that there are convincing reasons to modify or repeal existing laws and regulations prohibiting the unauthorized substitution of another drug product for the one specified by a prescriber. It is our belief that such laws and regulations merit the joint support of the medical, dental and pharmaceutical professions and the pharmaceutical industry.

Add your opinion to the weight of other professionals and send it to your state assemblyman or legislator.

Pharmaceutical Manufacturers Association
1155 Fifteenth Street, N.W., Washington, D. C. 20005

ROCHE announces new BACTRIM™

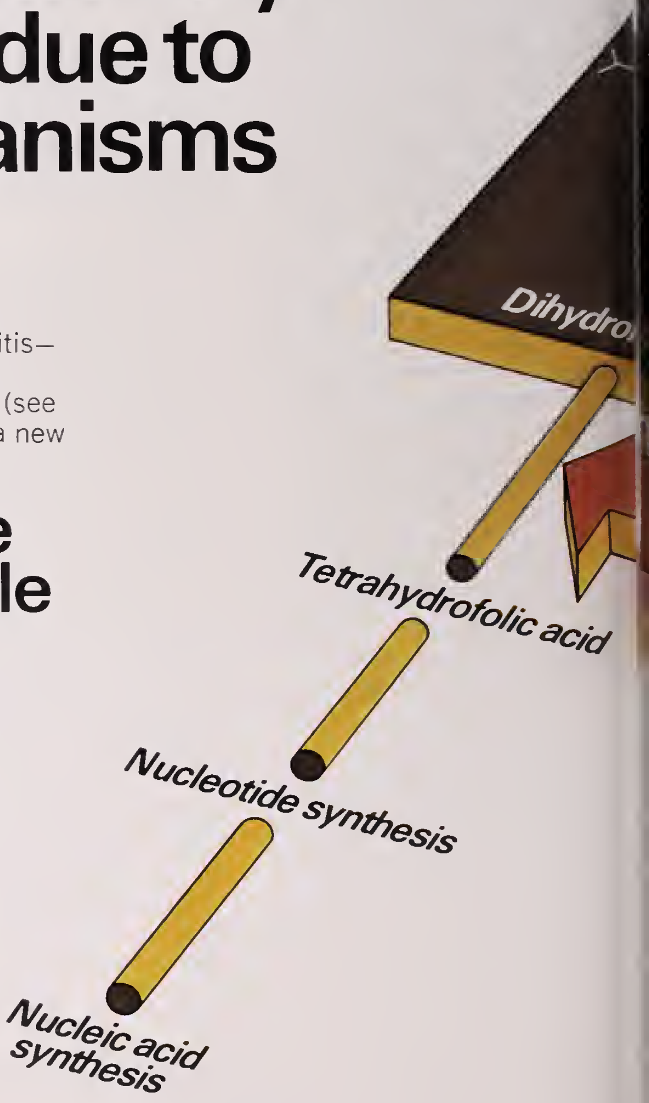
Each tablet contains 80 mg trimethoprim and 400 mg sulfamethoxazole.

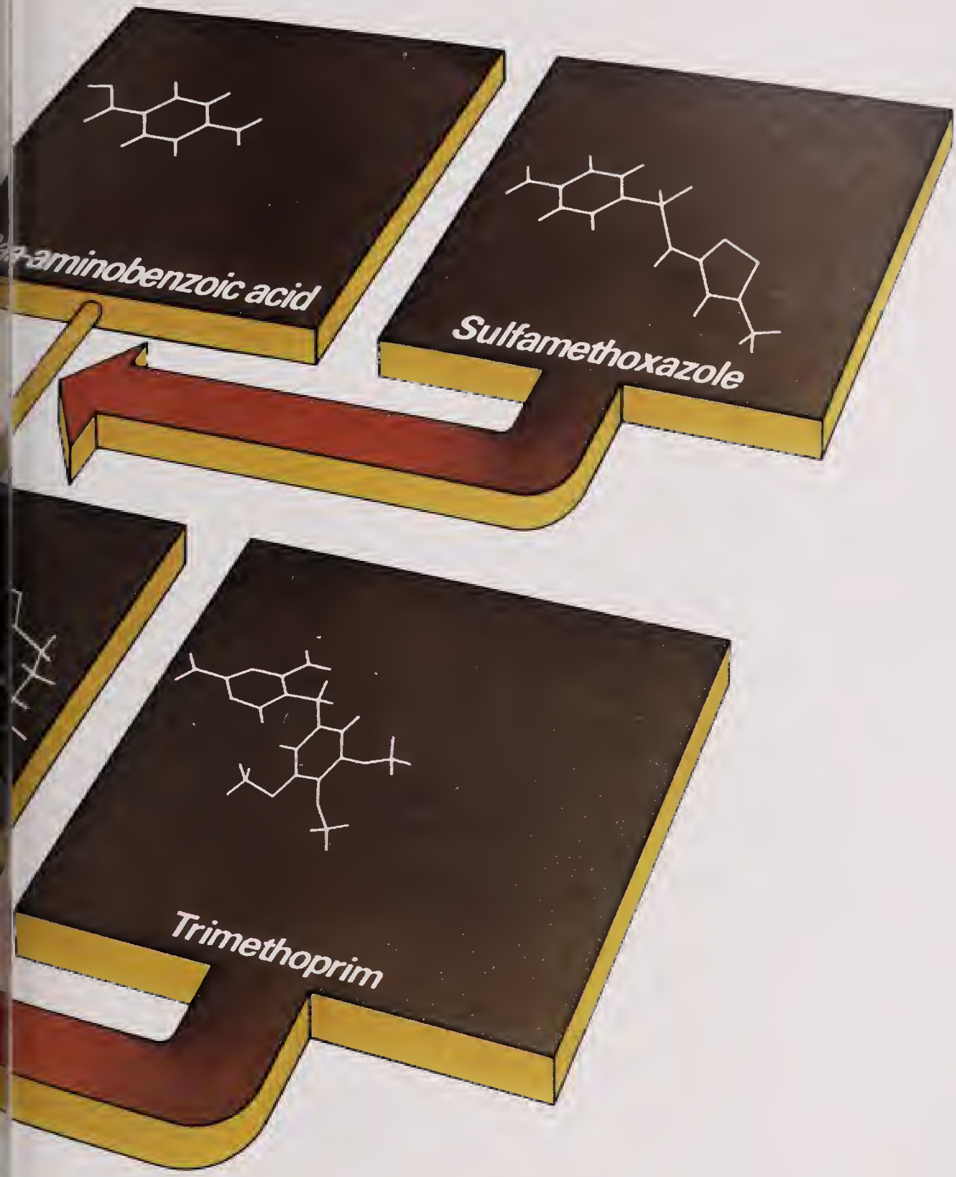
a new type of antibacterial for a two-pronged attack against chronic urinary tract infections due to susceptible organisms

Bactrim is highly effective in the treatment of these infections—primarily pyelonephritis, pyelitis and cystitis—when due to susceptible organisms. This efficacy is related to the unique mode of action against bacteria (see illustration), an action that, in effect, makes Bactrim a new type of antibacterial.

Bactrim interrupts the life cycle of susceptible bacteria

Unique mode of action interrupts the life cycle at two important points, thereby impeding the production of nucleic acids and proteins essential to these bacteria. These consecutive interruptions occur because sulfamethoxazole and trimethoprim resemble naturally existing substrates. By competitive replacement of these substrates, they inhibit further synthesis.





-aminobenzoic acid
Sulfamethoxazole
Trimethoprim

ROCHE

new BACTRIM™

Each tablet contains 80 mg trimethoprim and 400 mg sulfamethoxazole.

for chronic urinary tract infections

Before prescribing, please see complete product information on last page of advertisement.

Excellent clinical response in chronic urinary tract infections even with obstructive complications

A multiclinic, double-blind study* of response to a ten-day course of therapy in 471[†] patients with chronic urinary tract infections demonstrated the superiority of Bactrim. On the 10th day after initiation of therapy, 91.7% (of 168 patients) showed significant bacteriological response to Bactrim, compared with 81.2% (of 144 patients) to trimethoprim and 64.5% (of 155 patients) to sulfamethoxazole. More than half of these patients had obstructive complications.

Excellent response maintained

Bactrim proved equally impressive in maintaining this bacteriological response. In the above study, after a ten-day course of therapy with Bactrim, 68.4% of patients with chronic urinary tract infections *maintained* response for up to 42 consecutive days, compared with 59.7% with trimethoprim and 44.4% with sulfamethoxazole. These results are particularly noteworthy considering the number of patients with obstructive complications—cases regarded as being notoriously difficult to treat.

Prescribing considerations

Clinical Limitations: Currently, the increasing frequency of resistant organisms is a limitation of the usefulness of all antibacterial agents, especially in the treatment of chronic and recurrent urinary tract infections. Not recommended for children under twelve.

Contraindications: Hypersensitivity to trimethopri or sulfonamides. Pregnancy and during the nursing period.

Warnings and Precautions: Both sulfamethoxazole and trimethoprim have been reported to interfere with hematopoiesis. Complete blood counts shoul be done frequently. If a significant reduction in the count of any formed blood element is noted, Bactri should be discontinued. Bactrim should be given with caution to patients with impaired renal or hepatic function, possible folate deficiency, severe allergy or bronchial asthma. Maintain adequate fluid intake. Urinalyses with careful microscopic examination and renal function tests should be performed during therapy, particularly for those patients with impaired renal function.

Adverse Effects: Among the most common side effects are nausea, vomiting, rash, leukopenia and elevations in SGOT and creatinine.

Usual adult dosage: two tablets every twelve hour for 10 to 14 days; no loading dose required.

---

for chronic urinary tract infections

ROCHE

Roche Laboratories
Division of Hoffmann-La Roche Inc
Nutley, N J 07110

Before prescribing, please consult complete product information on facing page.

te Product Information:

tion: Bactrim is a synthetic antibacterial combination prod-
ailable in scored light-green tablets, each containing 80 mg
oprim and 400 mg sulfamethoxazole.

ioprim is 2,4-diamino-5-(3,4,5-trimethoxybenzyl) pyrimidine.
vhite to light-yellow, odorless, bitter compound with a molec-
ight of 290.3.

ethoxazole is N^1-(5-methyl-3-isoxazolyl) sulfanilamide. It is
ost white in color, odorless, tasteless compound with a mo-
weight of 253.28.

Microbiology: Sulfamethoxazole inhibits bacterial synthesis
drofolic acid by competing with *para*-aminobenzoic acid.
oprim blocks the production of tetrahydrofolic acid from di-
lic acid by binding to and reversibly inhibiting the required
, dihydrofolate reductase. Thus, Bactrim blocks two con-
steps in the biosynthesis of nucleic acids and proteins
al to many bacteria.

studies have shown that bacterial resistance develops more
with Bactrim than with trimethoprim or sulfamethoxazole

serial dilution tests have shown that the spectrum of anti-
al activity of Bactrim includes the common urinary tract
ns with the exception of *Pseudomonas aeruginosa*. The fol-
organisms are usually susceptible: *Escherichia coli, Kleb-
nterobacter, Proteus mirabilis* and indole-positive proteus

Representative Minimum Inhibitory Concentration Values for Bactrim-Susceptible Organisms
(MIC—mcg/ml)

a	Trimethoprim alone	Sulfamethoxazole alone	TMP/SMX (1:20) TMP	SMX
chia	0.05—1.5	1.0 —245	0.05—0.5	0.95— 9.5
; spp. positive	0.5 —5.0	7.35 —300	0.05—1.5	0.95—28.5
is	0.5 —1.5	7.35 — 30	0.05—0.15	0.95— 2.85
lla- bacter	0.15—5.0	0.735—245	0.05—1.5	0.95—28.5

Pharmacology: Bactrim is rapidly absorbed following oral
tration. The blood levels of trimethoprim and sulfamethoxa-
similar to those achieved when each component is given
eak blood levels for the individual components occur one
hours after oral administration. The half-lives of sulfameth-
and trimethoprim, 10 and 16 hours respectively, are rela-
e same regardless of whether these compounds are admin-
as individual components or as Bactrim. Detectable
of trimethoprim and sulfamethoxazole are present in the
4 hours after drug administration. Free sulfamethoxazole
nethoprim blood levels are proportionately dose-dependent.
ated administration, the steady-state ratio of trimethoprim
nethoxazole levels in the blood is about 1:20.

thoxazole exists in the blood as free, conjugated and pro-
nd forms; trimethoprim is present as free, protein-bound
abolized forms. The free forms are considered to be the
utically active forms. Approximately 44 percent of trimeth-
nd 70 percent of sulfamethoxazole are protein-bound in the
he presence of 10 mg percent sulfamethoxazole in plasma
es the protein binding of trimethoprim to an insignificant
trimethoprim does not influence the protein binding of
thoxazole.

n of Bactrim is chiefly by the kidneys through both glomer-
ation and tubular secretion. Urine concentrations of both
hoxazole and trimethoprim are considerably higher than
concentrations in the blood. When administered together
ctrim, neither sulfamethoxazole nor trimethoprim affects
ary excretion pattern of the other.

ns: Chronic urinary tract infections (primarily pyelonephri-
itis and cystitis) due to susceptible organisms (usually
Klebsiella-Enterobacter, Proteus mirabilis, and, less fre-
indole-positive proteus species).

***t note:* Currently, the increasing frequency of resistant organ-
limitation of the usefulness of all antibacterial agents, espe-
he treatment of chronic and recurrent urinary tract infections.**

dications: Hypersensitivity to trimethoprim or sulfonamides.
ncy and during the nursing period (see Reproduction

: Deaths associated with the administration of sulfonamides
en reported from hypersensitivity reactions, agranulocyto-
stic anemia and other blood dyscrasias. Experience with
prim alone is much more limited, but it has been reported
ere with hematopoiesis in occasional patients. In elderly
concurrently receiving certain diuretics, primarily thia-
increased incidence of thrombopenia with purpura has
orted.

The presence of clinical signs such as sore throat, fever, pallor, purpura or jaundice may be early indications of serious blood disorders. Complete blood counts should be done frequently in patients receiving Bactrim. If a significant reduction in the count of any formed blood element is noted, Bactrim should be discontinued.

At the present time, there is insufficient clinical information on the use of Bactrim in infants and children under 12 years of age to recommend its use.

Precautions: Bactrim should be given with caution to patients with impaired renal or hepatic function, to those with possible folate deficiency and to those with severe allergy or bronchial asthma. In glucose-6-phosphate dehydrogenase-deficient individuals, hemolysis may occur. This reaction is frequently dose-related. Adequate fluid intake must be maintained in order to prevent crystalluria and stone formation. Urinalyses with careful microscopic examination and renal function tests should be performed during therapy, particularly for those patients with impaired renal function.

Adverse Reactions: For completeness, all major reactions to sulfonamides and to trimethoprim are included below, even though they may not have been reported with Bactrim.

Blood dyscrasias: Agranulocytosis, aplastic anemia, megaloblastic anemia, thrombopenia, leukopenia, hemolytic anemia, purpura, hypoprothrombinemia and methemoglobinemia.

Allergic reactions: Erythema multiforme, Stevens-Johnson syndrome, generalized skin eruptions, epidermal necrolysis, urticaria, serum sickness, pruritus, exfoliative dermatitis, anaphylactoid reactions, periorbital edema, conjunctival and scleral injection, photosensitization, arthralgia and allergic myocarditis.

Gastrointestinal reactions: Glossitis, stomatitis, nausea, emesis, abdominal pains, hepatitis, diarrhea and pancreatitis.

C.N.S. reactions: Headache, peripheral neuritis, mental depression, convulsions, ataxia, hallucinations, tinnitus, vertigo, insomnia, apathy, fatigue, muscle weakness and nervousness.

Miscellaneous reactions: Drug fever, chills, and toxic nephrosis with oliguria and anuria. Periarteritis nodosa and L. E. phenomenon have occurred.

The sulfonamides bear certain chemical similarities to some goitrogens, diuretics (acetazolamide and the thiazides) and oral hypoglycemic agents. Goiter production, diuresis and hypoglycemia have occurred rarely in patients receiving sulfonamides. Cross-sensitivity may exist with these agents. Rats appear to be especially susceptible to the goitrogenic effects of sulfonamides, and long-term administration has produced thyroid malignancies in the species.

Dosage and Administration: Not recommended for use in children under 12 years of age.

The usual adult dosage is two tablets every 12 hours for 10 to 14 days.

For patients with renal impairment:

Creatinine Clearance (ml/min)	Recommended Dosage Regimen
Above 30	Usual standard regimen
15-30	2 tablets every 24 hours
Below 15	Use not recommended

How Supplied: Tablets, containing 80 mg trimethoprim and 400 mg sulfamethoxazole—bottles of 100 and 500; Tel-E-Dose® packages of 1000; Prescription Paks of 40, available singly and in trays of 10. Imprint on tablets: ROCHE 50.

Reproduction Studies: In rats, doses of 533 mg/kg sulfamethoxazole or 200 mg/kg trimethoprim produced teratological effects manifested mainly as cleft palates. The highest dose which did not cause cleft palates in rats was 512 mg/kg sulfamethoxazole or 192 mg/kg trimethoprim when administered separately. In two studies in rats, no teratology was observed when 512 mg/kg of sulfamethoxazole was used in combination with 128 mg/kg of trimethoprim. However, in one study, cleft palates were observed in one litter out of 9 when 355 mg/kg of sulfamethoxazole was used in combination with 88 mg/kg of trimethoprim.

In rabbits, trimethoprim administered by intubation from days 8 to 16 of pregnancy at dosages up to 500 mg/kg resulted in higher incidences of dead and resorbed fetuses, particularly at 500 mg/kg. However, there were no significant drug-related teratological effects.

Pinworm therapy is often a family affair

Contraindications: History of hypersensitivity to thiabendazole. **Warnings:** If hypersensitivity reactions occur, drug should be discontinued immediately and not resumed. Rarely, erythema multiforme has been associated with thiabendazole therapy; in severe cases (Stevens-Johnson syndrome), fatalities have occurred. Because CNS side effects may occur quite frequently, activities requiring mental alertness should be avoided. Safe use in pregnancy or lactation has not been established. **Precautions:** Ideally, supportive therapy is indicated for anemic, dehydrated, or malnourished patients prior to initiation of anthelmintic therapy. In presence of hepatic or renal dysfunction, patients should be carefully monitored.

Adverse Reactions: Most frequently encountered are anorex nausea, vomiting, and dizziness. Less frequently, diarrhea, epigastric distress, pruritus, weariness, drowsiness, giddine and headache have occurred. Rarely, tinnitus, hyperirritabili numbness, abnormal sensation in eyes, blurring of vision, xanthopsia; hypotension, collapse; enuresis; transient rise ir cephalin flocculation and SGOT; perianal rash, cholestasis ar parenchymal liver damage; hyperglycemia; transient leukope malodor of the urine, crystalluria, hematuria; appearance of Ascaris in the mouth and nose. INDICATION | DOSAGE SCHEDULE

MINTEZOL® (Thiabendazole, MSD) has demonstrated effectiveness against a broad spectrum of nematode infections. Dosages are weight related. For your convenience, the information in the weight-dose chart below is included in the full prescribing information and in the 1973 edition of PDR.
The recommended maximum daily dose of MINTEZOL is 3 g (6 tablets).
MINTEZOL should be given after meals if possible. Dietary restriction, complementary medications, and cleansing enemas are not needed.
The usual dosage schedule for all conditions is two doses per day. The size of the dose is determined by the patient's weight.

Weight-dose chart:

WEIGHT (lb)	EACH DOSE (g)	TABLETS
25	0.25	½
50	0.5	1
75	0.75	1½
100	1.0	2
125	1.25	2½
150 & over	1.5	3

The regimen for each indication follows:

INDICATION	REGIMEN	COMMENTS
Pinworm disease	Two doses per day for 1 day. Repeat in 7 days. This regimen is designed to reduce the risk of reinfection.	If this is not practical, give 2 doses per day for 2 successive days.
Threadworm,* large roundworm,* hookworm,* and whipworm* disease	Two doses per day for 2 successive days.	A single dose of 20 mg/lb or 50 mg/kg may be employed as an alternative schedule, but a higher incidence of side effects should be expected.
Creeping eruption	Two doses per day for 2 successive days.	If active lesions are still present 2 days after completion of therapy, a second course is recommended.
Symptoms of trichinosis* during the invasive phase of the disease	Two doses per day for 2 to 4 successive days according to the response of the patient.	The optimal dosage for the treatment of trichinosis has not been established.

*Clinical experience with thiabendazole for treatment of each of these conditions in children weighing less than 30 lb has been limited.

Continuing Education of Doctors To Be Stressed at AMA Convention

Postgraduate courses to help physicians keep abreast of the newest techniques in medical care will be the theme of the 1973 Annual Clinical Convention of the American Medical Association on December 1-5 at Anaheim, Calif.

Six medical schools in Southern California are cooperating with the AMA's Department of Scientific Assembly in offering 30 postgraduate courses. It marks the first time that medical schools have directly cooperated in the program, making available to participants some of the nation's top medical educators.

The scientific program, which is placing special emphasis on continuing education, opens with the exhibit portion of the program at 9 AM on Saturday, December 1 in the Anaheim Convention Center. The general sessions, postgraduate courses and medical films will start the next day.

The AMA's governing body, the House of Delegates, also will hold its semiannual meeting at Disneyland Hotel simultaneously with the scientific assembly.

The convention program is published in the October 15 issue of the *Journal of the American Medical Association.*

Eight of the postgraduate courses will be held from 7:30 AM-9 AM Sunday through Tuesday, December 2-4; 11 will be from 9:30 AM-12:30 PM on those three days; the remaining 11 will be offered from 2 PM to 5 PM on the same three days.

The early morning courses will be on asthma, diagnostic ultrasound, efficient task allocation in medical practice, epilepsy, heart sounds and their interpretations, the impact of welfare policies on health care delivery, industrial medicine and breast tumors.

The 9:30 AM sessions will focus on advanced electrocardiography, new pulmonary diagnostic techniques, coronary risk factors, epidemiology and the management of acutely injured patients, factors affecting fetal development and neonatal adaptation, high-risk obstetrics and fetal monitoring, immunology, new clinical practice from the basic sciences, pulmonary function and blood gases and vascular surgery.

Afternoon sessions will cover the anatomy of surgical procedures, basic electrocardiography, the clinical impact of recent alcoholism research, making critical decisions involving critically ill patients, diagnostic cardiology, liver diseases, diabetes, office evaluation of cervical lesions, child development problems, vascular diseases of the head and neck and salt, water and acid balance and imbalance.

In addition to the postgraduate courses, several general sessions on new dimensions in medicine are scheduled at the Convention Center Sunday through Tuesday.

On Sunday from 9:30 AM to noon, there will be a general session on medicine and from 1:30 PM-5:00 PM on surgery; Monday, 9:30 AM-noon, family practice, and 2 PM-4:30 PM, pediatrics; Tuesday, 9:30 AM-12:30 PM, psychiatry and 2 PM-4:30 PM, obstetrics and gynecology.

A highlight of the medical motion pictures, also to be shown at the Convention Center, will be a symposium on infertility on Monday morning. Among the films will be "The Beginning of Life," which was awarded first prize at the Venice, Padua and Rio de Janiero film festivals. Other films will be shown on Sunday through Tuesday.

More than 100 scientific exhibits, grouped by subject area, will be displayed, including special exhibits on cardiopulmonary resuscitation and fractures. There also will be an area for the "Live Teaching Clinical Program," an expansion of the previous special demonstration exhibit on arthritic diseases. This year the clinic will include other scientific exhibits on specific medical areas such as hypertension, cardiology and dermatology.

MSMA NEWS ROUND-UP

NOVEMBER, 1973

ouncil okays '74 legislative aims

Approval of a legislative program for the up- ming General Assembly Session highlighted the ptember meeting of the MSMA Council in Co- mbia.

The Council indicated its support on the follow- g measures:

1. Delegation Amendment — This bill would pro- le that physicians' trained assistants and nurses uld perform certain services if those services re rendered under the supervision, control and sponsibility of a licensed physician.

2. "Sick Doctor" — This bill contains provi- ns which would allow the State Board of Healing ts to attempt to "salvage" a sick doctor before becomes necessary to revoke the physician's ense. The Council agreed that Missouri physi- ns should be offered the opportunity to study s bill indepth and that wide dissemination of in- mation is necessary. (*An article on the subject included in this publication and similar articles ve been offered for use in county society publi- tions. Also, a copy of the bill has been sent to cretaries of all Component Medical Societies.)*

3. Laboratory Licensing — This bill would pro- le for proper registration of laboratories doing nmercial work.

4. Physical Therapists — This bill provides that y properly trained and qualified physical thera- ts can represent themselves as physical thera- ts.

5. Insurance for Newborn — A resolution passed the 1973 House of Delegates called for a law ich would require health insurance companies provide comprehensive health insurance for new- ns. The Council decided that the best approach this time would be to contact the Missouri Di- ion of Insurance and the Health Insurance Coun- to determine what is currently available and at could be done in the future concerning health urance for newborns.

In other action, the Council:

● Expressed its sorrow at the death of Ar- r W. Neilson, M.D., of St. Louis, a Delegate to AMA and active member of the MSMA and Louis Medical Society.

● Named Robert W. Kelley, M.D., of St. is, as AMA Delegate and Hubert A. Ritter,)., of St. Louis, as Alternate Delegate to serve il Jan. 1, 1974.

● Approved a motion to sell $48,000 in bonds n the MSMA investment portfolio to be applied to the loan which was taken out for the remodeling and furnishing of the new MSMA Headquarters.

● Reiterated its stand that the MSMA should press forward with educational programs concerning the Missouri Medical Political Action Committee.

● Heard a report on the 1973 AMA Annual Session and approved a recommendation by the Delegates to the AMA that a room and time be set aside at the MSMA Annual Session for the Delegates and Alternates to meet informally with the MSMA membership.

● Named R. Allen Chandler, M.D., Kansas City; William D. Bradshaw, M.D., Clinton; and John N. Martin, M.D., St. Joseph, to the Committee on Arrangements for the 116th Annual Session of the MSMA, April 4-7, 1974, at the Crown Center in Kansas City.

● Heard an indepth report on the Health Care Foundation of Missouri and current status of Professional Standards Review Organizations from Hector W. Benoit, Jr., M.D., Chairman of the HCFM and a member of the AMA's National Advisory Council on PSRO. (*A complete report of Dr. Benoit's talk will be included in the meeting minutes which will be published in the December issue of MISSOURI MEDICINE.)*

● Heard an updated report on Comprehensive Health Planning in Missouri from Robert W. Kelley, M.D., Chairman of the Governor's Advisory Council on CHP. (*This report will also be published in full in the December issue of MISSOURI MEDICINE.)*

● Adopted the report of the Commission on Public Affairs which named James Denninghoff, M.D., of Columbia, as Chairman of the Ad Hoc Committee on Environmental and Occupational Health; changed the scope of the 1974 Public Affairs Conference to a "MMPAC Workshop" to be conducted in February; and commended local medical societies for sponsoring Medical Aspects of Sports meeting with area coaches.

● Referred the matter of establishing a policy manual for the MSMA to the Planning Committee.

● Directed that no member of the MSMA staff is to serve as an executive officer for any specialty group, insurance group, foundation or other segment of organized medicine.

● Decided to request a survey of MSMA activities by a special AMA survey team.

● Set the next Council meeting for December 14-16 at the Ramada Inn in Jefferson City.

'Sick doctor statute' . . . . . how does it work

Added support for "sick doctor" legislation is expected in the 1974 General Assembly which convenes January 9.

At its recent September meeting, the MSMA Council directed that "sick doctor" legislation be pre-introduced in the 1974 Legislative Session.

The Council also stated that all Missouri physicians should become aware of the changes in the medical practice act which the new legislation provides. Along with articles in MISSOURI MEDICINE and County Society Bulletins, a copy of the proposed bill has been sent to the secretaries of all County Medical Societies.

A "sick doctor" bill was introduced on the final day of introduction in the 1973 General Assembly at the direction of the MSMA Council. The measure was purposely introduced late so that physicians would have the opportunity to "see it in print" and yet know that the bill did not have a chance of passage during that Session.

Florida and Texas pioneered in the development of "sick doctor statutes" by revising grounds for professional discipline under their medical practice acts to protect the public further against the incompetent or unqualified practice of medicine. Several other states are following suit.

In those states without a "sick doctor statute," disciplining a physician is predicated on his commission of misconduct of a variety of specified grounds, provided that fault could be proved against the physician.

Even though a physician's fitness or ability to practice may be substandard, no violation of the applicable medical practice act occurs unless his alleged misconduct violates a specified standard of behavior.

Therefore, a board of medical examiners is impotent in its desire to protect the public against a physician's incompetence or inability to practice medicine, unless the physician has also committed an act predicated on fault.

The "sick doctor statute" likely to be introduced in the 1974 Missouri General Assembly defines the inability of a physician to practice medicine with reasonable skill and safety to his patients due to one or more enumerated illnesses. It eliminates the need to prove that a physician's clinical judgement is impaired or that he actually injured a patient.

The defined inability can be the result of physical or mental disorders or can arise from excessive use of narcotics and drugs or alcohol.

To protect physicians from harassment, the proposed statute provides that there must be probable cause before the board can act. If probable cause exists, the physician would be required to submit to diagnostic mental or physical examinations. Under the law, medical doctors would be examined by other medical doctors while osteopaths would be examined by osteopaths.

A physician is judged to have given implied consent for such an examination through the act of practicing medicine or filing annual registration to practice in Missouri. The implied consent is further used in the law to waive all objections to the admissibility of the examining physicians' tes
mony or reports on the ground that these are pri
ileged communication.

The proposed law includes a section prohibitir
the use of the records of the proceedings or t
orders of the board to be used against a physici
in any other proceeding.

**If the board determines that a physicia
is unable to practice, it may demand one
the following:**

1. **Deny his application for a license.**
2. **Permanently withhold issuance of a l
cense.**
3. **Administer a public or private repriman**
4. **Suspend, limit or restrict his license f
five years.**
5. **Revoke his license.**
6. **Require him to submit to counseling
treatment of physicians designated by t
board.**

In conjunction with any of the foregoing, t
board may make a finding of guilt but suspe
judgement or penalty or part of the penalty a
place the physician on probation for a specifi
period.

MSMA expresses oppositio to HMO bill before Committe

*In reply to a letter from E. A. Stricker, M.D
President of the Missouri State Medical Associ
tion, Rep. James W. Symington, D-St. Louis, state
his agreement with the MSMA that Senate Bill 1
is objectionable.*

*SB 14 would appropriate $805 million for th
establishment and operation of Health Maintenan
Organizations. In his letter to Rep. Symington, D
Stricker said that besides the excessive cost, ot
er objectionable provisions of SB 14 were that th
bill sets up a discriminatory capitation subsid
that, in effect, provides national health insuran
for one type of practice — HMO's.*

*Dr. Stricker stated that SB 14 overrides sta
laws and forces implementation of HMO's on stat
Also, the bill calls for a Commission on Quali
Health Care, which Dr. Stricker termed an u
necessary and costly duplication of PSRO r
quirements.*

*Dr. Stricker gave qualified support for anoth
HMO bill, House Bill 7974, co-sponsored by Re
Symington. HB 7974 provides for $240 million

MMPAC drive set

An educational program designed to increase interest and membership in the Missouri Medical Political Action Committee (MMPAC) is being initiated with this issue of MISSOURI MEDICINE.

Following a resolution passed by the 1973 House of Delegates of the Missouri State Medical Association, the MSMA Council approved plans and funds for implementing several education tools to bolster MMPAC activity and membership.

Current plans call for the publishing of MMPAC news in MISSOURI MEDICINE and establishing a separate MMPAC Newsletter to be mailed to members of the MSMA. Also, a brochure outlining the purposes and goals of MMPAC will be distributed to the membership.

Time to join MMPAC is . . . . NOW!

As another Election Year quickly approaches, the time to join MMPAC is NOW!

- Payment of the annual dues gives you membership in both MMPAC and AMPAC.
- MMPAC and AMPAC dues years correspond with those of the Missouri State Medical Association and the American Medical Association.
- Fill out the coupon below and return it to MMPAC, P. O. Box 755, Jefferson City, Missouri 65101.

Comments from the Chairman

by

John N. Martin, M.D.

Due to my activities in the Missouri State Medical Association (MSMA) and the Missouri Medical Political Action Committee (MMPAC), I was given the opportunity recently to reread the "purposes" of the MSMA as stated in its articles of incorporation — something which should be of interest to us all.

As set out in its articles of incorporation, the purposes of the MSMA are:

".....to bring into compact organization the entire medical profession of the State of Missouri aiding thereby the extension of medical knowledge and the advancement of medical science;

"to promote and elevate the standards of medical education;

"to assist in the enactment and enforcement of just medical and public health laws;

"to encourage friendly intercourse among physicians;

"to enjoin and sustain measures of interest and advantage to the public and the medical profession;

"and, to promote the

Continued on next page

Chairman

Continued from page 1

advancement of science, knowledge and skill in the medical profession."

Interesting? Yes!

By rereading these purposes, it is obvious that MMPAC is a natural vehicle to assist in implementing many of the goals of the MSMA.

For example, in order "to assist in the enactment and enforcement of just medical and public health laws," it is necessary that organized medicine in Missouri be heard on these subjects by lawmakers.

MMPAC helps provide medicine with the opportunity to be heard!

To be truely effective, MMPAC needs the active support of physicians and their wives from throughout Missouri.

Join MMPAC — we need each other!! (*Which is more than Nixon and Agnew can say!*)

Auxiliary on move

A continuing drive to enroll more members of the Woman's Auxiliary to the Missouri State Medical Association in MMPAC is planned during the coming months.

Mrs. James A. Reid, of Marshall, Chairman of Auxiliary Public Affairs Committee and a Board member of MMPAC, said that MMPAC information and solicitation was presented at the Auxiliary's Fall Conference in Kansas City during October.

The Auxiliary also plans to take part in the MMPAC Workshop next February.

A change adopted last year in the Rules and Regulations of MMPAC permits Auxiliary members to join MMPAC at a special dues structure of $15 a year. The dues change has already resulted in an increase of Auxiliary membership in MMPAC and Mrs. Reid is confident the trend will continue.

MMPAC information available

Information on MMPAC is readily available by writing to MMPAC, P. O. Box 755, Jefferson City, Missouri 65101 or by contacting a member of the MMPAC Board of Directors.

Board members are:

John N. Martin, M.D., St. Joseph, Chairman; Hubert A. Ritter, M.D., St. Louis, Secretary-Treasurer.

Donald K. Back, M.D., Springfield; B. J. Bass, M.D., Salem; Donald Q. Cochran, M.D., Columbia; E. J. Cunningham, Jr., M.D., Ballwin; J. Will Fleming, M.D., Moberly; Carl M. Peterson, M.D., Kansas City; E. T. Hansbrough, M.D., Poplar Bluff.

Kenneth C. Hollweg, M.D., Kansas City; Mrs. James A. Reid, Marshall; Mrs. Benjamin F. Smith, Clayton; Mrs. Gerald Miller, Kansas City; and Elmer H. Van Dyke, M.D., Sedalia.

Exactly what is MMPAC

Exactly what is MMPAC?

Each edition of MISSOURI MEDICINE which contains MMPAC information will feature a question-and-answer section dealing with various aspects of MMPAC. If you have specific questions, please address them to MMPAC, P. O. Box 755, Jefferson City, Missouri 65101.

Now, what is MMPAC?

MMPAC is a voluntary, non-profit, unincorporated committee of individual physicians and others. The committee is an independent and autonomous organization and has no branches or subsidiary committees. It is NOT affiliated with any political party.

Who should belong to MMPAC?

Physicians and their wives, of course. MMPAC Rules and Regulations also provide that physicians' "friends" may become MMPAC members upon approval of the Board of Directors and payment of dues. "Friends" might include state, county and specialty society medical executives, dentists, pharmacists, nurses and others. AMPAC accepts those persons who have been accepted by MMPAC.

What are the functions of MMPAC?

One function of MMPAC is to promote and strive for the improvement of government by encouraging and stimulating all physicians and others to take a more active and effective part in the political process.

Another function is to encourage all physicians and others to concern themselves with the nature and actions of their government, to understand the importance of the elective process, and to inform themselves on the records of office holders and candidates.

Also, MMPAC should assist physicians and others in organizing themselves for (1) effective political action, and (2) responsible civic participation.

(A copy of MMPAC report filed with the appropriate supervisory officer is (or will be) available for purchase from the Superintendent of Documents, U. S. Government Printing Office, Washington D.C., 20402.)

WASHINGTON

William I. Bauer, M.D., has resigned as director of the controversy-ridden Professional Standards Review Organization (PSRO) program, expressing dissatisfaction with the PSRO organization setup.

The surprise step-down was a shock to the top officials at HEW who have been reeling from the loss of other high officials upset over the lengthy reorganization of the health activities at the HEW department.

Charles Edwards, M.D., Assistant HEW Secretary for Health, interrupted a planned business retreat to hurry back to Washington when news of the resignation filtered out. He called a news conference, but then cancelled it after the reporters had shown up. Dr. Edwards was in conference with HEW undersecretary Frank Carlucci at that time.

The PSRO program is a particularly sensitive one to be subject to the inevitable repercussions and criticisms that follow a resignation. Members of the Senate Finance Committee have been taking a hard line on involvement of state medical societies in the PSRO review of institutional care under Medicare and Medicaid. Some physicians groups and state societies, and the PSRO advisory committee, have urged a broader authority for state societies. In general, HEW and Dr. Bauer had appeared to be attempting a middle course.

Furthermore, the gearing-up for the intricate and complicated program has been a mammoth task for Dr. Bauer.

The 48-year-old Dr. Bauer was named to the PSRO post last March after a career as a practicing internist in Greeley, Colo. Other HEW officials who have resigned in the past several months are Gordon McLeod, M.D., director of the Health Maintenance Organization (HMO) program, and Arthur Lesser, M.D., head of Maternal and Child Health Services.

In a statement, Dr. Bauer said the administration has made a "significant commitment to PSRO but that commitment has not been translated into action. . . ."

"This extremely complex program with ramifications at all levels of medical care has been provided with limited resources and those resources that were made available could not be effectively administered and utilized because of the organizational structure," Dr. Bauer said.

According to a HEW spokesman, the resignation stemmed from a dispute between Drs. Bauer and Edwards over organizational control of the PSRO program. Dr. Bauer was said to believe that he could not exert meaningful authority under the present setup in which much of the field work for PSRO, involving hundreds of physicians, would not come under his line control but under the Bureau of Quality Assurance. Dr. Edwards, the spokesman said, contended that Dr. Bauer would still have the say-so, but Dr. Bauer obviously disagreed.

Underlying the dispute, apparently, has been the effort of Dr. Edwards to pry PSRO control away from Social Security and Social and Rehabilitation Services, present overseers of Medicare and Medicaid and to give the Health Department clear jurisdiction in PSRO.

Under the reorganization, 50 physicians at Social Security and 150 in the Health Services Administration are assigned to PSRO but not directly under Dr. Bauer who had 36 staff positions.

There was no indication from Dr. Bauer of any philosophical differences with the administration over how PSRO would function at the local and state level.

* * *

The House has approved legislation that will provide federal funds to start a limited number of experimental Health Maintenance Organizations over a five-year period to the tune of $240 million. The Senate's version of HMOs, passed months ago, would provide $805 million over the same period. House and Senate conferees must now resolve the differences.

The compromise bill voted by the House calls for spending $60 million this fiscal year, the Administration figure. The bill meets many objections raised to the original measure by the Administration and the American Medical Association.

Though no specific number limitations was set in the House bill, the limit of authorizations to $240 million will provide an effective ceiling on the number of HMOs which could be established. The House Commerce Committee estimated the legislation would be used to bring to the operating stage approximately 100 new HMOs.

CLINICAL CONSIDERATIONS:
Description VALISONE products contain betamethasone valerate (9-fluoro-11$_\beta$,17,21-trihydroxy-16$_\beta$-methylpregna-1,4-diene-3,20-dione 17-valerate). Each gram of VALISONE Cream 0.1% contains 1.2 mg. betamethasone valerate (equivalent to 1.0 mg. betamethasone) in a soft, white, hydrophilic cream of water, mineral oil, petrolatum, polyethylene glycol 100 monocetyl ether, cetostearyl alcohol, monobasic sodium phosphate, and phosphoric acid; 4-chloro-m-cresol is present as a preservative. Eac gram of VALISONE Ointment 0.1% contains 1.2 mg. betamethasone valerate (equivalent to 1.0 mg. betamethasone) in an ointment base of liquid and white petrolatum, and hydrogenated lanolin. VALISONE Cream and Ointment contain no parabens.
Indications VALISONE Cream and Ointment are indicated for the relief of the inflammatory manifestations of corticosteroid-responsive dermatoses.
Contraindications VALISONE Cream and Ointment are contraindicated in vaccinia and varicella. Topical steroids are contraindicated in those patients with a history of hypersensitivity to any of the components of the preparation.
Precautions If irritation develops with the use of VALISONE Cream or Ointment, treatment should be discontinued and appropriate therapy instituted. In the presence of an infection, the use of an appropriate antifungal or antibacterial agent should b instituted. If a favorable response does not occur promptly, the corticosteroid should be discontinued until the infection has been adequately controlled. If extensive areas are treated or if the occlusive technique is used, the possibility exists of increased systemic absorption o the corticosteroid and suitable precautions shou be taken. Although topical steroids have not been reported to have an adverse effect on pregnancy, the safety of their use in pregnant female has not been absolutely established. Therefore, they should not be used extensively in pregnant patients, in large amounts, or for prolonged periods of time. VALISONE Cream and Ointment are not for ophthalmic use.
Adverse Reactions The following local adverse reactions have been reported with topical corticosteroids: burning, itching, irritation, dryness, folliculitis, hypertrichosis, acneform eruptions, and hypopigmentation. Th following may occur more frequently with occlusive dressings than without such therapy: maceration of the skin, secondary infection, skin atrophy, striae, and miliaria.
Dosage and Administration Apply a thin film of VALISONE Cream or Ointment to the affected skin areas one to three times a day. Clinical studies of VALISONE have indicated that dosage only once or twice a day is often feasible and effective. AUGUST 1972

SLR

The bill has a flat five-year cut-off for the HMO program.

Unlike the Senate bill, the House legislation does not preempt state laws that restrict formation of HMOs. The reason given by the House Commerce Committee was "the rapid change already underway in state legislation designed to remove these barriers." Approximately 20 states have already adopted legislation specifically authorizing HMOs.

The bill limits grants or contracts for planning and initial development costs by prohibiting this assistance after 1976.

Initial development assistance would be prohibited after 1977.

Loans and loan guarantees for initial operation costs are authorized except that loan guarantees could be provided only if the HMO will serve residents of a medically underserved area.

The bill has no authority for loan guarantees for construction projects.

For grants and contracts for feasibility studies, initial planning and initial development costs, the bill would authorize $40 million for fiscal year 1974, $45 million for fiscal year 1975 and $50 million for fiscal year 1976. In addition, it would authorize $55 million for fiscal year 1977 for grants and contracts for initial development costs. The bill would authorize $20 million for fiscal year 1974 and $30 million for fiscal year 1975 to be appropriated to the loan fund.

The bill, unlike the original subcommittee bill, has no authority for demonstration grants and contracts for enrollment of the indigent, for providing service in rural medically underserved areas and for enrollment of high risk individuals. There also is no authority for special project grants and contracts, for grants for HMO management training and for program evaluation.

Provisions for protection against insolvency of HMOs, against the cost of providing unusual amounts of health services or of providing out of area health services, and protection against unusual losses were not contained in the final bill. Also deleted were provisions which authorized technical assistance and consultative services to aid in the planning or development of an HMO.

* * *

President Nixon has won a showdown with Congress on health spending. The House failed to override his veto of the emergency medical services bill, making the veto stand and bolstering the administration's hopes of curbing federal spending this year.

The Senate voted before the August recess to overturn the veto.

In the interval, pro-Administration and anti-Administration forces and supporters of the bill worked hard to line up House votes for their sides in what was regarded as an important test of the President's powers.

The bill authorized $185 million over three years to aid state and local governments to set up emergency medical services to cope with auto crashes and the like. In his veto message, President Nixon said the measure would establish "a large new federal program in an area which is traditionally a concern of state and local governments."

The chief executive also criticized a rider to the bill ordering the continued operation of eight public health service hospitals. He said "their inpatient facilities have now outlived their usefulness to the federal government."

Despite the Administration's opposition, the bill sailed through Congress by overwhelming votes.

The House vote on the veto was viewed as a key battle in the legislative war pitting congressional democrats against the Administration, a fight not only involving the issue of economy in government but the powers of Congress and the powers of the executive branch.

President Nixon had been successful in four previous vetoes this year.

* * *

Labor's leading proponent of a sweeping National Health Insurance bill, Leonard Woodcock of the united autoworkers, engineered a tentative agreement with the Chrysler corporation requiring the company to pay the full workers' tab for any National Health Insurance plan that comes down the pike.

It was believed to be the first such provision in a major labor settlement and made clear labor leaders' desire to have management shoulder the full cost of NHI. The agreement made dollars and sense from the standpoint of the UAW, but took some of the gloss off the repeated Woodcock assertions before congressional committees that workers are willing to pay their fair share of any national health program.

Steven Schlossberg, UAW's general counsel, was quoted as saying that autoworkers have always supported NHI, but "now they have even more incentive to press for its passage since, because of the new contract, there is no economic incentive for them to be against it."

The agreement states that in the event a National Health Insurance program is enacted Chrysler will be required to pay any direct premium or taxes which may be levied on workers.

Notes of interest from Here . . . . and There

Dr. James A. Felts, St. Louis, was reelected Vice-Speaker of the House of Delegates of the American Society of Anesthesiologists at the annual meeting of the 12,200 member organization in October. Dr. Felts is Assistant Professor of Anesthesiology at Washington University School of Medicine and a staff member at Barnes Hospital. He is a former president of the Illinois Society of Anesthesiologists, has served the ASA as a member of the House of Delegates, a member of the Board of Governors of the American College of Anesthesiologists and on various ASA committees.

Dr. William C. Banton, II, former St. Louis Health Commissioner, has been named director of the new St. Louis County Department of Community Health and Medical Care by County Supervisor **Lawrence K. Roos**. The new department, which must be approved by the County Council, will be a consolidation of the County Health Department and County Hospital.

Dr. Robert M. Myers, Kansas City, was the keynote speaker for adults at the annual Fall Assembly of the Christian Church of Third District in Missouri in Hannibal on September 30. Dr. Myers is a past-president of the Missouri and Kansas City Academies of General Practice, has received awards of merit for civic leadership and is a church school teacher and elder in the Country Club Christian Church of Kansas City. He also is an ordained Christian minister. The subject of his address was “Celebrating Our Response-Ability.”

Dr. Philip V. Dreyer, Huntsville, has qualified for an exclusive blood donor honor by making 30 trips since May, 1949, to contribute a pint of blood when the bloodmobile stopped in Moberly. On September 13, Dr. Dreyer gave the pint of blood that made him a ten-gallon donor. He received a pin in recognition of his contribution. Dr. Dreyer, who has practiced medicine in Huntsville for 36 years, has served the community in various capacities, including membership on the city council and school board. He has served two terms as President of Chariton-Macon-Monroe-Randolph County Medical Society.

Dr. Ben N. Till, Poplar Bluff, Chairman of the Ozark Health Care Council, was the featured speaker at the regular breakfast meeting of the Poplar Bluff Optimist Club on September 17. He outlined plans for area emergency health care services.—**Dr. Adolph Mueller**, Joplin, was guest speaker at the September meeting of the Joplin Community Multiple Health Association at St. John’s Medical Center.

An original oil painting was presented to **Dr. R. W. Smith** of Brookfield as a going-away gift from friends and patients. Dr. Smith began practice in Marceline in 1948 and later moved to Brookfield and became a staff member at Pershing Memorial Hospital. Dr. Smith recently left that area to assume a position in the medical services of an industrial firm in Granite City, Ill. The painting is an oil still life done by Apatfalvi Czenc Janos, who was born in 1895 and presented his first exhibit in 1921 after study in Rome and Vienna.

The Doctor in Your House Needs Hawaii in February . . .

. . . and so does the spouse.

Maui, "the valley island," has been reserved from February 16 to 23, 1974, just for you.

The elegant Maui Surf Hotel is where it's at, and the Royal Kaanapali Golf Course, the Royal Lahaina Tennis Club, and the golden sands are but steps away—waiting for you.

Why February of 1974? That's when the Washington University Medical Alumni Association has scheduled its First Annual Clinical Conference.

To clinically update the doctors, there are meetings in the mornings. But the afternoons and evenings are strictly "as you like it." There also are entertaining and educational events planned for the ladies.

It's at that time of the year when **everyone** needs to get away.

The Program:

JACK BARROW, M.D. '46—Instructor in Clinical Medicine, Washington University; Past-president, Medical Center Alumni Association. "The Allergic Emergency; Management of the Acute Anaphylactic Reaction."

RUSSELL J. BLATTNER, M.D. '33—J. S. Abercrombie Chairman of Pediatrics, Baylor College of Medicine. "Congenital Rubella."

ELMER B. BROWN, M.D. '50—Professor of Medicine, Associate Dean for Continuing Medical Education, Washington University. "Iron Deficiency: Diagnosis, Treatment, Prevention."

PAULA L. CLAYTON, M.D. '60—Associate Professor of Psychiatry, Washington University. 1) "Attempted Suicide: Psychiatric Emergency," 2) "Conjugal Bereavement."

MARSHALL B. CONRAD, M.D. '45—Assistant Professor of Orthopedic Surgery, Washington University; Past-president, Medical Center Alumni Association. 1) "Emergency Medical Service Systems," 2) "Children's Fractures."

RALPH W. HALE, M.D. Illinois '60—Professor and Chairman of the Department of Obstetrics and Gynecology; Assistant Dean, University of Hawaii. 1) "Our Experience Since Passage of Liberal Abortion Law in Hawaii," 2) "Medical Education as Presented in the Land of Aloha."

JOHN C. HERWEG, M.D. '45—Professor of Pediatrics, Associate Dean, Washington University. 1) "WUMS Curriculum: Past, Present and Future," 2) "Medical School Admissions: The Challenge of Selection."

CHARLES S. JUDD, JR., M.D. Harvard '46—Professor of Medical History and Surgery, University of Hawaii. "Medicine in Polynesia and Trust Territories."

DAVID M. KIPNIS, M.D. Maryland '51—Busch Professor and Head of the Department of Medicine, Washington University. 1) "Future Directions of Departments of Medicine," 2) "Various Types of Metabolic Coma."

FRANK McDOWELL, M.D. '36—Clinical Professor of Plastic Surgery, University of Hawaii. "My Observation of People's Republic of China."

GRANT N. STEMMERMAN, M.D. McGill '43—Clinical Professor of Pathology, University of Hawaii. "Ecology of Cancer in Japanese Living in Hawaii."

Program Chairman
JAMES A. WOOD, M.D. '49—Instructor in Clinical Medicine, Washington University; President, Medical Center Alumni Association.

Cost per person: From Los Angeles, $493; Denver, $534; St. Louis, $559; Chicago, $568; Dallas, $583; Indianapolis, $594; New York, $628.

All arrangements are being made by Lee Kirkland, president of Group Travel Services, Kansas City. Inexpensive optional extensions are available to neighboring islands.

Please send me complete information about that glorious week on Maui in February, 1974.

ST. LOUIS UNIVERSITY

St. Louis University's School of Nursing and Allied Health Professions graduated its first class in the Physician's Assistant Program in late August. Graduation climaxed 24 months of study for the eight graduates. A total of 16 students enrolled in September.

Dr. Francis Zacharewicz, program director, awarded certificates. *Dr. Donald R. Judd,* president of the St. Louis Medical Society and associate clinical professor of surgery at the School of Medicine, addressed the graduates and guests.

The eight graduates, all from the bi-state area, have taken positions with institutions and private practitioners in the St. Louis metropolitan area and rural Missouri and Illinois communities.

Dr. Henry Pinkerton, professor and chairman emeritus of the Pathology Department, has been notified that the Council of the American Association of Pathologists has selected him as the 1974 recipient of the Gold Headed Cane. The award will be made on March 11, 1974 at the annual banquet of the association in San Francisco. This award is being bestowed in recognition of Dr. Pinkerton's great and long contributions to pathology. The Gold Headed Cane award is the highest honor fellow pathologists can bestow upon their colleagues.

Nobel Laureate *Sir Hans A. Krebs,* professor of biochemistry at Oxford University, delivered a special lecture on sugar metabolism sponsored by the Edward A. Doisy Department of Biochemistry at the School of Medicine on October 3.

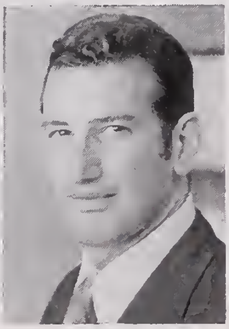
Sir Hans met with Nobel Laureate *Dr. Edward A. Doisy, Sr.,* chairman emeritus of the Department of Biochemistry at the School of Medicine before he visited the laboratories of *Dr. Robert E. Olson,* professor and chairman of the Department of Biochemistry, who spent a year's sabbatical working in 1961-1962 with Sir Hans at Oxford on the respiration of heart muscle.

Among the famed researcher's contributions to his field of biochemistry is the discovery of the citric acid cycle or Krebs Cycle.

Recent faculty members appointed at the St. Louis University School of Medicine are *Roger H. Secker-Walker,* M.R.C.P., associate professor of internal medicine (secondary appointment—associate professor of physiology); *Larry E. Alves,* M.D., assistant professor of internal medicine; *Francis A. Zacharewicz,* M.D., assistant professor of physician's assistant; *Sarah J. Richards,* M.D., assistant professor of pediatrics; *Dennis M. O'Connor,* M.D., assistant professor of pediatrics; *Charles C. Schober,* M.D., clinical professor of psychiatry; *William V. Miller,* M.D., assistant clinical professor of pathology; *Ivy (Thomas) Benjamin,* M.B.B.S., D.G.O., instructor in pathology; *Garry L. Carls,* M.D., instructor in radiology; *Anastasios K. Dagartzikas,* M.D., instructor in gynecology and obstetrics; *Hobart R. Hansen,* M.D., instructor in internal medicine; *Abraham M. Phillips,* M.D., instructor in pediatrics; *Joseph V. Prusaczyk,* M.D., instructor in pediatrics; *Richard A. Rudman,* M.D., instructor in radiology; and *Suheyla F. Savci,* M.D., instructor in radiology.

WASHINGTON UNIVERSITY

Burton E. Sobel, M.D., has been appointed Director of the Division of Cardiovascular Diseases at the Washington University School of Medicine by *David M. Kipnis,* M.D., Busch Professor and head of the Department of Medicine.



Dr. Sobel

The 36-year-old physician comes from the University of California-San Diego School of Medicine where he was director of the Coronary Care Unit and the Myocardial Infarction Research Unit.

He has published extensively on diseases of the heart, and has served as associate medical editor of the *Heart Bulletin.* Dr. Sobel is editor of *Clinical Cardiology* and on the editorial board of *Circulation.* In 1971, he received a Career Development Award from the National Heart and Lung Institute. In the same year he was appointed to the advisory panel on cardiovascular renal drugs for U. S. Pharmacopeia.

The first annual lecture honoring the late Carl V. Moore, M.D., was given on September 21 at Washington University School of Medicine. *Paul A. Marks,* M.D., professor of medicine and vice-president for health services at Columbia University College of Physicians and Surgeons, spoke on "The Thalassemia Syndromes—Genetic and Biochemical Aspects."

Dr. Moore, who died on Aug. 13, 1972, was head of the Department of Medicine from 1955 until his death. He was dean of the Medical School (1954-1955) and the first vice chancellor of medical affairs (1964-1965). A pioneer in the investigation of iron deficiency anemia and other blood diseases, Dr. Moore was elected to the National Academy of Sciences in 1970.

Nearly $60,000 has been awarded to two Washington University School of Medicine researchers by the March of Dimes.

Joseph F. Nee, president of the National Foundation-March of Dimes, announced that *Carl H. Smith,* M.D., assistant professor of pediatrics and pathology, has received $45,654 to study some aspects of how amino acids (the building blocks of proteins) are transported from a mother's bloodstream to her unborn child.

Richard E. Marshall, M.D., associate professor of pediatrics and director of the Division of Neonatology, has been given $14,080 to determine how and when enzymes (catalytic proteins) act in relation to both normal and abnormal development of the fetus.

George H. Bishop, emeritus professor of neurophysiology at the School of Medicine, died on Oct. 11, 1973. A memorial service will be scheduled in the near future.

Recognized as one of the great leaders in physiology of brain and nerve tissue, Dr. Bishop began his work in the early '20s in collaboration with Doctors Herbert S. Gasser and Joseph Erlanger who received the Nobel Prize in 1944 for their original studies of the electrical phenomena of nerve activity.

Dr. Bishop was also well known for his research involving the mechanism of nerve impulse and of pain. He also studied the patterns of development of higher level nervous systems. His basic work on electrical activity of brain tissue was instrumental in the development of electroencephalography as a diagnostic tool in the understanding of epilepsy.

The St. Louis Medical Society honored Dr. Bishop with the Gold Medal in 1959. In 1967, Dr. Bishop was recognized by election to the prestigious National Academy of Sciences and was given the Karl Spencer Lashley Award by the American Philosophical Society.

UNIVERSITY OF MISSOURI-COLUMBIA

Three physicians are among the 12 alumni and 12 faculty members of the University of Missouri-Columbia who were honored at ceremonies on September 21. They are *James O. Davis,* M.D.-Ph.D., chairman of the Department of Physiology in the School of Medicine, UMC; *Major General Carl W. Hughes,* chief surgeon for the U. S. Army, Pacific Area and commander of Tripler Army Medical Center in Honolulu; and *Cortez F. Enloe, Jr.,* M.D., editor and publisher of *Nutrition Today.*

General Hughes and Dr. Enloe were invited to lecture at the University Medical Center on September 21 while in Columbia. All three physicians were honored at a reception in the Postgraduate Lounge.

Sir Hans A. Krebs, M.D., 1953 Nobel Prize Laureate in physiology and medicine, accepted an invitation to be the guest lecturer at the 16th West Central States Biochemistry Conference in Columbia October 26-27.

Noted for his discoveries concerning biochemical pathways—including the ornithine-urea cycle, the citric acid cycle and, with H. L. Kornberg, the glyoxylate cycle—Professor Krebs also has pioneered in the regulation of metabolism. He continues his active research investigations in the Metabolic Research Laboratory, Nuffield Department of Clinical Medicine, Oxford, England.

Professor Krebs' long and distinguished career in biochemical research began in Germany in the 1920's. He left that country in 1933 as a refugee and joined Sir Frederick G. Hopkins' Biochemical Laboratory at Cambridge University. In 1945 he founded the Medical Research Council Unit in Cell Metabolism at the University of Sheffield; it was moved to Oxford University in 1954.

Richard A. Guthrie, M.D., a member of the faculty in the Department of Pediatrics for ten years, has accepted the position as professor and chairman of the Department of Pediatrics at Wichita State University Branch of the University of Kansas School of Medicine.

Complicated Case of Compound Presentation

Case Report

COMPOUND PRESENTATION, the prolapse of an extremity alongside the presenting part with both entering the pelvis simultaneously, is an uncommon condition occurring with a frequency of one in 1,581 deliveries (0.06%) of infants weighing more than 1,500 gm.[1] Compound presentation in which one or more feet prolapse alongside the presenting vertex is less common, occurring once in 7,068 to once in 10,631 labors.[2, 3] "Complete prolapse" in which the extremity lies in front of the presenting part occurs with even less frequency,[4] and prolapse of the umbilical cord occurs in approximately 17% of compound presentations.[2, 3] The case report presented is that of complete prolapse of both lower extremities and umbilical cord complicated by antenatal vaginal bleeding, severe anemia and absence of blood replacement. In the presence of these conditions, conservative management was adopted during the first stage of labor with subsequent vaginal delivery by breech extraction upon complete dilatation of the cervix.

CASE REPORT

The patient is a 20-year-old, gravida 4, para 3, black woman whose last menstrual period was on Aug. 1, 1971 and whose expected date of confinement was May 8, 1972. The patient was admitted to the Max C. Starkloff Memorial Hospital in St. Louis at 10 PM on March 27, 1972 with a ten-hour history of vaginal bleeding accompanied by the passage of clots. The patient gave a history compatible with rupture of the membranes four hours prior to admission and contractions began two and one half hours prior to admission, increasing in intensity to the time of admission.

The patient had received no prenatal care; to her knowledge, the pregnancy had been essentially unremarkable. The review of systems and past history are significant in that the patient had been informed in March, 1971 that she was anemic and had been treated with oral iron supplement. The patient was treated with antibiotics for a kidney infection in August, 1971. Her three previous pregnancies were unremarkable.

The physical examination revealed a temperature of 100.4 F, a pulse rate of 120 per minute and a blood pressure of 110/70 mmHg. In general, she was a well developed, well nourished, black woman in no acute distress. She was alert and well oriented. The conjunctiva were pale as well as were the nailbeds. The breasts, heart and lungs were essentially

Compound presentation involving complete prolapse of both feet and the umbilical cord is a rare condition in which cesarean section is the treatment of choice. Since this case was complicated by antepartal vaginal bleeding and severe anemia in the absence of blood replacement, it posed problems in both diagnosis and management. The authors are from the Department of Gynecology and Obstetrics, St. Louis University School of Medicine.

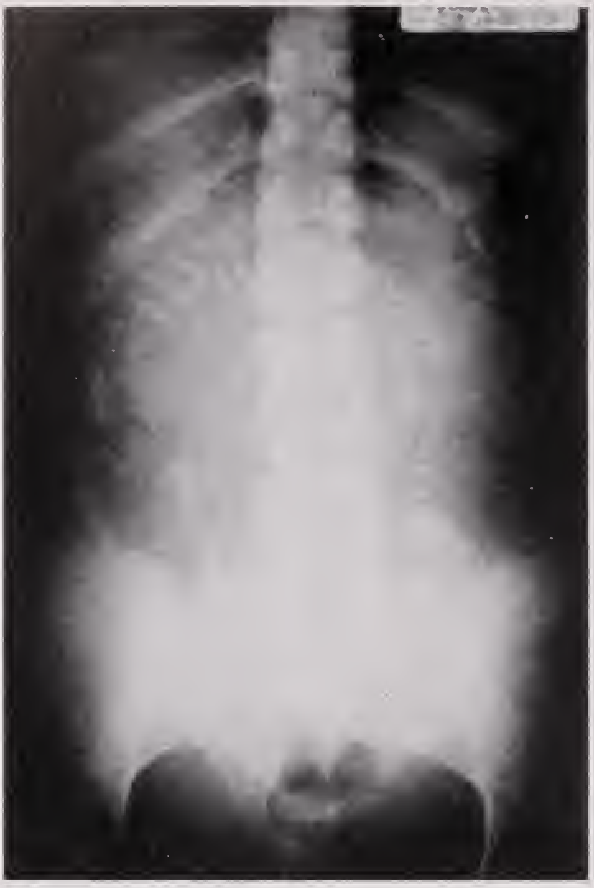

Fig. 1 Complete prolapse of both lower extremities.

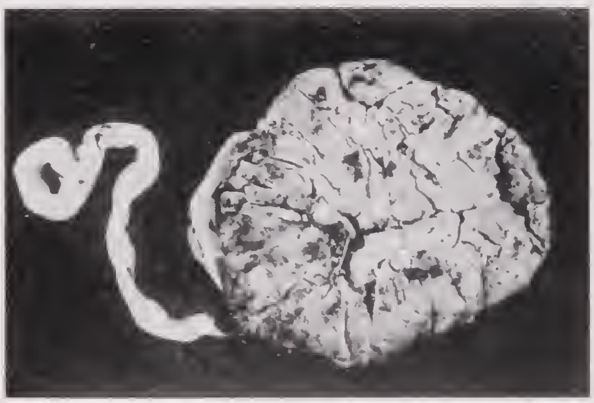

Fig. 2 Placenta with evidence of partial separation.

unremarkable. The abdomen was gravid with the MacDonald measuring 28 cm; the Leopold maneuvers were essentially noncontributory in identifying the lie of the fetus. The uterine tone was not increased and no tenderness was detected. The fetal head could not be palpated in the pelvis nor could the breech or fetal head be palpated in the upper quadrants. The fetal heart tones were audible in the LLQ just under the level of the umbilicus at 136 to 144 per minute. No edema or varicosities of the lower extremities were noted, and the neurological examination was essentially unremarkable.

On admission, the patient was having moderately strong contractions every three minutes with duration of about 60 seconds. The hematocrit value was 25%, and blood was obtained for type and crossmatch. The blood type was B negative and no compatible blood was available. Intravenous Lactated Ringer's solution was infused; blood pressure and fetal heart tones were monitored frequently and the patient's temperature was recorded hourly. The pediatrician was notified of the impending premature delivery.

X-ray examination (Fig. 1) at this time revealed a compound presentation of the fetus with complete prolapse of the feet in front of the presenting vertex. The fetal legs were extended, the breech was on the patient's right side and the upper extremities were flexed and not prolapsed alongside the vertex. The presenting parts were located within the pelvis and no evidence of a low lying placenta or placenta previa was noted.

Careful insertion of the speculum revealed the cervix to be approximately 3 cm dilated with the membranes immediately adjacent to the cervix. Digital examination confirmed the x-ray findings and revealed the membranes to be intact in contradistinction to admission history. Fetal small parts were palpable at a station minus two (-2). The fetal head was palpated above the fetal small parts and a pulsatile structure, which was identified as the umbilical cord, was palpable to the left of the fetal small parts.

The patient's vital signs and the fetal heart tones remained stable except for the previously noted maternal tachycardia. Her temperature returned to normal with hydration and Lactated Ringer's solution continued to be infused as compatible blood remained unavailable. Estimated blood loss during the three hours following admission was 800 ml. Contractions increased in intensity with subsequent cervical dilatation. Four and one half hours after admission, the cervix was noted to be completely dilated with the fetal small parts at a station minus one (-1). The fetal heart tones were audible at 186 per minute. A pudendal nerve block was performed, the feet were grasped and the membranes ruptured with the subsequent delivery of a 1,760 gm male infant by breech extraction. The Apgar score of the infant was three at one minute and seven at five minutes. Subcostal and substernal retractions were noted and the baby was transferred to the premature nursery.

The placenta revealed a partial abruption with a fine, shiny film over the maternal surface (Fig. 2). After delivery, the patient was transfused with two units of whole blood and the hematocrit value on the following morning was 24%. She was given a course of iron replacement therapy and was discharged to be observed in the outpatient clinic. The infant's postnatal course was essentially uncomplicated and he was discharged at 30 days of age at a weight of 2,400 gm.

DISCUSSION

Weissberg[1] describes a vertex-foot presentation without associated prolapse of the umbilical cord as a "major obstetric complication" usually requiring intervention. Compound presentation with associated prolapse of the umbilical cord is a condition in which fetal wastage is extremely high. Bhose,[5] in his review of 91 cases of compound presentation, noted that in the 25 cases with associated prolapse of the cord, 12 fetal deaths occurred prior to hospital admission. Bhose attributed 60% of all fetal deaths associated with compound presentation to prolapse and compression of the umbilical cord. Chan,[6] in his series of 65 cases, found a fetal mortality rate of 40% in cases associated with prolapse of the cord. He also noted an increased fetal mortality when the foot was prolapsed in contrast to the prolapse of the hand or arm alongside the vertex.

The case presented is complicated both from the diagnostic aspect and from the aspect of providing the management of choice. Associated with compound presentations are an increased incidence of both abruptio placenta and placenta previa[1, 8] as a source of antepartum bleeding, as well as increased incidence of prematurity.[8] The patient presented to the hospital in early labor with a history of antepartum bleeding and premature onset of labor. The premature status of the fetus as well as the vaginal bleeding were noted on admission, and the Leopold maneuvers were not contributory in determining the lie of the fetus. The uterine tone was normal and, consequently, significant placental separation was not suspected. The diagnosis of compound presentation was made by radiologic examination (Fig. 1). Because of the position of the presenting fetal parts and the absence of a low-lying soft tissue density, placenta previa was believed not to be present. A careful speculum examination revealed the membranes closely applied to the cervix. The digital examination confirmed that the membranes were intact and the diagnosis of compound presentation, as both feet and the pulsating umbilical cord were palpated in front of the presenting vertex. The prolapsed umbilical cord which was noted at the time of digital examination, was confirmed at the time of delivery.

The management of this case was influenced by the presence of severe anemia in the absence of blood for replacement and by the absence of the signs and symptoms of hypovolemic shock. The patient's hematocrit value on admission was 25%. With the continued vaginal bleeding, the estimated hematocrit value was 20%. Emergency cesarean section, the treatment of choice for prolapse of the umbilical cord during early labor,[6] was considered but was contraindicated by the patient's decreased hemoglobin level in the absence of available compatible blood.

A policy of "watchful expectancy"[7, 9] was adopted and supportive measures, which included intravenous replacement with lactated Ringer's solution, were instituted. Preparations were made for rapid extraction of the infant should this be necessitated by rupture of the membranes with subsequent compression of the umbilical cord. Labor proceeded uneventfully with the membranes remaining intact until complete dilatation, at which time a pudendal nerve block was given. The membranes were artificially ruptured and the infant was delivered by breech extraction.

Prematurity associated with compound presentation is a major cause of fetal loss[7] and, most probably, this was a significant factor in the neonatal morbidity associated with this case. The infant's birth weight was 1,760 gm, and severe retractions were noted soon after birth. Intensive care in the premature nursery was available, and the infant responded well to supportive oxygen therapy.

The diagnosis of compound presentation was made radiologically early in the course of the patient's labor and while the membranes were intact. Close fetal monitoring and watchful waiting without obstetric interference was employed and labor proceeded satisfactorily. The complications of uterine inertia, dyskinetic or tetantic uterine contractions, which are so frequently reported with compound presentations,[4] were not encountered.

Replacement of the fetal extremities was not attempted because of their complete prolapse, because of the abnormal lie of the fetus and because of the close proximity of the pulsating umbilical cord. In view of the multiple complicating factors in this case, which were compounded by the unavailability of compatible blood, the more obvious solution of cesarean section was not applied. Conservative management with subsequent breech extraction was successfully employed for the delivery of a live infant. However, it is stressed that when "watchful waiting" is the plan being followed in a situation of this type, continuous evaluation of the patient is required and facilities for immediate cesarean section must be available.

EMILIO M. CANLAS, M.D. *and*
M. MORGAN, M.D., *Poplar Bluff*

Radiologic Sequence From Esophagitis To Carcinoma

Case Report

A 73-year-old man was admitted to the hospital with a history of difficulty with swallowing, which he had experienced during the preceding 30 years. He claimed that during this period, he had learned to swallow air in order to push food into his stomach. However, he had not been seen by a physician until about seven years previously when he had gone to a private physician with a complaint of sour stomach and substernal soreness. He was given antacids which provided some relief.

He was first seen at this hospital on Dec. 21, 1965, again with the chief complaint of substernal chest pain and sour stomach. He claimed that taking a teaspoon of baking soda dissolved in water relieved the discomfort. He had no history of vomiting or regurgitation. The first esophagogram, which was made at this hospital on Dec. 28, 1965, showed narrowing of the distal third with ulceration (Fig. 1). A repeat esophagogram made in February, 1966, showed constriction of the lumen of the distal third,

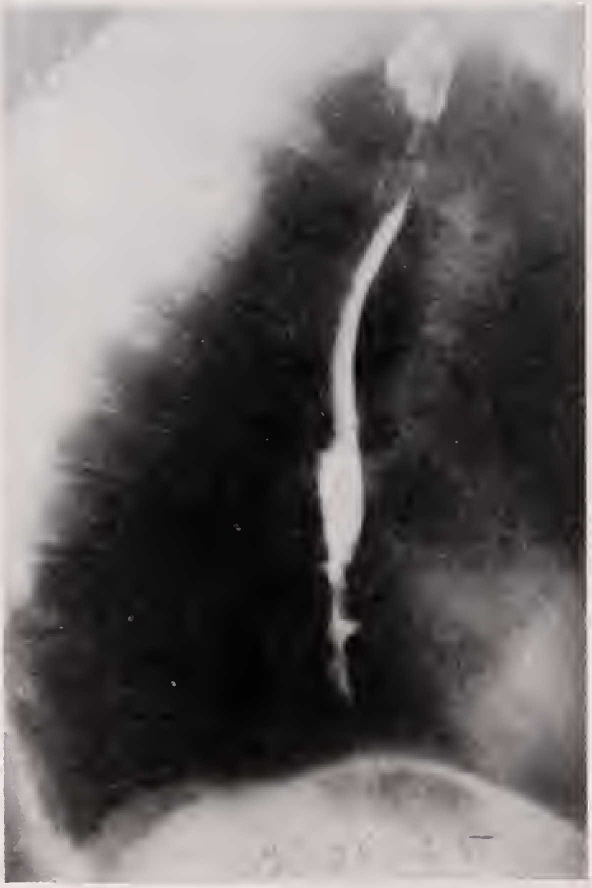

Fig. 1 (Dec. 28, 1965) Esophagogram shows two ulcers in the distal third with constant narrowing of the lumen. Moderate dilatation is seen proximal to this narrow segment.

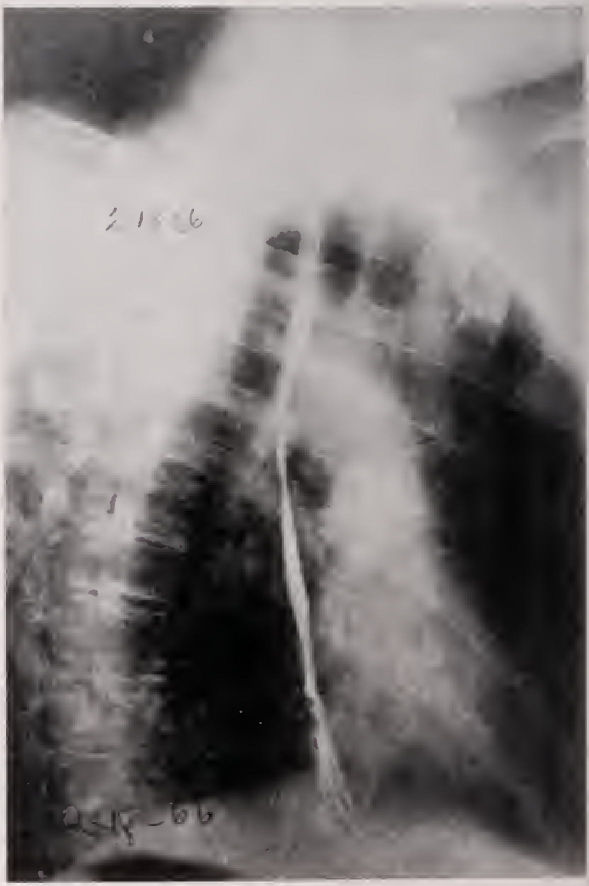

Fig. 2 (Dec. 18, 1966) Repeat esophagogram after one year shows absence of ulceration and entire esophageal lumen patent. No delay in the passage contrast medium into the stomach.

but no ulceration. No tumor was seen (Fig. 2). In January, 1969, esophagoscopy with biopsy was performed and showed acute and chronic esophagitis.

The patient was lost to follow-up and was not seen again until November, 1969. At that time, his main complaint was hematemesis of approximately 200 cc about an hour before admission. The patient stated that he continued to swallow air in order to push down each bolus of food.

Physical examination was essentially negative, except for minimal tenderness in the epigastrium. An esophagogram on Nov. 11, 1969, showed narrowing of the distal third with no ulcer or tumor (Fig. 3). Three weeks later, the patient was discharged to the care of his physician.

On March 23, 1971, after a 2- to 3-months period of worsening difficulty with swallowing, he was readmitted. During the two weeks before admission, the patient had taken only liquids by mouth and had experienced occasional regurgitation. He was ambulatory and appeared well for his age. On March 24, 1971, an esophagogram showed no ulcer or tumor, but narrowing of the distal third (Fig. 4). On March 25, 1971, esophagoscopy showed a marked stenosis at the lower third of the esophagus approximately 6 cm above the esophagogastric junction. The mucosa in this area was not seen clearly, but it appeared to be irregular. Several biopsies of the mucosa were taken, and these showed adenocarcinoma.

This case report illustrates that a malignant tumor may appear in chronic esophagitis and may be difficult to diagnose. Dr. Canlas is in the private practice of radiology and Dr. Morgan is Chief Surgeon, VA Hospital.

On April 1, 1971, an esophago-gastrectomy was performed. Inspection of the lesion showed 3 cm of normal-appearing mucosa between the lesion and the esophagogastic junction. Histologic studies of the intervening mucosa and section of the cardiac portion of the stomach failed to reveal any tumor. It was felt by the pathologist therefore, that the tumor arose in ectopic gastric mucosa in the lower portion of the esophagus.

The postoperative course was complicated by a

(Continued on page 767)

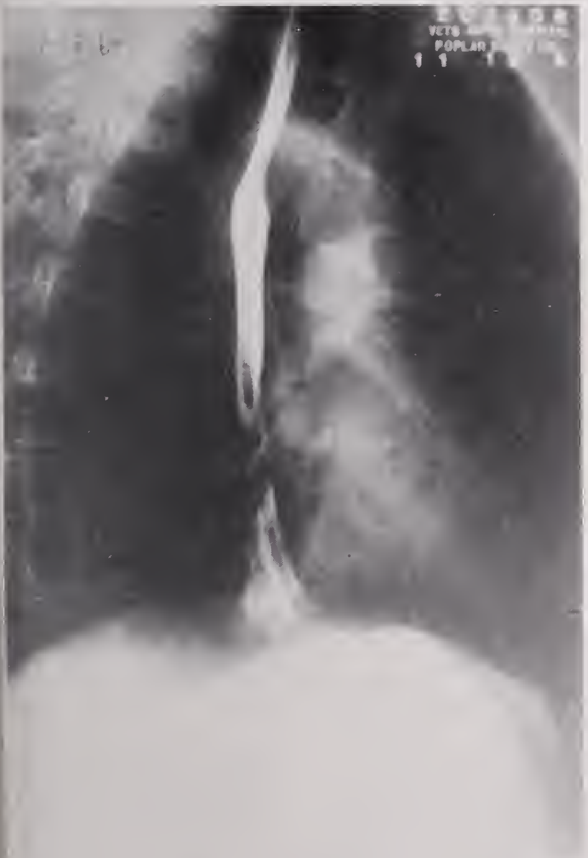

Fig. 3 (Nov. 18, 1969) Repeat esophagogram after three years shows narrowing distal third but no ulceration or tumor.

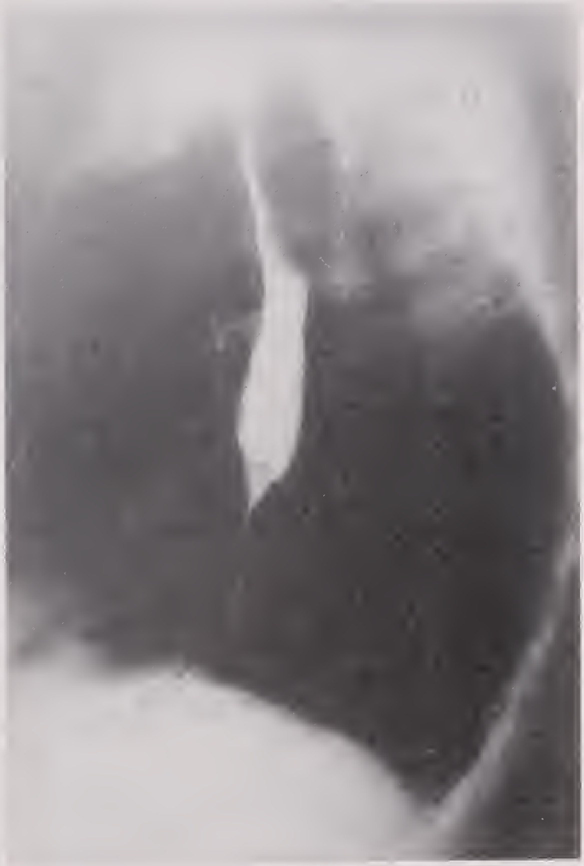

Fig. 4 (March 24, 1971) Repeat esophagogram after five years shows markedly narrow lumen, distal third and radiolucent area immediately above the narrow segment. Esophagoscopy was recommended for possible malignant tumor.

LARRY E. MILLIKAN, M.D., ***Columbia***

Wiskott Aldrich Syndrome: A Treatable Immune Disorder

A Review

In the past three years, the impressive therapeutic advances with transfer factor in the Wiskott Aldrich Syndrome make its clinical separation from other look-alikes important. Since its first description in 1937, by Wiskott,[1] more than 125 patients have been described in the literature. Aldrich, in 1954, first determined its x-linked nature.[2]

The classical triad of Wiskott Aldrich consists of eczema, thrombocytopenia and increased susceptibility of infections.[3, 4] The majority of patients, who were included in earlier reports of the syndrome, manifested all three. More recently, however, other patients have been included who do not manifest all three disorders and who do have other defects.

Pathogenesis

Examination of the eczema component alone doesn't furnish evidence for the separation of ordinary patients with atopic eczema from those with Wiskott Aldrich Syndrome,[5] although precise reports of response to therapy or other clinical details are few.

The inherited immune defect has been the subject of much research in the past five years. With this impetus, much has been learned of the underlying mechanisms. There is no single immunologic abnormality common to all patients with Wiskott Aldrich Syndrome. Three general terms, dysgammaglobulinemia, diminished cellular immunity and decreased isoagglutinins, perhaps best cover the abnormalities. Dysgammaglobulinemia is the preferred term, for while the IgM abnormality is almost universal,[6] variable changes in the other immunoglobulins are usually present. Elevations of all immunoglobulins have been described as well as elevations only of IgA[7] and elevations of both IgA and IgE.[8] The isoagglutinin deficiency is the most common abnormality and so is easily used as a screening test.[9] The abnormality of cellular immunity has long been suspected because of the types of infections. Abnormal lymphocyte transformation was first described by Gottoff in 1968.[10] Structural abnormalities of the thymus were previously described in 1967.[6] Cooper also noted a diminished response to Dinitrofluorobenzene (DNFB) sensitization and an abnormal homograph rejection.[10]

A single unifying hypothesis to explain this peculiar mosaic of immunoglobulin abnormalities and deficiencies in delayed hypersensitivity has not been devised. One approach was to explain this defect as an abnormality in the immunoglobulin sequence after antigen exposure. This hypothesis was initially based on the finding of decreased IgM. Because IgM is the dominant primary immunoglobulin, diminished macroglobulins could result from an abnormality in either the primary response or the processing step.[11] This abnormality would then cause abnormal accumulation of the antigen or infecting organism which would progress to persistent antigenemia antigen overloading. This can give the changes in delayed hypersensitivity and immunoglobulins. The differentiation between congenital or acquired thymic abnormalities is made by careful evaluation of the thymus on autopsy. The presence of Hassall's corpuscles is thought by most investigators to indicate intact congenital delayed hypersensitivity. Atrophy of the thymus can occur as the result of steroid therapy or chronic infection, but persistence of the Hassall's corpuscles is seen. Unfortunately, most of the patients who were examined in the past did not have a careful examination of the thymus.

A variation of the immunoglobulin sequence theory is the ingenious work of Cooper and Good.[10] They studied several patients with multiple antigens and were able to determine that the defect was related to the afferent limb of immunity. Their patients were unable to respond to certain polysaccharide antigens which required processing in the induction of immunity. These included the Forssmann antigen, blood group antigens, the Witebsky substances A or B and endotoxin. Most interestingly, these patients responded normally to protein antigens in most cases. They concluded that there was difficulty in the processing step which leads to the inability to handle certain antigens, antigen overload and a secondary functional deficiency of the thymus dependent lymphoid system. The effects of endotoxin are known and the end result would be lymphoreticulo-malfunction, decreased thymic dependent activity, decreased IgM and lymphocytopenia. Recent work done at the National Institutes of Health[12] has further elucidated the immunoglobulin abnormalities. The majority of patients had normal IgG levels, diminished IgM levels and increased amounts of IgA, IgD and IgE. Studies showed that IgG was turned over five times as fast as normal and there was a twice normal turnover for IgA, IgM and albumin. Turnover was not related to the GI loss since there was only a 2% increase in GI loss of immunoglobulins. The exact mechanism of the hypercatabolism was thought to be related to increased activity of the reticuloendothelial system.

Studies into the delayed limb of the immunity of these patients was done by the same group.[13] In their patients, they found that in many of the cases, there was increased spontaneous lymphocyte transformation in control cultures. Phytohemagglutinin response was largely normal and this parallels two other conditions with a generalized specific anergy associated with intact nonspecific PHA response. These are chronic mucocutaneous candidiasis and progressive lymphoid deterioration. They speculated that the basic lesion was defective antigen binding site on the lymphocyte surface. This, of course, could involve both the humoral and the delayed hypersensitivity limbs and lead to defective response to specific antigens. The defect could still be in the processing step delineated by Cooper, for the primary antigen processing is necessary for both delayed and immediate hypersensitivity reactions.

The platelet abnormality has received the most attention on the basis of various types of therapy. More recently, progress has been made n determining the exact metabolic problem in the platelets. In 1966, it was first noted that homologous platelets had normal survival in Wiskott Aldrich patients and that only autologous platelets had decreased survival rates.[14] This helps separate this problem from such immune problems as idiopathic thrombocytopenia purpura. More recently, evaluation of the platelet, itself, with many sophisticated techniques has been done. Reports have described abnormal responses[15] of platelets to epinephrine, and these suggest that the defect may be in intracellular granule formation of the platelet. These granules seem to lack specific regulators of the Krebs cycle, the energy source for the platelet degranulation and aggregation. An alternate explanation[16] presented is that there are defects in production of specific storage granules. Platelet size has been a subject of recent interest and patients with various thrombocytopenic states have been studied. Young platelets are generally larger in size, and this is the case in idiopathic thrombocytopenia purpura. The platelets in Wiskott Aldrich Syndrome have been reported to be a small size. This is of interest and is being studied further. The platelets in Wiskott Aldrich Syndrome are presently thought to be a young platelet population with a much shortened platelet survival. The small size of these platelets may point out an intrinsic defect not yet discovered.

Previously considered rare, the Wiskott Aldrich Syndrome is being recognized more commonly and has assumed importance because of new advances in therapy of the immunologic abnormalities. The current understanding of the hematologic and immunologic defects is presented. With the current therapeutic success using grafts and transfer factor, separation of the disorder from other diseases with eczema is necessary. Dr. Millikan is Associate Professor, Division of Dermatology, University of Missouri Medical Center.

The susceptibility to infection most commonly includes otitis media and some upper respiratory infections. Splenectomy, which is done for the thrombocytopenia, has contributed to the death of many of these patients. Presumably, this is related to both the immunologic defect and the loss of the filtering capability of the spleen. With the cellular immune defect, more serious infections can be expected to appear. Herpes simplex[17] and other viral infections and protozoan infections have been reported.[18]

About 150 patients with the full syndrome have been described. Many other patients with variations of this syndrome have been seen and their reports are appearing in the literature. Patients have been described with the platelet abnormality and decreased isoagglutinins but without increased susceptibility to infection. In addition, the platelet abnormality and eczema without immunodeficiency also has been described.[19] We have taken care of a kindred, two young men and their two nephews who had recurrent infections, thrombocytopenia but minimal if any skin changes. A similar kindred has been reported who had thrombocytopenia, decreased isoagglutinins without eczema or increased infections.[20] With this wide variation in manifestation of the syndrome, patients with partial expression having milder disease and longer life span[21] are recognized more often. Therapy also may be helpful in these patients and so their identification is of value.

Therapy

The primary causes of death in these patients are hemorrhage and infection. In the early 1960s, the first efforts were made to improve the survival of these patients by treating the thrombocytopenia. Platelet transfusions are used in mild cases, but splenectomy often is necessary in many of these patients.[22] This, however, is not without problems. In the literature, many of these patients have succumbed to infection after the removal of the spleen.[23] According to Mandl,[20] splenectomy is contraindicated in almost every case of Wiskott Aldrich because of the susceptibility to infection and the loss of the spleen as an important screening element in the reticuloendothelial system. At the present time, patients are still being treated by splenectomy and some have done very well. To our knowledge, the controversy has not been resolved and replacement therapy with platelet transfusions is still the safest therapy.

Attempts at improving the immune response began with simple plasma infusions.[11] These, of course, did help the patient to some extent. Transplant therapy was introduced by Bach[24] with the use of bone marrow transplant. The donor was the patient's sister, who was identical at the HLA locus. This patient responded well and developed the chimeric state in the peripheral blood with both male and female cells present. Other tissue transplants have been attempted, but the current exciting therapy involves the use of transfer factor. Transfer factor is a low molecular weight nonsensitizing dialyzable substance first described by Lawrence,[25] which recently has gained widespread acceptance and use in laboratories throughout the country. Evidence has been accumulated that eczema is related to defects in delayed hypersensitivity.[26] Therefore, it is not surprising that the patients who have some abnormalities of cellular immunity, susceptibility to infection and eczema, as in Wiskott Aldrich, might respond to transfer immunity. Spitler first described initial studies in abstract form in 1970. However, her work is fully described now in the recent publication.[27] The results in her patients with the Wiskott Aldrich Syndrome are extremely interesting. Clinical improvements with a marked decrease in infection and clearing of eczema was noted in seven of 12 patients treated. In vitro studies after transfer factor therapy showed no change in lymphocyte blast transformation, but it did show an increased production of migration inhibitory factor (MIF) in response to appropriate antigens showing partial recovery of cellular immunity. Abnormalities of monocyte IgG receptors were found in those patients who responded to the transfer factor. This gives a clue as to the mechanism of the response and seems to confirm previous speculations.[13] Transfer factor appears to affect membrane functioning and, thus far, works only on those patients with defective IgG receptors.

Because a new means of therapy is available, it is important to reevaluate all patients with an eczema or other portions of the syndrome to determine if they have the Wiskott Aldrich Syndrome. Those who have sufficient disability should be considered for possible transfer factor therapy. This therapy, thus far, in our hands[28] and others[29] seems to have minimal problems. The dramatic response of Spitler's patients gives hope for many patients with this serious disorder.

Compound Presentation

(Continued from page 761)

SUMMARY

A report of a complicated case of compound presentation involving complete prolapse of both feet and umbilical cord, as well as antenatal vaginal bleeding, prematurity and severe anemia in the absence of blood replacement, has been presented. X-ray examination revealed the presence of a compound presentation and provided evidence against the presence of a low lying placenta allowing for further careful evaluation. Although the diagnosis of prolapse of the cord was made early in labor, cesarean section was contraindicated by the unavailability of compatible blood. A policy of watchful expectancy was employed and was followed by vaginal delivery via breech extraction upon complete dilatation of the cervix.

Esophagitis to Carcinoma

(Continued from page 763)

left femoral embolus, which was successfully treated by embolectomy. The patient recovered from the operation well, has been eating a regular diet and has gained five pounds.

SUMMARY

A case report of dysphagia of over 30 years duration is presented. During the last five years, it was diagnosed as chronic esophagitis by X-ray, esophagoscopy and biopsy. X-ray findings were typical of esophagitis, with narrowing of the distal third, gradually merging into normal esophagus. Later, an esophagogram showed a small radiolucent area in the proximal end of the narrow segment, and esophagoscopy was recommended for possible malignant tumor. Biopsy showed adenocarcinoma.

A malignant tumor may appear in chronic esophagitis and may be difficult to diagnose. The role of prolonged chronic irritation in the initiation of the carcinoma is open to speculation.

JAMES L. CHAPEL, M.D., ***Columbia***

The Hyperactive Child

Every neighborhood and almost every grade school classroom has an irritating and difficult child who is the curse and the despair of the adults who come into daily contact with him. This child presents the same sort of picture to the other adults that he does to the teacher, except that his teacher's lot is worse than the casual neighbor's. The teacher must deal with him from three to six hours a day, five days a week, for nine long months of the year while he is living for the day when this boy will graduate to the next class. Alas, more often than not, the boy is replaced by another "little monster" of the same vintage, same problem, but different name.

In discussions, this child is called a "problem child," "anti-social," "a disrupter" and, at times after a more than usually trying day, names which more properly belong in a zoo or in a kennel. He is the hyperactive, impulse-driven, easily frustrated child who has a knack for "getting into everyone's hair" and who, it is said, "should know better," "is able to do better if only he wanted to" or "if he would try." Eventually, through pressure from the school (or if the child is too young for school, then pressure from the neighborhood), the child finds his way to the physician's office, being tugged grimly by the hand by a mother who is both emotionally and physically exhausted. It then becomes the physician's task to diagnose this child's problem and offer concrete help to the parents and other significant people in this child's life.

Medically, it should be appreciated that this child could be showing the results of any one of the following:

1. A normal but high activity level.
2. Minimal brain damage (cerebral dysfunction).
3. An emotional reaction to a variety of stimuli which may be either internal or external or both.

The problem of differential diagnosis is difficult at times; at other times (but, fortunately, rarely), it is almost impossible. In the following discussion, I will present my impressions of this particular problem and outline the steps which I feel one ought to consider in attempting to arrive at a definite diagnosis and sound treatment plan. In order to do this, I will present in detail the findings which one most commonly meets in the brain-damaged child. From that, it will be appreciated how one might make the differential diagnosis.

The syndrome of "Minimal Brain Damage" is known by many and various names, depending on the discipline which is attempting to deal with the syndrome at that particular moment, e.g., "maturational lag, minimal brain dysfunction, neurophrenia, impulse-driven child, hyperkinetic child, brain injured child" and others. From the medical viewpoint, it is important to realize that there are many and varied clinical types of brain-damaged children, ranging from those with gross cerebral palsy at one end of the spectrum to children whose brain damage shows no discernible clinical signs whatever.[1] In this spectrum ranging then from severe to apparently normal, the syndrome of the "brain-damaged child" to which we are referring falls to the right of center or towards "apparently normal." When this child is referred to the physician, he is referred primarily because of his behavior and not because of neurological involvements. He may well present with a multitude of "soft signs" of central nervous system involvement or he may show only a few inconclusive but suggestive signs. In these cases, consequently, one has to base his diagnosis on the correlation of the clinical picture with the history and investigative findings, although even this method at times will fail to definitely resolve the question. The age of the patient also is of little help, since the behavior manifestations may appear at any time in childhood from infancy to early adolescence, but more commonly between five to ten years of age.

The following outlines the more important areas which have to be explored in order to arrive at the diagnosis of brain damage:

A. Clinical picture.
B. Social adjustment history—peer and teacher relationships, family interactions, learning

skills, school behavior, etc.

C. Psychological and other tests—WISC, Bender, Benton, Graham-Kendall, ITPA, speech and educational evaluation, etc.

D. Medical history—prenatal, natal, growth and development.

E. Physical and neurological examination—"soft signs," EEG.

In my experience, I have felt that a positive ABC, i.e., a positive clinical picture plus a typical social maladjustment history plus psychological tests compatible with brain damage, are together proof enough to establish a diagnosis in virtually all cases. The other areas of investigation (D,E) can add to the probability of the diagnosis. When negative, however, they still do not significantly detract from making the diagnosis.

A "normal but high activity level" diagnosis may be made when the examinations are negative and there are no learning difficulties except those which may be directly attributed to hyperactivity or restlessness. In these cases as well, one will find that the child has a normal attention span, is not abnormally distractible and has good impulse control. Really, to all intents and purposes, he is quite normal except that "he is more boy than the average." Of course, the important factor here is the recognition of this boy's different temperament and the management instituted in line with this knowledge.

An "hyperactive child due to emotional factors" diagnosis also can be made on the absence of positive findings in C, D and E, but in the social history (B), there are very definite indications of internal stresses (anxieties, insecurities, fears and others) as well as pathological external and environmental factors (rejecting parents, intense sibling rivalry and others).

In making the diagnosis of the "minimally brain-damaged child," the five broad areas of nvestigation mentioned above can be further detailed as follows:

A. Clinical Picture

The child is more often a boy (six boys to one girl is often quoted as an average figure) who s invariably prepubertal and with the age group ive to ten years showing most dramatically the igns and symptoms characteristic of this syndrome. The cardinal signs are hyperactivity, impulsivity, distractibility, short attention span and ow frustration level, all of which are present in varying intensity depending on the severity and ocation of the brain injury, the age of the child, the nature of the examination's setting, etc. The child is restless, moves from one situation to another and is unable to sit quietly for any time. The slightest noise in the external environment commands his attention; the slightest distraction forces him to look. He is impulsive in his play with objects or with persons and unable to concentrate on any task for any significant length of time. Often, his speech reflects a parallel hyperactivity and distractibility in his thinking and one finds oneself amazed at the close similarity between his motor and verbal patterns. At times, the child definitely gives the unsophisticated interviewer the impression that this hyperactivity is nothing more than the behavior seen in a spoiled, untrained child and the urge is strong to lay one's "healing hands" where "it will do most good." The child may well rummage through your desk, play with your instruments, get into your stock of sample medications and literally destroy the effectiveness of your long years of "insight training." If ever the strong urge to discipline a very restless boy arises within you as you interview a child, I would venture to say that chances are you are dealing with a hyperactive, brain-damaged child.

The syndrome of the hyperkinetic child, regardless of etiology, is a real and trying condition for all who are associated with the victim. The author presents his impressions of this problem and outlines steps to consider in attempting to arrive at a definite diagnosis and sound treatment plan. Dr. Chapel is Professor and Chief of Child Psychiatry in the Department of Psychiatry, University of Missouri-Columbia.

B. Social Adjustment History

The history of adjustment in the home and in the community is that of a poor adjustment, indeed. In the neighborhood, the boy is always "on the go," always doing something to someone and always getting into some sort of mischief. He tends to have very few, if any, friends because of his tendency to be destructive and impulsive and to act without showing good sense. His judgment is poor and his behavior is unpredictable. In fact, at times, he is cruel and seemingly unfeeling. As he gets older, he may be aggressive, irritable, high strung, easily panicked, unpredictable and, at times, quite explosive in his emotional outbursts. There may be emotional lability, destructiveness, cruelty to people and animals. The lack-of-impulse control makes him unable to refrain from touching and handling objects regardless of how "out of bounds" they might be, whether at home or in a strange place. In fact, the stranger the setting, the more stimulating it is to him and, therefore, the more difficult it is to resist. This impulsivity leads him into conflict with the demands for conformity as established by family, school and the immediate and not-so-immediate society. Often, the brain-damaged child will attempt to make contact with people by clinging or overaffectionate behavior or by attention seeking or even abusiveness, but much of the activity is impulsive, poorly controlled and disorganized. If his interest is keenly aroused, however, he can show good attention span. The parents, faced with daily evidence of their ineffective management of this boy, react with anger, guilt, depression and helplessness. All of this tends to make their inadequacies much worse and leads to a vicious, self-perpetuating cycle only broken when treatment is begun. The child himself, who is an unthinking, impulsive, destructive and often antisocial being, sees himself falling behind in school and being rejected or shunned socially. Hence, he develops poor self concepts, lacks confidence, feels inadequate and insecure and reacts with bitter hostility towards his world. They are most often unwanted by others and they know it.

In school, the boy can present a variety of pictures and he is described by the teachers or those who come into contact with him as a child who has any of the following:

No sit in him.
Can't be screwed to his seat.
He seems bright, but he daydreams and can't read.
He is high strung and nervous.
He does not work to capacity.
He has frequent temper outbursts, often without reason.
He cries often and easily.
He is an attention seeker.
He is often stubborn and uncooperative.
He has constant difficulty with the other children and with adults.
He is unhappy, aggressive and unrealistic in his demands.
His daydreaming alternates with his hyperactivity.
He lacks continuity of effort and perserverance or stick-to-it-ness.
He may have unpredictable, explosive behavior.
He has poor self-control and is very impulsive verbally.
His school performance is erratic.
The quality of his work varies daily.
He appears unable to differentiate important from unimportant stimuli, i.e., a car horn is as important as the teacher's voice.
He often shows learning disabilities, e.g., he shows confusion in spelling, in writing (reversals of letters, mirror writing, rotation of symbols).
He is poor in arithmetic, can't read, has poor memory.

Further terms used to describe this boy would include "poor reader, poor ability to conceptualize and to abstract, difficulty in reasoning out logically or to arrive at the meat of the matter, classroom comments often inappropriate, answers often concrete." A rather common trademark of this boy is a poor, scrawly, irregular, often illegible handwriting with frequent reversals, rotations and a very clear inability to stay between the lines. There is often difficulty in drawing angles, diamonds or reproducing geometric figures which have special spatial relationships.

The most frequent and most frustrating behavior of the typical brain-damaged child is that of his hyperactivity which, along with his very short attention span, tends to lead him to distract the remainder of the class and be completely disruptive of classroom discipline.

At times, this child's inability to concentrate or to assimilate the material presented to him causes him to become retarded educationally and eventually to be banished to the special education classes where it is apparent that his intelligence is better than most of his peers but his ability to use that intelligence actually is poorer.

Finally, this boy seems to exhibit a fluctation of mood with aggressive outbursts often coupled with poor judgment and impulsive behavior. He lacks fear, shyness and ambition and has an unfortunate inability to delay gratification or to profit from experience.

In summary, then, performance in school may show extreme variability, especially in spelling, arithmetic and reading. These children are impulsive in answering questions and act without thinking, thus giving a good example of the absence of reflection between impulse and action.

The irritations of man's day are often reflected in his gut.

The causes of irritable colon and the diarrheal symptoms that often accompany it can be as diverse as the systemic and emotional irritations man is faced with daily.

Although the mucoid nature of stools and the occurrence of diarrheal episodes coincident with times of emotional stress may be valuable clues to the functional nature of the disorder, irritable colon must often be diagnosed by exclusion. Such diagnostic exploration takes time. Discovery of the nature of any emotional problems may take more. During that time, Lomotil® is an ideal agent for controlling diarrheal symptoms.

Lomotil tablets are small, easy to carry and easy to take. They act promptly and effectively. Secondary effects are relatively infrequent and, once the first force of the diarrhea is controlled, maintenance is frequently effective on as little as one fourth of the initial dosage.

These same characteristics make Lomotil useful in controlling the diarrhea associated with gastroenteritis, antibiotic therapy and acute infections.

Lomotil®

TABLETS/LIQUID

Each tablet and each 5 ml. of liquid contain:
diphenoxylate hydrochloride . . . 2.5 mg.
(Warning: May be habit forming)
atropine sulfate . . . . 0.025 mg.

takes care of the gut issue in irritable colon

IMPORTANT INFORMATION: This is a Schedule V substance by Federal law: diphenoxylate HCl is chemically related to meperidine. In case of overdosage or individual hypersensitivity, reactions similar to those after meperidine or morphine overdosage may occur; treatment is similar to that for meperidine or morphine intoxication (prolonged and careful monitoring). Respiratory depression may recur in spite of an initial response to Nalline® (nalorphine HCl) or may be evidenced as late as 30 hours after ingestion. LOMOTIL IS NOT AN INNOCUOUS DRUG AND DOSAGE RECOMMENDATIONS SHOULD BE STRICTLY ADHERED TO, ESPECIALLY IN CHILDREN. THIS MEDICATION SHOULD BE KEPT OUT OF REACH OF CHILDREN.

Indications: Lomotil is effective as adjunctive therapy in the management of diarrhea.

Contraindications: In children less than 2 years, due to the decreased safety margin in younger age groups, and in patients who are jaundiced or hypersensitive to diphenoxylate HCl or atropine.

Warnings: Use with caution in young children, because of variable response, and with extreme caution in patients with cirrhosis and other advanced hepatic disease or abnormal liver function tests, because of possible hepatic coma. Diphenoxylate HCl may potentiate the action of barbiturates, tranquilizers and alcohol. In theory, the concurrent use with monoamine oxidase inhibitors could precipitate hypertensive crisis.

Usage in pregnancy: Weigh the potential benefits against possible risks before using during pregnancy, lactation or in women of childbearing age. Diphenoxylate HCl and atropine are secreted in the breast milk of nursing mothers.

Precautions: Addiction (dependency) to diphenoxylate HCl is theoretically possible at high dosage. Do not exceed recommended dosages. Administer with caution to patients receiving addicting drugs or known to be addiction prone or having a history of drug abuse. The subtherapeutic amount of atropine is added to discourage deliberate overdosage; strictly observe contraindications, warnings and precautions for atropine; use with caution in children since signs of atropinism may occur even with the recommended dosage.

Adverse reactions: Atropine effects include dryness of skin and mucous membranes, flushing and urinary retention. Other side effects with Lomotil include nausea, sedation, vomiting, swelling of the gums, abdominal discomfort, respiratory depression, numbness of the extremities, headache, dizziness, depression, malaise, drowsiness, coma, lethargy, anorexia, restlessness, euphoria, pruritus, angioneurotic edema, giant urticaria and paralytic ileus.

Dosage and administration: ***Lomotil is contraindicated in children less than 2 years old.*** Use only Lomotil liquid for children 2 to 12 years old. For ages 2 to 5 years, 4 ml. (2 mg.) t.i.d.; 5 to 8 years, 4 ml. (2 mg.) q.i.d.; 8 to 12 years, 4 ml. (2 mg.) 5 times daily; adults, two tablets (5 mg.) t.i.d. to two tablets (5 mg.) q.i.d. or two regular teaspoonfuls (10 ml., 5 mg.) q.i.d. Maintenance dosage may be as low as one fourth of the initial dosage. Make downward dosage adjustment as soon as initial symptoms are controlled.

Overdosage: Keep the medication out of the reach of children since accidental overdosage may cause severe, even fatal, respiratory depression. Signs of overdosage include flushing, lethargy or coma, hypotonic reflexes, nystagmus, pinpoint pupils, tachycardia and respiratory depression which may occur 12 to 30 hours after overdose. Evacuate stomach by lavage, establish a patent airway and, when necessary, assist respiration mechanically. Use a narcotic antagonist in severe respiratory depression. Observation should extend over at least 48 hours.

Dosage forms: Tablets, 2.5 mg. of diphenoxylate HCl with 0.025 mg. of atropine sulfate. *Liquid*, 2.5 mg. of diphenoxylate HCl and 0.025 mg. of atropine sulfate per 5 ml. A plastic dropper calibrated in increments of ½ ml. (total capacity, 2 ml.) accompanies each 2-oz. bottle of Lomotil liquid.

Integument!

Our skin—the human integument—covers us, defines us, protects us. But skin is subject to cuts, burns, abrasions. And infections. Neosporin Ointment fights infection by providing broad antibacterial action against susceptible skin invaders. It contains antibiotics that are rarely used systemically, reducing the risk of sensitization.

INDICATIONS: *Therapeutically,* used as an adjunct to appropriate systemic therapy for topical infections, primary or secondary, due to susceptible organisms, as in: • infected burns, skin grafts, surgical incisions, otitis externa • primary pyodermas (impetigo, ecthyma, sycosis vulgaris, paronychia) • secondarily infected dermatoses (eczema, herpes, and seborrheic dermatitis) • traumatic lesions, inflamed or suppurating as a result of bacterial infection.

Prophylactically, the ointment may be used to prevent bacterial contamination in burns, skin grafts, incisions, and other clean lesions. For abrasions, minor cuts and wounds accidentally incurred, its use may prevent the development of infection and permit wound healing.

CONTRAINDICATIONS: Not for use in the external ear canal if the eardrum is perforated. This product is contraindicated in those individuals who have shown hypersensitivity to any of the components.

PRECAUTION: As with other antibiotic preparations, prolonged use may result in overgrowth of nonsusceptible organisms and/or fungi. Appropriate measures should be taken if this occurs. Articles in the current medical literature indicate an increase in the prevalence of persons allergic to neomycin. The possibility of such a reaction should be borne in mind.

Complete literature available on request from Professional Services Dept. PML.

NEOSPORIN® Ointment

(POLYMYXIN B-BACITRACIN-NEOMYCIN)

Each gram contains: Aerosporin® brand Polymyxin B Sulfate 5,000 units; zinc bacitracin 400 units; neomycin sulfate 5 mg. (equivalent to 3.5 mg. neomycin base); special white petrolatum q.s. In tubes of 1 oz. and ½ oz. and 1/32 oz. (approx.) foil packets.

Wellcome

Burroughs Wellcome Co.

North Carolina 27709

Their handwriting often is poor with rotation and reversals and one may see them holding the pencil awkwardly or even in the palm of the hand. They are very distractible in their thinking and in their speech as well as in their attention. Motor restlessness is very much akin to the "thinking restlessness." There definitely is a low tolerance for frustration with the child giving up easily or getting angry when unable to master a problem. Attention span or ability to concentrate is often quite inadequate (this, perhaps, being a function of his high distractibility and acute consciousness of background stimulus). Such a child appears to be as stimulated by background extraneous noises or sights as he is by the task at hand. Hence, he can't concentrate on any task unless most other stimuli are removed.

Impulse control is defective and this also is manifested in thinking (they say what comes to mind) and speech (they speak without taking time to really formulate or think out the answer). It is as if they get the first two or three words of an answer in mind and start speaking, depending on the rest of the sentence to spontaneously appear. They can't wait to get started on a test, although they know they can't start before the others, and are often finished first because they can't stop to reflect or delay.

C. Psychological Testing

Psychological tests, done under controlled conditions by an experienced examiner, can prove to be highly helpful in the differential diagnosis of this condition. There are many proven tests such as the Bender-Gestalt, Benton Visual Retention Test, the Graham-Kendall Test and the Weschler Intelligence Scale (WISC) for Children. All but the WISC are tests which measure visual motor integrity and are often referred to as "very sensitive neurological tests." The WISC on the other hand is primarily an instrument to measure intelligence. Through experience with this test, however, it has become quite clear to some clinicians that it is a very sensitive indicator of brain damage. According to Clements and Peters,[2] there are three principal patterns which are suggestive for brain damage. The most frequent pattern is scatter in either or both of the Verbal or Performance scales with low scores occurring most frequently in arithmetic and digit span of the Verbal scale, as well as block design, object assembly, coding and mazes in the Performance scale. In this pattern, the verbal and performance intelligence quotient (IQ) scores turn out nearly equal. The second most frequent WISC pattern is that in which the verbal IQ is more than 15 points higher than the performance IQ. The third and least frequent pattern is that which sees the performance IQ being 15 points or more higher than the verbal IQ. This last mentioned pattern should immediately suggest dyslexia to the examiner except in those grossly underprivileged and culturally deprived children who have had very little verbal stimulation.

The tests for organicity (for example, Bender Visual-Motor Gestalt Test) when positive for brain damage may demonstrate such errors as rotation, difficulty in spatial arrangements, reversals, "dog ears," and others. In addition, the writing is often poorly executed, showing a variation in size of the letters, a tendency to project out of the lines and, in many cases, almost illegibility. In the younger school age child (ten years or under), there is often difficulty in reproducing geometric designs (circles, squares, triangles, diamond circle and diamond opposed).

In summary, then, it might be said that one of the better tools for diagnosis of cerebral dysfunction is the WISC which can, if interpreted correctly, add much weight "for-or-against" organicity. The tests for organicity, such as the Bender-Gestalt, also are of great help. On the other hand, there are studies that may tend to indicate that the WISC is totally unreliable in helping diagnose minimal brain damage. An example of these studies is one done by Rowley[3] in which he compared the WISC performance of brain-damaged and emotionally disturbed children and concluded that "when overall level of performance is controlled, examination of the pattern of WISC performance does not provide a basis for differentiating nondefective brain-damaged children from nondefective emotionally disturbed children." Nevertheless, there are definite patterns in the subtests of the WISC which strongly suggest brain dysfunction and these are scatter in either or both verbal and performance.

Other tests which may lend support to the diagnosis of brain damage might include the findings of dyslexia, acalculia, aphasia or difficulty in abstracting (which, incidentally, seems to be the hallmark of the brain damaged child). There are different degrees of abstract behavior, ranging from very good to poor, and the extent of the loss may vary with the amount of damage. However, it is felt that abstract capacity (symbol function) is the most complex function of the brain and, therefore, suffers first in cortical damage.

D. Medical History

This part of the investigation is oriented towards uncovering facts which could be related to or which could have contributed to brain damage. One examines the gestation period, the labor and the postnatal growth and development.

Items such as maternal infections (for example, German measles, mumps), toxemia, bleeding, premature rupture of membranes, foul-smelling amniotic fluid and others can be significant. Placenta previa, abruptio placenta, traumatic instrument delivery and cephalo-pelvic disproportions are all looked for. Fetal anoxia, prematurity, intracranial bleeding, maternal-infant blood incompatibility and kernicterus can all play a role.

A thorough history usually reveals that these children have some important differences in their developmental histories. They often are fussy eaters, show food idiosyncrasies and are prone to fussing and crying. They may be restless or excessively active in their cribs, show inability to tolerate fondling or caressing and be generally irritable and tense. The child may be hypertonic and be made more unhappy when picked up for comforting. On the other hand, early childhood could be quite normal. As the child gets older he seems to run rather than walk, stumbles more often than the neighbor's child of the same age and shows a tendency to be accident prone. He may be poorly coordinated at play, slow to ride a bicycle and "all thumbs" when it comes to catching a ball, throwing a stick or in other skills. He is slow in learning to tie his shoe laces, do up his shirt buttons ar perform other tasks which require good function of the finger muscles.

Pasamanick,[4] in epidemiological studies of prenatal factors, found that five clinical entities in children were found to be significantly associated with complications of pregnancy and prematurity. These were cerebral palsy, epilepsy, mental deficiency, reading disabilities and behavior disorders. He also found that significantly more of the prematures exhibited the syndrome of minimal damage.

E. Physical and Neurological Examination

Physical examination is notable for the absence of serious abnormalities. One often finds associated strabismus and minor speech defects which may consist of poor articulation or immature speech development. It should be noted, however, that no specific finding is invariably associated with this diagnosis.

Neurologically, more often than not one will find the "soft signs" which have become associated with the minimally brain-damaged child. Perhaps it may be simpler to list those findings:

Mixed dominance—For example, right eye dominant, left hand and left foot dominant.
Poor recognition of right and left sides (confused laterality).
Poor hand-finger coordination.
General motor awkwardness, e.g., difficulty in walking a straight line, throwing or catching a ball or manipulating objects.
Gait may be awkward and hopping on one leg rather unwieldy.
Walking on heels or toes is unsteady.
Simultaneously alternating rotation of wrists is grossly uncoordinated.
A rather striking inability to handle a pencil or other small objects with gentleness and precision. This lack of gentleness is even manifested when laying down these objects.

Physically, the boy is often lean and wiry and his head size is in the lower limits of normal.

Electroencephalogram (EEG) findings in those children with minimal brain damage are inconsistent and nonspecific. For that reason, we do not find this laboratory test very helpful in the diagnosis at this time.

TREATMENT

The response of the minimally brain-damaged hyperactive child to drug therapy is one of the most gratifying experiences one can have occur in his practice. When the happy combination of proper management and maximum drug effect ensue, the gratitude of a great number of people spontaneously falls on the physician. The teachers are delighted, the parents are thankful and even the child appreciates the change. This is a direct "about face" to the child's first visit when the mother dragged him to the office for treatment when she was weary, despondent and "fed up to the ears." In fact, I have known parents to say on their first visit that whatever we decided for the child was fine with them—"we can't and don't want to be responsible for him anymore when he's like this." Needless to say, this attitude dramatically reverses itself in a very few weeks.

Drug Treatment

The drug of choice in my practice is either dextro-amphetamine or methylphenidate in adequate doses given at appropriate times. Adequate dosage may reach up to 40 mg or more per day in a few cases; but, generally, it is felt that dosages above 20 mg per day may well have an adverse effect on growth.[5] The timing must be adjusted to the particular idiosyncrasies of the child. Both drugs begin to act within the half hour and tend to lose their effect in less than four hours. They also tend to affect appetite and sleep. Hence, one tries to give medication so that it will be working during school hours and, at least, during the child's high period of hyperactivity. It is best given 15 to 30 minutes before breakfast and lunch, and usually the last dose is given no later than 5 PM-6 PM. On weekends and during vacation, I recommend discontinuance of the drug if the child can be tolerated at home and in the environment. I do encourage the parents to use the medication at any special time during these school breaks when the child needs to be able to pay attention and be relatively quiet, such as at church services and summer school. Once the medication has been optimally adjusted, the dosage may be maintained until the child reaches puberty, since the condition seems to improve when pubescence begins. The tip off to discontinue medication may come when the child is near or at puberty and begins to once more show his previous characteristic behavior. When this happens, discontinuance of the medication over a two-week period should be attempted. Incidentally, one of the fringe benefits often encountered is the control of bed wetting in some enuretic children when the medication is started. I tend to prefer methylphenidate over dextro-amphetamine in my practice because of the following reasons:

1. It interferes less with sleep and appetite.
2. Parents feel less uneasy using methylphenidate (Ritalin) since amphetamines have a bad "newspaper" reputation.
3. There is less potential for abuse with methylphenidate if the medication falls into other hands.

A lack of improvement on one drug calls for trial with the other. The regimen I most commonly use is as follows:

1. I give the mother a behavior check list which she check marks before medication is begun and three days after. She brings this list with her on every visit.
2. The child is given a test dose of 10 mg of methylphenidate in my office and is observed one hour later. This gives me a reasonably good indication as to whether or not this particular child will be improved by Ritalin.
3. If the response in (2) is positive, the mother is instructed to give her child 5 mg of Ritalin in the morning and at noon, 15 to 30 minutes before eating. This is continued for three days.
4. Medication is adjusted thereafter to give maximum benefit. Sprague[6] feels that the optimum effect is reached at approximately 0.5 mg/kg/day and that a higher dosage than this is no more effective and may, in fact, have an adverse effect on the growth of the child.

Educational Management

Since the teachers frequently cannot tolerate disruptive behavior in the classroom, it is important that the physician work in close cooperation with the school. It is amazing how much more tolerant and helpful a teacher can be when she knows something is being done to help improve a child's behavior. Progressive schools now have special programs for this type of exceptional child and it includes Strauss cubicles, rugs and special remedial exercises. It is accepted that the visual-motor and visual-spatial dysfunctions can be helped by specially designed exercises given at regular sessions. At the same time, support and explanation to the parents is essential to alleviate their guilty and hostile feelings. They also need encouragement to look to the future with hope and must be helped to learn how best to realistically help their child's maturation.

Discussion

It might be well to mention that many workers, both medical and nonmedical in the field of child psychiatry and child development repudiate the concept of brain damage for these children and prefer to think of this condition as a lack of maturation of the central nervous system (CNS) leading to dysfunction. Hence they call it minimal brain dysfunction. The term dysfunction does seem to fit in well with the improvement experienced at puberty and seems to be better accepted by the parents than the term "brain damage" so that the term (if not the concept) is slowly gaining favor.

Several important points must be emphasized in regards to this syndrome as follows:

1. The syndrome of minimal brain damage is not necessarily confined to the hyperactive child but also may be seen in the withdrawn, day-dreaming child who never moves from his seat in class. Appropriate examination may show visual-motor and perceptual deficits and other supporting evidence of minimal brain damage in these children.
2. The finding of a learning disability by itself does not warrant the diagnosis of minimal brain damage. Many children suffer from a specific learning disability, such as dyslexia, without associated brain damage. Its presence when accompanied by other soft signs as previously mentioned, however, lends greater weight to the diagnosis.
3. There is insignificant danger of the development of an amphetamine psychosis in these children regardless of dosage of drug being taken daily. Comley[7] spoke of one case out of 2,000 and Bradley reported no cases of psychosis in his group of treated children.
4. As a rule, barbiturates make these children much worse and this paradoxical reaction has been proposed as a reliable diagnostic test.
5. Addiction to the stimulants by these children does not occur.
6. For some yet unexplained reason, some hyperactive children, who are *not* minimally brain damaged, respond equally well to the same drug regimen. So when faced with a particularly difficult case for differential diagnosis, treatment can be instituted without delay with approximately a 75% chance of improvement of behavior.
7. Recent work by Satterfield, Cantwell *et al*[8] suggests that children who show an abnormal EEG and four or more "soft signs" have an almost 100% chance of responding favorably to a stimulant.

CONCLUSION

The syndrome of the hyperkinetic child, regardless of his or her etiology, is a real and trying condition for all who are associated with its victim. It can and does ruin the child's personality at times; it does create havoc in the classroom and other settings, e.g., church; it can ruin a marriage and break up a family. More than 20% of the evaluations done in our outpatient child psychiatry clinic are in reference to this condition. Certainly, more research must be done in this area since it may well prove to be a preventable condition.

SUMMARY

A syndrome of minimal brain dysfunction is commonly encountered in the child psychiatry clinics and may be suspected by the presence of the cardinal symptoms of hyperactivity, impulsivity, distractibility, shortened attention span and low frustration level. The additional findings of visual-motor and perceptual dysfunctions as well as a positive Bender-Gestalt or typical WISC make the diagnosis tenable. The condition is well controlled in approximately 75% of cases by adequate dosage of methylphenidate or d-amphetamine until early adolescence at which time the child appears to begin to be able to control his behavior without medication. An untreated child has a great chance of developing an aggressive, warped personality. Even though the characteristic behavior seems to improve at puberty, the crystallized personality remains with him. Dosage above 0.6 mg/kg/day has been shown to be significantly correlated with retardation of growth in these children.

JOHN B. SHIELDS, M.D., *St. Louis*

Tracheal Soft Tissue Mass

Case Reports

These case reports of tracheal soft tissue mass call attention to the difficulty of early diagnosis due to nonspecificity of symptoms and the importance of careful scrutiny of the tracheal air column, particularly in a patient with unexplained cough and hemoptysis with the lung fields clear. Dr. Cabal is an Instructor and Dr. Shields is Associate Professor, Department of Radiology, St. Louis University School of Medicine. Both also are from the Department of Radiology, St. Louis Veterans Administration Hospital, where Dr. Shields is Chief.

EARLY DIAGNOSIS of a tracheal soft tissue mass presents a diagnostic problem due to the nonspecificity of symptoms and the paucity of radiographic findings. Often, the tracheal soft tissue mass is missed in the initial chest radiograph. Case reports of a primary undifferentiated small (oat) cell carcinoma and of a squamous cell carcinoma of the trachea are presented.

CASE REPORTS

Case # 1 This 45-year-old white man was admitted to the hospital because of intermittent cough, hemoptysis and shortness of breath of two weeks duration. He had been a cigarette smoker for the past 20 years, but he did not inhale the smoke. The initial physical examination revealed decreased breath sounds in the base of the right lung which subsequently cleared after five days without therapy. There were no other abnormal physical findings. The laboratory examinations were normal.

The posteroanterior radiograph of the chest (Fig. 1) revealed a soft tissue mass density in the left wall of the trachea 4 cm above the carina. The lung fields were normal. Tomograms of the trachea in anteroposterior (Fig. 2-A) and lateral (Fig. 2-B) views revealed a soft tissue mass which occluded approximately 80% of the tracheal lumen. No hilar abnormality was seen. Bronchoscopy disclosed a fungating tumor in the left tracheal wall projecting into the lumen. Several biopsy specimens were taken and fulguration of the tumor was performed. The carina was noted to be free of tumor. Serial microscopic sections showed the subepithelial stroma to be infiltrated with nests of undifferentiated small (oat) cell carcinoma. The tumoral nests were surrounded by aggregates of inflammatory cells. The patient was given a course of radiation therapy utilizing a Cobalt 60 unit; the total tumor dose was 3,723 rads in three weeks. Follow-up bronchoscopy and tomograms of the trachea in anteroposterior (Fig. 3) views six months later revealed disappearance of the tracheal soft tissue mass.

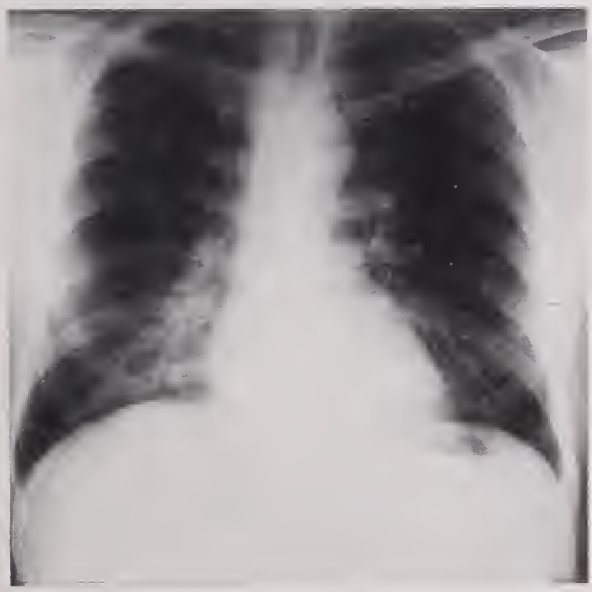

Fig. 1 Posteroanterior chest radiograph showing soft tissue mass in the trachea.

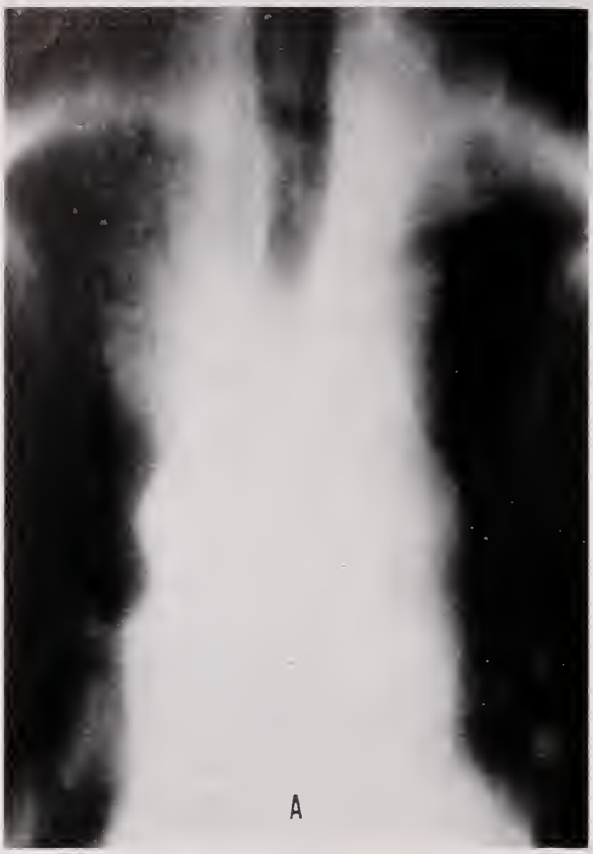
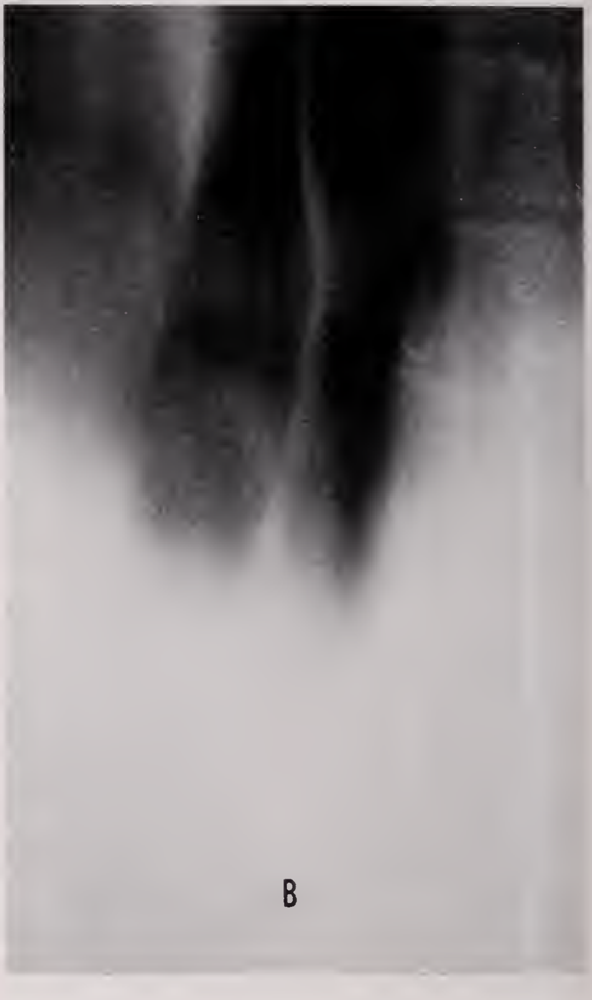
Case # 2 This 55-year-old white man was admitted to the hospital complaining of a choking sensation and progressive difficulty in swallowing for the previous six months. There were no other symptoms. He smoked one pack of cigarettes every other day. The physical examination was nonrevealing. Laboratory examinations were normal.

The chest radiograph in posterioanterior view (Fig. 4-A) revealed minimal right apical fibrosis with the rest of the lung fields clear. No hilar mass was seen. The lateral view (Fig. 4-B) revealed a non-calcified soft tissue mass impinging on the trachea posteriorly at the level of the thoracic inlet. A barium swallow (Fig. 5) again revealed the tracheal soft tissue mass displacing the cervical esophagus posteriorly. On esophagoscopy, a constriction approximately 4 cm below the cricopharyngeus was encountered





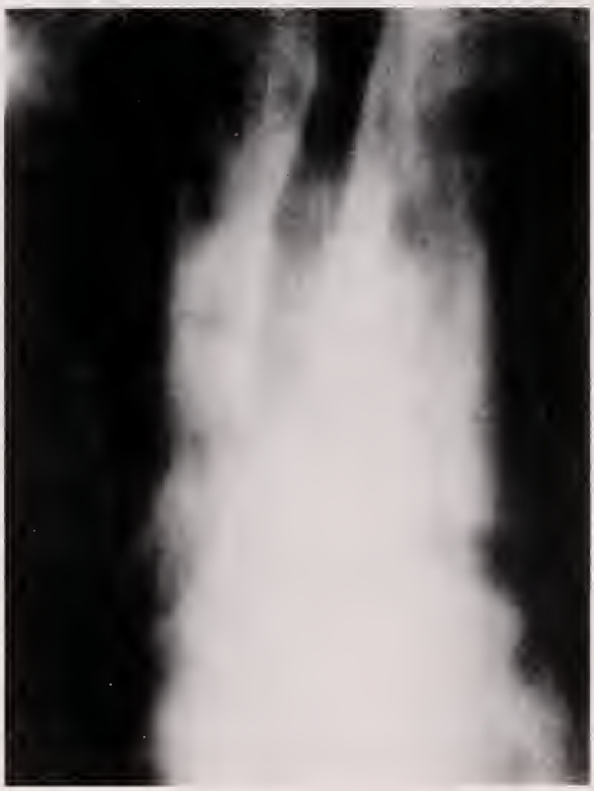
→

Fig. 2 (A) Anteroposterior and (B) Lateral tomogram of the trachea delineating the margin of the tumor.

which did not allow further passage of the esophagoscope. There were no mucosal changes. No biopsy was taken. Bronchoscopy also was performed. Approximately 20 cm from the incisor teeth, the tracheal mucosa was found to be elevated and soft. Multiple superficial biopsy specimens were obtained. There were no lesions seen in the carina. Microscopic examinations of the biopsy specimens revealed a moderately well-differentiated squamous cell carcinoma. The patient received local radiation therapy with Cobalt 60 with a total tumor dose of 4,006 rads in five weeks. Repeat barium swallow (Fig. 6) at the end of the radiation therapy course revealed almost complete disappearance of the mass, and repeat bronchoscopy two weeks later showed only residual muscosal irregularity but no recognizable tumor.

Discussion

A tracheal soft tissue mass may be either a benign or malignant lesion. The benign tumor



←

Fig. 3 Anteroposterior tomogram of the trachea six months after radiotherapy showing disappearance of the tracheal mass.

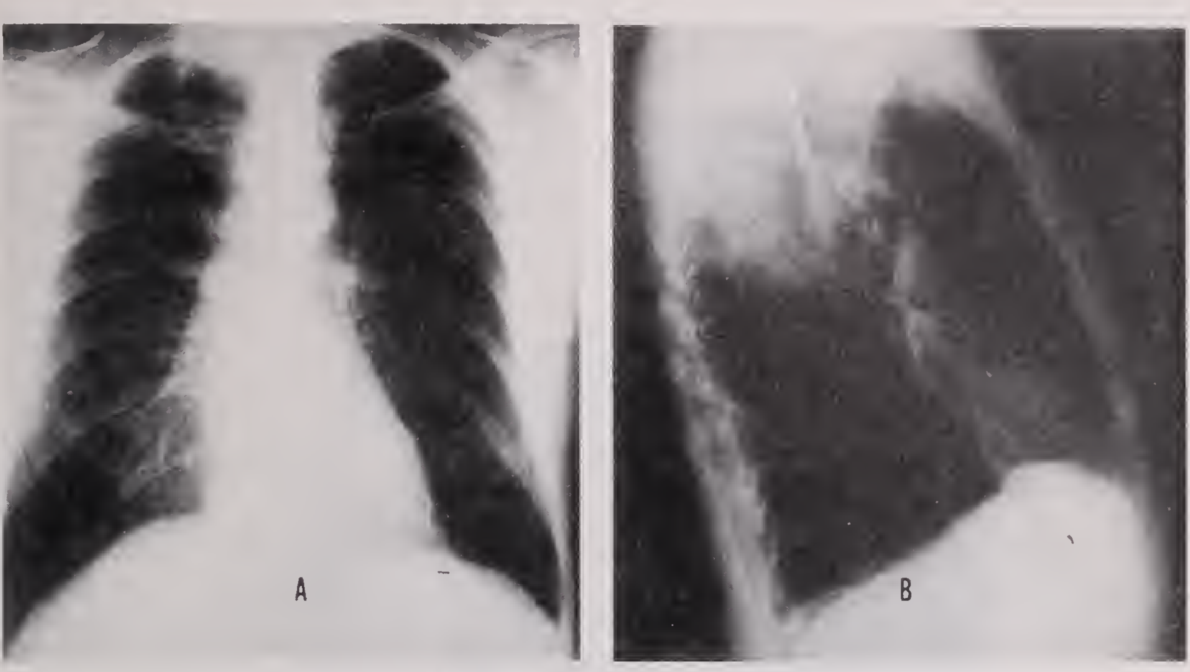


Fig. 4 (A) Posteroanterior chest radiograph showing right minimal apical fibrosis with the rest of the lungs clear. (B) Lateral view showing the tracheal air column with soft tissue mass posteriorly at the level of the thoracic inlet.

and tumor-like conditions of the trachea encountered are squamous papilloma, hamartoma, inflammatory fibrous polyps, lipoma, myeloblastoma, amyloid, xanthoma, leiomyoma and tracheopathia osteoblastica.[1] The peak incidence of most of these lesions is in the "cancer age." Men are affected about three times more often than women. Squamous cell papillomas are seen in younger adults.

Primary carcinoma of the trachea is rare. The exact incidence is not known. Men are affected twice as often as the women with the peak incidence at fifth decade. Squamous cell carcinoma and adenoid cystic carcinoma (cylindroma) are the most common malignant tracheal tumors. Cases of malignant adenocarcinoma, undifferentiated small (oat) cell carcinoma, muco-epidermoid carcinoma and carcinoma of mesenchymal origin have been reported as well.[2]

Signs and symptoms may initially be absent. As the tumor increases in size and depending on the degree of obstruction, secondary changes in the lung fields will be seen. The patient may have cough, stridor, hoarseness, increasing dyspnea and dysphagia. Hemoptysis is usually a late sign. In a patient with unexplained cough, wheezing or hemoptysis with clear lung fields on the chest radiograph, a tracheal lesion should be considered and a high kilovoltage, overpenetrated film of the chest should be taken to evaluate the tracheal air column. Tomograms of the trachea will help in delineating the tumor. A

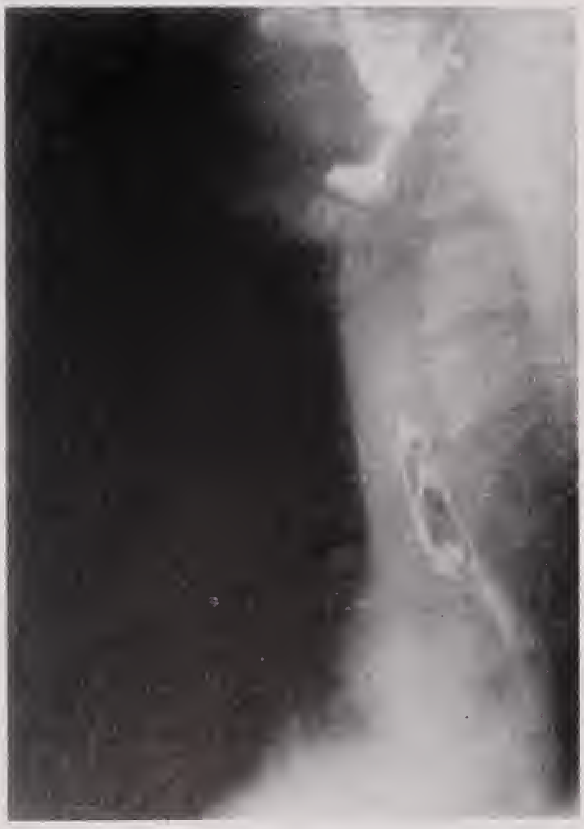

Fig. 5 Lateral view of the cervical area again revealing the tracheal soft tissue mass with posterior displacement of the barium filled cervical esophagus.

tracheogram utilizing opaque contrast medium is not necessary since the air provides good contrast material.[3] A barium swallow should also be obtained for further delineation of the extent of the tumor. The clinical and radiographic manifestations of these benign and malignant lesions are so similar that bronchoscopy and adequate biopsy are the most reliable means of establishing the diagnosis.

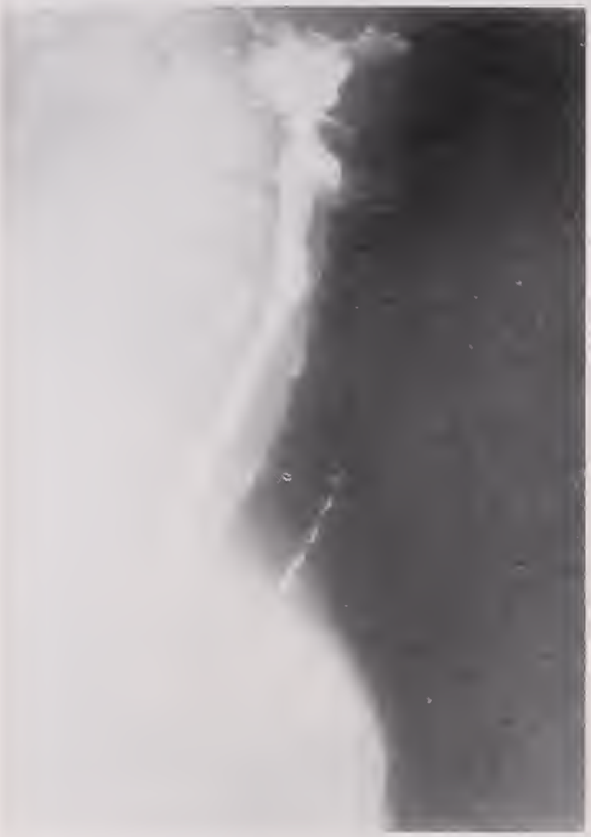

Fig. 6 Barium swallow after the course of radiation therapy shows regression of the tumor.

SUMMARY

Two cases of tracheal soft tissue mass which proved to be a small undifferentiated (oat) cell carcinoma and a squamous cell carcinoma are reported. There is difficulty with the early diagnosis due to the nonspecificity of symptoms and the paucity of radiographic findings. The importance of careful scrutiny of the tracheal air column in an overpenetrated chest radiograph cannot be overemphasized, particularly in a patient with unexplained cough and hemoptysis with the lung fields clear. Examination of the esophagus with barium is invaluable in delineating the extent of the tumor outside the trachea.

George M. Ragsdale, M.D., Paris, a graduate of Louisville Medical University, 1907; member of Chariton-Macon-Monroe-Randolph Counties Medical Society; age 87; died Sept. 7, 1973.

John W. Deyton, M.D., 1617 S. Brentwood Blvd., St. Louis, a graduate of the University of North Carolina, 1929; member of St. Louis County Medical Society; age 73; died Sept. 12, 1973.

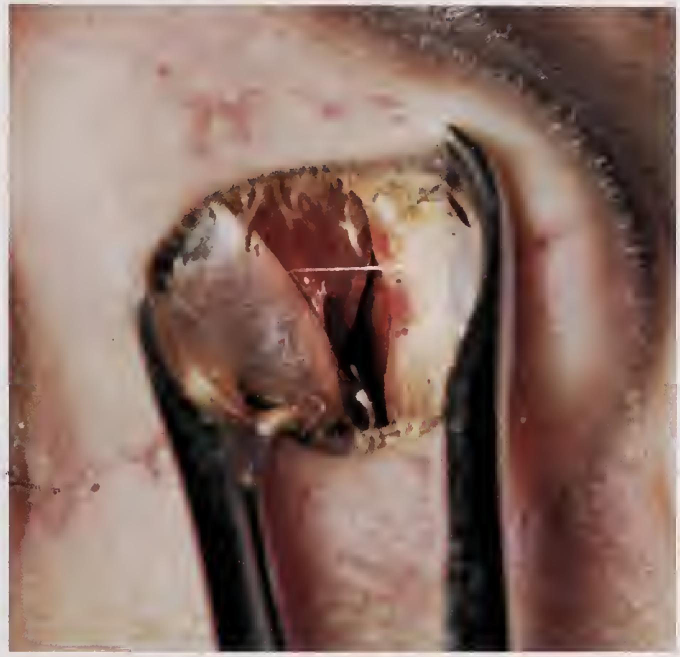
Lynn D. Weller, M.D., 6700 Troost, Kansas City, a graduate of the University of Utah, 1963; member of Jackson County Medical Society; age 36; died Sept. 17, 1973.

Maybe the patient's self-diagnosis is right. He could have hay fever. But that bright red nasal mucosa, along with the thick discharge and excoriation around the nares, strongly suggests that the main problem is a cold. Hay fever or another form of allergic rhinitis may or may not be an underlying factor.

If a complete history and examination rule out allergic rhinitis, the long-term outlook will be a lot more favorable than his own "diagnosis" would have indicated.

But right now, whether he's got allergic rhinitis or a cold, he's suffering from the same irritating symptoms of drip, congestion and stuffiness. Try Dimetapp Extentabs®. They're formulated to relieve these symptoms without much chance of causing drowsiness or overstimulation. Your patients will appreciate the 24-hour relief they can get from just one tablet every 12 hours.

Cold or Allergy?



Whether it's a cold or an allergy, Dimetapp Extentabs® effectively relieve stuffiness, drip and congestion.

INDICATIONS Dimetapp Extentabs are indicated for symptomatic relief of allergic manifestations of upper respiratory illnesses such as the common cold seasonal allergies, sinusitis, rhinitis, conjunctivitis and otitis. In these cases it quickly reduces inflammatory edema, nasal congestion and excessive upper respiratory secretions, thereby affording relief from nasal stuffiness and postnasal drip.

CONTRAINDICATIONS Hypersensitivity to antihistamines of the same chemical class. Dimetapp Extentabs are contraindicated during pregnancy and in children under 12 years of age Because of its drying and thickening effect on the lower respiratory secretion Dimetapp is not recommended in the treatment of bronchial asthma. Also Dimetapp Extentabs are contraindicated in concurrent MAO inhibitor therapy.

WARNINGS *Use in children:* In infants and children particularly, antihistamines in overdosage may produce convulsions and death.

PRECAUTIONS: Administer with care to patients with cardiac or peripheral vascular diseases or hypertension. Until the patient's response has been determined, he should be cautioned against engaging in operations requiring alertness such as driving an automobile, operating machinery etc Patients receiving antihistamines should be warned against possible additive effects with CNS depressants such as alcohol, hypnotics sedatives tranquilizers, etc

ADVERSE REACTIONS Adverse reactions to Dimetapp Extentabs may include hypersensitivity reactions such as rash urticaria, leukopenia, agranulocytosis and thrombocytopenia; drowsiness lassitude, giddiness, dryness of the mucous membranes, tightness of the chest thickening of bronchial secretions urinary frequency and dysuria, palpitation hypotension/hypertension headache, faintness dizziness, tinnitus incoordination visual disturbances mydriasis CNS-depressant and (less often) stimulant effect, anorexia nausea, vomiting diarrhea constipation and epigastric distress

HOW SUPPLIED Light blue Extentabs in bottles of 100 and 500

Dimetapp Extentabs®

Dimetane® (brompheniramine maleate), 12 mg.; phenylephrine HCl, 15 mg.; phenylpropanolamine HCl, 15 mg.

A·H·ROBINS

A. H. Robins Company, Richmond Va. 23220

when pain goes on... and on... and on–

or the patient with a terminal illness, PAIN past,
resent. and future can dominate his thoughts
ntil it becomes almost an obsession. The more he
aware of the pain he is now experiencing, the
nore difficult it is to erase his memory of yesterday's pain, and to allay his fearful anticipation
f tomorrow's pain.

urely the last thing this patient needs is an
nalgesic containing caffeine to stimulate the
enses and heighten pain awareness. A far more
gical choice is Phenaphen with Codeine. The
ensible formula provides ¼ grain of phenobarbital
take the nervous "edge" off, so the rest of the
rmula can help control the pain more effectively.
on't you agree, Doctor, that psychic distress
an important factor in most of your terminal
nd long-term convalescent patients?

the analgesic formula that calms instead of caffeinates

Phenaphen with Codeine

Phenaphen with Codeine No. 2 3. or 4 contains: Phenobarbital (¼ gr.). 16.2 mg (warning: may be habit forming): Aspirin (2½ gr.). 162.0 mg : Phenacetin (3 gr.). 194.0 mg : Codeine phosphate, ¼ gr. (No. 2) ½ gr. (No. 3) or 1 gr. (No. 4) (warning: may be habit forming)

Indications: Provides relief in severer grades of pain. on low codeine dosage. with minimal possibility of side effects. Its use frequently makes unnecessary the use of addicting narcotics. **Contraindications:** Hypersensitivity to any of the components. **Precautions:** As with all phenacetin-containing products, excessive or prolonged use should be avoided. **Side effects:** Side effects are uncommon, although nausea, constipation and drowsiness may occur. **Dosage:** Phenaphen No. 2 and No. 3—1 or 2 capsules every 3 to 4 hours as needed: Phenaphen No. 4—1 capsule every 3 to 4 hours as needed. For further details see product literature

ⒸIII Phenaphen with Codeine is now classified in Schedule III, Controlled Substances Act of 1970. Available on written or oral prescription and may be refilled 5 times within 6 months, unless restricted by state law.

President's Message

What's Happening to Our Drugs?

While the attention of most doctors has been focused on PSRO, HMO, HNI and the like, the FDA has slowly but surely been eliminating the drugs we use.

The FDA does not always forbid their use, but it does require that the pharmaceutical firms submit detailed research on each drug to prove that the medication is effective, even though that drug has been in use for 20 years. These drugs, which have been standbys for years, are economical, competitive and represent low profit items for the drug houses. However, the firms are not going to spend five years of research and more than $1 million to meet the criteria for acceptance. So, when the stock of one drug is depleted, there is no more production of that item.

E. A. Stricker, M.D.

Not only are we deprived of many of the old medicines, but we have undue delays in getting new drugs approved—usually five or six years after the rest of the world has them in use. The procedures by which new drugs are evaluated and approved for use in this country are causing us to fall behind in this area of medical science.

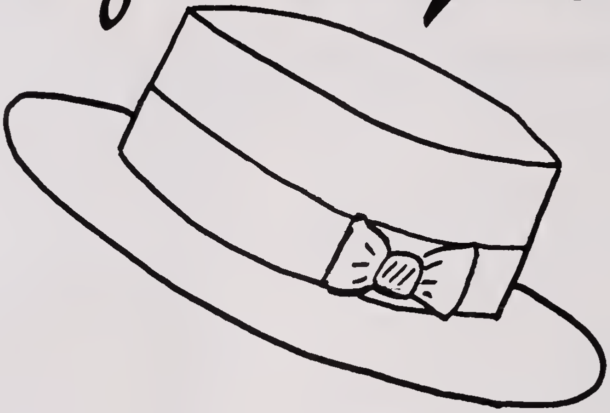
A classic example is the drug, rifampin, which is a powerful new antibiotic for treating tuberculosis. Discovered in Italy, the drug was in use in 50 other countries before it became available in the U.S.A. During the time it was being approved, 17,000 TB victims died in this country. Time and space do not permit enumeration of the hundreds of new drugs which we are denied because of the red tape and executive time required for approval.

The FDA has become a mighty bureaucratic force, expanding regulations and paperwork in all directions. For example, in 1948, Parke, Davis & Co. obtained a license for Benylin Expectorant with 73 pages of facts. In 1968, the same company's application for Ketalar required 72,200 pages of facts for the FDA.

This excessive amount of red tape not only delays the time for the drug's availability, but also reflects much higher costs to our patients. It also discourages our own U. S. drug firms from developing new medicines, although for years they were leaders in this field. Before 1962, the U. S. pharmaceutical industry produced and marketed an average of 43 new drugs annually. In the last five years, the average has been 13, and the cost of research has risen from $212 million in 1960 to $728 million last year.

This type of federal interference leads to the practice of inferior medicine at higher health care costs. It behooves us to talk to our Congressmen about this dilemma.

the same hat doesn't fit everyone



We wear the hats of Democrats, Republicans and Independents. But, we're all physicians and we are all concerned. Concerned about legislation which could lead to the destruction of the fee for service concept . . or the physician-patient relationship . . or the quality of health care . . and a lot of other things. That's why we decided to do something . . to get involved. Some of us just offer our dues dollars while others actually get out and get involved in the campaigns of people we would like to see get elected. In 1972, we helped elect 203 people to Congress that don't want to destroy the American health care system.
Why not do your part?
Join us in 1973 . . . and bring along a friend.

MISSOURI MEDICAL POLITICAL ACTION COMMITTEE
P.O. Box 755
Jefferson City, Missouri 65101

I would like more MMPAC membership information.

Woman's Auxiliary

50th Anniversary

L-E-G-S

L-E-G-S stands for Legislative Effort Group System, which is another point on our Woman's Auxiliary five-point TEL-STAR program for service. It refers to the unique communications system which Auxiliary members utilize to assist our Missouri doctors in making their views on legislative matters known to county, state and national legislators on a moment's notice.

Our basic **L-E-G-S** team is composed of our State Legislative Chairman, Mrs. Gerald L. Miller, Kansas City; State Public Affairs Chairman, Mrs. James A. Reid, Marshall; our 26 county legislative chairmen; and the county **L-E-G-S** committees. The county chairmen and their **L-E-G-S** committees are ready to mobilize immediately upon receipt of a telephone call or a letter.

We believe we have proved the effectiveness of this system and take pride in the success of our collective letter writing to the representatives and senators in opposition of Senate Bill #14. We are holding communications lines open to be sure that we are ready when an alert is sounded again. The fact remains, however, that with more Auxiliary members involved, our efforts can be even more encompassing. Please encourage your wife to join the Auxiliary now and help us in this important legislative effort.

Mrs. Charles R. Willman
President

It's true that, at times, there seems to be confusion about the separation of politics and legislation. We suggest that politics deals with people and legislation deals with laws. If we are to be effective in influencing passage of the right laws, we have important responsibilities ahead. First, all Auxiliary members must be knowledgeable and know the issues and how organized medicine can help to resolve them. Second, we must share our knowledge with friends, neighbors and legislators to inform them of our views.

It is important that Auxiliary members be involved in every available opportunity to help strengthen the quality of health care in our country. A most vital opportunity is membership in **MMPAC.** Every member has been invited to join. For your information, an Auxiliary membership is $15, a family membership is $40 and a sustaining membership is $100.

Remember that your and your wife's support of MMPAC is as important in non-election years as in election years, since MMPAC is a continuous function and maintains uninterrupted interest in supporting candidates who understand and share medicine's point of view, regardless of their party affiliations.

Our record for the 1972 elections showed a remarkable percentage of success. Let's alert ourselves now in preparation for the 1976 elections and raise that percentage. If you have not joined MMPAC, please do so by sending your check today to our Public Affairs Chairman, Mrs. James A. Reid, 102 East Rea, Marshall 65340.

(A copy of the MMPAC report, filed with the appropriate supervisory officer is (or will be) available for purchase from the Superintendent of Documents, United States Government Printing Office, Washington, D. C. 20402.)

EDITORIAL

PUTTING HMOs TO THE TEST

One of the more interesting debates coming up as Congress reconvenes is how heavily the government should promote formation of health maintenance organizations (HMOs), which are founded on a theory that it's better to try to keep people well than to wait for them to develop illnesses before treating them.

Whether HMOs are an attractive alternative to more traditional forms of health care delivery has had inconclusive testing and debate. There would seem to be no reason why some modest government aid should not be applied to carrying the test further.

But the HMO debate will also pit two opposing theories of government. It will be a good opportunity for Congress to demonstrate that it has moved beyond the kind of thinking, so common in the '60s, that tackles complex problems—to lift a Nixon phrase—by "throwing money at them."

The administration itself, it should be noted, was guilty in 1971 of that style of thought on health care. It adopted HMOs as a panacea for a general discontent over medical costs, proposing to make HMOs available to 90% of the population by 1980. Today, however, it is merely backing a $60 million, one-year House bill to subsidize HMO formation, which, by federal standards, puts the program in the largely experimental category. Senator Kennedy, however, has pushed a bill through the Senate calling for spending $805 million over three years.

Some of the latter-day administration diffidence is perhaps attributable to budget concerns or possibly lobbying against HMOs by the American Medical Association. But the main reason is more likely a timely fear that a vast, taxpayer-financed federal overhaul of health care delivery might produce a fiasco on the order of, say, some of the housing schemes of the '60s.

That's a very good reason. If the HMOs really are a better idea, they will prove their worth if government merely provides them with opportunities to grow freely. The Kennedy approach is to ram them down everyone's throat.

Simple, facile prescriptions for the problems of American health care should always be approached with skepticism. Health care is a complex and pluralistic industry. Its quality and ability to meet varieties of needs are better than its critics maintain. Some of the difficulties of the poor which are blamed on the medical profession are far broader—having to do with nutrition, inadequate housing, drug misuse and ignorance of rudimentary principles of health protection.

But there can be little doubt that for some people, and for some types of illnesses, high costs are a fundamental problem. Past government efforts to deal with the cost problem, through such giant programs as Medicare, have reduced costs for some people but exacerbated them for others by increasing inflationary pressures in the industry. Massive subsidies, as usual, have generated new inequities.

Government can, however, tackle some of the problems of health care in relatively undramatic ways. Government, for example, has the authority to supersede self-regulation in the health industry when self-regulation has failed to allow broad enough access to the medical profession and sufficient scope for new methods of health care delivery, such as HMOs.

The administration's HMO bill moves in this direction through provisions that would seek to pre-empt state laws that inhibit the development of HMOs. These laws, for example, bar corporate practice of medicine or classify HMOs as insurance schemes that must meet certain capitalization requirements. This kind of legislative approach is tough and ticklish, involving as it does state and professional prerogatives. But in fact, nine states, with federal urging, have themselves moved to clear the way for HMOs since 1971 and another 20 or so have changes in the works.

This kind of hard, slogging legislative work is what government should be about. It is time to bury the idea that complex problems must always be tackled with dramatic, sweeping programs. Too often, such programs are characterized by lack of sufficient thought, a waste of taxpayer money and benefits to all sorts of people except those who have the problem.

LETTERS to the Editor

The Editor
Missouri Medicine

Dear Dr. Finnegan:

Please accept hearty congratulations for the superb April, 1973 number of Missouri Medicine. The articles on "Angina Pectoris" and the "Psychopharmacology of the Depressive Neurosis" are especially praiseworthy. For us (or is it we?) poor chaps who wonder how we will ever keep up with our continuing medical education, they are perfect—much better than attending a seminar or meeting.

The idea of having medical students write a review of a subject under the guidance of a faculty advisor is one that should be put into *regular* practice by offering a small prize or by making it a requirement for certain courses.

Thank you for your editorial leadership.

Sincerely,
Michael Gass, M.D.

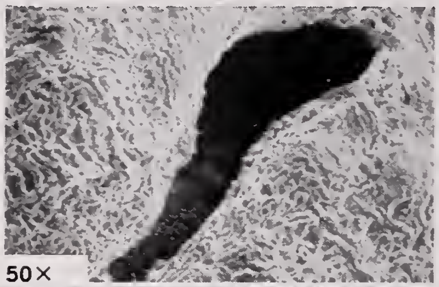
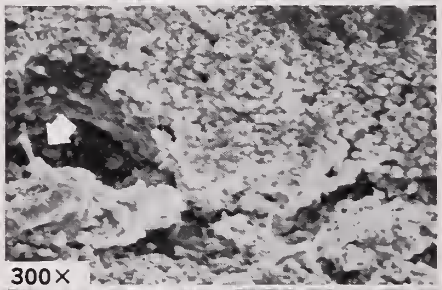
Progress i

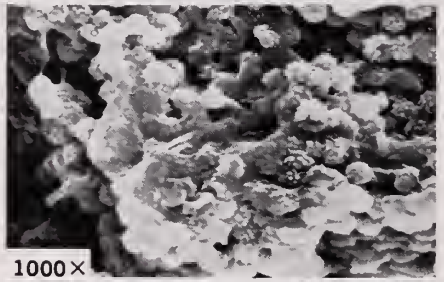
Diagnosis

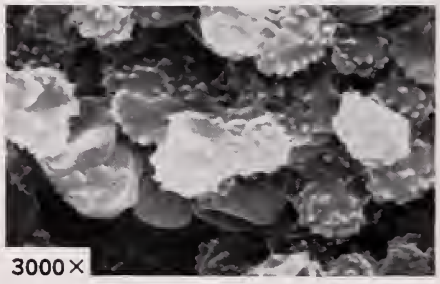
In these illustrations of tissue from a patient with acute cystitis, you can see the swollen and inflamed mucosa of the ureteral orifice (50×), a fibrin strand (300×), and a whitish exudate composed of polymorphonuclear leukocytes (1000× and 3000×). The photographs were taken with the scanning electron microscope (SEM) by Dr. Shirley Siew, Associate Professor of Pathology at the University of Pittsburgh School of Medicine. They come from the clinical exhibit "Scanning Electron Microscopy of Urinary Tract Infection," which won first prize in Clinical Research at the May 1972 meeting of the American Urological Association.

The scanning electron microscope promises to be extremely useful in its investigation of human pathology. In time, examination of tissue with the SEM is likely to play a significant role in the diagnosis of urinary tract infection.









A note on the photography:
These photographs were made by the
ning electron microscope, which, lik
transmission electron microscope, op
on the basic principle of exposure of
to a beam of electrons in a vacuum. V
the SEM, electrons bombard the surf
of tissue which has been given a fine
ing of gold. The electrons reflect off t
tissue onto a television screen, and th
resulting photograph shows a three-d
sional effect. The tissue sections nee
be ultrathin, so there is a minimum o
handling and distortion.

Just as much an instrum
of progress and just as helpful ir
way has been Gantrisin (sulfiso
zole) Roche, developed and intr
duced a generation ago. Howeve
there's been no generation gap
its continuing usefulness. In fac
Gantrisin, with so many years of
clinical experience behind it, is
still one of the most valuable dru
we have for the treatment of non
obstructed cystitis, pyelitis or py
lonephritis due to susceptible
organisms such as *E. coli*. Speci
cally, Gantrisin provides your pat
with certain important therapeu
advantages:

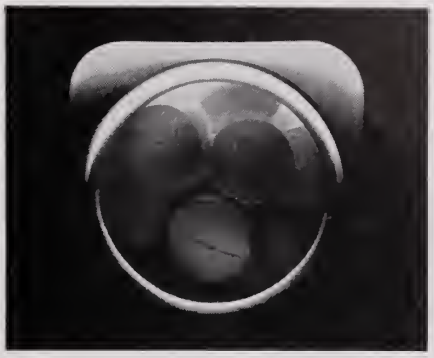
treating chronic or recurrent
structed cystitis, pyelitis or
ephritis due to *E. coli* and
susceptible organisms. (See
tant Note in summary of product information.) Complete blood counts and urinalyses, with careful microscopic examination, should be performed frequently.



high solubility Gantrisin (sulfisoxazole) Roche is one of the most soluble of all sulfonamides, with both free and acetylated forms highly soluble in the commonly encountered urinary pH range of 5.5 to 6.5. Urine levels have been detected in 60 minutes; therapeutic levels are usually reached in from 2 to 3 hours. About 90% of a single dose is excreted in 24 to 48 hours. As with all sulfonamides, adequate fluid intake must be maintained.

economy Average cost of therapy is still only about 6½¢ per tablet.

total therapy: 14 days Recent evidence in the medical literature suggests that therapy in acute nonobstructed urinary tract infections should be continued for 10 to 14 days even if patients become asymptomatic in 2 or 3 days, as they often do.[1-11] However, one investigator, evaluating a 5-year study of sulfisoxazole used to treat urinary tract infection in 368 girls, found no advantage in continuing therapy more than two weeks *for a first infection*.[12]

For acute, chronic or recurrent nonobstructed cystitis, pyelitis, or pyelonephritis due to susceptible organisms...

begin with

Gantrisin®

sulfisoxazole/Roche®

County Society News

SECOND DISTRICT

COUNCILOR
LYSLE M. BACH, M.D., HANNIBAL

Chariton-Macon-Monroe-Randolph County Medical Society

The September meeting of the Chariton-Macon-Monroe-Randolph County Medical Society was held on the 17th at the Library Conference Room of Woodland Hospital in Moberly.

Members present were Drs. F. L. Harms and D. D. Stuart, Chariton County; J. E. Campbell, Gretchen D. Collins and D. E. Eggleston, Macon; F. A. Barnett, Monroe County; and C. C. Cohrs, P. V. Dreyer, J. W. Fleming, T. S. Fleming, L. E. Huber, G. R. Hudson, R. V. Tompson, R. H. Young and R. L. Bautista, Randolph County.

Dr. Robert Young, President, presided. He presented a tribute to the late Dr. George Ragsdale of Paris, a former member of the Society and a practitioner of 67 years in the Paris Area.

Dr. Tompson presented the minutes of the previous meeting, which were approved. The financial report was then presented.

An invitation was presented to the membership from Barnes Hospital in St. Louis for ceremonies to be held on October 11, designating Barnes Hospital as the Regional Trauma Center. Dr. J. W. Fleming then presented a status report of the AMPAC memberships. Dr. C. C. Cohrs presented a report on the formation of Professional Standards Review Organizations.

The program for the evening was presented by Dr. William Griffin, professor of obstetrics and gynecology at the University of Missouri-Columbia. Dr. Griffin spoke on "Anaerobic Infections" and presented criteria for diagnosis, identification and preferred methods of treatment. He also presented several interesting case histories to illustrate the severity of the problems and the increasing incidents of this particular form of infectious disease.

Dr. Leopold Lachance of Centralia was a guest at the meeting.

Robert V. Tompson, M.D., *Secretary*

Eighth Councilor District Holds Annual Meeting

David Weihaupt, Director of the Planning and Development Division of the American Medical Association, was the featured speaker at the annual meeting of the MSMA Eighth Councilor District of the Missouri State Medical Association on September 20 at Howard Johnson's Convention Center in Springfield.

Mr. Weihaupt opened the meeting program so that the physicians would have ample opportunity to discuss their views or disagreements with policies of the AMA.

E. A. Stricker, M.D., President of the MSMA, spoke at the meeting and gave the area physicians an update on the status of Professional Standards Review Organizations (PSRO) in Missouri.

Dr. Howard J. McAlhany, Springfield, is Councilor for the Eighth District which is composed of the following 15 Missouri counties: Barry, Barton, Christian, Dade, Dallas, Greene, Hickory, Jasper, Lawrence, McDonald, Newton, Polk, Stone, Taney and Webster.

IMPROVED ACCIDENT & HEALTH PROGRAMS

The Disability Income Policy sponsored by the Missouri State Medical Association since 1943 has now been made GUARANTEED RENEWABLE and income benefits are available up to $300.00 weekly to members under age 56 subject to acceptance by the Company.

Also, the Major Hospital and Nurse Expense Program offers higher limits with increased Room & Board Benefits.

Must vasodilators and therapy for other diseases come into conflict?

not if the vasodilator is

VASODILAN®

(ISOXSUPRINE HCI)

the compatible vasodilator... no treatment conflicts reported

The cerebral or peripheral vascular disease patient often has coexisting disease[1] which calls for another drug along with his vasodilator. It may be a hypoglycemic, miotic, antihypertensive, diuretic, anticoagulant, corticosteroid, or coronary vasodilator.

Vasodilan is not incompatible with any of these drugs—no treatment conflict has been reported. And, unlike other vasodilators, Vasodilan has not been reported to affect carbohydrate metabolism, liver function, or intraocular pressure—or to complicate treatment of diabetes, hypertension, peptic ulcer, glaucoma, or liver disease.

In fact, there are no known contraindications to the use of Vasodilan in recommended oral doses, other than that it should not be given in the presence of frank arterial bleeding or immediately postpartum.

Indications: Based on a review of this drug by the National Academy of Sciences-National Research Council and/or other information, the FDA has classified the indications as follows:

Possibly Effective:

1. For the relief of symptoms associated with cerebral vascular insufficiency.
2. In peripheral vascular disease of arteriosclerosis obliterans, thromboangiitis obliterans (Buerger's Disease) and Raynaud's disease.
3. Threatened abortion.

Final classification of the less-than-effective indications requires further investigation.

Composition: Vasodilan tablets, isoxsuprine HCl, 10 mg. and 20 mg.

Dosage and Administration: 10 to 20 mg. three or four times daily.

Contraindications and Cautions: There are no known contraindications to oral use when administered in recommended doses. Should not be given immediately postpartum or in the presence of arterial bleeding.

Adverse Reactions: On rare occasions, oral administration of the drug has been associated in time with the occurrence of severe rash. When rash appears, the drug should be discontinued. Occasional overdosage effects such as transient palpitation or dizziness are usually controlled by reducing the dose.

Supplied: Tablets, 10 mg.—bottles of 100, 1000, 5000 and Unit Dose; 20 mg.—bottles of 100, 500 and Unit Dose.

Your Help Is Needed! Send It Today!

MISSOURI STATE MEDICAL FOUNDATION
113 Madison
Jefferson City, Missouri 65101

Dear Doctor:

"Missouri physicians encouraging and helping Missouri young people to attend medical school."

The above vital words state the purpose and goal of the Missouri State Medical Foundation, which has provided more than 1,010 loans to Missouri medical students since 1960.

The money for these loans has been made available through the generosity and dedication of the practicing physicians of Missouri.

Despite this past and present generosity, however, additional money is still needed to provide all the loans we would like to make to assist students.

You, as a practicing physician in Missouri, can make more funds available by contributing to the Foundation now. Such donations are tax deductible. This is an excellent time to make your 1973 gift since we are near the close of the tax year.

The need for more physicians is still great. We of the Missouri State Medical Association can and must help to fill this need by providing loans to medical students who are residents of our state. I am certain that you would not want the Foundation to turn away any deserving student because of our lack of funds.

Please send your check now. Make it payable to the Missouri State Medical Foundation and mail it to Box 1028, Jefferson City 65101. Today is not too soon.

Sincerely yours,

Byron M. Stuart, M.D.

President

SPONSORED BY THE MISSOURI STATE MEDICAL ASSOCIATION

The Missouri State Medical Foundation is classified by the Internal Revenue Service under Section 509(a)(3). Individuals may deduct up to 50% of their adjusted gross income for contributions made to the MSMF.

New Members

John W. Armstrong, M.D., 4940 Audubon, St. Louis, has become a member of St. Louis County Medical Society. Dr. Armstrong is a native of Farmville, Va., received his preliminary education at the University of Idaho and his M.D. degree at Washington University in 1969. He specializes in psychiatry.

Keith W. Ashcraft, M.D., 510 Medical Plaza, Kansas City, has become a member of Jackson County Medical Society. Dr. Ashcraft is a native of Hillsboro, Kan., received his preliminary education at the University of Kansas and his M.D. degree at the University of Kansas in 1963. He specializes in pediatric surgery.

Kil Young Baik, M.D., Keeling Clinic, Waverly, has become a member of Lafayette-Ray County Medical Society. Dr. Baik is a native of Korea, received his preliminary education at Seoul National University and his M.D. degree at Seoul National University in 1965. He specializes in general surgery.

Jon Ronald Bopp, M.D., 505 Glenview, Joplin, has become a member of Jasper County Medical Society. Dr. Bopp is a native of Alton, Ill., received his preliminary education at the University of Missouri and his M.D. degree at the University of Missouri in 1967. He specializes in obstetrics and gynecology.

Carlos J. Borromeo, M.D., 43 St. Joe St., Rivermines, has become a member of Mineral Area County Medical Society. Dr. Borromeo is a native of the Philippines, received his preliminary education at the University of San Agustin and his M.D. degree at the University of Santo Tomas in 1960. He specializes in pediatrics.

William B. Bradley, M.D., 731 E. High, Jefferson City, has become a member of Cole County Medical Society. Dr. Bradley is a native of Macon, received his preliminary education at the University of Missouri and his M.D. degree at the University of Cincinnati in 1955. He specializes in pediatrics.

James E. Carter, M.D., 9th and Euclid, Kansas City, has become a member of Jackson County Medical Society. Dr. Carter is a native of Kansas City, received his preliminary education at the University of Missouri-Kansas City and his M.D. degree at the University of Missouri-Columbia in 1969. He specializes in family practice.

Sae Rong Choi, M.D., 1736 Canary Cove, Brentwood, has become a member of St. Louis County Medical Society. Dr. Choi is a native of Seoul, Korea, received his preliminary education at Pusan National University and his M.D. degree at Medical College of Pusan in 1959. He specializes in general surgery.

Thomas R. Cotton, M.D., 2929 Baltimore, Kansas City, has become a member of Jackson County Medical Society. Dr. Cotton is a native of Geneseo, Ill., received his preliminary education at the University of Illinois and his M.D. degree at the University of Illinois in 1965. He specializes in otorhinolaryngology.

James B. Earnest, M.D., 2929 Baltimore, Kansas City, has become a member of Jackson County Medical Society. Dr. Earnest is a native of Oklahoma City, Okla., received his preliminary education at Oklahoma State University and his M.D. degree at Baylor University in 1966. He specializes in cardiovascular diseases.

4:00 PM Adjourn.

The EFSCH-CRC Professional Program has been approved for five elective credit hours by the AAFP and is open to any interested medical personnel. For additional information, write to James M. Thomson, M.D., Ellis Fischel State Cancer Hospital, Business 70 and Garth Ave., Columbia, Mo. 65201.

Medical School Enrollments Set New Record for 1973-1974

One hundred and fourteen medical schools, the most since 1925, opened their doors for the 1973-1974 school year in the United States, according to a report in an October issue of *American Medical News*, a publication of the AMA.

The first-year entering class reached an estimated 13,790, which also is a new record. Total enrollment for the first time topped the 50,000 mark, with educators setting an estimate of 51,123, states the report based on statistics compiled by the AMA's Medical Education Division.

If all senior students get a degree on schedule, there will be 11,862 new physicians at the end of the school year, the first time this figure has gone over the 11,000 mark.

First year enrollment last year was 13,726, with 47,546 the total enrollment for all classes. There were 10,391 graduates, the first time the number receiving M.D. degrees had topped the 10,000 mark in any one year.

There were 924 women in the 1973 graduating class and 6,099 women enrolled in all medical schools.

A continuous climb in the production of new physicians is likely. It is estimated that in 1974-1975, first-year enrollments will rise to 14,336 and the number of graduates will exceed 13,000. The first-year enrollment figure will reach 15,000 for the first time with the opening of the 1976 year.

The two new schools which opened for the 1973-1974 school year are Southern Illinois University School of Medicine in Springfield and the Eastern Virginia Medical School in Norfolk.

STATEMENT OF OWNERSHIP, MANAGEMENT AND CIRCULATION (ACT OF AUGUST 12, 1970: SECTION 3685, TITLE 39, UNITED STATES CODE)

1. Title of Publication: MISSOURI MEDICINE.

2. Date of filing: September 28, 1973.

3. Frequency of issue: Monthly.

4. Location of known office of publication: 1201-05 Bluff Street, Fulton (Callaway), Missouri 65251.

5. Location of the headquarters or general business offices of the publishers: 113 Madison Street, Jefferson City, Missouri 65101.

6. Names and addresses of publisher, editor and managing editor: Publisher, Missouri State Medical Association, 113 Madison Street, Jefferson City, Missouri 65101. Editor, Joseph V. Finnegan, 113 Madison Street, Jefferson City, Missouri 65101. Managing Editor, Miss Jean Duensing, 113 Madison Street, Jefferson City, Missouri 65101.

7. Owner (If owned by a corporation, its name and address must be stated and also immediately thereunder the names and addresses of stockholders owning or holding 1 percent or more of total amount of stock. If not owned by a corporation, the names and addresses of the individual owners must be given. If owned by a partnership or other unincorporated firm, its name and address, as well as that of each individual must be given.) Missouri State Medical Association, 113 Madison Street, Jefferson City, Missouri 65101.

8. Known bondholders, mortgagees, and other security holders owning or holding 1 percent or more of total amount of bonds, mortgages or other securities: None.

9. For optional completion by publishers mailing at the regular rates (Section 132.121, Postal Service Manual) 39 U.S.C. 3626 provides in pertinent part: "No person who would have been entitled to mail matter under former section 4359 of this title shall mail such matter at the rates provided under this subsection unless he files annually with the Postal Service a written request for permission to mail matter at such rates."

In accordance with the provisions of this statute, I hereby request permission to mail the publication named in Item 1 at the reduced postage rates presently authorized by 39 U.S.C. 3626.

JEAN DUENSING, *Managing Editor*

10. For completion by nonprofit organizations authorized to mail at special rates (Section 132.122, Postal Manual). The purpose, function, and nonprofit status of this organization and the exempt status for Federal income tax purposes have changed during preceding 12 months.

11. Extent and nature of circulation. The average number of copies each issue during preceding 12 months are: (A) Total No. copies printed (Net Press Run), 5,073; (B) Paid circulation: 1. Sales through dealers and carriers, street vendors and counter sales, 0; 2. Mail subscriptions, 4,710; (C) Total paid circulation, 4,710; (D) Free distribution by mail, carrier or other means; 1. Samples, complimentary, and other free copies, 243; 2. Copies distributed to news agents, but not sold, 0; (E) Total distribution (Sum of C and D), 4,953; (F) Office use, left-over, unaccounted, spoiled after printing, 120; (G) Total (Sum of E & F—should equal net press run shown in A), 5,073. Actual number of copies of single issue published nearest to filing date: (A) Total No. copies printed (Net Press Run), 5,050; (B) Paid circulation: 1. Sales through dealers and carriers, street vendors and counter sales, 0; 2. Mail subscriptions, 4,680; (C) Total paid circulation, 4,680; (D) Free distribution by mail, carrier or other means: 1. Samples, complimentary, and free copies, 243; 2. Copies distributed to news agents, but not sold, 0; (E) Total distribution (Sum of C and D), 4,923; (F) Office use, left-over unaccounted, spoiled after printing, 127; (G) Total (Sum of E & F—should equal net press run shown in A), 5,050.

I certify that the statements made by me above are correct and complete.

JEAN DUENSING, *Managing Editor*

LEO H. POLLOCK, M.D.

Missouri Medicine in Review

FORTY YEARS AGO

On October 20, Lincoln County Medical Society was organized at Troy for the first time with 12 physicians as charter members. Dr. W. P. Smith, Troy, was elected President; Dr. H. S. Harris, Troy, was elected Vice-President; and Dr. J. J. Allevato, Winfield, was elected Secretary and Treasurer.

On April 5, the Dallas-Hickory-Polk County Medical Society was organized with 16 members. Dr. A. S. Johnston, Wheatland, was elected President and Dr. J. L. Johnston, Wheatland, was elected Secretary-Treasurer.

The Perry County Medical Society, which has been inactive for several years, has been reorganized. Officers elected were Drs. O. A. Carron, Perryville, President; W. H. Abernathy, Menfro, Vice-President; and J. J. Bredall, Perryville, Secretary-Treasurer.

A phonetic clinical laboratory has been installed at the Central Institute for the Deaf in St. Louis. In this laboratory, the deaf and others with speech defects may see a graph of the sound vibrations of their speech and compare it with pictures of normal speech.

Dr. Caleb A. Ritter, Kansas City, was honored by the alumni of the University Medical College of Kansas City at a dinner on October 5. Dr. Ritter is 81 years old and has practiced in Kansas City for 49 years. He was an instructor at the University Medical College of Kansas City, was one of the first physicians in service at the General Hospital and is one of the organizers of the maternity department of the hospital.

TWENTY-FIVE YEARS AGO

The position of President Harry S. Truman, Democratic candidate for reelection to that office, on the question of compulsory health insurance (Wagner-Murray-Dingell National Health Act) is well known. On several occasions, most recently in September, 1948, he has called upon the Congress to enact legislation to provide compulsory health insurance for all the people in the United States.

Gov. Thomas Dewey spoke to the House of Delegates of the Oregon State Medical Association last May. Part of his address follows: "Compulsory socialized medicine is no good. It cannot be done. It would utterly destroy the quality of medical care—If a thing is evil, the first job is to convince people that it is evil and thoroughly evil. I am unalterably opposed to it."

Mr. Murray E. Thompson, Republican candidate for Governor of Missouri, stated that "I am not an advocate or supporter of socialized medicine and if successful in my candidacy, certainly will not in any way advocate 'socialized medicine.' "

TEN YEARS AGO

In writing about syphilis, Arthur W. Neilson, M.D., St. Louis and E. A. Belden, M.D., Jefferson City, say, "In this modern world of dramatic technical advancement, of high school graduates more sophisticated than many a Ph.D. of a half century ago, of moon rockets and miracle medicines, it is hardly conceivable that a communicable disease susceptible to relatively easy diagnosis and treatment should not have long since been eradicated. Yet, since 1958, syphilis has reversed its downward trend and with each passing year, the problem becomes greater and greater. Syphilis has invaded every age, sex and racial group, every geographical area—urban and rural."

The American Rhinologic Society presented an Honor Award Certificate of merit to Dr. Pat A. Barelli of Kansas City at the Academisch Liekenhuis, University of Leiden, Holland in July.

Members of Greene County Medical Society, who are graduates of the University of Missouri School of Medicine, held a surprise testimonial dinner at the Holiday Inn in Springfield on August 14 in honor of M. Pinson Neal, M.D., Columbia, who is finishing his long teaching career at the University of Missouri. Dr. Neal has been Professor of Pathology at the M.U. School of Medicine since 1922 and was acting dean of the School of Medicine from 1951 to 1953.

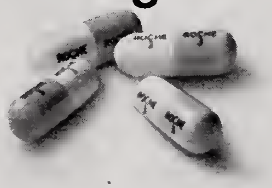
How strong must a tranquilizer be for severe anxiety?

As strong as Librium® 25 mg (chlordiazepoxide HCl)

ROCHE
ROCHE

The achievement of desired therapeutic results is often a function of the dosage *strength* as well as the drug's intrinsic action. Thus, when anxiety is *severe.* the 25-mg strength of Librium frequently provides the necessary antianxiety action with a minimum of unwanted adverse reactions. Librium 25 mg is a convenient dosage form for the relief of severe, incapacitating anxiety, specifically formulated to supplement your counsel and reassurance.

Benefits-to-risks ratio permits higher dosage



For over 13 years, Librium has been recognized for its excellent benefits-to-risks ratio, an asset in the *higher* dosage ranges as in more common clinical applications. Thus, the frequency of dosage with Librium 25 mg can be flexibly adjusted to the needs and response of the individual patient, up to 100 mg daily if required. Total daily dosage for the elderly and debilitated should not exceed 20 mg. When severe anxiety has been reduced, Librium dosage should be correspondingly reduced or discontinued entirely.

basic support in severe anxiety

Librium® 25 mg

(chlordiazepoxide HCl)

1 capsule t.i.d./q.i.d.

ROCHE
Roche Laboratories
Division of Hoffmann-La Roche Inc
Nutley, N J 07110

Before prescribing, please
plete product information, a sun
which follows:

Indications: Relief of anxiet
occurring alone or accompanying v
states.

Contraindications: Patients
hypersensitivity to the drug.

Warnings: Caution patients
combined effects with alcohol and
depressants. As with all CNS-actin
patients against hazardous occupat
complete mental alertness (*e.g.*, op
ery, driving). Though physical and
dependence have rarely been repor
mended doses, use caution in admi
addiction-prone individuals or tho
increase dosage; withdrawal sympt
convulsions), following discontinu
drug and similar to those seen with
have been reported. Use of any dru
lactation, or in women of childbearing age requi
that its potential benefits be weighed against its
possible hazards.

Precautions: In the elderly and debilitate
and in children over six, limit to smallest effective dosage (initially 10 mg or less per day) to
preclude ataxia or oversedation, increasing grad
ally as needed and tolerated. Not recommended
in children under six. Though generally not rec
ommended, if combination therapy with other
psychotropics seems indicated, carefully conside
individual pharmacologic effects, particularly in
use of potentiating drugs such as MAO inhibito
and phenothiazines. Observe usual precautions
presence of impaired renal or hepatic function.
Paradoxical reactions (*e.g.*, excitement, stimulati
and acute rage) have been reported in psychiatri
patients and hyperactive aggressive children.
Employ usual precautions in treatment of anxie
states with evidence of impending depression;
suicidal tendencies may be present and protecti
measures necessary. Variable effects on blood
coagulation have been reported very rarely in
patients receiving the drug and oral anticoagulants; causal relationship has not been establish
clinically.

Adverse Reactions: Drowsiness, ataxia a
confusion may occur, especially in the elderly an
debilitated. These are reversible in most instanc
by proper dosage adjustment, but are also occasionally observed at the lower dosage ranges. In
few instances syncope has been reported. Also e
countered are isolated instances of skin eruptio
edema, minor menstrual irregularities, nausea a
constipation, extrapyramidal symptoms, increas
and decreased libido—all infrequent and general
controlled with dosage reduction; changes in E
patterns (low-voltage fast activity) may appear
during and after treatment; blood dyscrasias (including agranulocytosis), jaundice and hepatic
dysfunction have been reported occasionally, ma
ing periodic blood counts and liver function test
advisable during protracted therapy.

Supplied: Librium® Capsules containing 5 mg, 10 mg or 25 mg chlordiazepoxide HCl. Libritabs® Tablets containing 5 mg, 10 mg or 25 mg chlordiazepoxide.

Everybody experiences psychic tension.

Most people can handle this tension.

Some people develop excessive psychic tension and need your counseli

and a few may need counseling
and the psychotropic action of Valium® (diazepam).

Before deciding to make Valium
azepam) part of your treatment
n, check on whether or not the
tient is presently taking drugs
d, if so, what his response has
en. Along with the medical and
cial history, this information can
p you determine initial dosage,
possibility of side effects and
ultimate prospects of success
failure.

While Valium can be a most
pful adjunct to your counseling,
hould be prescribed only as long
xcessive psychic tension per-
s and should be discontinued
en you decide it has accom-
shed its therapeutic task. In
eral, when dosage guidelines
followed, Valium is well
rated (see Dosage). For con-
nience it is available in 2-mg, 5-mg
10-mg tablets.

Drowsiness, fatigue and ataxia
e been the most commonly re-
ted side effects.

Until response is determined,
ients receiving Valium should
cautioned against engaging in
ardous occupations requiring
nplete mental alertness, such
driving or operating machinery.

ROCHE
Roche Laboratories

Nutley, N.J. 07110

Before prescribing, please consult complete product information, a summary of which follows:

Indications: Tension and anxiety states; somatic complaints which are concomitants of emotional factors; psychoneurotic states manifested by tension, anxiety, apprehension, fatigue, depressive symptoms or agitation; symptomatic relief of acute agitation, tremor, delirium tremens and hallucinosis due to acute alcohol withdrawal; adjunctively in skeletal muscle spasm due to reflex spasm to local pathology, spasticity caused by upper motor neuron disorders, athetosis, stiff-man syndrome, convulsive disorders (not for sole therapy).

Contraindicated: Known hypersensitivity to the drug. Children under 6 months of age. Acute narrow angle glaucoma; may be used in patients with open angle glaucoma who are receiving appropriate therapy.

Warnings: Not of value in psychotic patients. Caution against hazardous occupations requiring complete mental alertness. When used adjunctively in convulsive disorders, possibility of increase in frequency and/or severity of grand mal seizures may require increased dosage of standard anticonvulsant medication; abrupt withdrawal may be associated with temporary increase in frequency and/or severity of seizures. Advise against simultaneous ingestion of alcohol and other CNS depressants. Withdrawal symptoms (similar to those with barbiturates and alcohol) have occurred following abrupt discontinuance (convulsions, tremor, abdominal and muscle cramps, vomiting and sweating). Keep addiction-prone individuals under careful surveillance because of their predisposition to habituation and dependence. In pregnancy, lactation or women of childbearing age, weigh potential benefit against possible hazard.

Precautions: If combined with other psychotropics or anticonvulsants, consider carefully pharmacology of agents employed; drugs such as phenothiazines, narcotics, barbiturates, MAO inhibitors and other antidepressants may potentiate its action. Usual precautions indicated in patients severely depressed, or with latent depression, or with suicidal tendencies. Observe usual precautions in impaired renal or hepatic function. Limit dosage to smallest effective amount in elderly and debilitated to preclude ataxia or oversedation.

Side Effects: Drowsiness, confusion, diplopia, hypotension, changes in libido, nausea, fatigue, depression, dysarthria, jaundice, skin rash, ataxia, constipation, headache, incontinence, changes in salivation, slurred speech, tremor, vertigo, urinary retention, blurred vision. Paradoxical reactions such as acute hyperexcited states, anxiety, hallucinations, increased muscle spasticity, insomnia, rage, sleep disturbances, stimulation have been reported; should these occur, discontinue drug. Isolated reports of neutropenia, jaundice; periodic blood counts and liver function tests advisable during long-term therapy.

Dosage: Individualize for maximum beneficial effect. *Adults:* Tension, anxiety and psychoneurotic states, 2 to 10 mg b.i.d. to q.i.d.; alcoholism, 10 mg t.i.d. or q.i.d. in first 24 hours, then 5 mg t.i.d. or q.i.d. as needed; adjunctively in skeletal muscle spasm, 2 to 10 mg t.i.d. or q.i.d.; adjunctively in convulsive disorders, 2 to 10 mg b.i.d. to q.i.d. *Geriatric or debilitated patients:* 2 to 2½ mg, 1 or 2 times daily initially, increasing as needed and tolerated. (See Precautions.) *Children:* 1 to 2½ mg t.i.d. or q.i.d. initially, increasing as needed and tolerated (not for use under 6 months).

Supplied: Valium® (diazepam) Tablets, 2 mg, 5 mg and 10 mg; bottles of 100 and 500. All strengths also available in Tel-E-Dose® packages of 1000.

Valium®
(diazepam)

To help you manage excessive psychic tension

Panalgesic©

RELIEVES PAIN

Usage: Apply where it hurts with gentle massage. May be repeated as often as necessary. A first aid in injuries, relieving pain and discouraging infection. Useful in industrial clinics—collegiate and professional athletic training programs.

**You may request a clinical supply.*

Dispensed in 4 oz. bottles, 6 oz. aerosol spray, pint and half gallon bottles.

Information for Contributors

Articles are accepted for publication on condition that they are contributed solely to this journal. Material appearing in Missouri Medicine is protected by copyright. Permission will be granted on request for reproduction in reputable publications provided proper credit is given and author gives permission.

Manuscripts should be typewritten, double spaced, and the original with one carbon copy submitted. Retain another carbon copy for proofreading. Used manuscripts are not returned. School and hospital appointments of the author should accompany the manuscript. It is desirable that a synopsis-abstract of approximately 135 words accompany the manuscript. References should be arranged at the end of the article in the order in which the references are cited in the text. The reference should give name of author, title of article, name of periodical, volume number, initial page number and year. Authors are responsible for reference accuracy.

Illustrations should be glossy prints or drawings in India ink on white paper. They should not be mounted and name of author and figure number should be penciled lightly on the backs. Legends should appear on a separate sheet. Colored illustrations will be used when suitable if author assumes the actual cost.

Legal difficulties may arise from unauthorized use of names, initials or photographs in which individuals can be identified. Permission should be secured from patient or legal guardian and signed duplicate or photostat submitted with such photographs or identification. The Editor and Editorial Board assume no responsibility for the opinions and claims expressed in articles contributed by authors. If citation of an institution related to the article is made, approval of the chief of service should be given in a letter accompanying the article.

Reprint order blanks will accompany proof, which will be sent to authors prior to publication.

All material other than scientific should be received prior to the first of the month preceding month of publication.

Please give notice of change of address at least one month in advance of the change, giving old and new addresses.

acute arthritic inflammation...heat that freezes

In acute rheumatoid arthritis consider Tandearil. The anti-inflammatory action of Tandearil quickly helps reduce heat, pain, swelling, and stiffness. Results are usually seen in 3 or 4 days. Try it for a week when the symptoms defy aspirin control.

Remember that Tandearil is not a simple analgesic. It should not be used on patients responding to routine therapy. Before using, please read the prescribing information. It's summarized below.

Tandearil® helps take the heat off

oxyphenbutazone NF

Geigy

Tablets of 100 mg.
Important Note: This drug is not a simple analgesic. Do not administer casually. Carefully evaluate patients before starting treatment and keep them under close supervision. Obtain a detailed history, and complete physical and laboratory examination (complete hemogram, urinalysis, etc.) before prescribing and at frequent intervals thereafter. Carefully select patients, avoiding those responsive to routine measures, contraindicated patients or those who cannot be observed frequently. Warn patients not to exceed recommended dosage. Short-term relief of severe symptoms with the smallest possible dosage is the goal of therapy. Dosage should be taken with meals or a full glass of milk. Patients should discontinue the drug and report immediately any sign of: fever, sore throat, oral lesions (symptoms of blood dyscrasia); dyspepsia, epigastric pain, symptoms of anemia, black or tarry stools or other evidence of intestinal ulceration or hemorrhage, skin reactions, significant weight gain or edema. A one-week trial period is adequate. Discontinue in the absence of a favorable response. Restrict treatment periods to one week in patients over sixty.
Indications: Acute gouty arthritis, rheumatoid arthritis, rheumatoid spondylitis.
Contraindications: Children 14 years or less; senile patients; history or symptoms of G.I. inflammation or ulceration including severe, recurrent or persistent dyspepsia; history or presence of drug allergy; blood dyscrasias; renal, hepatic or cardiac dysfunction; hypertension; thyroid disease; systemic edema; stomatitis and salivary gland enlargement due to the drug; polymyalgia rheumatica and temporal arteritis; patients receiving other potent chemotherapeutic agents, or long-term anticoagulant therapy.
Warnings: Age, weight, dosage, duration of therapy, existence of concomitant diseases, and concurrent potent chemotherapy affect incidence of toxic reactions. Carefully instruct and observe the individual patient, especially the aging (forty years and over) who have increased susceptibility to the toxicity of the drug. Use lowest effective dosage. Weigh initially unpredictable benefits against potential risk of severe, even fatal, reactions. The disease condition itself is unaltered by the drug. Use with caution in first trimester of pregnancy and in nursing mothers. Drug may appear in cord blood and breast milk. Serious, even fatal, blood dyscrasias, including aplastic anemia, may occur suddenly despite regular hemograms, and may become manifest days or weeks after cessation of drug. Any significant change in total white count, relative decrease in granulocytes, appearance of immature forms, or fall in hematocrit should signal immediate cessation of therapy and complete hematologic investigation. Unexplained bleeding involving CNS, adrenals, and G.I. tract has occurred. The drug may potentiate action of insulin, sulfonylurea, and sulfonamide-type agents. Carefully observe patients taking these agents. Nontoxic and toxic goiters and myxedema have been reported (the drug reduces iodine uptake by the thyroid). Blurred vision can be a significant toxic symptom worthy of a complete ophthalmological examination. Swelling of ankles or face in patients under sixty may be prevented by reducing dosage. If edema occurs in patients over sixty, discontinue drug.
Precautions: The following should be accomplished at regular intervals: Careful detailed history for disease being treated and detection of earliest signs of adverse reactions; complete physical examination including check of patient's weight; complete weekly (especially for the aging) or an every two week blood check; pertinent laboratory studies. Caution patients about participating in activity requiring alertness and coordination, as driving a car, etc. Cases of leukemia have been reported in patients with a history of short- and long-term therapy. The majority of these patients were over forty. Remember that arthritic-type pains can be the presenting symptom of leukemia.
Adverse Reactions: This is a potent drug; its misuse can lead to serious results. Review detailed information before beginning therapy. Ulcerative esophagitis, acute and reactivated gastric and duodenal ulcer with perforation and hemorrhage, ulceration and perforation of large bowel, occult G.I. bleeding with anemia, gastritis, epigastric pain, hematemesis, dyspepsia, nausea, vomiting and diarrhea, abdominal distention, agranulocytosis, aplastic anemia, hemolytic anemia, anemia due to blood loss including occult G.I. bleeding, thrombocytopenia, pancytopenia, leukemia, leukopenia, bone marrow depression, sodium and chloride retention, water retention and edema, plasma dilution, respiratory alkalosis, metabolic acidosis, fatal and nonfatal hepatitis (cholestasis may or may not be prominent), petechiae, purpura without thrombocytopenia, toxic pruritus, erythema nodosum, erythema multiforme, Stevens-Johnson syndrome, Lyell's syndrome (toxic necrotizing epidermolysis), exfoliative dermatitis, serum sickness, hypersensitivity angiitis (polyarteritis), anaphylactic shock, urticaria, arthralgia, fever, rashes (all allergic reactions require prompt and permanent withdrawal of the drug), proteinuria, hematuria, oliguria, anuria, renal failure with azotemia, glomerulonephritis, acute tubular necrosis, nephrotic syndrome, bilateral renal cortical necrosis, renal stones, ureteral obstruction with uric acid crystals due to uricosuric action of drug, impaired renal function, cardiac decompensation, hypertension, pericarditis, diffuse interstitial myocarditis with muscle necrosis, perivascular granulomata, aggravation of temporal arteritis in patients with polymyalgia rheumatica, optic neuritis, blurred vision, retinal hemorrhage, toxic amblyopia, retinal detachment, hearing loss, hyperglycemia, thyroid hyperplasia, toxic goiter, association of hyperthyroidism and hypothyroidism (causal relationship not established), agitation, confusional states, lethargy; CNS reactions associated with overdosage, including convulsions, euphoria, psychosis, depression, headaches, hallucinations, giddiness, vertigo, coma, hyperventilation, insomnia; ulcerative stomatitis, salivary gland enlargement.
(B)98-146-800-F (10/71)
For complete details, including dosage, please see full prescribing information.

The Executive Committee of the National Association of Retail Druggists

The Board of Directors of the Pharmaceutical Manufacturers Association

The National Wholesale Druggists' Association

nt Statement on Antisubstitution Laws and Regulations

The purpose of this statement is affirm the support of the participat- organizations for the laws, regula- ns and professional traditions which hibit the unauthorized substitution drug products.

Traditionally, physicians, den- s and pharmacists have worked operatively to serve the best inter- s of patients. Productive coopera- n has been achieved through tual respect as well as a common ncern for the ideals of public vice. This mutual respect has been lected, in part, by joint support er the years for the adoption and forcement of laws and regulations ecifically prohibiting unauthorized bstitution and encouraging joint cussion and selection of the urce of supply of drug products. e basic principles of medical, den- and pharmacy practice are thus ized and preserved in the interest patient welfare.

The antisubstitution laws have obstructed enhancement of the ofessional status of pharmacy any re than they have in and of them- ves guaranteed absolute protec- n from unsafe drugs, or freed ysicians, dentists and pharmacists m their responsibilities to patients. a practical matter, however, such s and regulations encourage inter- ofessional communications regard- drug product selection and assure ch profession the opportunity to ercise fully its expertise in drug age, to the advantage of patients.

Physicians and dentists should urged to increase the frequency d regularity of their contacts with armacists in selection of quality ug products, recognizing that economies to patients can be improved through such communication, taking into account the patients' needs. The pharmacist's knowledge of the chemical characteristics of drugs, their mode of action, toxic properties and other characteristics that assist in making drug selection decisions should be utilized to the fullest extent practicable by physicians and dentists in serving their patients.

Since drug product selection entails knowledge derived from clinical experience, the physician's and dentist's roles in product selection remain primary and do not permit delegation of decisions requiring medical and dental judgments. A broader role in therapy will evolve for pharmacists as improved understanding and cooperation among the professions continue to grow.

There has been no evidence that there are convincing reasons to modify or repeal existing laws and regulations prohibiting the unauthorized substitution of another drug product for the one specified by a prescriber. It is our belief that such laws and regulations merit the joint support of the medical, dental and pharmaceutical professions and the pharmaceutical industry.

Add your opinion to the weight of other professionals and send it to your state assemblyman or legislator.

MISSOURI STATE MEDICAL ASSOCIATION
NEWS
ROUND-UP
DECEMBER, 1973

Physician fee hike ceiling set at 4%

Physicians will be permitted an annual aggreate fee increase of 4% under proposed Phase 4 gulations issued recently by the Cost of Living ouncil.

Although higher than the 2.5% ceiling allowed hysicians since 1971, the new proposed regulaons have already drawn the ire of the AMA and any other health-related organizations.

Under the proposed regulations:

- No fee over $10 can be raised by more than 0%.
- No fee under $10 can be raised by more han $1 in a single year.
- **The posting of an easily readible sign tating the availability of the physician's rice schedule is required. (One page of this ection can be clipped and used for such a ign.)**
- A schedule of base and current prices must e available upon request.
- Price increase entitlements may be accuulated from year to year.
- Profit margin may not increase for one year fter any price increase.

Final regulations will be effective Jan. 1, 1974.

The AMA has formally requested that physicians be exempted from all price controls under Phase 4.

In its request, the AMA stated:

1. Wages have generally increased at an annual rate of 6.8% since the beginning of Phase 2, while physicians' fees were limited to annual increases of 2.5%. Proposed Phase 4 regulations would continue to discriminate against physicians.

2. The proposed 4% limitation on fee increases is inadequate due to the rising costs incurred by physicians.

3. The profit-margin limitation is unfair and inequitable to physicians because physicians experiencing a growth in their practices are penalized.

4. Current and proposed price regulations prevent physicians with low fees from increasing them to prevailing levels in their community.

5. The regulations deny physicians the benefit of the small business exemption currently available to all industries except health, construction and petroleum.

Missouri abortion laws ruled unconstitutional

The U. S. Supreme Court recently rejected Misouri's challenge to the high court's decision grantng the right to abortions during the first six months f pregnancy.

The Supreme Court affirmed a district court's deision of last May which declared Missouri's aborion laws unconstitutional. In effect, that means Misouri is now operating under the guidelines set down y the Supreme Court in January, 1973.

These guidelines provide that (1) abortions in the irst three months of pregnancy are a matter to be ecided by the woman and her physician; (2) during he second three months states may step in to legisate health regulations such as procedure or places here abortions must be performed; and (3) only in he last three months may the state "go so far as to roscribe abortion . . . . except when it is necessary o preserve the life or health of the mother."

Missouri Attorney General John C. Danforth has said that there is no further appeal of Missouri's case. He has stated that he will continue to work for a constitutional amendment to the U. S. Constitution to protect the rights of unborn children.

The "Abortion-Conscience" bill passed by the last General Assembly and signed into law by the Governor is not affected by the Supreme Court's decision at this time.

This bill provides that no physician, allied health personnel or hospital is required to treat or admit any woman for the purpose of abortion if such treatment is against the policy of the hospital or against the religious, moral or ethical principles of the individual.

However, a suit has been filed in St. Louis which challenges the right of public hospitals to refuse to perform abortions. Results should be available in a few months.

Series to spell out PSRO provisions

Since the passage last year of the Professional Standards Review Organizations law (PL92-603), the implications of the new measure have led to much confusion. In an effort to clear the air on some of the provisions of the bill, MISSOURI MEDICINE will publish a monthly series of articles designed to spell out exactly what the bill says — without passing judgement.

The first installment is a simplified explanation of "What the Law Says About PSRO," published by the Medical Advances Institute of Columbus, Ohio. In future editions, questions and answers gleaned from PL92-603, other publications and those submitted by MISSOURI MEDICINE readers should make for interesting reading.

Purpose of PSRO's (Sec. 1151)

- To assure that health care services will conform to appropriate **professional** standards
- That services paid for will be medically necessary
- That inpatient services be utilized only when care cannot be provided more economically on an outpatient basis or in another facility

Qualifications of PSRO's (Sec. 1152)

- Nonprofit professional associations
- Composed of practicing doctors of medicine and osteopathy
- Organized to provide professional competence to review health care services
- Voluntary membership is to include a substantial proportion of area physicians (without requiring dues or membership in Medical Societies)
- No practicing physicians are to be restricted from serving as officers or restricted from the assignment of PSRO duties

Statewide PSRO Council (Sec. 1162)

- In any state where there are **more than two** PSRO's, the Secretary of H.E.W. may designate a Statewide PSRO Council
- Appointments to this council would then be made by the Secretary of H.E.W., the Governor of the State, the state hospital association and the state medical societies
- The state medical society under this provision, can designate only 2 council members (the minimum council membership is eleven)

Duties of the Statewide Council (Sec. 1162)

- "Coordinate the activities" of the PSRO's in the state
- Assist the Secretary of H.E.W. in developing uniform data systems and uniform operating procedures
- "Assist the Secretary in evaluating the performance of each PSRO"
- Assist the Secretary "in developing and arranging for a qualified replacement" PSRO

Designation of Area PSRO's (Sec. 1152)

- The Secretary of H.E.W. will designate PSRO "areas" by Jan. 1, 1974
- To apply, organizations within designated areas must submit formal proposals and
- Must demonstrate capability of performing activities of a PSRO "in an effective, timely, and objective manner and at reasonable cost"
- The secretary will first designate "conditional" PSRO's which, if they demonstrate capability, may be designated as the "area" PSRO prior to Jan. 1, 1976

Duties, Functions of Area PSRO's (Sec. 1155)

- Responsible for reviewing professional activities of physicians, hospitals, and other providers of health care services
- Determine whether such services are **medically necessary**
- Determine whether services meet professionally recognized standards of health care
- Determine whether inpatient services could be effectively provided in outpatient or other facilities
- Be responsible for the regular review of profiles of care and services
- Develop criteria relating to health care services by type of care or by diagnosis
- Determine whether care and services rendered are consistent with specified criteria
- Publish such criteria

Norms of Health Services (Criteria) (Sec. 1156)

- PSRO's shall apply "professionally developed norms of care, diagnosis and treatment"
- Criteria are to be based on **typical patterns** of practice within the PSRO region
- Principal points of evaluation and review include typical length-of-stay for institutional care by age and diagnosis
- Where norms of care in a PSRO area are significantly different from regional norms (and are found to be **reasonable**), the PSRO may apply the area norms with approval of the National PSRO Council

Prohibition Against Disclosure of Information (Sec. 1166)

- Information acquired in exercise of PSRO functions shall be used only to the extent necessary to carry out those functions
- Such information is to be held in confidence and "shall not be disclosed to any person"

Limitations on Liability (Sec. 1167)

- No person providing information to PSRO's shall be held to have violated any criminal law or be civilly liable under the law
- This provision applies to the PSRO organization, its personnel and to health **practitioners.**

HCFM and PSRO

PL92-603 changes aims of Foundation

by E. Mark Halvorson
Executive Vice President
Health Care Foundation of Missouri

A year has passed since President Nixon signed PL92-603, the federal PSRO law that requires physicians in each state to respond with organizaional concepts that broaden review processes and develops systems of economic as well as medical accountability.

It was this law, many remember, that physicians in Missouri were anticipating as early as August 1970, and which led the MSMA and the MAOPS to conjointly sponsor the Health Care Foundation of Missouri.

Goals Listed

In the three years of its existence, the HCFM has striven to develop a peer review mechanism n Missouri that would be the forerunner of a statewide Professional Standards Review Organization. In many ways it has succeeded. In some ways it has not. Its goals and objectives, however, have never been compromised, nor have they been modified or replaced. Today, as in August of 1970, the HCFM is still striving to protect and elevate the quality of medical care in Missouri; to discover and eliminate abuses within the health care system; and to seek to control the costs of medical care through appropriate educational programs.

It was felt in 1970 that physicians in Missouri would respond to the Foundation and what it was aspiring to do. Many did, and today the Foundation has over 2,700 physician members; it has processed hundreds of cases submitted by carriers, government agencies, the Blues, physicians themselves, and yes, even consumers and, in most cases, it has supported the physician's judgement.

Needed More "Clout"

The Foundation *has* succeeded but it has not succeeded as well as it could have if there had been even greater physician support or if there been enough financing to create the programs that would make it a resounding success. Strong physician support would have given the Foundation the "clout" necessary to construct contracts with carriers that would have brought eager cooperation from HIC, Division of Welfare and other intermediaries, and they would have been happy to aid financing Foundation programs.

Now, PSRO has introduced a new perspective and the thrust of this is on "local" area physician organizations instead of the statewide HCF in Missouri. The HCFM now urges physicians to create their own strong organizations in their respective areas, and is energetically helping them to do so.

As reported in the September issue of *Missouri Medicine*, the HCFM responded to "*PSRO Area Designation Guidelines*" by proposing that the original HCFM Peer Review regions, with minot modifications to accommodate physician preferences and Medicare intermediary boundaries, be accepted as the most appropriate definition of medical service areas in Missouri. This was Step 1 in the implementation of PL92-603, and current indications are that these boundaries will be designated as PSRO areas before January 1, 1974.

Seeks Role as PSAO

The Foundation also proposed that it be named the statewide PSAO (Professional Standards Administrative Organization) to coordinate and assist the work of each PSRO, in Missouri, to maintain a central computerized data service, and to develop appropriate physician and consumer education and information programs.

When the PSRO areas are officially designated, it becomes the responsibility of physicians in each area to develop an organization that can qualify as a PSR Organization. This is Step II in the implementation of PL92-603, and each such organization must be operative within a two-year period, or before January 1, 1976.

Then Step III goes into effect and the organization that has been formed and has proven itself capable of organizing review and reporting functions during the two-year "probationary" period will then become the "official" PSRO for that area on a one-year renewable contract basis.

Assist Area Organizations

Having proposed the PSRO areas for Missouri, the HCFM is now proceeding to encourage and assist physicians in these areas to develop organizations that will not only conform to the requirements of the law, but also will give them the "local" strength to interface collectively with carriers in a contractual basis. Since some form of organization must be created to accommodate PSRO, it is reasonable that this same organization should also address its expertise to the problems of private health insurance carriers and thereby permit physician influence and control to prevail over the entire health care delivery system in Missouri, and not just the 30% which pertains to Medicare and Medicaid.

The HCFM has engaged a consulting firm, Uni-Med Services, Inc., to assist in so doing, and through their efforts, the SEMOFMC (Southeast Missouri Foundation of Medical Care) and the MMHCF (Mid-Missouri Health Care Foundation) organizations are progressing rapidly. Similar steps are also being taken by physicians in Kansas City and St. Louis. Physicians in the Springfield area will be meeting soon to discuss their organizational approach.

And that's where the HCFM is now. It is acting as the statewide "preorganizer" of PSRO's and FMC's. It is still processing cases for Peer Review on a statewide basis until "local physician organizations" are formed. It still needs physician cooperation and support, and it still needs adequate financing. The HCFM urges all physicians in Missouri to repond to the need to develop local physician organizations that will, through their collective strength, provide a strong statewide review organization.

The Council Reports

Meeting of Sept. 29-30, 1973

R. Allen Chandler, M.D., Kansas City, Chairman, called the meeting to order. Those present were Drs. Chandler; E. A. Stricker, St. James; James C. Cope, Columbia; John I. Matthews, Jefferson City; Donald R. Judd, St. Louis; Walter T. Gunn, St. Louis; John N. Martin, St. Joseph; Lysle M. Bach, Hannibal; Max S. Franklin, St. Louis; Louis P. Hetlage, Troy; Robert Bregant, Jefferson City; William D. Bradshaw, Clinton; Claude Cooper, Thayer; E. T. Hansbrough, Popular Bluff; Stanley S. Peterson, Springfield; J. Loren Washburn, Versailles; Hector W. Benoit, Jr., Kansas City; William D. Mayer, Columbia; R. K. Noback, Kansas City; M. Kenton King, St. Louis; Herbert R. Domke, Jefferson City; Richard P. Bowles, Liberty; Messrs. Lee E. Mortenson, Chicago, Ill.; Allen D. Smith, Kansas City; Hollister Smith, St. Louis; Ray McIntyre, Tom P. Fox, Royal O. Cooper and C. C. Swarens, Staff.

APPROVAL OF PREVIOUS COUNCIL MINUTES

Dr. Chandler called the meeting to order and requested approval of the minutes of the June 2-3, 1973 Council Meeting. On motion, duly seconded, the Council minutes of June 2-3, were approved as printed in the August, 1973 issue of Missouri Medicine.

EXECUTIVE SECRETARY'S REPORT

Mr. McIntyre indicated that the American Hospital Association is still trying to promote its Quality Assurance Program (QAP) and is holding regional meetings in order to acquaint people with its program and is trying to get backing. Such a meeting was held in Kansas City on August 15 and 16. Persons attending this meeting were from hospital associations, state medical associations, health departments, representatives of CME programs and others.

A meeting, held in Jefferson City on August 27 at the Ramada Inn, was called by the Regional Office, Department of HEW, to give organizations and individuals an opportunity to appear before this hearing and make recommendations on areas for PSRO designations. It was pointed out that the Health Care Foundation of Missouri made a recommendation which was supported by MSMA.

Mr. McIntyre stated that at the PSRO hearing, there were local medical groups who proposed five area PSRO designations. The first recommendation of the HCF was that it be designated as the PSRO for the state of Missouri. However, if there are local PSROs set up as presented, the HCF asked to be designated as the administrative coordinating agency for the entire state.

He said that Dr. Benoit would speak again on the PSRO hearing later in the meeting. Approximately 50 physicians from all over the state were present at this meeting. It was reported that Dr. Bauer had resigned as the Director of the PSRO section of HEW and a Dr. Simmons is acting in that position.

The Executive Secretary informed the Council that several staff members had been elected to offices of state organizations. Miss Jean Duensing, Managing Editor of Missouri Medicine, was recently installed as President of Missouri Press Women. About 175 women journalists belong to this organization and Jean was elected for a two-year term. We feel it is an honor to Jean and to the MSMA to have her in this capacity. A motion was made, seconded and carried that Jean be commended for her election to the presidency of this organization.

Royal O. Cooper has taken over the presidency of a newly formed organization—the Missouri Society of Association Executives. There is a national association, and there are two local societies in Missouri with which Allen Smith and Hollister Smith are affiliated. However, this is a newly organized state association spearheaded by Mr. Cooper. A motion was made, seconded and carried that commendation be granted to Royal for his election as President of MSAE.

M.D. Day at Missouri University will be on October 12-13. The MU-Nebraska football game is scheduled for October 13. The University of Nebraska Medical School will cooperate with the MU Medical School in presenting the scientific program for Friday.

Mr. McIntyre noted that Dr. Slickman, Speaker of the House of Delegates for the 116th Annual Session, was in attendance at the Council Meeting and welcomed him.

Mr. McIntyre pointed out that for the information of the Council there was a resolution in the folders having to do with the Missouri Psychiatric Association and their interest in having a resolution passed in the MSMA House of Delegates next spring which would provide for delegates from various specialty organizations of the state to be voting members of the MSMA House.

Dr. Domke was kind enough to arrange for the survey, "Physician Manpower for Missouri," to be published in the May issue of Missouri Medicine. The Division of Health financed this and it is the most up-to-date Missouri medical manpower survey available for today. We know that reports of this are being read as newspaper clippings from various parts of the state are citing statistics from the report.

Mr. Swarens attended a meeting of the State Medical Journal Advertising Bureau in Atlanta recently, along with Dr. Finnegan. Journal advertising was considered. This is becoming quite a problem. Journal advertising is more difficult to obtain and, at the same time, printing costs, postage, etc. are rising. Consequently, we are trying to keep informed on what different states are proposing.

A letter answering questions regarding Phase IV was sent out from the MSMA office along with one of the weekly issues of *AMA Newsletter* for posting on hospital staff bulletin boards.

Mr. Swarens indicated that October has been designated as Immunization Month in Missouri by Governor Bond. He pointed out that the current issue of *JAMA* has a good article on immunizations. The publicity will be aimed at parents, requesting them to call their physicians and bring their children up to date on their immunizations.

Mr. McIntyre reported that the Missouri State Board of Registration for the Healing Arts has denied Dr. Finch the right to take the examination for licensure. However, the administrative hearing commission ruled that the Board of Healing Arts is wrong and that Dr. Finch should be allowed to take the examination. Probably the Board will file suit to have the ruling declared invalid.

REPORTS OF DISTRICT COUNCILORS

District #2—Dr. Bach reported that he had recently attended a meeting regarding a commercial concern organization to run PSRO. He felt the tenor was that it had the approval of the Health Care Foundation of Missouri.

District #3—Dr. Franklin reported that he had attended the AMA Meeting in New York City. He indicated his Society's regret at the loss of Dr. Neilson and said that Dr. Robert Kelley had served as Dr. Neilson's replacement Delegate at the AMA Meeting.

The motion was made by Dr. Franklin that Dr. Robert Kelley be officially made an AMA Delegate to replace Dr. Neilson to Jan. 1, 1974. The motion was duly seconded and carried.

A motion was further made, seconded and carried that Dr. Hubert A. Ritter be appointed as Alternate Delegate to serve in that capacity to Jan. 1, 1974.

Dr. Franklin reported that the survey team from the AMA made its survey of the St. Louis Medical Society on September 16-19, and it seemed to go off very well. The annual pictorial roster of St. Louis Medical Society members has taken much staff time.

St. Louis Medical Society has voted to renovate its building rather than move. St. Louis Medical Society is raising its dues from $75 to $100 for the coming year.

Dr. Franklin indicated that, at the present time, his Society is not supporting the Open Panel Program of Blue Shield. Dr. Judd stated that the Society approved the concept, but is opposed to it on several grounds, the outstanding one being that if you are not a participating physician, Blue Shield will not pay either the patient member or the physician. It makes referral of patients very difficult.

District #4—Dr. Hetlage stated that in his personal conversations, he did not find overwhelming disapproval of the St. Louis Blue Shield Open Panel proposed program. He said that there was a good amount of physician input into this program and he could see reason for such further input.

In District #4, there is a crises of ambulance service. The undertakers will cease their ambulance service on January 1, and there will be no such service in Lincoln County. Dr. Hetlage indicated that he felt this is a serious medical problem and something needs to be done now.

Dr. Hetlage voiced his concern that as PSRO foundations, organizations, etc. are set up, the structure of medicine may very rapidly change if these organizations take over the functions of the district and county medical societies. There is concern that these foundations, etc. may be making the medical decisions.

District #5—Dr. Bregant reported that his district is addressing itself to PSRO and have been meeting with the UNIMED people. This area would conform with Region B of the Health Care Foundation of Missouri.

District #6—Dr. Bradshaw indicated that there are no serious problems in his district at the present time.

District #9—Dr. Cooper reported that he had attended a meeting of the South Central Counties Medical Society. They discussed PSRO and decided that they want to go along with the HCF. They discussed continuing medical education and the work of MMPAC. Dr. Cooper stated that they are beginning to feel that they will have to get involved.

Dr. Cooper also attended a meeting of the Mid-Missouri Medical Society. Dr. Stanley Peterson was the speaker and made a fine presentation. Mid-Mo is reactivating its Society. They have changed their Bylaws so they might admit D.O.s into the Society.

Dr. Cooper indicated that he hopes something will come out of the meeting regarding some direction on Phase IV. Mr. Swarens reiterated some of the points that are included in the letter sent from the MSMA office on Phase IV.

Dr. Hetlage indicated that he would like to see the D.O.s in his area attend the society and district meetings so that all physicians will be working in the same direction. Considerable discussion was held regarding this matter. Dr. Hetlage stated that what he is really interested in is for MSMA staff to contact the Missouri Association of Osteopathic Physicians and Surgeons to see if these is some way that the practicing D.O.s can attend medical meetings and still be in good graces with their own organization. He said that they have been invited to many of his local and district meetings, but do not attend, supposedly because of their fear of being disassociated from their parent organization.

District #10—Dr. Hansbrough indicated that he would like to discuss the PSRO hearing in Jefferson City. About half of the presentation time was used by Dr. Burford, Cape Girardeau, explaining the Southeast Missouri Health Care Foundation, which essentially takes in the 10th Councilor District. He presented slides and explained the reasons for pointing out this district. The SEMO Health Care Foundation is the only local foundation in Missouri which is off the ground and has a program to present. About 15 months ago, the Cape Girardeau County Medical Society hired UNIMED, a corporation which had set up a functioning foundation in Denver. They were successful in signing up health insurance companies for the Denver foundation program. The basic purpose is to reduce health insurance premiums through the Foundation's physician peer review program. To finance the Foundation's program, health insurance companies or other third party payers cooperating, pay the Foundation a certain percent of their contract premiums. They, thus, expect, through the Foundation's peer review program, to reduce their patient care cost. The experience has been that they can save about 12% over what has been expended before patient care came under the foundation. Of that amount, about 6% goes into the foundation for operating expenses. The Cape Society hired UNIMED to do a survey in Cape Girardeau County where there are about 60 doctors. The conclusion was that this was not large enough. UNIMED came back with the proposal that the areas be expanded. Other physicians in Southeast Missouri then became involved by contributing money to have UNIMED do a feasibility study of the entire area, which is the 10th Councilor District, plus Jefferson County, which is a large county physician-wise, and also included

Carter County which does not have a physician. This fills out the area and makes it possible to present maps showing that this is a functional area based upon trade routes, tradition, etc. There were 12 different ways in the presentation showing how this district was tied in as a unit. UNIMED concluded the study and said, indeed, this area is right for a rural health care foundation.

Dr. Hansbrough indicated that it was his understanding that as we go further along, cities may not get foundation approval in the future. The Bennett Amendment and probable HEW regulations seemed to make practical a PSRO area, since by including Jefferson County, there were 340 M.D.s and D.O.s in this area, which is Region E of the HCFM and identical to the 10th Councilor District. Immediately, the physicians in Southeast Missouri took up the idea.

Dr. Hansbrough stated that he felt that Dr. Burford's presentation at the PSRO hearing was thorough, complete and exceptionally well presented. At the encouragement of the Southeast Missouri group, other parts of the state are considering such feasibility studies by UNIMED.

The Executive Council of the Southeast Missouri foundation and the people doing the work, consist of each hospital sending a physician to be a representative on the Executive Committee of the corporation. Some of the smaller hospitals voiced concern that the larger hospitals and staffs would be telling the smaller ones what to do. However, they were assured that this would not be the case and they would have equal rights.

Dr. Hansbrough stated that there is a danger to this because these people have put so much time and work into this that, indeed, if there is a change in PSRO districts to allow state organizations as HCFM to do the whole job, perhaps the Southeast Missouri foundation will say, we would like to do ours, let them do the rest of the state. He stated that he is definitely enthusiastic about the Southeast foundation, but does not want to split the state. The physicians have indicated that they want to review only in their area and have the HCFM be the coordinator, since the word they now have from Washington is that a PSRO district will not be set up with more than 3,000 physicians.

Lengthy discussion followed regarding the pros and cons of such a foundation as explained by Dr. Hansbrough.

Mr. Mortenson indicated that as far as he knew, HEW has not officially discouraged the setting up of these foundations in a city area.

Dr. Hansbrough indicated that the cost of this to an individual family or the employer is an administrative thing and is being determined by UNIMED. They have indicated that they will need to operate this for two to three years at which time the help would be trained to carry on.

Concern was expressed over the fact that after these foundations have been set up, a time will come when the federal government will try to impose certain fee schedules, changes, etc. and we will be locked into a situation from which there is no escape, so there should be caution.

Further discussion followed regarding the Southeast Missouri Foundation. Dr. Hansbrough stated that he was a little disappointed in the fact that the *Journal* made practically no mention of the 45-minute presentation given at the PSRO hearing by the SEMO group.

Dr. Hansbrough reported that several months ago, several area physicians became interested in Comprehensive Health Planning and organized a Poplar Bluff Health Care Council. The first project was an approved ambulance training program in the junior college, which one of the physicians is teaching. Recently, a meeting was held to organize the Ozarks foothills into a B Agency under CHP. It is anticipated that the Poplar Bluff Health Care Council will organize a B Agency. Dr. Hansbrough indicated to the Council of MSMA that if you don't have a CHP agency in your area, get an organization set up to help the people in the area, but have definite medical input. This is so very important.

Dr. Hansbrough said that all of the undertakers in his area are going out of the ambulance business on January 1. Both Poplar Bluff and Cape Girardeau have private ambulance services. Some of the other counties are trying to have a working arrangement with these to go as far as 65 miles for ambulance service.

District #1—Dr. Martin indicated that the morticians are going to discontinue ambulance service in his area. However, they do have three ambulances, all run out of one of the hospitals. The problem has been the requirements to drive an ambulance. He further indicated that the morticians really tried to help the local people by getting out and pushing for a mill tax to support an ambulance service.

Dr. Martin reported that a local group has taken over Sisters' Hospital in St. Joseph. They have an administrator and a local Board and it seems to be going along well.

Dr. Martin indicated that St. Joseph is in dire need of an anesthesiologist and asked the Council to please indicate to him if they are aware of anyone looking for a location.

Dr. Martin stated that he does not feel we have the relationship at the state level with the AMA that we should have. We do not have enough input to the AMA on a daily or weekly basis and we do not get enough back from the AMA. We need closer relationship. I think Missouri and maybe every state should have a staff person who can go into the AMA office and secure needed information and come back to us with it. Not that Lee Mortenson doesn't give us good service. He covers three states. We need someone to go up there from time to time from our state organization to find out what is going on.

Dr. Martin indicated that he was very disappointed when attending the AMA meeting in the fact that when they voted for the Board of Directors, it was interesting that there was only one man running for every office and that was the one sitting at the head table.

Dr. Martin indicated that he has been asked by several people to see a financial report of the Health Care Foundation of Missouri and he has asked for one, but has yet to receive one. He said that he would like to see one.

District #8—In the absence of Dr. McAlhany, Dr. Peterson gave a brief report for District #8. A Councilor District meeting was held on September 20 in Springfield. Mr. Dave Weihaupt of the AMA office in Chicago was on the program, along with Dr. E. A. Stricker, President of MSMA. Mr. Weihaupt stated that PSRO is here and we should remember one basic thing—that it is a regulatory arm of the U. S. Government.

Dr. Peterson reported that one of the not-for-profit hospitals in Springfield was taken over by a for-profit organization and Blue Cross indicated that they could not pay for-profit organizations. Later, they indicated that they would not pay because Springfield had too many hospital beds anyway based upon the state plan

(Continued on page 834)

Recommendations[†] on Combination Live Virus Vaccines

American Academy of Pediatrics

Committee on Infectious Diseases

In the September 15, 1971 *AAP Newsletter* sent to Academy members, the Committee on Infectious Diseases of the American Academy of Pediatrics stated its recommendations on the use of combination live virus vaccines. After a careful review of available data, the committee concluded that:

- "This information indicates that the products are both safe and effective when used as directed."
- The vaccine "...can, therefore, be recommended with the obvious advantages of reduction in the number of injections for any given child and a concomitant decrease in the required visits to a physician's office or clinic."

United States Public Health Servic

Advisory Committee on Immunization Practices

In the April 24, 1971 issue of *Morbidit and Mortality Weekly Report,* the Advisory Committee on Immunization Practices of the United States Public Healt Service presented recommendations o the use of combination live virus vaccine The committee stated that:

- "Data indicate that antibody respons to each component of these combinatio vaccines is comparable with antibody response to the individual vaccines give separately.
- "There is no evidence that adverse reactions to the combine products occur more frequently or are more sever than known reactions to th individual vaccines (see pertinent ACIP recommendations).
- "The obvious convenienc of giving already selecte antigens in combined for should encourage consideration of using these product when appropriate."

[†] For complete text of both recommendations see your MSD representative or write to Professional Service Dept., Merck Sharp & Dohme, West Point, Pa. 19486.

M-M-R*

(MEASLES, MUMPS AND RUBELLA VIRUS VACCINE, LIVE | MSD)

Single-dose vials

M-M-R, given in a single injection, fits easily into your routine immunization program for well babies.

Given at age 12 months, M-M-R provides for vaccination early in life against measles, mumps, and rubella.

MSD suggested immunization schedule for well babies

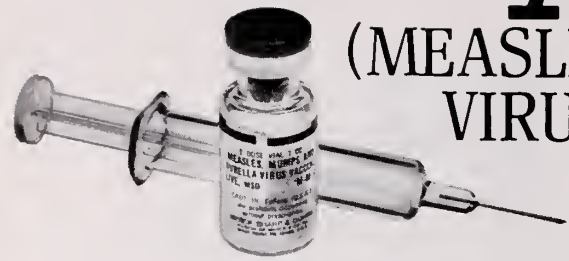
Age	Vaccine(s)
2 months	DPT (diphtheria-pertussis-tetanus) Oral poliomyelitis vaccine (triple)
3 months	DPT[1]
4 months	DPT Oral poliomyelitis vaccine (triple)
6 months	Oral poliomyelitis vaccine (triple)
12 MONTHS	**M-M-R (MEASLES, MUMPS AND RUBELLA VIRUS VACCINE, LIVE, MSD)**

[1] This vaccination may be given at 3 months, 5 months, or at 6 months, depending on your preference or on the condition of the child.

Since vaccination with a live virus vaccine may depress the results of a tuberculin test for four weeks or longer, the test and the vaccine should not be given during the same office visit.

*Trademark of Merck & Co., INC.

For a brief summary of prescribing information, please see following page.



M-M-R

(MEASLES, MUMPS AND RUBELLA VIRUS VACCINE, LIVE | MSD)

Single-dose vials

Contraindications: Pregnancy or possibility of pregnancy within three months following vaccination; infants less than one year old; sensitivity to chicken or duck, chicken or duck eggs or feathers, or neomycin; any febrile respiratory illness or other active febrile infection; active untreated tuberculosis; therapy with ACTH, corticosteroids, irradiation, alkylating agents, or antimetabolites; blood dyscrasias, leukemia, lymphomas of any type, or other malignant neoplasms affecting the bone marrow or lymphatic systems; gamma globulin deficiency, i.e., agammaglobulinemia, hypogammaglobulinemia, and dysgammaglobulinemia.

Precautions: Administer subcutaneously; *do not give intravenously.* Epinephrine should be available for immediate use should an anaphylactoid reaction occur. Should not be given less than one month before or after immunization with other live virus vaccines, with the exception of monovalent or trivalent poliovirus vaccine, live, oral, which may be administered simultaneously; vaccination should be deferred for at least three months following blood transfusions or administration of more than 0.02 ml immune serum globulin (human) per pound of body weight, or human plasma.

Due caution should be employed in children with a history of febrile convulsions, cerebral injury, or any other condition in which stress due to fever should be avoided. The physician should be alert to the temperature elevation which may occur 5 to 12 days after vaccination.

Excretion of the live attenuated rubella virus from the throat has occurred in the majority of susceptible individuals administered the rubella vaccine. There is no definitive evidence to indicate that such virus is contagious to susceptible persons who are in contact with the vaccinated individuals. Consequently, transmission, while accepted as a theoretical possibility, has not been regarded as a significant risk.

Attenuated live virus measles, mumps, and rubella vaccines, given separately, may temporarily depress tuberculin skin sensitivity; therefore, if a tuberculin test is to be done, it should be scheduled before vaccination, to avoid the possibility of a false negative response.

Before reconstitution, refrigerate vaccine at 2–8 C (35.6–46.4 F) and *protect from light.* Use only diluent supplied to reconstitute vaccine. If not used immediately, return reconstituted vaccine to refrigerator at 2–8 C (35.6–46.4 F), and discard after eight hours.

Adverse Reactions: To date, clinical evaluation has not revealed any adverse reactions peculiar to the combination. The adverse reactions that occurred were limited to those that have been reported previously for the component vaccines.

Fever, rash; mild local reactions such as erythema, induration, tenderness, regional lymphadenopathy; parotitis; thrombocytopenia and purpura; allergic reactions such as urticaria; arthritis, arthralgia, and polyneuritis.

Occasionally, moderate fever (101–102.9 F); less commonly, high fever (above 103 F); rarely, febrile convulsions.

Encephalitis and other nervous system reactions that have occurred very rarely with the individual vaccines may also occur with the combined vaccine. Experience from more than 44 million doses of all live measles vaccines given in the U.S. by mid-1971 indicates that significant central nervous system reactions such as encephalitis, occurring within 30 days after vaccination, have been temporally associated with measles vaccine approximately once for every million doses. In no case has it been shown that reactions were actually caused by vaccine. The Center for Disease Control has pointed out that "a certain number of cases of encephalitis may be expected to occur in a large childhood population in a defined period of time even when no vaccines are administered. A survey conducted in New Jersey in 1965 showed that 2.8 cases of encephalitis (of unknown cause) occurred per million children, ages 1–9 years per 30-day period." However, the Center for Disease Control has analyzed the reported reactions following measles vaccines and pointed out that "the clustering of cases in the period 6 through 13 days after inoculation as well as the recovery of measles virus (probably the vaccine strain) from the CSF of one patient does suggest that some of these cases may have been caused by the vaccine." The risk of such serious neurological disorders following live measles virus vaccine administration remains far less than that for encephalitis with measles (one per thousand reported cases).

Transient arthritis, arthralgia, and polyneuritis are features of natural rubella and vary in frequency and severity with age and sex, being greatest in adult females and least in prepubertal children. Such reactions have been reported with live attenuated rubella virus vaccines. Symptoms relating to joints (pain, swelling, stiffness, etc.) and to peripheral nerves (pain, numbness, tingling, etc.) occurring within approximately two months after immunization should be considered as possibly vaccine related. Symptoms have generally been mild and of no more than three days' duration. The incidence in prepubertal children would appear to be less than 1% for reactions that would interfere with normal activify or necessitate medical attention.

How Supplied: Single-dose vials of lyophilized vaccine, containing when reconstituted not less than 1,000 TCID_{50} (tissue culture infectious doses) of measles virus vaccine, live, attenuated, 5,000 TCID_{50} of mumps virus vaccine, live, and 1,000 TCID_{50} of rubella virus vaccine, live, expressed in terms of the assigned titer of the FDA Reference Measles, Mumps, and Rubella Viruses, and approximately 25 mcg neomycin, with a disposable syringe containing diluent and fitted with a 25-gauge, ⅝″ needle. Also in boxes of 10 single-dose vials nested in a pop-out tray with a separate box of 10 diluent-containing syringes.

For more detailed information, consult your MSD representative or see full prescribing information. Merck Sharp & Dohme, Division of Merck & Co., Inc., West Point, Pa. 19486.

County Society News

FIRST DISTRICT

COUNCILOR
JOHN N. MARTIN, M.D., ST. JOSEPH

Buchanan County Medical Society

For the 18th consecutive year, physicians and attorneys in St. Joseph met jointly when 90 members of the Buchanan County Medical Society and the St. Joseph Bar Association attended a dinner and program in the Empire Room of Hotel Robidoux.

Dr. Elza F. Butler, president of the Medical Society, and Mrs. Milton (Grace) Day, president of the Bar Association, presided jointly and extended greetings to those in attendance.

The speaker for the event was Sixth District Congressman Jerry Litton of Chillicothe, who is serving his first term in Congress.

Dr. Gerald E. Fox and J. William Roberts, program chairman for the two professional groups, made arrangements for the meeting.

TENTH DISTRICT

COUNCILOR
EUGENE T. HANSBROUGH, M.D.,
POPLAR BLUFF

Butler-Wayne-Ripley Medical Society

The Butler-Wayne-Ripley Medical Society elected new officers at a meeting at the Hickory House in Poplar Bluff on October 9.

Officers elected to take office in January, 1974 are Dr. Ricardo Ramirez, President; Dr. Tom Wood, Vice-President; Dr. D. K. Varma, Secretary; and Dr. Robert Laatsch, Treasurer.

Delegates to the MSMA Annual Session are Drs. Eugene Ruff, George Ladyman and Fred Caldwell. Alternate Delegates are Drs. Austin Tinsley, S. R. Reddy and Ben Till.

Dunklin County Medical Society

Dr. Romeo I. Santos, Kennett, was elected President of Dunklin County Medical Society at its meeting on October 15. He succeeds Dr. W. D. English, Cardwell.

Other new officers elected for 1974 are Drs. Chester R. Peck, Kennett, Vice-President; Quinton Tarver, Secretary-Treasurer; and George Q. Dunmire, Delegate to the MSMA.

Dr. John K. Legan was elected Alternate Delegate and Dr. Chester R. Peck was elected to a three-year term as Censor.

St. Louis Blue Shield Modifies Open Panel Program

The Areawide Open Panel program proposed for St. Louis Blue Shield has been modified in an important respect, according to a recent announcement by Dr. James C. Sisk, Chairman of the Board of Trustees of the Plan.

The original proposal advanced last June stipulated that benefits would not be paid for the services of a physician who had not signed an agreement of participation in the plan. In response to reaction within the medical profession against this aspect of the program, Dr. Sisk said, the Blue Shield Board of Trustees voted in October to change the terms to provide for payment to the member of benefit amounts based on the usual, customary and reasonable charge concept when covered services are received from a nonparticipating physician.

With the modification, the Open Panel program still retains its broad scope of coverage, providing benefits for a wide range of professional services, including care in the physician's office or patient's home. Advocates of the plan list the provision of benefits for out-of-hospital services as one of its most significant features.

The Areawide Open Panel is a pilot experimental plan based on a fundamental private physician "fee for service" approach. Intended as a side-by-side offering with regular Blue Shield programs as an optional choice within employee groups, it is designed to permit compilation of statistical data on "fee for service" practice for comparison with information on salaried group practice and HMO arrangements. This could and should show that "fee for service" will remain a viable delivery system, Dr. Sisk said.

Letters have been mailed to all physicians in the St. Louis Blue Shield area explaining the new provision of benefits for services of non-participating physicians and urging participation in the program. Dr. Sisk stressed the point that the plan cannot be marketed until a substantial majority of area physicians have agreed to participate by signing and returning the agreement card enclosed in the mailing.

an effective, private,
physician-controlled
treatment.

It took just one short visit.

*Urethritis, cervicitis, proctitis when due
to susceptible strains of *N. gonorrhoeae*

he Upjohn Company J-3437-6

Trobicin—The advantage of injectable therapy.
Once Trobicin is injected, treatment is usually complete; there can be no problems with patients sharing, skimping, skipping or forgetting medication.

Trobicin—The aspect of privacy.
There are no prescriptions to fill, no capsules to take. Neither family, friends nor co-workers need know or suspect the patient's problem.

Trobicin—Indication and dosage.
Spectinomycin is indicated only for use in acute urethritis and proctitis in the male and acute cervicitis and/or proctitis in the female when due to susceptible strains of *N. gonorrhoeae*. The usual dosage for Trobicin in adult males is 2 grams intramuscularly[†]; 4 grams intramuscularly in females.

Trobicin—Not effective for syphilis.
Trobicin is not effective for any stage of syphilis. Trobicin may mask or delay the symptoms of incubating syphilis. If concurrent syphilis is suspected, follow the patient serologically for at least 3 months. Patients with syphilis should receive adequate specific anti-syphilitic therapy with an appropriate antibiotic. Trobicin is contraindicated in patients previously found hypersensitive to it.

m vials containing 5 ml when reconstituted diluent.
m vials containing 10 ml when reconstituted diluent.
aminocyclitol antibiotic active *in vitro* against t strains of *Neisseria gonorrhoeae* (MIC 7.5 0 mcg/ml). Definitive *in vitro* studies have wn no cross resistance of *N. gonorrhoeae* ween spectinomycin and penicillin.

ications: Acute gonorrheal urethritis proctitis in the male and acute gonorrheal icitis and proctitis in the female when due susceptible strains of *N. gonorrhoeae*.

ntraindications: Contraindicated in pa- ts previously found hypersensitive to spec- mycin.

arnings: Not indicated for the treatment of hilis. Antibiotics used to treat gonorrhea y mask or delay the symptoms of incubating hilis. Patients should be carefully examined monthly serological follow-up for at least nonths should be instituted if the diagnosis of syphilis is suspected.
Safety for use in infants, children and pregnant women has not been established.

Precautions: The usual precautions should be observed with atopic individuals.
Clinical effectiveness should be monitored to detect evidence of development of resistance by *N. gonorrhoeae*.

Adverse reactions: The following reactions were observed during the single-dose clinical trials: soreness at the injection site, urticaria, dizziness, nausea, chills, fever and insomnia.
During multiple-dose subchronic tolerance studies in normal human volunteers, the following were noted: a decrease in hemoglobin, hematocrit and creatinine clearance; elevation of alkaline phosphatase, BUN and SGPT. In single- and multiple-dose studies in normal volunteers, a reduction in urine output was noted. Extensive renal function studies demonstrated no consistent changes indicative of renal toxicity.

Dosage and administration: Keep at 25° C and use within 24 hours after reconstitution with diluent.
Male—Inject 5 ml intramuscularly for a 2 gram dose. Patients with gonorrheal proctitis and patients being re-treated after failure of previous antibiotic therapy should receive 4 grams (10 ml). In geographic areas where antibiotic resistance is known to be prevalent, initial treatment with 4 grams (10 ml) intramuscularly is preferred.
Female—Inject 10 ml intramuscularly for a 4 gram dose.

How supplied: *Vials, 2 and 4 grams—with ampoule of Bacteriostatic Water for Injection with Benzyl Alcohol 0.9% w/v.* Reconstitution yields 5 and 10 ml respectively with a concentration of 400 mg spectinomycin per ml (as the hydrochloride). For intramuscular use only.
Susceptibility Powder—for testing *in vitro* susceptibility of *N. gonorrhoeae*.
Caution: Federal law prohibits dispensing without prescription.
For additional product information see your Upjohn representative or consult the package insert.

Upjohn MED B-5-S (MBR-1)

or patients with gonorrheal proctitis and for patients in geographic areas where antibiotic sistance is known to be prevalent, initial treatment with 4 grams is preferred.

WASHINGTON

The debate concerning the right of large states to establish statewide Professional Standards Review Organizations (PSROs) apparently has come to an abrupt halt with the government saying "no" in a loud and clear voice.

The Department of Health, Education and Welfare announcement came only ten days after it had released a statement that said under certain circumstances, it would consider naming a statewide PSRO in big states where there is support for it among the interested medical and health groups.

Though an about-face was denied by Henry Simmons, M.D., Deputy HEW Assistant Secretary for Health and acting head of PSRO, there was an apparent conflict between the statement given earlier to the PSRO Advisory Council and the final decision.

The designated PSRO areas which will be announced by late November or early December will include no area having many more than 3,000 physicians within it, Dr. Simmons told a news conference in his office. He conceded that there is no such limitation in the PSRO law, but the 2,500-physician level suggested in the report by the Senate Finance Committee was "reasonable" but not "rigid."

The area selections will be in the form of proposals printed in the Federal Register giving interested parties 30 days in which to comment. The possibility remains that some changes could be made before the designations become final, but Dr. Simmons did not talk as if there were much chance of that happening.

In the earlier statement given the Advisory Council, Dr. Simmons said: "There are a few states with a larger number of physicians that have requested that they also be designated as single state PSROs and have obtained backing of their medical, osteopathic and hospital associations and, in some instances, government. In such instances, we will individually consider designation of a statewide PSRO if the statewide PSRO has support of physicians throughout the state and agrees to further subdivide itself . . . and if control of the review process remains at the local levels. . . .

"Thus, in states with a large number of physicians which nevertheless opt for a statewide PSRO, it is clear that the review of care would be controlled and performed locally. . . ."

Members of the Council interpreted this as indicating that HEW in some cases might okay a statewide PSRO in large states.

Dr. Simmons also told the news conference that guidelines will be issued in February on how organizations can apply to become PSROs within the designated areas. By next June, he said, the hope is to have 50 PSROs chosen. Within four to six weeks, a PSRO bulletin will be sent to all physicians in the nation outlining the status of the program and informing them of PSRO developments.

He predicted that from 20 to 30 small states will be single-state PSRO areas.

PSRO, said Dr. Simmons, is "probably the most sensitive program that has been mandated" for the medical profession "and one of the most important ever passed in terms of impact upon the profession and benefit to the public."

He praised the AMA for "very constructive steps" in developing diagnostic standards for PSRO and "very constructive work in general" with HEW in gearing up for the program. He conceded a difference of opinion with the AMA on the extent to which PSROs would function at the state level.

* * *

Prior to the HEW decision against statewide PSROs in large states, the Senate Finance Committee had tentatively approved a provision that would ban HEW from using a limitation on the number of physicians that may belong to a PSRO.

If enacted, the provision could make it easier for statewide PSROs to win HEW approval.

At present, the Department is employing a general top limit of 2,500 physicians per review organization, a maximum guide that obviously would foreclose larger states from having a single organization to review institutional care for Medicare and Medicaid patients.

The amendment was sponsored by Sen. Lloyd Bentsen (D.-Texas) and agreed to by Sen. Wallace Bennett (R.-Utah), originator of the PSRO concept and a staunch proponent of smaller PSRO units.

The language of the proposed Bentsen amendment reads: "In carrying out the provisions of this section, the Secretary may designate, as an appropriate area with respect to which a Professional Standards Review Organization may be designated, an area encompassing a whole State; and the Secretary shall not refuse to designate any qualified organization as the Professional Standards Review Organization with respect to such area solely because of the number of physicians participating in such Organization."

Whether or not the Senate committee action on a House-passed measure making technical changes in the Social Security Law would result in a significant change in HEW PSRO policy is not known at this time.

* * *

The present Congress won't act on a full-scale national health insurance program, predicts Sen. Wallace Bennett (R.-Utah).

Bennett, top Republican on the Senate Finance Committee which has jurisdiction over NHI, said such a national program would require new taxes to finance it.

"Congress is keenly aware of a strong and growing resistance to any increase in taxes for any purpose," he said. "To complicate the situation further, there is a real rivalry between the Administration and the Congress as to which can demonstrate the greatest fiscal responsibility.

"I don't believe the people really realize just how great the added tax burden must be to provide the billions needed to support some of the large-scale programs which have been proposed," Bennett said, adding that a health care bill sponsored by Sen. Edward Kennedy (D.-Mass.), would cost "an estimated $70 billion."

Although ruling out the possibility of Congressional action on a full-scale national health insurance program, Bennett said it was possible that Congress might act on "some limited type of catastrophic health insurance coverage and improvements in Medicaid."

The Senator was referring apparently to the bill introduced by Finance Committee Chairman Russell Long (D.-La.) and Sen. Abraham Ribicoff (D.-Conn.) recently for a Social Security-financed catastrophic plan and federalization of Medicaid.

Post-Traumatic Cyst of the Sacrum

Case Report

Destructive lesions other than chordomas and metastases are relatively uncommon in the sacrococcygeal region. As a further contribution to the differential diagnosis of expansile destructive lesions of the sacrum, the case report of a patient with a cyst of the sacrum following trauma is presented.

Case Report

A 36-year-old white man was referred from an outside hospital for evaluation of a tumor of the sarcum which was detected radiologically three weeks prior to admission. For six months, he had had low back pain with intermittent numbness of the entire right leg which developed after he had lifted heavy molds at work. He gave a history of "some type of pelvic fracture" in 1960 or 1961. He was hospitalized for several weeks as a result of this injury. In the intervening time, he had had no complaints relative to his back or pelvis. On physical examination, range of motion of the back and the hip joints was normal. There was an area of localized tenderness over the lower sacrum and the coccyx. On rectal examination, a presacral fullness not involving the bowel was noted. Neurologically, no sensory or motor defects were present. His reflexes were normal. Serum calcium, phosphorus and alkaline phosphatase levels were within normal limits.

Radiologic examination, including laminography, revealed an expansile lesion involving the lower portion of the sacrum (Fig. 1). The border was well defined by a thin rim of ossification. The mass displaced the colon anteriorly 4.5 cm. The greater portion was located on the right side, but it also extended anteriorly and posteriorly and across the midline. The coccyx was unremarkable. Comparison films taken nine months previously showed no interval change. A myelogram revealed no communication with the mass. There was a small anterior midline bulge at L4-L5. The chest film was normal.

At operation, a considerable amount of mature bone was found at the right posterior aspect of the sacrum. Anteriorly, a large cavity containing a few fine trabeculae of bone and no fluid was entered. During curettage, brisk bleeding from bone occurred. Histologic sections showed irregular spicules of cancellous bone and scattered areas of fibrocarti-

---

As a further contribution to the differential diagnosis of expansile destructive lesions of the sacrum, the authors present this case report of a patient with a cyst of the sacrum and a history of pelvic trauma ten years prior to biopsy. They include a discussion of biopsy, history and x-ray findings and a brief review of the literature on the subjects of post-traumatic cyst formation in bones and tumors of the sacrococcygeal area. Dr. Ellsasser is from the Division of Orthopedic Surgery and Drs. Peters and Staples are from the Mallinckrodt Institute of Radiology, Washington University School of Medicine.

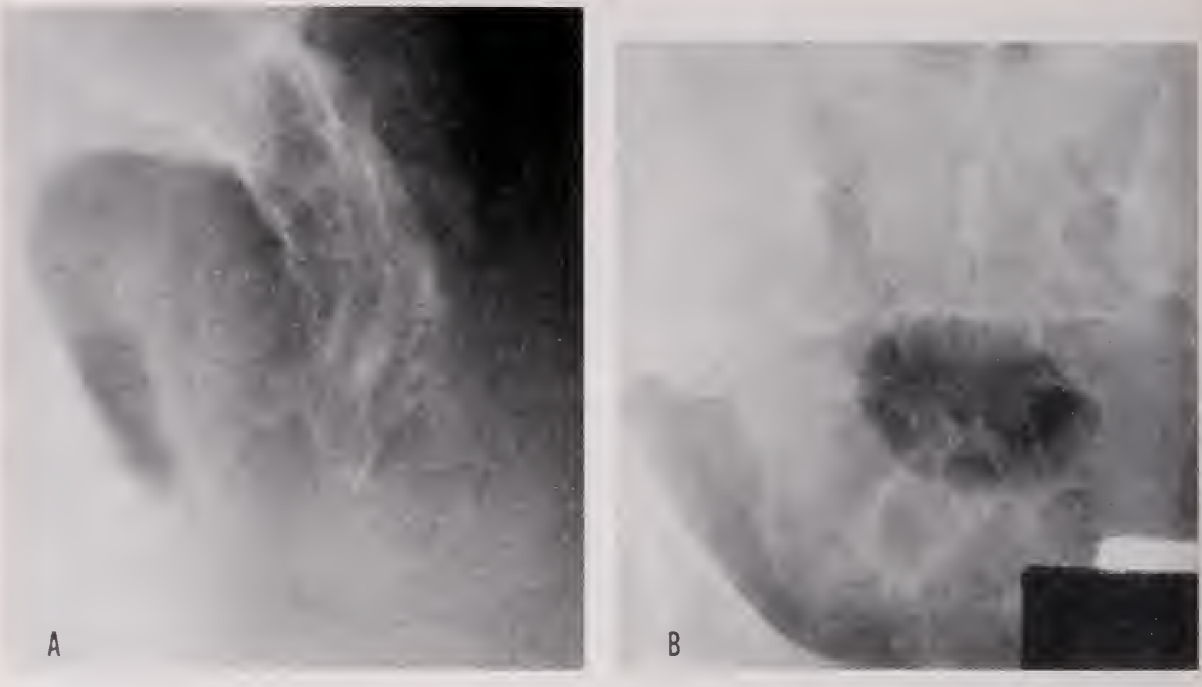

Fig. 1 The lateral x-ray of the sacrum (A) demonstrates an expansile, well-defined lesion extending anteriorly and posteriorly The rectum is displaced by the mass. The anterior-posterior view of the sacrum (B) shows a bulging right lateral border with asymmetry of the right third and fourth sacral foramina.

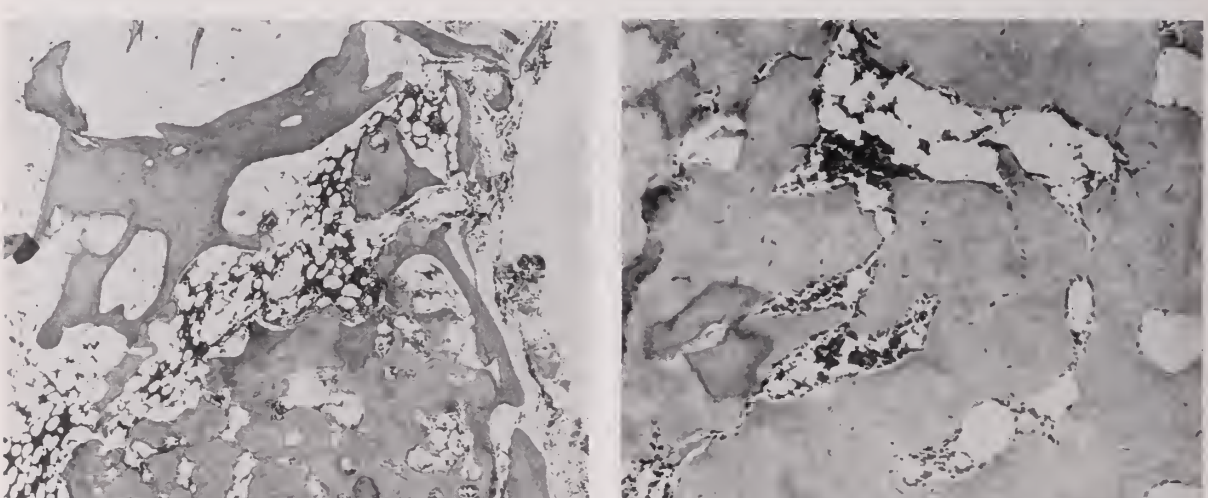

Fig. 2 A low-power view of the biopsy specimen (A) shows spicules of cancellous bone, benign fibrocartilage and vascular spaces. (B) Higher power view of the fibrocartilage.

lage without evidence of neoplasia. There was no evidence of aneurysmal bone cyst or tumor (Fig. 2). This histologic appearance is compatible with a reactive process and is consistent with previous trauma. Although various etiologies might be responsible for this nonspecific reactive picture in bone, it is surmised that the patient's preceding injury was responsible for the changes.

Follow-up films six months after biopsy revealed no interval change. The patient remains well two years after biopsy.

DISCUSSION

Post-traumatic cyst formation in long bones has been described either as "ossifying subperiosteal hematoma"[1] or as "post-traumatic periostoma."[2] Radiologically, these cysts are eccentric in position and the underlying bone cortex shows little or no involvement. They occur after severe trauma, usually without but sometimes with fracture of a long bone, simulating the radiographic appearance of an aneurysmal bone cyst.[3] On the other hand, several cases of histologically documented aneurysmal bone cyst have been described with a definite history of trauma to the involved region.[4] Post-traumatic bone lesions having the roentgenographic and microscopic appearance of unicameral bone cysts also have been reported ("post-hematoma cyst").[5] The common etiology of these cystic bone changes following trauma appears to be subperiosteal or intramedullary hemorrhage. In fact, Cottier was able to produce cystic bone formations in experimental animals by subperiosteal injection of blood.[6]

Several attempts were made to obtain the x-rays or the reports from this patient's original injury in 1960 or 1961. No information was available. It is postulated that the injury most likely was a transverse fracture of the sacrum since no other residual pelvic deformity is present.

Radiographic differential diagnostic considerations in this case included aneurysmal bone cyst, giant cell tumor and chordoma. While aneurysmal bone cysts can occur in almost any bone of the skeleton, the sacrum is an uncommon site.[7] Giant cell tumors arise more often in the sacrum. Of 218 cases, 11 (5%) were located in this region.[8] Forty-five percent of chordomas involve the sacrum.[9] An important clinical consideration is the possibility of an anterior meningocele. Inadvertent entry into the lesion at surgery has led to fatal meningitis.[10] Myelography should be done to determine any communication between the subdural space and the cystic structure prior to biopsy.

SUMMARY

A case of a cyst of the sacrum following trauma is reported. The differential diagnosis of sacral tumors is briefly discussed.

EDWIN HERMAN, M.D. *and* LUZVIMINDA SICAT, M.D., *Kansas City*

Radiologic Problem Case

A 60-YEAR-OLD WHITE MAN sought medical consultation when he noted progressive difficulty in breathing.

Current History: The present illness was of short duration, occurring over a period of four months. He was first aware of some minimal respiratory problems when he was troubled with a persistent cough. On Oct. 16, 1972, he visited his physician, who detected some rhonchi in the basilar portions of his lungs. The patient smoked one package of cigarettes per day and was advised to curtail his smoking until further follow-up evaluation. In the interim, a chest roentgenogram (Fig. 1) made during the October visit was compared to a normal routine chest film (Fig. 2) that had been taken prior to the present complaint.

The chest radiograph revealed patchy areas of opacification in the lateral basilar portions of the lungs. These small areas were no larger than the size of a quarter and were confined to the costophrenic regions. There was no obliteration of the sulci and the heart and great vessels appeared normal. The roentgen observations were explained on lack of deep breathing and the fact that patchy areas of atelectasis (plate-like) were present in the bases of both lungs.

The patient's condition did not improve with symptomatic therapy. Since dyspnea increased rather than regressed, a repeat film was taken on Nov. 11, 1972 (Fig. 3). At this examination, the roentgen observations were more marked with linear areas of interstitial opacification and

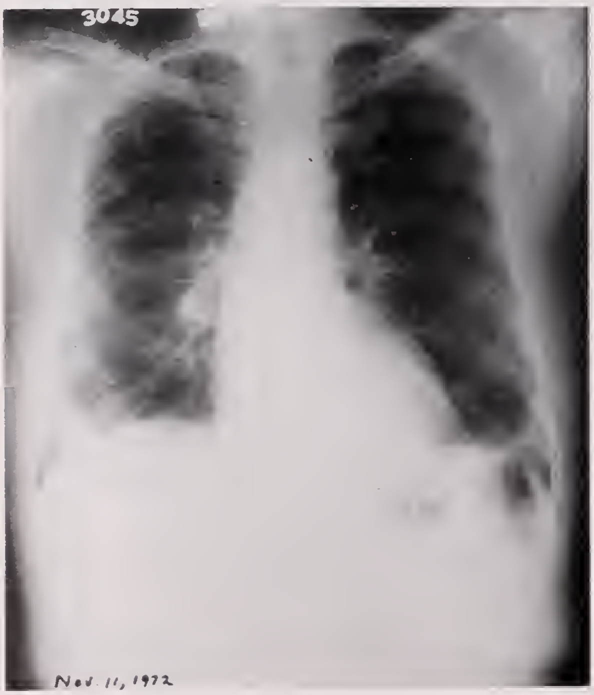

Fig. 1 Infiltrate is observed in lower lung fields. The symmetry and lateral position of minimal density suggested an area of poor aeration associated with limited diaphragmatic excursion.

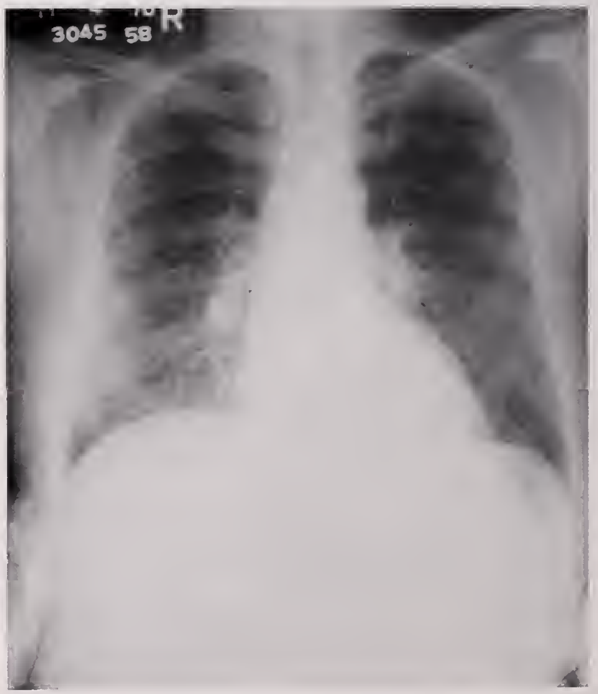

Fig. 2 A routine film made on Nov. 4, 1972 is normal. The lung fields appear clear with no basilar abnormalities. The vascular markings are normal. The right infrahilar density is due to a calcified gland.

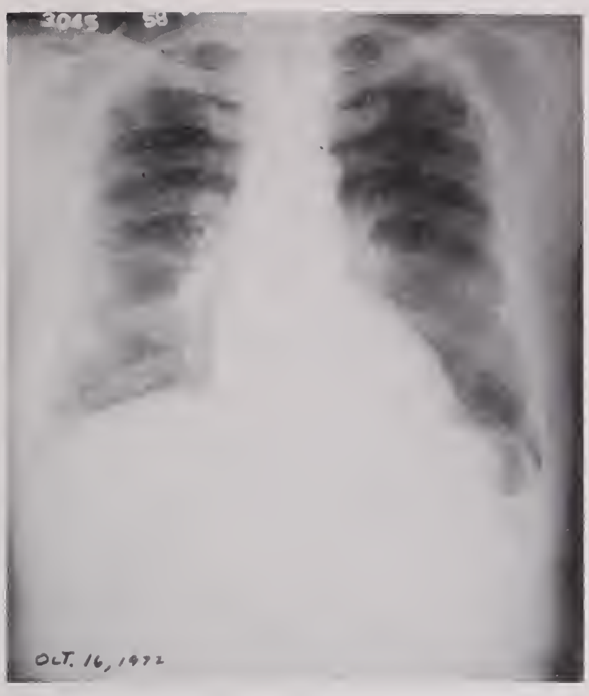

Fig. 3 The film, taken on Nov. 11, 1972, reveals the increased striation at the bases. This is bilateral, but most marked on the right. The densities have the appearance of Kerley B lines.

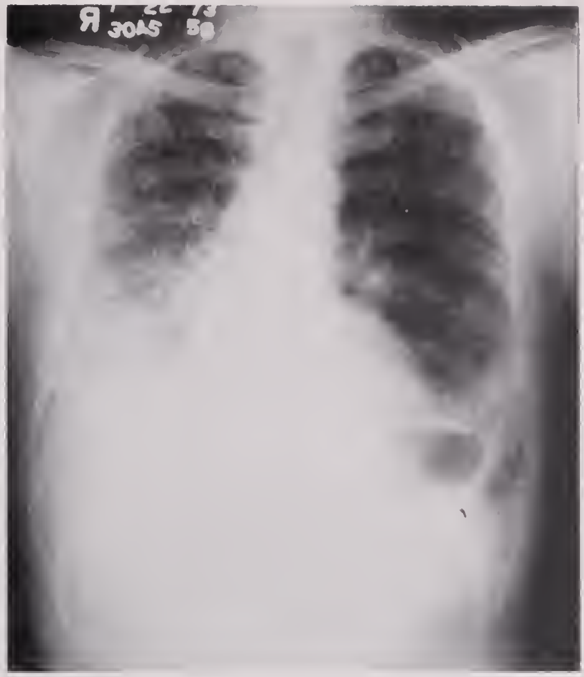

Fig. 4 The interstitial nature of the disease is manifest by the honeycomb appearance of the lung field on the left. The homogeneous nature of the pattern on the left is more alveolar in character.

basilar infiltration. The linear striation was most marked in the right infrahilar region.

Although physical activity evoked greater difficulty in breathing, the patient refused hospitalization, concluding that he had merely contracted a respiratory infection. He decided upon a vacation and departed immediately to an area of warm climate.

He returned from his vacation in January, 1973 after several weeks of unrelenting pulmonary symptoms. During this period, he developed a pruritic rash that covered his face and extremities. The rash subsided temporarily and, subsequently, recurred after a brief course of steroids. A chest film (Fig. 4) made on January 23 revealed marked extension of the disease process, so he returned to Kansas City with evidence of progressive pulmonary disease.

He was partially debilitated, being able to walk less than ten steps before experiencing marked dyspnea. Therefore he was incapable of conducting his business. He finally agreed to hospitalization in February, 1973.

Past History: The past history was noncontributory although the patient had experienced an acute myocardial infarction two years prior to this event. He recovered completely from his myocardial infarct.

The family history was of no significance in regard to the recent disease.

Physical Examination: The patient appeared to be acutely and chronically ill. He was quite dyspneic upon the slightest exertion. There was a generalized psoriatic rash on his face, hands and upper extremities. The lungs were filled with crackling sounds on ausculation, and percussion elicited dullness at the bases. The heart sounds were distant and there was tachycardia. The other systems were normal, and no findings were observed that were relevant to the pulmonary impairment.

Laboratory Data: An SMA-12 done on Feb. 1, 1973 revealed an elevated LDH of 300 Mu/ml (normal is 200 Mu/ml). The BUN, uric acid,

The authors of this series of articles presenting unusual radiologic problem cases are from the Department of Radiology, Menorah Medical Center, where Doctor Rubin is Chairman. In this case, they were assisted by Luzviminda Sicat, M.D., Resident in Radiology, and Marvin Kahn, M.D., Internist and pulmonary specialist.

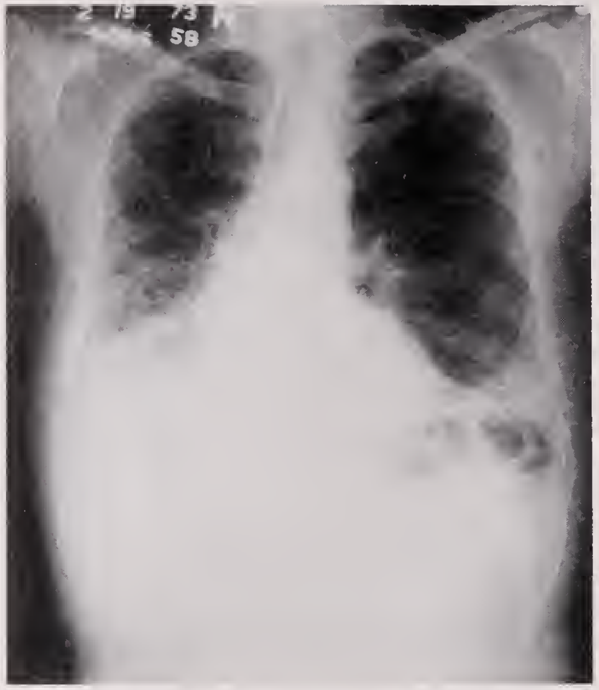

Fig. 5 On Feb. 19, 1973, approximately one month prior to the patient's death, the reticulated pattern becomes more apparent. The honeycomb nature of the interstitial process is even more apparent. The disease has progressed to involve all of the right lung. The left lung is less involved.

albumin and total protein were normal.

The hemoglobin level was 12.8 gm/100 ml with a hematocrit reading of 41%. The white blood cell count was 8,100/cu mm on February 1. A repeat count on February 5 revealed 12,400/cu mm. There were 62% polys, 12% stabs, 17% lymphocytes and 9% monocytes. The platelet count was 465,000/cu mm. Na and K were 137 mEq/liter and 3.9 mEq/liter, respectively. The chlorides were 104 mEq/liter, which is within normal limits.

The pulmonary function studies were most revealing with a PO_2 of 65 mm Hg and oxygen saturation of 89%. The pH was 7.44, the upper limits of normal.

PCO_2 was 37 mm Hg (normal 33-47 mm Hg) with the HCO_3 measuring 24 mEq/liters (normal 22-30). The total CO_2 was within the normal range of 25. The base excess was −1.2 mEq/liter.

Radiological Diagnosis: Since the x-ray diagnosis is not specific in diffuse interstitial fibrosing pulmonary disease (Fig. 5), one can only arrive at a differential diagnosis by clinical and laboratory manifestations. In the differential diagnosis, one must consider histiocytosis,[1] histoplasmosis, sarcoidosis, amyloidosis, tuberculosis or lymphangitic carcinoma as just a few of the conditions that might produce the honeycomb pattern of fibrotic disease. The lack of specificity[2] in the laboratory data and the clinical picture strongly favored the so-called "Hamman-Rich Syndrome,"[3] and a biopsy was suggested.

Pathology Report: Fragments of dense collagenous connective tissue, presumably representing thickened pleura, were noted. Chronic inflammation and collections of connective tissue were evident. Proliferation of alveolar pneumocytes was observed and irregular areas of fibrosis were seen throughout. There was no evidence of granuloma or vasculitis.

Diagnosis: Nonspecific interstital fibrosis with proliferation of alveolar pneumatocytes.

Findings were consistent with interstitial pulmonary fibrosis and desquamative pneumonitis.

Impression: Hamman-Rich type of fibrotic disease.

Discussion: Hamman and Rich[3] described a disease which was originally considered to be quite specific and which manifested itself by an insidious onset of general malaise, fever, occasional dry cough, chest pain and progressive and fatal dyspnea.

Today, this obscure disease is considered to be nonspecific, and etiology of the fibrosis is obscure. It is possible that this represents a tissue response to multiple agents (antigens). In the original treatise on this disease entity, the patient presented with a subacute or chronic pattern. This slowly progressed over several months and eventuated in death.

In recent years, a more acute disease process has been described and named *desquamative interstitial pneumonia* (DIP).[4] DIP is believed to represent an early but transitional state of a disease complex which culminates into interstitial fibrosis.[5] Fibroblastic proliferation in the alveolar wall, edema and cellular infiltration (plasma cells and lymphocytes) create an interference which results in diffusion impairment, thereby modifying respiratory gaseous exchange.

In DIP, an area of infiltrate is first noted in the bases, laterally. This opacity is radiologically minor when compared to the clinical discomfort that may be manifested by the patient. In our patient, the linear striation and fibrotic appearance proceeded over a period of three and one half months, becoming more prominent in the right lung. The assymmetrical progression of the disease, while not typical, has been reported and is now a recognized pattern of this disease. The interstitial fibrosis progresses and, finally,

MOSTAFA DAFTARY, M.D., *Poplar Bluff*

Avulsion or Rupture of Distal Tendon of Biceps Brachii Muscle

Case Report

Although avulsion of the biceps brachii tendon from the bicipital tuberosity of the radius is a rare injury, it is not as rare as the literature would indicate. The author describes a case and the best surgical treatment. Dr. Daftary is from the Department of Surgery, Veterans Administration Hospital.

THE PATIENT was a 64-year-old white man who was admitted to the hospital in August, 1972 because of pain and weakness in his left arm, after it had been injured. The injury occurred while he was holding a calf, which jumped and injured his arm. There was a sharply convex bulge near the upper part of the left arm with local tenderness and weakness of flexion of the elbow and supination of the forearm as compared to the right side.

With the patient under axillary block anesthesia, the distal tendon of the left biceps brachii muscle was attached to the brachialis muscle with Dacron. The result has been satisfactory. About six months after the operation, the patient had regained almost complete function of his left arm.

DISCUSSION

Rupture of the long head of the biceps brachii muscle (the commonest kind of tendon rupture of this muscle) is of infrequent occurrence, and rupture of its insertion into the radius is a rare clinical finding. McReynolds[1] collected 285 cases; 144 are from questionnaires, 128 are from literature and 13 are his own. He concluded that avulsion of the biceps brachii tendon from the bicipital tuberosity of the radius is a rare injury, but not as rare as the number of cases reported in the literature would indicate. It has been seen in patients from the second to seventh decades of life, occurring mostly in their fourth and fifth decades. Only one occurrence was reported in a female patient, and bilateral involvement was noted in only five patients.[1]

The rupture can occur from a sudden forceful contracture of the biceps against resistance, usually with the elbow flexed and the forearm in supination. It has occurred in pulling, jerking, heavy lifting, swimming, playing basketball and falling. In most cases, there is no recognizable degenerative change at the point of insertion of the tendon. However, Davis and Yassine[2] have noted lipping along the anterior margin of the radial tuberosity impinging upon the tendon as the forearm was supinated or pronated both radiographically and at surgery in two patients.

The credit goes to Starks[1] for the first description of rupture or avulsion of the insertion of the distal tendon of the biceps brachii reported in 1843 and to Acquaviva for its operative treatment in 1898.

Opinions differ in regard to the proper treatment, method and site for reattaching the tendon. R. G. Smith[3] described two patients he had treated conservatively. Both had regained full power of the flexion. However, there had been some weakness in one patient and slight loss of full supination in another.

Surgical treatment consists of (A) attachment of the tendon by some method to the radius or (B) attachment to some structures other than the radius. In addition to flexing of the elbow, the biceps is a strong supinator of the forearm. Most authors agree that the tendon should be reattached at its normal position on the radial tuberosity to restore the full supination power. Although McReynolds[1] has replaced the avulsed tendon on the bicipital tuberosity of the radius in ten patients through an anterior approach without complication, Dobbie, Meheriss and Kelgore[2] have stressed the dangers and difficulties in this kind of approach and have reported on five patients who sustained permanent radial nerve damage from this procedure. Reinserting the tendon into the tuberosity of radius through a combined anterior and posterior approach and transferring the tendon to the coronoid process also have been used. Dobbie, Meheriss and Kelgore[2] have advocated suturing the distal biceps tendon to the brachialis muscle without danger to radial nerve and have had a satisfactory result in restoring the functions.

SUMMARY

Avulsion of the distal tendon of the biceps brachii is a rare occurrence. The methods of treatment consist of attachment to its normal insertion into the tuberosity of radius or to the brachialis tendon. Although the reinsertion into the radius is more physiological, it is technically difficult and damage to the radial nerve is not infrequent. Its attachment to the brachialis is a simple procedure and the result is satisfactory.

A case report of rupture of distal tendon of biceps brachii muscle and its treatment with satisfactory results has been presented.

Radiologic Problem Case

(Continued from page 820)

the lung takes on a cystic or honeycomb appearance due to obliteration of the alveoli. The ultimate diaphragmatic motion is limited, due to the loss of pulmonary elasticity. Since the roentgen findings are nonspecific, the lung biopsy is essential for a definitive diagnosis.

The case report of this patient, who is now deceased, is presented because the entire pattern of clinical and roentgen manifestations are recorded. Corticosteroids have been recommended for treatment but without long term success.

The Heart—1973

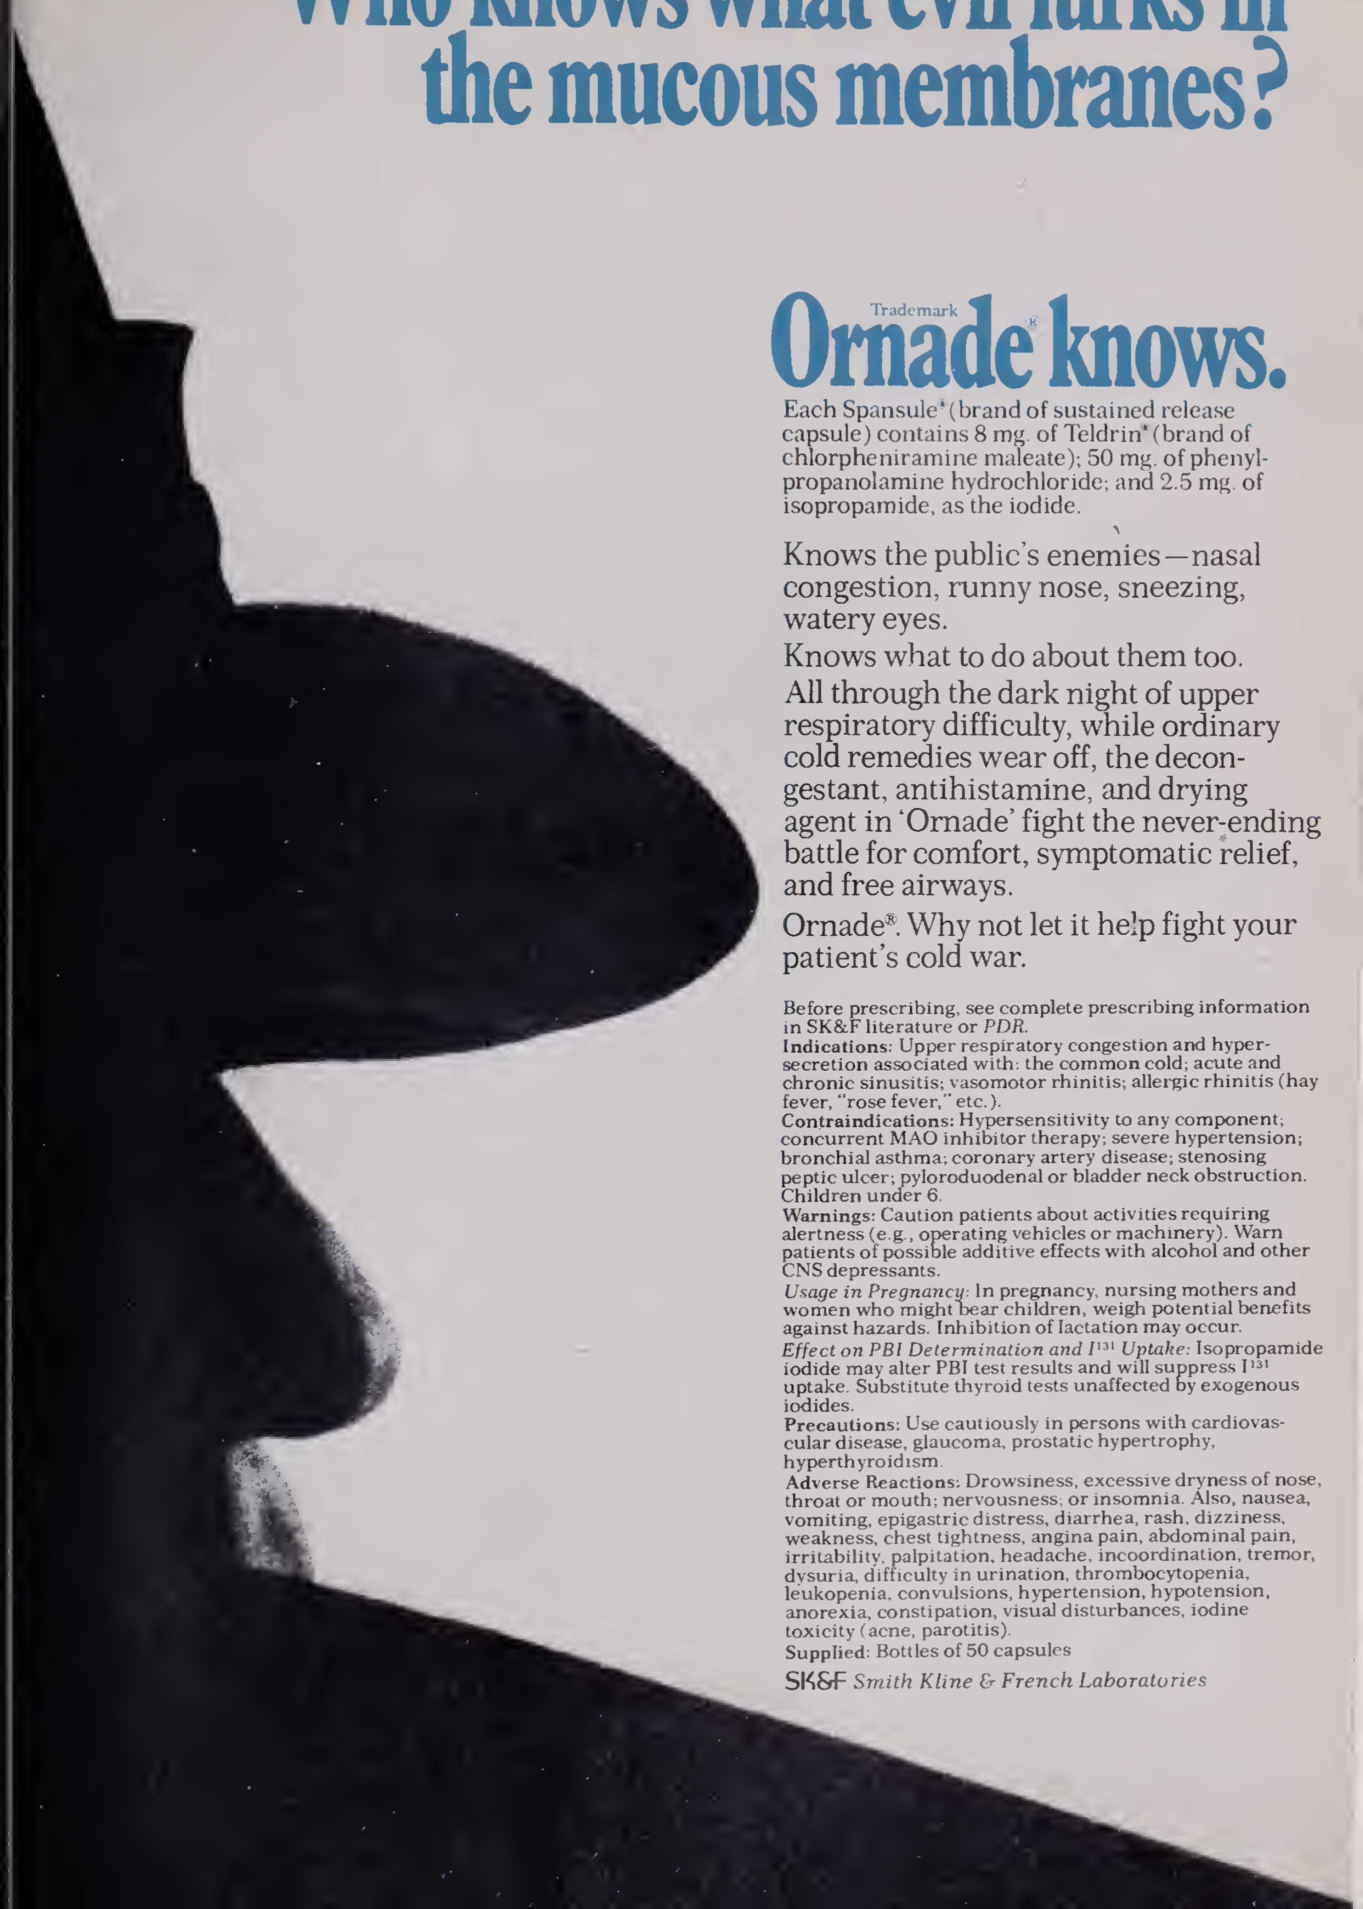
The University of Missouri-Kansas City School of Medicine's annual continuing medical education program, "The Heart—1973, Current Topics in Cardiology," will be presented on Dec. 13-15, 1973 at Crown Center Hotel in Kansas City.

The guest faculty includes Robert O. Brandenburg, M.D., Mayo Clinic; Howard B. Burchell, M.D., University of Minnesota; Robert D. Conn, M.D., Southern Illinois University; J. Michael Criley, M.D., University of California-Los Angeles; Robert F. Zelis, M.D., University of California-Davis.

The subject matter includes congestive heart failure, drug therapy, coronary artery disease, valvular heart disease, cardiac pacemakers and "potpourri."

This program is acceptable for 17 credit hours in Category I for the Physician's Recognition Award of the American Medical Association and for 17 prescribed hours by the American Academy of Family Physicians. For complete program and registration information, contact Continuing Medical Education, University of Missouri-Kansas City School of Medicine, 2220 Holmes, Kansas City, Mo. 64108 or phone 816/471-3876.

Who knows what evil lurks in the mucous membranes?



Trademark Ornade® knows.

Each Spansule® (brand of sustained release capsule) contains 8 mg. of Teldrin® (brand of chlorpheniramine maleate); 50 mg. of phenylpropanolamine hydrochloride; and 2.5 mg. of isopropamide, as the iodide.

Knows the public's enemies—nasal congestion, runny nose, sneezing, watery eyes.

Knows what to do about them too.

All through the dark night of upper respiratory difficulty, while ordinary cold remedies wear off, the decongestant, antihistamine, and drying agent in 'Ornade' fight the never-ending battle for comfort, symptomatic relief, and free airways.

Ornade®. Why not let it help fight your patient's cold war.

Before prescribing, see complete prescribing information in SK&F literature or *PDR*.
Indications: Upper respiratory congestion and hypersecretion associated with: the common cold; acute and chronic sinusitis; vasomotor rhinitis; allergic rhinitis (hay fever, "rose fever," etc.).
Contraindications: Hypersensitivity to any component; concurrent MAO inhibitor therapy; severe hypertension; bronchial asthma; coronary artery disease; stenosing peptic ulcer; pyloroduodenal or bladder neck obstruction. Children under 6.
Warnings: Caution patients about activities requiring alertness (e.g., operating vehicles or machinery). Warn patients of possible additive effects with alcohol and other CNS depressants.
Usage in Pregnancy: In pregnancy, nursing mothers and women who might bear children, weigh potential benefits against hazards. Inhibition of lactation may occur.
Effect on PBI Determination and I^{131} *Uptake:* Isopropamide iodide may alter PBI test results and will suppress I^{131} uptake. Substitute thyroid tests unaffected by exogenous iodides.
Precautions: Use cautiously in persons with cardiovascular disease, glaucoma, prostatic hypertrophy, hyperthyroidism.
Adverse Reactions: Drowsiness, excessive dryness of nose, throat or mouth; nervousness; or insomnia. Also, nausea, vomiting, epigastric distress, diarrhea, rash, dizziness, weakness, chest tightness, angina pain, abdominal pain, irritability, palpitation, headache, incoordination, tremor, dysuria, difficulty in urination, thrombocytopenia, leukopenia, convulsions, hypertension, hypotension, anorexia, constipation, visual disturbances, iodine toxicity (acne, parotitis).
Supplied: Bottles of 50 capsules

SK&F *Smith Kline & French Laboratories*

How to better achieve a smooth "pill" response :

A blueprint for introducin

I. If one "pill" were right for every woman, we'd make it.

Where "The Pill" Began

arily on animal studies.

Note: Oral contraceptives are complex medications. As with all medications they should be prescribed with discriminating care, and only after reference to full prescribing informatio
For brief summary of prescribing information, please see next page.

If one "pill" were right for every woman, we'd make it.

Ovulen® **Available in 20-, 21- and 28-pill schedules**
Each white tablet contains: ethynodiol diacetate 1 mg./mestranol 0.1 mg.
Each pink tablet in Ovulen-28® is a placebo, containing no active ingredients.

Demulen® **Available in 21- and 28-pill schedules**
Each white tablet contains: ethynodiol diacetate 1 mg./ethinyl estradiol 50 mcg.
Each pink tablet in Demulen-28® is a placebo, containing no active ingredients.

Actions—Ovulen and Demulen act to prevent ovulation by inhibiting the output of gonadotropins from the pituitary gland. Ovulen and Demulen depress the output of both the follicle-stimulating hormone (FSH) and the luteinizing hormone (LH).

Special note—Oral contraceptives have been marketed in the United States since 1960. Reported pregnancy rates vary from product to product. The effectiveness of the sequential products appears to be somewhat lower than that of the combination products. Both types provide almost completely effective contraception.

An increased risk of thromboembolic disease associated with the use of hormonal contraceptives has now been shown in studies conducted in both Great Britain and the United States. Other risks, such as those of elevated blood pressure, liver disease and reduced tolerance to carbohydrates, have not been quantitated with precision.

Long-term administration of both natural and synthetic estrogens in subprimate animal species in multiples of the human dose increases the frequency of some animal carcinomas. These data cannot be transposed directly to man. The possible carcinogenicity due to the estrogens can be neither affirmed nor refuted at this time. Close clinical surveillance of all women taking oral contraceptives must be continued.

Indication—Ovulen and Demulen are indicated for oral contraception.

Contraindications—Patients with thrombophlebitis, thromboembolic disorders, cerebral apoplexy or a past history of these conditions, markedly impaired liver function, known or suspected carcinoma of the breast, known or suspected estrogen-dependent neoplasia and undiagnosed abnormal genital bleeding.

Warnings—The physician should be alert to the earliest manifestations of thrombotic disorders (thrombophlebitis, cerebrovascular disorders, pulmonary embolism and retinal thrombosis). Should any of these occur or be suspected the drug should be discontinued immediately.

Retrospective studies of morbidity and mortality conducted in Great Britain and studies of morbidity in the United States have shown a statistically significant association between thrombophlebitis, pulmonary embolism, and cerebral thrombosis and embolism and the use of oral contraceptives. There have been three principal studies in Britain[1-3] leading to this conclusion, and one[4] in the United States. The estimate of the relative risk of thromboembolism in the study by Vessey and Doll[3] was about sevenfold, while Sartwell and associates[4] in the United States found a relative risk of 4.4, meaning that the users are several times as likely to undergo thromboembolic disease without evident cause as nonusers. The American study also indicated that the risk did not persist after discontinuation of administration and that it was not enhanced by long-continued administration. The American study was not designed to evaluate a difference between products. However, the study suggested that there might be an increased risk of thromboembolic disease in users of sequential products. This risk cannot be quantitated, and further studies to confirm this finding are desirable.

Discontinue medication pending examination if there is sudden partial or complete loss of vision, or if there is a sudden onset of proptosis, diplopia or migraine. If examination reveals papilledema or retinal vascular lesions medication should be withdrawn.

Since the safety of Ovulen and Demulen in pregnancy has not been demonstrated, it is recommended that for any patient who has missed two consecutive periods pregnancy should be ruled out before continuing the contraceptive regimen. If the patient has not adhered to the prescribed schedule the possibility of pregnancy should be considered at the time of the first missed period.

A small fraction of the hormonal agents in oral contraceptives has been identified in the milk of mothers receiving these drugs. The long-range effect to the nursing infant cannot be determined at this time.

Precautions—The pretreatment and periodic physical examinations should include special reference to the breasts and pelvic organs, including a Papanicolaou smear since estrogens have been known to produce tumors, some of them malignant, in five species of subprimate animals. Endocrine and possibly liver function tests may be affected by treatment with Ovulen or Demulen. Therefore, if such tests are abnormal in a patient taking Ovulen or Demulen, it is recommended that they be repeated after the drug has been withdrawn for two months. Under the influence of progestogen-estrogen preparations preexisting uterine fibromyomas may increase in size. Because these agents may cause some degree of fluid retention, conditions which might be influenced by this factor, such as epilepsy, migraine, asthma, cardiac or renal dysfunction, require careful observation. In breakthrough bleeding, and in all cases of irregular bleeding per vaginam, nonfunctional causes should be borne in mind. In undiagnosed bleeding per vaginam adequate diagnostic measures are indicated. Patients with a history of psychic depression should be carefully observed and the drug discontinued if the depression recurs to a serious degree. Any possible influence of prolonged Ovulen or Demulen therapy on pituitary, ovarian, adrenal, hepatic or uterine function awaits further study. A decrease in glucose tolerance has been observed in a significant percentage of patients on oral contraceptives. The mechanism of this decrease is obscure. For this reason, diabetic patients should be carefully observed while receiving Ovulen or Demulen therapy. The age of the patient constitutes no absolute limiting factor, although treatment with Ovulen or Demulen may mask the onset of the climacteric. The pathologist should be advised of Ovulen or Demulen therapy when relevant specimens are submitted. Susceptible women may experience an increase in blood pressure following administration of contraceptive steroids.

Adverse reactions observed in patients receiving oral contraceptives—A statistically significant association has been demonstrated between use of oral contraceptives and the following serious adverse reactions: thrombophlebitis, pulmonary embolism and cerebral thrombosis.

Although available evidence is suggestive of an association, such a relationship has been neither confirmed nor refuted for the following serious adverse reactions: neuro-ocular lesions, e.g., retinal thrombosis and optic neuritis.

The following adverse reactions are known to occur in patients receiving oral contraceptives: nausea, vomiting, gastrointestinal symptoms (such as abdominal cramps and bloating), breakthrough bleeding, spotting, change in menstrual flow, amenorrhea during and after treatment, edema, chloasma or melasma, breast changes (tenderness, enlargement and secretion), change in weight (increase or decrease), changes in cervical erosion and cervical secretions, suppression of lactation when given immediately post partum, cholestatic jaundice, migraine, rash (allergic), rise in blood pressure in susceptible individuals and mental depression.

Although the following adverse reactions have been reported in users of oral contraceptives, an association has been neither confirmed nor refuted: anovulation post treatment, premenstrual-like syndrome, changes in libido, changes in appetite, cystitis-like syndrome, headache, nervousness, dizziness, fatigue, backache, hirsutism, loss of scalp hair, erythema multiforme, erythema nodosum, hemorrhagic eruption and itching.

The following laboratory results may be altered by the use of oral contraceptives: hepatic function: increased sulfobromophthalein retention and other tests; coagulation tests: increase in prothrombin, Factors VII, VIII, IX and X; thyroid function: increase in PBI and butanol extractable protein bound iodine, and decrease in T^3 uptake values; metyrapone test and pregnanediol determination.

President's Message

There has been an ongoing battle for many years over brand-name drugs versus generic drugs. In the early 1900s, there was outright counterfeiting of prescription products. The legitimate pharmaceutical manufacturers, druggists, doctors and other interested groups helped to secure passage of antisubstitution drug laws which stopped this unethical and illegal practice.

These laws also mandated that the retail pharmacist supply the patient with the exact prescription, by brand name, that had been written by the physician.

E. A. Stricker, M.D.

Today, the antisubstitution laws are being challenged. Legislators throughout the country are alarmed at the high cost of medical care and are considering repealing these laws so that generic drugs may be substituted for band-name drugs because generics are cheaper. Many sincere and well-meaning organizations are supporting the movement for repeal of these laws purely out of financial consideration. They believe that because two drugs have the same chemical formula they will have the same therapeutic effect. Sometimes, this is true: many times, it is not. Graphite and diamonds are chemically equivalent, but certainly do not have identical properties.

There are several reasons why chemically equivalent drugs do not necessarily get an equal biologic response from the patient. One is the way the drug is put together, such as the size of crystals, compression, filler materials, type of coating, flavors, pH factors, dyes, etc. Also, not all drug manufacturers use the same degree of skill, care, testing or quality control. Third, equivalent products, although well produced, do vary in rate of absorption, blood levels and clinical response.

As we, in our practice, use these drugs, which are standardized by brand name, we become aware of consistent biologic reactions to certain given drugs. The difference in price between generics and brand-name drugs is usually not worth the difference in therapeutic predictability. And it is almost certain to be true that if generics are allowed to take the place of brand-name drugs, their price will rise as demand increases.

Repeal of the antisubstitution laws would not only victimize our patients, but would have other undesirable results, such as discouraging research by companies that market their products by brand name. These pharmaceutical firms must invest a large amount of money and time in worthwhile research. Naturally, the companies which closely reproduce the formulas and manufacture generics can sell them cheaper. This could easily destroy private research and production incentive.

To say that physicians like to prescribe expensive drugs is foolish. Most doctors prescribe a drug because they believe it is the most effective drug for that particular patient at that particular time. Experience is still the best way of knowing which drug (even among brand names) has superior biologic response. Even a well-trained pharmacist does not have the clinical experience with observation of patient reaction to impose his selection of a generic over the physician's choice.

There obviously are many situations in which generics are perfectly acceptable as substitutes and the physician is perfectly willing to use them. But the choice should be his—with no penalty of extra paperwork for him or government refusal to pay for the patient.

Woman's Auxiliary

50th Anniversary

Make It a TEL-E-YOUTH Christmas

A most appropriate point for us all to consider during this season of Christmas and gift giving is TEL-E-YOUTH, another important point in our Woman's Auxiliary Tel-Star service program.

On your Christmas list this year, please include a gift-contribution to a medical education for deserving young Missourians via your donation to the Missouri State Medical Foundation (MSMF). The funds of the Foundation are used to assist a registered, full-time medical student (1) who is working toward a M.D. degree in an AMA-accredited school of medicine in the U. S., (2) whose home residence is in Missouri and (3) who is in need of financial aid to complete his or her medical education.

Mrs. Charles R. Willman
President

In 1972-1973, the county auxiliaries in Missouri donated $2,203.50 to the MSMF. The Clay County Auxiliary alone donated a total of $597.50 or $8.91 per person and, as a result, is holding the coveted MSMF traveling plaque of recognition. We hope that every Auxiliary member will help her county group to top this record. Please make your check payable to the Missouri State Medical Foundation and forward it to Mrs. James S. Gordon, MSMF Chairman, 600 Boonville Rd., Jefferson City 65101.

We also encourage you to support the American Medical Association Education and Research Foundation (AMA-ERF) by sending a donation or purchasing special gift merchandise being sold by the chairman of each county auxiliary. Beautiful gift items include watches, jewelry, stationery, place mats, cookbooks, scarves and Christmas cards with all profits going to the AMA-ERF.

Auxiliary contributions made nationally to the AMA-ERF totalled $963,823.86 last year. The unrestricted funds given to our four medical schools in Missouri totalled almost $33,000. From 1962 to 1972, Missouri students were loaned a total of $2,025,350.

The Jackson County Medical Auxiliary received the state award for the largest total contribution to the AMA-ERF. County auxiliaries which contributed $10 per member were Pettis, Cole, Buchanan, Grand River, Dunklin and South Central. This is generous, but we need more donations if we want to contribute to maintaining the high calibre of medicine being practiced in these United States.

Remember that in making your tax deductible contribution to the AMA-ERF, you may specify that it is for a particular medical school. If you do not, it will be divided among the four medical schools in Missouri. If you prefer, you can request that it be added to the Loan Guarantee Fund, which guarantees bank loans to medical students.

A *"Million for Millions,"* the national slogan, can be accomplished if you send your check today to your county chairman or to Mrs. Larry Ozenberger, State AMA-ERF Chairman, 302 Birch Ave., Plattsburg 64477.

Why not celebrate Christmas in this way this year for a more satisfying and worthwhile season. Join the many physicians who make annual contributions to the MSMF in honor of friends outside medicine or in memory of loved ones and, at the same time, help to provide for new physicians in our state. Both funds need the support of all MSMA and Auxiliary members.

MERRY CHRISTMAS to you and yours! May you all think of Medicine in 1974.

EDITORIAL

FAIRNESS AND THE FAIRNESS DOCTRINE

It is no secret that some network TV and radio executives disapprove of the Fairness Doctrine, the requirement that contrasting viewpoints be aired on controversial issues of public importance. It isn't that these officials disapprove of editorial balance, but they contend that true balance does not necessarily consist of approximately equal time, and that its judgment is not the province of government but of responsible journalists.

It's easy to sympathize with their concern, and the Fairness Doctrine obviously has shortcomings. But the networks do not seem to be doing much to help their own cause. Two TV documentaries currently under discussion have not only raised questions of their basic fairness, but have raised anew the question of how, in the absence of pay TV or greater availability of television channels, fairness generally can be assured in a medium licensed in the public interest.

Recently, for example, NBC agreed to allow the president of the American Medical Association to present the AMA viewpoint on two network shows. But it agreed to do so only after the AMA asked the FCC to investigate a number of alleged distortions and inaccuracies in last December's documentary, "What Price Health." Moreover, several months ago the FCC staff ruled that an NBC news special broadcast in September 1972, examining the nation's private pension system, violated the Fairness Doctrine.

No one concerned about the broader aspects of press freedom can take comfort that a government agency is empowered to apply a yardstick to pro or con pronouncements, even in a licensed industry. But neither should anyone concerned with press freedom take comfort from the FCC staff finding that only two brief statements near the end of the hour-long documentary on pensions could be taken to present a viewpoint at odds with the general impression that the private pension system is replete with failure. Or take comfort that the health care documentary showed a five-year-old Ohio girl being denied necessary corrective surgery for a congenital heart condition because her unemployed father could not afford it, when in fact she received heart surgery more than a month before the broadcast.

We're sure that deeper government interference with broadcast programming would quickly cause even worse abuses; clearly the Fairness Doctrine's corollary, the "equal time" provision has already done much to limit television coverage of politics. Still, with increasing frequency we find ourselves arguing against thoughtful people who believe that journalistic professionalism is not enough, that there should be some sort of outside check. Our end of that argument would be far easier to uphold if the fairness and professionalism of all the items under question were more self-evident.

Pinworm therapy is often a family affair

Contraindications: History of hypersensitivity to thiabendazole. **Warnings:** If hypersensitivity reactions occur, drug should be discontinued immediately and not resumed. Rarely, erythema multiforme has been associated with thiabendazole therapy; in severe cases (Stevens-Johnson syndrome), fatalities have occurred. Because CNS side effects may occur quite frequently, activities requiring mental alertness should be avoided. Safe use in pregnancy or lactation has not been established. **Precautions:** Ideally, supportive therapy is indicated for anemic, dehydrated, or malnourished patients prior to initiation of anthelmintic therapy. In presence of hepatic or renal dysfunction, patients should be carefully monitored.

Adverse Reactions: Most frequently encountered are anorexia, nausea, vomiting, and dizziness. Less frequently, diarrhea, epigastric distress, pruritus, weariness, drowsiness, giddiness, and headache have occurred. Rarely, tinnitus, hyperirritability, numbness, abnormal sensation in eyes, blurring of vision, xanthopsia; hypotension, collapse; enuresis; transient rise in cephalin flocculation and SGOT; perianal rash, cholestasis and parenchymal liver damage; hyperglycemia; transient leukopeni malodor of the urine, crystalluria, hematuria; appearance of liv Ascaris in the mouth and nose. Hypersensitivity reactions

INDICATION | DOSAGE SCHEDULE

MINTEZOL® (Thiabendazole, MSD) has demonstrated effectiveness against a broad spectrum of nematode infections. Dosages are weight related. For your convenience, the information in the weight-dose chart below is included in the full prescribing information and in the 1973 edition of PDR.

The recommended maximum daily dose of MINTEZOL is 3 g (6 tablets).

MINTEZOL should be given after meals if possible. Dietary restriction, complementary medications, and cleansing enemas are not needed.

The usual dosage schedule for all conditions is two doses per day. The size of the dose is determined by the patient's weight.

Weight-dose chart:

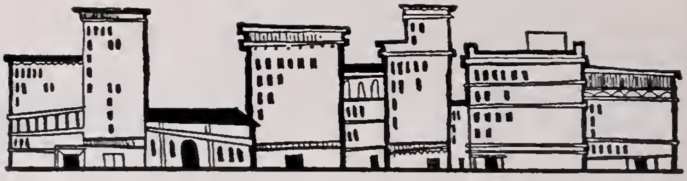
WEIGHT (lb)	EACH DOSE (g)	TABLETS
25	0.25	½
50	0.5	1
75	0.75	1½
100	1.0	2
125	1.25	2½
150 & over	1.5	3

The regimen for each indication follows:

INDICATION	REGIMEN	COMMENTS
Pinworm disease	Two doses per day for 1 day. Repeat in 7 days. This regimen is designed to reduce the risk of reinfection.	If this is not practical, give 2 doses per day for 2 successive days.
Threadworm,* large roundworm,* hookworm,* and whipworm* disease	Two doses per day for 2 successive days.	A single dose of 20 mg/lb or 50 mg/kg may be employed as an alternative schedule, but a higher incidence of side effects should be expected.
Creeping eruption	Two doses per day for 2 successive days.	If active lesions are still present 2 days after completion of therapy, a second course is recommended.
Symptoms of trichinosis* during the invasive phase of the disease	Two doses per day for 2 to 4 successive days according to the response of the patient.	The optimal dosage for the treatment of trichinosis has not been established.

*Clinical experience with thiabendazole for treatment of each of these conditions in children weighing less than 30 lb has been limited.

From the Medical Schools



ST. LOUIS UNIVERSITY

Dr. George E. Thoma Jr. has been named vice-president for the Medical Center at St. Louis University. *Daniel L. Schlafly,* chairman of the board of trustees, announced the appointment at the quarterly meeting of the trustees.

Dr. Thoma

Dr. Thoma, former assistant vice-president for the Medical Center, was nominated by a seven-member trustee search committee which was named in October, 1972. The appointment became effective on October 22.

He succeeds the *Rev. E. J. Drummond,* S.J., who has been vice-president for the Medical Center since 1962. On October 1, Father Drummond became executive vice-president of the University.

As assistant to Fr. Drummond since 1962, Dr. Thoma has been responsible for activities related to planning, federal grants and hospital affiliations.

Dr. Thoma, associate professor of internal medicine at the School of Medicine, is a pioneer in the field of nuclear medicine. He has been editor of the *Journal of Nuclear Medicine* and a trustee of the Society of Nuclear Medicine for 11 years. He established the Radioisotope Laboratory at Firmin Desloge Hospital in 1949, which became known as one of the most completely equipped clinical radioisotope laboratories in the Middle West. Later, he developed and headed the Section of Nuclear Medicine at the St. Louis University Hospitals from 1959-1968.

He has served as a member of numerous boards and committees including the Bi-State Regional Medical Program, St. Louis Research Council and the Joint Board of Health and Hospitals, City of St. Louis. He was Health Commissioner of the City of Clayton (Mo.) and a trustee of Blue Cross Inc.

Dr. Thoma earned the M.D. degree from St. Louis University in 1947 and the B.S. degree in biochemistry from the University of Dayton in 1943. He took his internship and residency at the St. Louis University Hospitals.

Dr. Richard K. Danis, the new president of the St. Louis University Medical Alumni Association, assumed office during Founders Week. He is assistant clinical professor of surgery in the School of Medicine. Dr. Danis presented the Alumni Association's plaque of appreciation to *Dr. Francis X. Lieb,* outgoing president.

Dr. Edward L. Eyerman, Jr., assistant clinical professor of neurology at the School of Medicine, was elected president of the St. Louis University Hospitals medical and dental staff. He succeeds *Dr. Edward M. Wittgen, Jr.,* assistant clinical professor of orthopedic surgery. *Dr. Dermott Smith,* associate professor of psychiatry and former secretary-treasurer of the group, was elected vice-president. *Dr. Murray Chinsky,* assistant clinical professor of internal medicine, was elected as the new secretary and treasurer.

Dr. Elliott O'Reilly, professor of orthopedic surgery and chairman of the Department, was invited to attend an international Work-Study Group of the Spastic Society of London held at Guys Hospital in London and Nottingham. Dr. O'Reilly discussed Cerebral Palsy of Adult Patients in an exchange of ideas with physicians from many parts of the world, including Denmark, France and Spain.

Dr. Francis X. Paletta, clinical professor of surgery and director of the Section of Plastic Surgery, St. Louis University School of Medicine, has been elected a member of the board of directors of the American Society of Plastic and Reconstructive Surgery. The election took place at a meeting held in Miami in October.

WASHINGTON UNIVERSITY

The Research Corporation, through funds provided by the Brown-Hazen Program, has awarded a grant of $36,500 to Washington University Medical School for graduate research and training in medical myocology.

The principal investigators are *George S. Kobayashi,* Ph.D., and *Gerald Medoff,* M.D., associate professors, Division of Dermatology and

Division of Infectious Diseases of the Department of Internal Medicine and the Department of Microbiology. The program will provide training in laboratory and clinical investigation in the area of mycology and will prepare the trainees for academic careers.

Monies from the grant are currently supporting three postdoctoral fellows and providing equipment and supplies for research.

Robert Lee has been promoted from coordinator to assistant dean for minority student affairs at the School of Medicine. The announcement was made by *M. Kenton King*, M.D., dean, and *Samuel B. Guze*, M.D., vice-chancellor for medical affairs.

A native St. Louisian, Mr. Lee was graduated from Central High School in 1962, and from Harris Teachers College in 1966 with the B.A. degree in elementary education. He received the M.Ed. degree in 1971 from the University of Missouri at St. Louis.

From 1966 to 1968 he taught in St. Louis elementary schools. He was acting chairman of the district music program while he taught vocal music from 1968 to 1970.

Mr. Lee joined the staff at Illinois State University at Normal as admissions counselor and, after nine months, was promoted to assistant director of admissions. He became a member of the Washington University Medical School staff in 1972. He also is affiliated with the School of Dentistry, and the programs of occupational therapy, physical therapy, health care administration and graduate study at the Medical Center.

In Memoriam

Benjamin H. Cohen, M.D., 138 N. Meramec Ave., St. Louis, a graduate of the University of Toronto, 1939; member of St. Louis Medical Society; age 59, died Sept. 11, 1973.

Shelby C. Slaughter, M.D., Fredericktown, a graduate of Missouri Medical College, 1899; member of Mineral Area County Medical Society; age 95; died Sept. 21, 1973.

James O. Helm, M.D., New Florence, a graduate of Rush Medical College, 1927; member of Montgomery County Medical Society; age 77; died Sept. 22, 1973.

Waldo B. Isom, M.D., Knox City, a graduate of St. Louis College of Physicians and Surgeons, 1925; member of North Central County Medical Society; age 73, died Sept. 22, 1973.

O. P. J. Falk, M.D., 3 Southmoor Dr., Clayton, a graduate of St. Louis University, 1918; member of St. Louis County Medical Society; age 79; died Sept. 23, 1973.

Ernest E. Tremain, M.D., 2901 Big Bend Blvd., Maplewood, a graduate of St. Louis University, 1921; member of St. Louis County Medical Society; age 78; died Sept. 28, 1973.

Samuel R. McCracken, M.D., Box 220, Excelsior Springs, a graduate of Loyola Medical College, 1919; member of Clay County Medical Society; age 80; died Oct. 5, 1973.

Sidney Goldenberg, M.D., 8515 Delmar, University City, a graduate of State University of Iowa, 1951; member of St. Louis Medical Society; age 50; died Oct. 7, 1973.

Paul B. Nussbaum, M.D., 1858 Broadway, Cape Girardeau, a graduate of St. Louis University, 1924; member of Cape Girardeau County Medical Society; age 73; died Oct. 8, 1973.

Norman H. Barnett, M.D., 25th and Jackson, Joplin, a graduate of the University of Missouri, 1945; member of Jasper County Medical Society; age 50; died Oct. 9, 1973.

William R. Eubank, M.D., 6700 Troost Ave., Kansas City, a graduate of Louisiana State University, 1939; member of Jackson County Medical Society; age 59; died Oct. 25, 1973.

Max Rosen, M.D., 801 E. Cherry, Springfield, a graduate of Cornell University, 1932; member of Greene County Medical Society; age 65; died Oct. 27, 1973.

Leon A. Feinstein, M.D., 6411 Wydown Blvd., St. Louis, a graduate of St. Louis University, 1909; member of St. Louis Medical Society; age 86; died Oct. 29, 1973.

Carl J. Heifetz, M.D., 4511 Forest Park Blvd., St. Louis, a graduate of Washington University, 1929; member of St. Louis Medical Society; age 66; died Oct. 31, 1973.

Clarence R. McCubbin, M.D., 8612 Meadow Lane, Leawood, Kan., a graduate of the University Medical College, Kansas City, 1912; member of Jackson County Medical Society; age 85; died Oct. 31, 1973.

New Members

Henry Adeyemi-Doro, M.D., 2601 N. Whittier, St. Louis, has become a member of St. Louis Medical Society. Dr. Adeyemi-Doro is a native of Nigeria, received his preliminary education at Government College and his M.D. degree at the University of Ibadan in 1969. He specializes in general surgery.

A. L. Ahuja, M.D., 5400 Arsenal, St. Louis, has become a member of St. Louis Medical Society. Dr. Ahuja is a native of Shikarpursind, West Pakistan, received his preliminary education at Jairind and his M.D. degree at Christian Medical College in 1966. He specializes in psychiatry.

Marvin P. Altman, M.D., 2850 W. Clay, St. Charles, has become a member of St. Charles-Lincoln County Medical Society. Dr. Altman is a native of Washington, D. C., received his preliminary education at the University of Pittsburgh and his M.D. degree at the University of Philadelphia in 1966. He specializes in internal medicine.

Victor A. Arana, M.D., Callaway Bank Bldg., Fulton, has become a member of Callaway County Medical Society. Dr. Arana is a native of Trujillo, Peru, received his preliminary education at the University of Trujillo and his M.D. degree at San Marcos University in 1961. He specializes in general surgery.

Fernando Arias, M.D., Barnes Hospital Plaza, St. Louis, has become a member of St. Louis Medical Society. Dr. Arias is a native of Calarca, Colombia, South America, received his preliminary education at Universidad de Caldas and his M.D. degree at National University in 1958. He specializes in obstetrics and gynecology.

Admad K. Bayrakdar, M.D., 6420 Clayton Rd., St. Louis, has become a member of St. Louis Medical Society. Dr. Bayrakdar is a native of Syria, received his M.D. degree at Damascus University in 1970. He specializes in internal medicine.

Inocencio M. Boc, M.D., 1515 Lafayette, St. Louis, has become a member of St. Louis Medical Society. Dr. Boc is a native of the Philippines, received his preliminary education at the University of the Visayas and his M.D. degree at Cebu College of Medicine in 1967. He specializes in pediatrics.

Garry L. Carls, M.D., 1325 S. Grand, St. Louis, has become a member of St. Louis Medical Society. Dr. Carls is a native of Beardstown, Ill., received his preliminary education at Purdue University and his M.D. degree at St. Louis University in 1965. He specializes in radiology.

R. Marshall Colburn, M.D., 510 S. Kingshighway, St. Louis, has become a member of St. Louis Medical Society. Dr. Colburn is a native of St. Louis, received his preliminary education at Lawrence College and his M.D. degree at Northwestern University in 1966. He specializes in radiology.

Narenda K. Datta, M.D., 30 North Allen, Bonne Terre, has become a member of Mineral Area County Medical Society. Dr. Datta is a native of New Delhi, India, received his preliminary education at Delhi University and his M.D. degree at Punjab University in 1962. He specializes in obstetrics and gynecology.

Ramon R. DyRagos, M.D., 2929 Baltimore, Kansas City, has become a member of Clay County Medical Society. Dr. DyRagos is a native of the Philippines, received his preliminary education at the University of St. Tomas and his M.D. degree at the University of St. Tomas in 1965. He specializes in neurological surgery.

George Emeran, M.D., 600 N. Union, St. Louis, has become a member of St. Louis Medical Society. Dr. Emeran is a native of Haiti, received his preliminary education at Institution St. Louis De Gonzague and his M.D. degree at the Medical School of Haiti in 1966. He specializes in urology.

Tomas Espinosa, M.D., Fulton State Hospital, Fulton, has become a member of Callaway County Medical Society. Dr. Espinosa is a native of Monterey, Mexico, received his preliminary education at the University of Nuevo and his M.D. degree at the University of Nuevo Leon in 1965. He specializes in psychiatry.

Allan R. Fleming, M.D., 2929 Baltimore, Kansas City, has become a member of Jackson County Medical Society. Dr. Fleming is a native of Kansas City, received his preliminary education at the University of Missouri and his M.D. degree at the University of Kansas in 1969. He specializes in hematology.

Robert L. Grubb, M.D., Barnes Hospital Plaza, St. Louis, has become a member of St. Louis Medical Society. Dr. Grubb is a native of North Carolina, received his preliminary education at the University of North Carolina and his M.D. degree at the University of North Carolina. He specializes in neurological surgery.

D. Wade Hammond, M.D., 1301 Boonslick Rd., St. Charles, has become a member of St. Charles-Lincoln County Medical Society. Dr. Hammond is a native of Bluffton, Ind., received his preliminary education at DePauw University and his M.D. degree at Washington University in 1965. He specializes in orthopaedic surgery.

Fayez Hanna, M.D., 5400 Arsenal, St. Louis, has become a member of St. Charles-Lincoln County Medical Society. Dr. Hanna is a native of Sudan and received his M.D. degree at Ein Shams University in 1957. He specializes in psychiatry.

L. Henares-Levy, M.D., 1221 S. Grand, St. Louis, has become a member of St. Louis Medical Society. Dr. Henares-Levy is a native of Mexico, received her preliminary education at Universidad Labastida and her M.D. degree at Universidad de Neuvo Leon in 1971. She is a resident in psychiatry.

George J. Hill, M.D., 4960 Audubon, St. Louis, has become a member of St. Louis Medical Society. Dr. Hill is a native of Cedar Rapids, Ia., received his preliminary education at Yale University and his M.D. degree at Harvard University in 1957. He specializes in surgery.

Jacob Igra, M.D., 1221 S. Grand, St. Louis, has become a member of St. Louis Medical Society. Dr. Igra is a native of Lvou, Poland, received his preliminary education at the University of Melbourne and his M.D. degree at the University of Melbourne in 1956. He specializes in neurology.

Walter D. Kistler, Jr., M.D., 2639 Miami, St. Louis, has become a member of St. Louis Medical Society. Dr. Kistler is a native of Davenport, Ia., received his M.D. degree at Washington University in 1966. He specializes in cardiology.

Russell R. Kraeger, M.D., 1200 Lanvale Dr., St. Louis, has become a member of St. Louis Medical Society. Dr. Kraeger is a native of St. Louis, received his preliminary education at St. Benedicts College and his M.D. degree at St. Louis University in 1967. He specializes in general surgery.

George B. Kroeger, Jr., M.D., 621 S. New Ballas Rd., St. Louis, has become a member of St. Louis Medical Society. Dr. Kroeger is a native of St. Louis, received his preliminary education at St. Louis University and his M.D. degree at St. Louis University in 1966. He specializes in otolaryngology.

S. Kulkamthorn, M.D., 216 S. Kingshighway, St. Louis, has become a member of St. Louis Medical Society. Dr. Kulkamthorn is a native of Thailand, received her preliminary education at Chulalonokorn University and her M.D. degree at Chulalonokorn University in 1968. She is a resident in physical medicine and rehabilitation.

Harold G. Kunz, Jr., M.D., 100 N. Euclid, St. Louis, has become a member of St. Louis Medical Society. Dr. Kunz is a native of New Jersey, received his preliminary education at Cornell University and his M.D. degree at Cornell University in 1965. He specializes in radiology.

Joseph P. McEnery, M.D., 187 Concord Village Plaza, St. Louis, has become a member of St. Louis Medical Society. Dr. McEnery is a native of Richmond Hill, N. Y., received his preliminary education at St. Peter's College and his M.D. degree at St. Louis University in 1967. He specializes in ophthalmology.

Jerry Meyers, M.D., 4511 Forest Park, St. Louis, has become a member of St. Louis Medical Society. Dr. Meyers is a native of Brady, Tex., received his preliminary education at the University of Texas and his M.D. degree at Washington University in 1966. He is specializing in general surgery.

Thomas M. Moran, M.D., 1221 S, Grand, St. Louis, has become a member of St. Louis Medical Society. Dr. Moran is a native of Des

Adiraju Palagiri, M.D., 1515 Lafayette, St. Louis, has become a member of St. Louis Medical Society. Dr. Palagiri is a native of India, received his M.D. degree at Kurnoll College in 1965. He specializes in urology.

Leopoldo P. Pardo, Jr., M.D., 6744 Clayton Rd., St. Louis, has become a member of St. Louis Medical Society. Dr. Pardo is a native of the Philippines, received his preliminary education at Letran College and his M.D. degree at the University of the Philippines in 1955. He specializes in neurosurgery.

Abraham M. Phillips, M.D., 777 S. New Ballas Rd., St. Louis, has become a member of St. Louis Medical Society. Dr. Phillips is a native of Cape Girardeau, received his preliminary education at Washington University and his M.D. degree at the University of Missouri-Columbia, in 1969. He specializes in pediatrics.

Prabha Partap, M.D., 9620 Hartdale, St. Louis, has become a member of St. Louis Medical Society. Dr. Partap is a native of India, received her preliminary education at Delhi University and her M.D. degree at S. N. Medical College in 1967. She specializes in pathology.

John F. Pinto, M.D., 4617 Gustine Terr., St. Louis, has become a member of St. Louis Medical Society. Dr. Pinto is a native of Ohio, received his preliminary education at the University of Akron and his M.D. degree at St. Louis University in 1972. He specializes in internal medicine.

Joseph Prusaczyk, M.D., 1225 Graham Rd., Florissant, has become a member of St. Louis Medical Society. Dr. Prusaczyk is a native of St. Louis, received his preliminary education at St. Louis University and his M.D. degree at St. Louis University in 1968. He specializes in pediatrics.

Morris W. Pulliam, M.D., Barnes Hospital Plaza, St. Louis, has become a member of St. Louis Medical Society. Dr. Pulliam is a native of Boonville, received his preliminary education at the University of Missouri-Columbia and his M.D. degree at Washington University in 1966. He is a resident in neurosurgery.

Mohammad Hafeezur Rahman, M.D., 2850 W. Clay, St. Charles, has become a member of St. Charles-Lincoln County Medical Society. Dr. Rahman is a native of Delhi, India, received his preliminary education at S. M. Science College and his M.D. degree at Dow Medical College in 1960. He specializes in pediatrics.

Robert A. Ratcheson, M.D., Barnes Hospital Plaza, St. Louis, has become a member of St. Louis Medical Society. Dr. Ratcheson is a native of Chicago, Ill., received his preliminary education at Miami University and his M.D. degree at Northwestern University in 1965. He specializes in neurological surgery.

A. Razzaq, M.D., 3165 Myrtle, Granite City, Ill., has become a member of St. Louis Medical Society. Dr. Razzaq is a native of Pakistan, received his M.D. degree at King Edward College in 1952. He specializes in internal medicine.

Michael Roark, M.D., 1325 S. Grand, St. Louis, has become a member of St. Louis Medical Society. Dr. Roark is a native of Alabama, received his preliminary education at the University of Notre Dame and his M.D. degree at St. Louis University in 1969. He is a resident in ophthalmology.

Charles C. Schober, M.D., 4524 Forest Park, St. Louis, has become a member of St. Louis Medical Society. Dr. Schober is a native of Louisiana, received his preliminary education at Louisiana State University and his M.D. degree at Louisiana State University in 1949. He specializes in psychiatry.

Gustav Schonfeld, M.D., 507 S. Euclid, St. Louis, has become a member of St. Louis Medical Society. Dr. Schonfeld is a native of Czechoslovakia, received his preliminary education at Washington University and his M.D. degree at Washington University in 1960. He specializes in internal medicine.

Seyvee Sirintrapun, M.D., 4720 S. Spring, St. Louis, has become a member of St. Louis Medical Society. Dr. Sirintrapun is a native of Thailand, received his preliminary education at the Pre-University School of Thailand and his M.D. degree at Chiengmai University in 1968. He specializes in obstetrics and gynecology.

James B. Smith, M.D., 100 N. Euclid, St. Louis, has become a member of St. Louis Medical Society. Dr. Smith is a native of Boonville and received his M.D. degree at the University of Missouri in 1967. He specializes in psychiatry.

Teodoro C. Tang, M.D., 2415 N. Kingshighway, St. Louis, has become a member of St. Louis Medical Society. Dr. Tang is a native of the Philippines, received his preliminary education at the University of the Philippines and his M.D. degree at Far Eastern University in 1962. He specializes in general surgery.

Anver A. Tayob, M.D., 1465 S. Grand, St. Louis, has become a member of St. Louis Medical Society. Dr. Tayob is a native of Parbandar, India and received his M.D. degree at Dow Medical College in 1965. He specializes in orthopedics.

Surinder S. Thind, M.D., 6420 Clayton Rd., St. Louis, has become a member of St. Louis Medical Society. Dr. Thind is a native of India, received his preliminary education at Government College of India and his M.D. degree at C.M.C. Hospital in 1968. He is a resident in internal medicine.

Johnson Underwood, III, M.D., 5140 N.E. Antioch Rd., Kansas City, has become a member of Clay County Medical Society. Dr. Underwood is a native of Kansas City, received his preliminary education at William Jewell College and his M.D. degree at the University of Missouri-Columbia, in 1966. He specializes in general surgery.

Emerito F. Ureta, M.D., 1755 S. Grand, St. Louis, has become a member of St. Louis Medical Society. Dr. Ureta is a native of the Philippines, received his preliminary education at Far Eastern University and his M.D. degree at Far Eastern University in 1966. He specializes in general surgery.

Fremont P. Wirth, M.D., Barnes Hospital Plaza, St. Louis, has become a member of St. Louis Medical Society. Dr. Wirth is a native of Nashville, Tenn., received his preliminary education at Williams College and his M.D. degree at Vanderbilt University in 1966. He specializes in neurosurgery.

Council Reports

(Continued from page 805)

which indicates that Springfield is overbuilt. However, Blue Cross is now paying this hospital. Dr. Peterson indicated that this was an example that if the community is right, nobody from some place else should be making your decisions.

District #7—Dr. Chandler reported that the Jackson County Medical Society Medical-Legal Committee has worked diligently and has come up with a final draft of its proposed interprofessional code. Dr. Chandler indicated that he thought it was excellent and will pass it along to the Chairman of the MSMA Commission for any help it might be to them.

Jackson County Medical Society has instituted a membership campaign aimed at the 335-plus-or-minus physicians in the county who presently are not members.

The Medical Business Bureau in Jackson County is contemplating the establishment of a placement service for employees in physicians' offices. They presented their proposal to the Jackson County Council and were given an okay to go ahead with the study for the establishment of such a service.

PRESIDENT'S REMARKS

Dr. Stricker reported that he had attended many meetings during the past summer. At the AMA Convention in New York, he attended the State Presidents' meeting. This was attended by many state presidents and foreign dignitaries. The meeting was well worthwhile.

He said that he had attended the Blue Shield workshop meeting held at the Lake of the Ozarks this past summer.

Dr. Stricker also attended the Mid-Mo Medical Society meeting at which Dr. Stanley Peterson gave an interesting presentation on the Missouri Physicians' Guild.

Dr. Stricker stated that he had attended the Kentucky Medical Association convention recently and truly enjoyed the Southern hospitality. Presidents of six other states were in attendance at the meeting. He indicated that he attended the Councilor District meeting in Springfield at which Mr. Weihaupt spoke.

MSMA SPONSORSHIP OF FUTURE TOURS

Mr. Cooper reported that the Rhine Escape tour would leave on Sunday, October 7. This tour was oversold with about 75 on the wait list. Several other trips are being planned—one European trip by Intrav in June, 1974 and a Grecian tour by Marriott in August, 1974. Mr. Cooper asked if the Council might be interested in a post-convention trip, such as to Las Vegas for four days for about 100 persons, $200-$225 including stay at Caesar's Palace. Discussion followed as to whether such a trip might enhance the attendance at the Annual Session or hinder such attendance. On motion, duly seconded, it was agreed that MSMA not sponsor such a post-convention trip.

REPORT OF BUDGET AND FINANCE COMMITTEE

Dr. Judd, Chairman of the Finance and Budget Committee, gave the following report:

The Budget and Finance Committee of the MSMA met at the MSMA Offices in Jefferson City on September 9, 1973. Present were Donald Judd, M.D.; James C. Cope, M.D.; E. A. Stricker, M.D.; Howard McAlhany, M.D.; and Mr. Ray McIntyre. Allen Chandler, M.D., was ill and unable to attend. Mr. Gerald Sandweg and Mr. Oliver Wilkins of the Mercantile Bank of St. Louis met with the Committee. The following items were considered:

1. *MSMA Building*—MSMA has borrowed $120,000 from the Mercantile Bank at 7% annual interest. This loan expires in early October, 1973. The Mercantile Bank desires to terminate the present loan and will establish a conventional real estate first mortgage loan for 15 years at 7% on the MSMA building and furnishings. The Bank is willing to loan up to 80% of a conservative appraisal of the value of the MSMA building and building site. Such an appraisal has been completed with the appraised value of $100,000. Thus, Mercantile will extend the loan up to $80,000 at 7% annual interest, to be paid within 15 years. The payments are to be made in level monthly payments. Prepayment of any portion of the loan can be made without penalty.
2. *Loan Payment*—To reduce the present loan from $120,000 to below $80,000, a motion was made and unanimously passed that MSMA sell bonds from its investment portfolio and apply the proceeds to the reduction of the present loan. The recent market value of these bonds was $48,331.00. Applied to the present loan, this would leave a mortgage loan of approximately $72,000 with annual payments of approximately $7,765 per year. The recent stock market situation would make sale of any stock unwise at the present time.
3. *Budget*—A more detailed budget will be submitted in December. Advertising revenue from the MSMA *Journal* is less than anticipated.
4. *Recommendation*—MSMA dues are low in comparison to those in other states. Our present dues are $65 per year with a $10 per year special assessment for the Missouri State Medical Foundation. The Foundation has about $487,000 loaned out at present. The assessment produces about $38,000 per year. It is recommended that this assessment for the MSMF be discontinued and that the MSMF continue to be supported by interest on loans, gifts and bequests. The assessment would be directed to the following:
   a. Reserve fund—50%
   b. Special projects—50%—Retirement of building fund, continuing education, etc, that the Council deems wise.

   This requires approval by the Council and House of Delegates.
5. *Assignments*—The Council must decide officially who can execute assignments on behalf of MSMA.

Dr. Judd stated that approval by the Council and House of Delegates would be necessary regarding Recommendation #4 of the Committee's Report, and the Budget and Finance Committee proposes such a resolution to implement this recommendation.

Dr. Matthews stated that there is need for more operating revenue and that, perhaps, rather than ask for a revolving assessment, a dues increase should be considered. Dr. Mayer pointed out that the need for student loans is increasing and that he felt the MSMF assessment should be continued.

Dr. Judd stated that the pros and cons of this matter had been discussed at the Committee meeting and it seemed obvious that a time will come when the Association will need to balance what they have done for the medical students against what needed to be done for physicians who are members. The time should come when the money coming back in repayments can be turned around and be loaned to students and still provide adequate funding for the student loans. Several other officers and councilors expressed their views on discontinuance of the assessment and proposed dues increase.

Dr. Martin moved to table the resolution. Motion was seconded and carried.

A motion was made to approve selling the bonds indicated above, which authorization was given the Finance Committee by previous action of the Council and the 1973 House of Delegates. The motion was seconded and adopted.

Dr. Judd stated that the Council needs to decide officially who could execute assignments on behalf of MSMA. A motion was made that the President of the Association be authorized to execute assignments on behalf of MSMA. Motion was seconded and adopted.

REPORT OF LEGISLATIVE COMMITTEE

Dr. Matthews reported that the Committee had met on Saturday morning and had discussed proposed legislation to be introduced in the upcoming session of the General Assembly. He indicated that this will be a short legislative session and most proposed legislation would have to be pre-filed if it was to get anywhere.

Dr. Matthews stated that the Legislative Committee, in cooperation with the ophthalmologists, had developed a delegation amendment. He stated that Council approval was needed.

A motion was made by Dr. Cope to approve this portion of the report. Motion was seconded and carried.

Dr. Domke stated that an Attorney General's opinion had been obtained on midwifery and that the opinion and the proposed legislation might be in conflict. He stated that, perhaps, this should be referred to the Board of Health to get an Attorney General's opinion. Dr. Matthews indicated that this could be done, but that the bill would have to be pre-filed if it is to get anywhere in the Legislature.

A motion was made that this proposed legislation be referred to the Board of Health and an Attorney General's opinion be obtained. The motion was seconded and adopted.

The next item discussed by the Legislative Committee was "sick doctor" legislation. Dr. Matthews stated that this legislation was introduced late in the last session of the General Assembly and received a favorable response from legislators. The intent of this legislation is to help the "sick doctor" obtain treatment. He indicated that special articles on this subject would be printed.

A motion was made to adopt this portion of the report. The motion was seconded and adopted.

A laboratory licensing law was discussed by the Legislative Committee. A similar bill had been introduced previously. Dr. Matthews indicated that the intent of the bill was to properly regulate laboratories doing commercial work.

A motion was made by Dr. Gunn for approval of this section of the report. Motion was seconded and carried.

Dr. Matthews next discussed Resolution #9 from the 1973 MSMA House of Delegates, which called for comprehensive coverage for newborns in insurance policies. It was felt by the Committee that going through the Legislature is not wise and that this matter should be directed to the Insurance Department and the Health Insurance Council.

Legislation regarding physical therapists was considered by the Legislative Committee. This legislation would allow only licensed physical therapists to represent themselves as physical therapists.

A motion was made to adopt this portion of the report. The motion was seconded and carried.

Dr. Matthews reported that there are rumors that a bill may be introduced which would specify the number of hours of continuing education for annual registration.

Dr. Matthews stated that our legislative record for the past session was good and that this was due to a lot of hard work on the part of Royal Cooper, Cork Swarens and Ray McIntyre, who deserve a lot of thanks for their efforts.

Mr. McIntyre stated that he, Royal and Cork were grateful for Dr. Matthews comments and his confidence, but he would be amiss if he did not mention that Dr. Matthews had testified at hearings and that without his help and advice, the staff would have been much less effective.

REPORT OF LEGAL COUNSEL

Mr. McIntyre stated that Mr. Noble, who was ill and unable to attend the meeting, had sent a letter regarding the progress in the lawsuit relating to the HCF now under appeal. The letter indicated that (1) Respondents' motion for extension of time to Oct. 15, 1973 to file brief has been granted by the Court; (2) Brief will be filed on or before October 15 and a copy will be sent to Ray McIntyre; (3) Since the appellants failed to perfect their appeal on Count II of their suit, which was the Count directed against the Health Care Foundation of Missouri, the judgment of the Trial Court in favor of the Health Care Foundation of Missouri is final.

REPORT OF MMPAC

Dr. Martin reported that resolutions regarding PAC had been passed at the April Council meeting, but that they had not been implemented.

Mr. McIntyre stated that there had been questions concerning what activities the personnel of MSMA could take regarding PAC. He indicated that there had been contact with Lee Mortenson and the Legal Counsel of AMPAC and the AMA regarding this question and whether *Journal* pages can be used for PAC. Mr. McIntyre stated that our CPA was also concerned as to exactly what the staff could do in regard to PAC.

Dr. Martin stated that other states have gotten into this and that it was his understanding that activities which didn't deal directly with specific candidate support can be classified as educational activities.

Mr. Mortenson outlined how some other states handle staff time spent on PAC and how this was paid for. Each state mentioned handled things in different ways. Dr. Hetlage stated that physicians need to be educated to think along political lines without mentioning candidates. Dr. Martin reported that PAC Bylaws had been rewritten and that the size of the Board is going to be increased. The Board will consist of two members from each of the Councilor Districts (at least one of whom is to be a physician), President of MSMA, President-Elect of MSMA, Chairman of the Council, a Woman's

Auxiliary Representative and the Executive Secretary of MSMA.

Dr. Martin stated that some resolutions regarding membership also had been passed. Mr. Swarens stated that letters are going out to new members, to members who are renewing only MSMA and to members who are renewing both MSMA and AMA membership. He indicated that an MSMA brochure and an AMA brochure were supposed to be sent out, but the AMA brochure has not been received and the MSMA brochure is almost ready to be printed. He stated that no direction was given as to when these brochures are to be sent out, but it seemed practical they be sent out with the next dues billing.

REPORT OF AMA DELEGATES

Dr. Washburn gave the following report of the AMA annual meeting held in June:

"This Council has already sadly acknowledged the death of Art Neilson. Your AMA Delegation would like to add its sincere feeling of loss on the passing of Art and its heartfelt condolences to his wife, Janet, and the family. Art was a truly dedicated and competent man in many fields and activities, and we shall all miss him. Staff has been directed to submit a memorial resolution to the AMA for presentation at the Clinical Session.

"I will attempt to present a brief summary of the AMA House of Delegates action in New York. It was the largest business session in the history of the AMA. Meeting for a total of almost 19 hours, the House acted on 84 reports and 179 resolutions for a total of 263 items of business.

"As most of you know, Hector Benoit was successful in his reelection bid for the Council on Medical Service. Bob Kelley, who filled in for Art, did an obviously effective job in directing Hector's campaign. Dr. Russell B. Roth of Pennsylvania, who spoke at the MSMA Convention two years ago, was installed as President of AMA and Malcom C. Todd of California, was selected as President-Elect.

"The resolution presented by the Missouri Delegation which expressed concern over disruptive socioeconomic influences in medical practice and urged a "hard line" in dealing with those influences was not adopted. However, a substitute was adopted which stated: "That Officers and the Board of Trustees of the AMA take steps to increase the capacity of the AMA to speak with authority in representing the interest of the medical profession and the public in the socioeconomic areas."

"Issues discussed ranged from PSROs and wage-price controls to institutional licensure and the need for more primary care physicians, as follows:

PSRO's—Resolutions were passed informing HEW that peer review for physicians can be carried out only by organizations composed of practicing physicians and that since many such organizations are now in existence, HEW rules and regulations should be written to allow existing peer review groups to function as PSROs. The House also recognized that repeal or modification of PSRO legislation may ultimately be required to preserve high quality of patient care.

Wage-Price Controls—The AMA is to work for an end to discriminatory treatment toward physicians under the controls.

FDA Regulations—The AMA will continue to protest current and proposed FDA regulations which restrict the use of prescription drugs to "official labeling" and make an effort for establishing better communications between the practicing physician and the FDA.

QAP—The House expressed reservations about the American Hospital Association's proposed peer review mechanism and the AMA representatives will meet with the AHA to offer suggestions.

Support for Medical Staffs—It was resolved that any arrangement between hospital board of trustees and its medical staff that conflicts with the AMA principles of ethics and that unilateral changes in medical staff bylaws by hospital trustees are improper.

Physicians on Hospital Boards—The House called for increased medical staff representation on hospital boards, asked state and local medical societies to remove barriers to such representation and requested the JCAH to ascertain the effectiveness of communications between hospital governing boards and medical staffs.

Certificate of Need—The new Social Security Law, which more-or-less places certificate of need regulations in effect regardless of state laws, was discussed and the AMA will continue to support voluntary planning that preserves decision-making on the local level and seek the participation of practicing physicians on planning boards.

Primary Care Physicians—The AMA is to publicize and promote a goal to have at least 50% of all medical graduates enter residency training in the primary care specialties in the coming years. Also, the AMA is to continuously monitor the need for number and types of physicians.

Medical Schools—The House adopted a report which presented the essential characteristics by which a medical school is accredited, thus bringing up to date a document last revised in 1957.

Unions—Unionism among self-employed physicians was opposed, but AMA will maintain its interest and concern in those physicians in employment situations who need assistance and support.

Malpractice—The formation of a Medical Liability Commission to represent health care providers in dealing with medical malpractice problems was approved. The Commission will consist of representatives of the AMA, AHA, American College of Surgeons, American College of Physicians and four specialty societies.

Internal Matters—The House added a resident-intern member to the Council on Medical Service and Council on Medical Education, but defeated a move which would have separated the scientific meetings from meetings of the House. Also, the House changed the dues setup so that the delinquency date for AMA dues is April 30, rather than June 1, each year and eliminated the requirement that members dropped for nonpayment must pay one year's past dues.

"Regarding the AMA Board of Directors, the House instructed the Council on Constitution and Bylaws to prepare for the 1973 Clinical Session a measure that will allow the House to vote on whether Trustees shall serve a maximum of two three-year terms. Now, Trustees may now serve up to three three-year terms.

"*In Other Action* the House reaffirmed the AMA abortion policy which states that 'abortion is a medical procedure and should be performed only by a duly licensed physician in accredited hospitals acting only after consultation with two other physicians, and in conformance with standards of good medical practice. . . .'

"Also, the House voted to support and collaborate with efforts to set up #911 as the nationwide emergency telephone number.

"And, the House encouraged state medical societies to support medical licensure law amendments to permit out-of-state physicians to practice temporarily in areas of medical need.

"And, finally, Bob Hope, who was presented the AMA Citation of a Layman Award for his philanthropy on behalf of medical facilities and causes across the country, was one of the highlights of the Convention as he entertained delegates with the unique comedy only he can offer."

Dr. Washburn stated that the AMA delegates had been spread rather thin because of the campaign for Dr. Benoit and the help of the staff and officers throughout the meeting was most important. He said that sometime in the past, the Council had made a policy that the senior AMA delegate should report on AMA meetings to the Council. Dr. Washburn reported that he thought this should be changed due to the fact that each delegate covers different areas during the AMA meeting and that it would be better to have each report on what he covered. He indicated that the possibility of only opening the MSMA Hospitality Suite for one night at the AMA clinical meeting was being considered.

Dr. Washburn stated that if it is feasible during the MSMA Annual Session, an informal meeting could be set up so that members of the Association could meet with the AMA Delegates and Alternates to ask questions, give criticism, etc.

A motion was made that the suggestion that the AMA Delegates and Alternates meet with members of the Association at the Annual Session be implemented. Motion was seconded and carried.

A motion was made to approve the AMA report as received. Motion was seconded and carried.

REPORT OF BUILDING COMMITTEE

Dr. Matthews stated that the MSMA's new building is now completed and he hopes that the Councilors will urge members in their districts to visit the new headquarters.

REPORT OF MEDICAL SCHOOL DEANS

Dr. King reported Washington University Medical School has 120 freshman students and that by next year, the total student body would be 480.

Dr. Noback reported that there were 72 new students in Year 1 and 40 at the Year 3 level in Kansas City. He stated that several new faculty members had been added. There were 40, Year 2, students in preceptorships in Kansas City and Western Missouri this past summer and it is hoped that this can be expanded to include areas outside of Western Missouri.

Dr. Noback mentioned that several students had taken Part 1 of the National Boards as noncandidates. He indicated that the Western Missouri Health Education Center now has the cooperation of the dental and pharmacy schools. He reported that the groundbreaking ceremony had been held for the new Truman Medical Center, which will replace the present General Hospital.

Dr. Mayer reported that Joseph White, M.D., had been appointed as the Provost for Health Affairs at the University of Missouri. He indicated that Dr. White had hoped to attend the Council meeting, but had a prior commitment. Dr. Mayer stated that Dr. White would like an opportunity to get to know the Council members.

Dr. Mayer indicated that there had been considerable discussion recently about the Missouri Institute of Psychiatry. Correspondence regarding experimentation on humans was sent to Dr. Harold Robb, Governor Bond and Congressman James Symington. Congressman Symington has asked the FDA to look into matters relating to human experimentation.

MUNNS
MEDICAL
SUPPLY

at

1432 Hanley Industrial Drive
St. Louis, Mo.

Topeka — Kansas City — Wichita

Dr. Mayer indicated that he, personally, would be supportive of an increase of dues and that he did not want to see the loss or decrease of loan funds for medical students. We would be decreasing loans at a time when there is increasing needs.

REPORT OF DIRECTOR OF DIVISION OF HEALTH

Dr. Domke stated that the Board of Health had been asked to prepare a brochure on recommended immunization procedures.

Dr. Domke stated that he would like to talk about the ambulance situation. The ambulance regulation law does not become effective until July 1, 1974. The funeral directors in Missouri are going out of the ambulance business. At this time, half of the state is now covered by substitute ambulance services. There is a statewide concern regarding this matter. In rural areas particularly, perhaps there could be a hospital-based ambulance service. In metropolitan areas, there are private ambulance services. Dr. Domke reported that since the ambulance district law has gone into effect, some 20 districts have been voted in around the state. It is the basic policy to make ambulance service a local responsibility. Dr. Domke stated that there is a great deal of interest and concern about this problem, but that it would have to be resolved locally. He reported that the ambulance bill calls for ambulance, training and equipment to meet American College of Surgeons standards.

AMA REPORT

Mr. Mortenson reported on several items. On national legislation, he indicated that the Keogh Plan change should be satisfactory to everyone involved. The PSRO National Council has indicated that there will be a state and local option plan. Mr. Mortenson stated that he had talked with the sponsor of the House HMO bill and that it looks like there will be an HMO bill coming out of the House. He said that, hopefully, this bill can be amended satisfactorily. The bill will be an experimental, limited HMO bill.

The dates selected for the Leadership Training Seminar sponsored by the MSMA are February 23-24, 1974.

Mr. Mortenson stated that the AMA had not as yet received the MSMA request for a survey. He reported that the St. Louis City and St. Louis County Medical Societies' surveys have been made.

Mr. Mortenson reported that he is sending a memo to all state and county societies in his area setting forth the new decisions the AMA House of Delegates made on membership.

COMMITTEE OF ARRANGEMENTS

Dr. Chandler appointed the following committee on arrangements for the 116th Annual Session: Dr. Chandler, Chairman; Drs. Bradshaw and Martin.

The Council Chairman commended Dr. Cope for the lovely party held the evening before and on his lovely family.

HCF AND PSRO

Dr. Benoit indicated that the HCF has problems and is in a state of flux. He gave a brief rundown regarding the SEMO foundation and its relationship with UNIMED. The HCF Board has met with UNIMED representatives who assist in setting up and initially operating health care foundations similar to the Denver Foundation for Medical Care. It was the Board's feeling that the UNIMED approach is good. The Board has elected to permit the Executive Committee to work out some arrangement with UNIMED. In dealing with all the various problems implied in PSRO, he said you must develop a flexible plan so you can move in any direction that may become feasible. The AMA has strongly urged HEW to allow state option on statewide PSRO designations. The National Advisory Council of PSRO has taken a positive position in their recommendation to Secretary Weinberger that statewide PSROs be allowed in those states where it appears feasible.

As UNIMED viewed it, the best thing to do was take HCF's original structure and with the five review areas, develop them more autonomously in line with the recent changes in the Bylaws, to structure it so that each area could, if necessary, be identified as a separate PSRO and the current HCF could become the coordinator. The Board felt this was an appropriate approach and if, indeed, the Secretary of HEW was willing to sign a single contract within the State, the HCF would be eligible for such a contracting arrangement, with the subcontracts to each of the five individual areas and HCF as the coordinator.

Dr. Benoit expressed his feeling that a position of unanimity of thought and ability to be heard when contract time rolls around would be better if we have a single contracting agency within the State such as the HCF. He feels it would be better if HEW dealt only with one office rather than dealing with different areas of the state at different times and possibly setting double and triple standards.

Dr. Benoit then reported on the hearing on PSRO held in Jefferson City on August 27. Each of the major physician organizations in the state—MSMA, MAOPS and the HCF—and a spokesman from areas approximating each of the five HCF peer review regions of the state presented proposals with some degree of unanimity. Dr. Benoit said he would not discuss further the SEMO Foundation proposal since he understood that Dr. Hansbrough had covered that. The HCF proposal included the option to have the secretary sign a unilateral contract with just the HCF for PSRO activities within the state, but also indicated its willingness to be the coordinating agency if the secretary chose to make contractural arrangements with different portions of the state. HCF shifted a few counties into different peer review areas. This was done to accommodate physicians in a given county who expressed where they wanted to be located. Physicians in both Wyandotte and Johnson Counties in Kansas, who do much of their hospital work in Kansas City, Missouri, have indicated to their spokesmen they want to be a part of Kansas's PSRO activities rather than Missouri's.

Dr. Benoit stated that as this thing with PSRO evolves, it is possible there might not be a HCFM. This would be detrimental to the physicians and the patients in the state if it happens. What we want to do in peer review is still needed as it was back in 1969 when the HCF was born, is totally defensible and would be to the benefit of all concerned. If we are forced to carry it out under a governmentally structured situation, now identified as PSRO which is going to completely identify itself with cost curtailment and in no way consider the benefits of the patient or the physician's ability to take care of that patient, then we are in very serious trouble and it is the one trap we have to be careful not to fall into.

Dr. Benoit then indicated some of the things going on at the AMA level. The AMA Advisory Committee on PSRO established and organized in January. Four full committee meetings have been held. Dr. Benoit chairs the task force concerned with geographical distribution. The most active task forces have to do with data collection and proper handling. They are extremely concerned with the possibility that all confidentiality of the patient-physician relationships could be lost. If this data handling can be done by coding so that some degree of anonymity is preserved, this is one thing we are striving for. The Task Force on Regulations has developed an initial draft of regulations which are broad and leave room for local modification.

The Task Force Committee on Guidelines and Norms attempted to develop broad guidelines and norms of diagnosis and treatment which will be only a guideline to local PSROs.

It was indicated that Dr. Bauer had resigned, and Dr. Benoit discussed some of the possibilities for his replacement. Senator Bennett is considering introducing an emergency amendment in Congress proposing that the PSRO legislation be entirely administered by SSA.

HR 1 now includes the extension of Medicare beneficiaries to everybody under treatment of chronic instage renal disease. The National Kidney Foundation was called on to draw up proposed regulations for its implementation. Many nephrologists voiced their dissatisfaction to virtually all of their proposals. Dr. Benoit became involved in a special committee of AMA to handle this problem. This Committee feels there is no need to set up a separate review system and that pay for a chronic renal problem should not be any different than for a diabetic, cardiac, etc. One of the proposed regulations has to do with the structure under which certification of centers would be achieved. You would have to have done 25 transplants in the past year to be eligible. Three agencies—AMA, ASIM and a group known as physicians for renal replacement—presented a position paper to HEW through Dr. Edward's office proposing certain basic concepts as follows: (1) No reason for reimbursement other than by traditional methods; (2) Review should be done starting with as local an area as possible; (3) Certain criteria should be developed by people in nephrology which would indicate as least the minimum for an acceptable facility to carry out renal dialysis. Another item which AMA felt strong about is that there should be inducement to patients to go on home dialysis.

The Council on Medical Service has considered a number of AMA resolutions regarding confidentiality. There are certain areas in which it has become common practice for insurance companies to come in and photograph patient records. They have a blanket consent.

The insurance commissioner in Pennsylvania about 1½ years ago came out with 39 proposed guidelines which he proposed should be incorporated into any contract drawn up between Blue Cross plan and any hospital in Pennsylvania. This list now numbers 67 and they are something. This was brought to the AMA's attention, which in turn gave it to three committees of the Council for study and recommendation. Dr. Benoit indicated that he would say 50 of these items are in violation of what most physicians consider good medical principles.

Dr. Benoit then spoke on a program presently under day in Wisconsin on a pilot basis—the Wisconsin Health Maintenance Program. A very knowledgeable man from the NABSP office went over this with the AMA Council on Medical Service. He thinks it combines the best of what physicians want in PSRO and what certain governmental people want in HMO.

Discussion followed regarding Dr. Benoit's presenta-

tion. The question was raised as to whether by one piece of legislation, namely HR 1, have we gotten ourselves in a position of being forced to change the structure of organized medicine. Dr. Hetlage expressed concern that these various foundations being set up in the state would encompass the whole practice of medicine and the local, state and ultimately the national medical societies will be bypassed. If one company would set up several foundations in the state, this company could render itself extremely powerful.

Dr. Benoit stated that he did not feel this was a threat. Dr. Hansbrough stated that representatives of UNIMED went to every hospital in his district and from the beginning organized medicine was informed. UNIMED is interested in organization and not operation.

Dr. Benoit pointed out that physicians at the level of the Board of Trustees of AMA and the Council on Medical Services are beginning to feel that the UCR concept is in serious jeopardy.

Dr. Peterson indicated that everyone must remember that a health care delivery system and a PSRO are not the same thing. One is a health care delivery system and the other is a regulatory arm of the federal government.

The Chairman thanked Dr. Benoit for an excellent report.

REPORT ON CHP

Dr. Robert Kelley stated that he felt it is about time that the Council be informed about what is going on in CHP in Missouri. He stated that, basically, one of the questions that requires resolving at this point in time is what attitude does the Council of MSMA and the individual members take toward CHP. Dr. Kelley stated that several attitudes had been expressed personally to him by physicians from around the state.

Dr. Kelley stated that he had gotten into CHP by reason of MSMA's suggestion to Governor Hearnes that he should be on the Governor's Advisory Council for CHP. He reported that during the two years he has been Chairman of the Governor's Advisory Council, the Council has been reorganized and there has been considerable change in the composition of the Council. He indicated that hopefully, through the Legislature, the Governor's Advisory Council will be given some statutory authority and thus, be put on a little firmer ground. The Governor's Advisory Council is made up of 51% consumers and is appointed by the Governor. It is a governing board. All policy decisions are made by the Council and implemented by the staff. He indicated that there had been implications that the authority for CHP lies chiefly in the hands of the Director of CHP and that he would like to dispel this idea. He reported that CHP would continue, as in the past, where the Advisory Council controls major policy decisions.

Dr. Kelley stated that the problem in Missouri has been (1) Inadequate funding. CHP has not been able to establish all the area agencies that it should. Eighty-five percent of the population is now in CHP local areas, but there are large geographical areas that are not covered; (2) A salary schedule that is below the national average; and (3) As a result of the salary schedule, they have difficulty in recruiting staff.

The basic premise of CHP is that the original planning should come from the local community. Problems have occurred throughout the state in getting people to cooperate within the local area. A lot of people feel that it is impossible to get a group of consumers and providers of health to cooperate as desired.

Dr. Kelley stated that, at the state level, regardless of the fact that people have different interests and different ideas of what the health system should be, it had been his experience that if you get reasonably intelligent people together and sit down and work things out, you really can achieve results. The results are somewhat meager at times, but there is some progress. If people say this is impossible at the local, regional and state level, then there is going to be federal planning. Dr. Kelley expressed a personal concern for the apathy and disinterest expressed by physicians in CHP activities.

Dr. Kelley stated that CHP had developed a task force to investigate the accessibility of health services. The group held a meeting and asked both providers and consumers what they thought the major defects were in people getting health care. One of the major defects that became apparent was the lack of any plan for emergency medical services in the state. A conference on emergency medical services was held and a state plan was developed. A state center for health statistics is being developed. It will be a center where you can go for definite information about physician distribution, dentist distribution, nursing homes, hospitals, etc.

Dr. Kelley reported that so many things were being placed in the CHP office that they may not be able to accomplish their primary purpose which is long-range planning. One of the things that has come up this year is certification of need legislation.

Dr. Kelley stated that it is difficult to get a physician interested in CHP and attend meetings. There has been concern expressed over the fact that 51% consumers were required in the A and B agencies and the task forces. It was felt that there would be lay domination of all these areas. Dr. Kelley stated that providers are listened to and physician's influence greater than numerical representation. Dr. Kelley expressed concern on what position organized medicine will take in regard to CHP.

He stated that the composition of the present Council is good. There is now better representation of practicing M.D.s and D.O.s on the Council. A dentist has been added to the Council and the consumer representation also is good.

Dr. Hetlage stated that apathy is a problem. He suggested that before the next Council meeting, a list be made of the positive things the B agencies had done throughout the state for health care. He indicated that in his area, the B agency had been mainly involved in facility review. Dr. Kelley stated that Dr. Hetlage was right in that the area agencies have been bogged down in facility review and have not taken the opportunity to get involved in actual basic health planning. He stated that he hoped to send to each member of the MSMA Council a copy of the current composition of the Governor's Advisory Council and a copy of the task force reports that have been accumulated. Dr. Kelley said that this year a task force is in the process of organization which would be involved in home health care.

A question was asked as to whether there would be conflict between the proposed PSRO regions and the CHP boundaries. Dr. Kelley stated that the Governor's Advisory Council had not taken a position on PSRO areas. It had been suggested that the Advisory Council take over this job, but Dr. Kelley stated that this would be inappropriate because the Council is made up of 51% consumers. PSRO is involved in peer review and consumers should not be involved in peer review.

Mr. McIntyre mentioned that Dr. Kelley had stated that the subject of certificate of need legislation might come up in the state legislature and asked how this might conflict with the federal law which more or less has to do with certificate of need legislation. Dr. Kelley stated that the federal law is limited to those institutions which participated in Medicare and Medicaid. The state law, if passed, would cover any institution. Dr. Peterson asked how CHP is coming on such a state plan. Dr. Kelley stated that the CHP does not have a state plan and that one would have to be developed step by step.

REPORT OF COMMISSION ON PUBLIC AFFAIRS

Dr. Bowles acknowledged with deep regret the death of Dr. Arthur Neilson. He stated that Dr. Neilson will be missed on the Commission. Dr. Bowles said that Dr. James Denninghoff of Columbia will replace Dr. Neilson in the area of occupational health on the Commission.

Dr. Bowles stated that because of the failure to attract a good attendance, he wondered if the Public Affairs Conference is accomplishing the purpose for which it is intended. The Commission recommends that for at least one year, the emphasis of the conference be shifted to MMPAC and that it be called an "MMPAC Workshop." The Commission further recommends that the "MMPAC Workshop" be held on the first weekend in February, 1974 and that Dr. Hubert Ritter be asked to serve as Chairman for the Workshop.

A motion to accept and approve this portion of the report was made by Dr. Martin. The motion was seconded by Dr. Hetlage and carried.

Dr. Bowles stated that the Commission recommends that the Auxiliary Public Affairs Breakfast at the Annual Session be continued for 1974, but that MMPAC funds not be used to support the breakfast. Mr. McIntyre stated that he had contacted Mrs. Willman, President of the Auxiliary, about a speaker for the breakfast. The AMA has designated Dr. John M. Chenault as the Board representative to attend the 1974 MSMA Annual Session. Mrs. Willman will invite Dr. Chenault to be the speaker for the Public Affairs Breakfast.

Dr. Bowles stated the Commission recommends continued support of Regional Medical Program projects. He said that RMP has been funded through June 30, 1974.

Dr. Bowles indicated that the Commission commends those local component medical societies who are sponsoring medical aspects of sports meetings with area coaches. The Commission also recommends wide dissemination of timely news releases of interest to the public on venereal disease, immunizations, donating body organs and others.

A motion to approve the entire report was made, seconded and adopted.

Dr. Hetlage suggested that at the next annual session, a breakfast be held with the Councilors and the Presidents and Secretaries of medical societies for a general discussion of medical society problems. Dr. Hansbrough pointed out that during the annual session, the delegates usually have breakfast with their Councilors to discuss matters. Mr. McIntyre suggested that perhaps this could be done during the Public Affairs Conference in February.

Dr. Martin stated that he needed the names from Councilors of two people, at least one to be a physician, from each Councilor District suggested for the PAC Board. These will be given to the Nominating Committee for consideration. He indicated that they could be sent to Mr. McIntyre for transmittal to the committee.

Dr. Martin stated that he had a suggested resolution to propose:

WHEREAS, The American Medical Association is now in the process of reordering its internal priorities, and,

WHEREAS, The AMA is a federated structure, composed of state and county medical societies and,

WHEREAS, 12 men are now expected to maintain AMA's relations with 435 Congressional Districts, 100 Senatorial Districts, 50 State Medical Associations, 50 State PACs, 50 State Legislatures and over 2,000 county medical societies, and,

WHEREAS, We, the states, and our component county societies expect and need the American Medical Association to provide us with technical expertise which we cannot afford, and,

WHEREAS, We are only as strong as our weakest link, therefore be it

Resolved, That the field offices of the American Medical Association be given a top priority within the "mission" concept to assist the states and counties with more technical expertise, and be it

Resolved, That these Regional Offices be provided with additional staff to provide much needed assistance in the areas of Communication and Promotional Development, Membership and Promotional Development and Legislative Development, all strictly for the help of these 50 component members of this federation of organized medicine.

Dr. Martin moved acceptance of this resolution for further Council study. The motion was seconded by Dr. Bradshaw and carried.

NEXT COUNCIL MEETING

Dr. Chandler reported that the next Council meeting will be held on December 14, 15 and 16 at the Ramada Inn in Jefferson City. The Budget Committee will meet at 1 PM on the 14th and the Council will have an executive-session dinner meeting on Friday night. The meeting was adjourned.

EXECUTIVE SESSION

In Executive Session following the adjournment of the regular Council meeting, the Council considered the following:

The matter of any staff member being designated as an executive officer for any specialty groups in the state was discussed. After considerable discussion, the following motion was made, seconded and unanimously adopted: "No member of the staff of MSMA is to serve as an executive officer for any specialty group, insurance group, foundation or other segment of organized medicine."

The second item discussed was a request to the AMA to provide a survey team to look at the Missouri State Medical Association. The Chairman pointed out that in such a letter of request, we need to specify certain items which we would like the survey team to study and advise upon. We believe that this survey team can assist us in evaluating our present activities and operation and can give us suggestions which will be helpful in planning the future of our Association. The following items were agreed upon for the AMA survey team to consider: review and advise us as to needed changes in our Constitution and Bylaws; our community relations or, better stated, public relations; our communications' efforts; our executive staff organization and activity; and our financial status and budget control.

Mr. McIntyre was directed to write a letter to the AMA requesting a survey based upon these stated items.

The third item was presented by Dr. Chandler who reported that he is quite sold on a policy manual of the Illinois State Medical Society which sets forth in printed form the existing official opinions, policies and practices of the Illinois State Medical Society which may be used as reference documents by officers and spokesmen for the Medical Society as well as for information of the membership.

Dr. Chandler proposed that a similar policy manual be drafted by MSMA and kept current, so it will be available to all those needing its contents. It also was recommended that this idea of a policy manual for the MSMA be referred for consideration and further recommendation by the Committee on Planning of MSMA.

Missouri Medicine in Review

FORTY YEARS AGO

The 100th anniversary of the publication of William Beaumont's "Experiments and Observations on the Gastric Juice and the Physiology of Digestion" was celebrated by the St. Louis Medical Society on November 21, Dr. Beaumont's 148th birthday anniversary. The program consisted of "Biographical Sketch of William Beaumont" by Dr. Major G. Seelig; "William Beaumont's Experiments and Their Present Day Value" by Dr. Joseph Erlanger; "Dr. Beaumont as a St. Louisian" by Dr. Robert E. Schlueter; and "Our Civic and Medical Debt to Beaumont" by Dr. Louis H. Behrens.

The Bates County Medical Society met at the Courthouse in Butler on November 16 with President R. E. Crabtree of Butler presiding. Members present were Drs. C. W. Luter, C. A. Lusk and G. A. Delameter, Butler; H. A. Rhodes, Foster; J. M. Smith, Amoret; E. E. Robinson, Adrian; and R. H. Smith, Rich Hill. Visitors were Drs. C. C. Conover and John Deweese of Kansas City. Officers elected were Dr. G. A. Delameter, President, and Dr. R. H. Smith, Secretary-Treasurer. It was temporarily agreed that the Society should meet every two months, alternating with Vernon-Cedar County Medical Society. This would make it possible for all to attend a meeting each month.

TWENTY-FIVE YEARS AGO

One hundred and twenty-five physicians of Northwest Missouri and Eastern Kansas gathered in Excelsior Springs on November 4 for a clinical conference sponsored by the Clay County Medical Society. Afternoon and evening meetings were held at the Elms Hotel. The one-day meeting opened with a 12:15 PM round-table luncheon at which Dr. E. C. Robichaux of Excelsior Springs presided.

The Missouri Medical Service was organized in St. Louis in April, 1945 to provide for payment of certain general surgical services, medical and other diagnostic procedures. At the end of the first year, a total of 29,153 persons were enrolled. The participants are limited to employed groups of people covered under the Blue Cross Plan and their dependents. The Blue Cross Hospital Service Plan was inaugurated in Kansas City in 1938 through the untiring efforts of members of the medical profession.

Hugh G. Hamilton, M.D., Kansas City, was elected secretary of the Section on Obstetrics of the Southern Medical Association recently.

A scholarship in public health is being established in honor of the late Joseph F. Bredeck, M.D., St. Louis.—Dr. David E. Musgrave assumed the office of mayor of Excelsior Springs on October 11.

TEN YEARS AGO

It was noted in this "Forty Years Ago" column that "The Nobel prize in medicine for 1923 has been awarded to Drs. H. G. Banting and J. T. R. Macleod of Toronto for their discovery of insulin."

Dr. Hugh V. Ashley, Jr. of Cape Girardeau, one of 44 thirty-second degree Masons, was selected for the rank of Knight Commander of the Court of Honor.

Wendell G. Scott, M.D., St. Louis, was named president of the American Cancer Society at a meeting of the Board of Directors on October 25.

Dr. Thomas H. Burford of St. Louis was among the surgeons who took part in operations televised at the meeting of the American College of Surgeons in San Francisco.

On Thursday, September 12, the Greene County Medical Society held its 16th Annual Handicap Golf Tournament at Hickory Hills Country Club in Springfield. Dr. M. D. Bonebrake took top honors in this year's tournament with a net score of 66. Dr. Bonebrake obtained temporary possession of the new Championship Traveling Trophy and, also, an electric eye Polaroid camera.

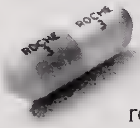
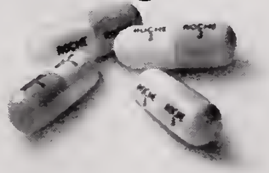
How strong must a tranquilizer be for severe anxiety?

As strong as Librium® 25 mg
(chlordiazepoxide HCl)



The achievement of desired therapeutic results is often a function of the dosage *strength* as well as the drug's intrinsic action. Thus, when anxiety is *severe*, the 25-mg strength of Librium frequently provides the necessary antianxiety action with a minimum of unwanted adverse reactions. Librium 25 mg is a convenient dosage form for the relief of severe, incapacitating anxiety, specifically formulated to supplement your counsel and reassurance.

Benefits-to-risks ratio permits higher dosage



For over 13 years, Librium has been recognized for its excellent benefits-to-risks ratio, an asset in the *higher* dosage ranges as in more common clinical applications. Thus, the frequency of dosage with Librium 25 mg can be flexibly adjusted to the needs and response of the individual patient, up to 100 mg daily if required. Total daily dosage for the elderly and debilitated should not exceed 20 mg. When severe anxiety has been reduced, Librium dosage should be correspondingly reduced or discontinued entirely.

basic support in severe anxiety
Librium® 25 mg
(chlordiazepoxide HCl)
1 capsule t.i.d./q.i.d.

SAMPLE

Precautions: In the elderly and debilitated, and in children over six, limit to smallest effective dosage (initially 10 mg or less per day) to preclude ataxia or oversedation, increasing gradually as needed and tolerated. Not recommended in children under six. Though generally not recommended, if combination therapy with other psychotropics seems indicated, carefully consider individual pharmacologic effects, particularly in use of potentiating drugs such as MAO inhibitors and phenothiazines. Observe usual precautions in presence of impaired renal or hepatic function. Paradoxical reactions (*e.g.*, excitement, stimulation and acute rage) have been reported in psychiatric patients and hyperactive aggressive children. Employ usual precautions in treatment of anxiety states with evidence of impending depression; suicidal tendencies may be present and protective measures necessary. Variable effects on blood coagulation have been reported very rarely in patients receiving the drug and oral anticoagulants; causal relationship has not been established clinically.

Adverse Reactions: Drowsiness, ataxia and confusion may occur, especially in the elderly and debilitated. These are reversible in most instances by proper dosage adjustment, but are also occasionally observed at the lower dosage ranges. In a few instances syncope has been reported. Also encountered are isolated instances of skin eruptions, edema, minor menstrual irregularities, nausea and constipation, extrapyramidal symptoms, increased and decreased libido—all infrequent and generally controlled with dosage reduction; changes in EEG patterns (low-voltage fast activity) may appear during and after treatment; blood dyscrasias (including agranulocytosis), jaundice and hepatic dysfunction have been reported occasionally, making periodic blood counts and liver function tests advisable during protracted therapy.

Supplied: Librium® Capsules containing 5 mg, 10 mg or 25 mg chlordiazepoxide HCl. Libritabs® Tablets containing 5 mg, 10 mg or 25 mg chlordiazepoxide.
